THE TALKING MACHINE WORLD

Vol. 5. No. 1 New York, January 15, 1909 Price Ten Cents

Opportunities for Business Broadening

The first of the year is an excellent time to inaugurate new departures in business, and with the first 1909 issue of this publication we have commenced a new feature which we term "The Side Line Section." The field has been covered in a departmental sense for some time, but according to our views the time has arrived when the subject demands an enlarged treatment.

Our readers will see at a glance that this is a move which means a business broadening for all who desire to extend their lines. It means that we are going to place thousands of our subscribers in direct communication with special products which can be handled harmoniously with talking machines. Close to market as we are we shall at all times be able to place our readers in touch with specialties of many kinds.

There are thousands of dealers who are bright, energetic business men who have attractive establishments located in the principal business thoroughfares of many cities throughout the land, who are desirous of increasing their business incomes.

That is a laudable ambition, truly, and The World proposes to assist them along the right path. We propose to place them in direct communication with manufacturers of whom it will pay to know.

There are many side lines which can be handled advantageously, which will not occupy great space in the stores, and yet will be instrumental in increasing sales and drawing more dollars to the coffers of business men. The more people that can be drawn to a store, the better it is for every department of that store.

To-day people visit exclusive talking machine stores with but one purpose in view, and that is to purchase talking machines and accessories, but if some specialty, some novelty, is in the window, it interests them. Frequently they will step inside to buy it, and while in the store it follows as a natural sequence that they will make other purchases.

Therein lies the success of the department stores. A customer enters to make an individual purchase, and before he gets out he buys many other things. A man enters a store to buy a single necktie, and ten to one before he gets out he will make a half dozen purchases.

Now, if talking machine dealers take hold energetically of side lines, they can sell not only more talking machines, but they can sell more of everything, and the Side Line Section proposes to assist them and we shall use every endeavor for legitimate trade development in every direction.

If you scan the pages of this section closely it is certain that you will find much therein to interest you and this is but the beginning of a broader campaign.

NEW YORK, JANUARY 15, 1909.

It is our intention to make this section an interesting feature of every issue of The Talking Machine World, and all of our readers will find in its pages much of interest to them. Advertisers will have something special to say along interesting lines, and we have no doubt but that this publication will be the means of steadily broadening the business possibilities of our readers everywhere.

The more people which can be drawn into stores the better it is for all merchants. The aim of the "Side Line Section" will be, to build trade, for we propose to make it the vehicle of distribution for special lines of merchandise. We are a novelty producing nation, and there is no reason why a publication of this kind should not contain news and information concerning specialties as well as regular lines of products which will be of business value to readers.

It should be understood that The World not only reaches thousands of talking machine dealers, but there are many merchants who handle such lines as sporting goods, furniture, general merchandise, etc., who read it regularly; therefore, advertisers will have the added advantage of covering a new field and reaching as well people who are at the present time interested in their products.

All of these things count in a business sense, for they all help in building the business profits for the year. Nothing should be overlooked which will help to draw trade and the Side Line Section will play a part in helping to bring the manufacturer and merchant together for mutual good.

Talking machine dealers everywhere are realizing more and more that the road to bigger profits and real expansion lies in adding attractive side lines to their business. Lines that, while not interfering with the sale of talking machines, will open new fields that will admit of practically limitless development.

Naturally the most desirable side lines are those well advertised by the manufacturers and requiring the least effort in the selling or being exploited by means of various forms of silent salesmen. Such lines include cameras or kodaks, safety razors, sporting goods, post-cards and novelties by the hundred, and the dealer must be in a bad way indeed who cannot find at least one which would appeal to his trade.

As in all new ventures, it is well to go slow in the outset when installing side lines, for the actual profit does not always increase in ratio to the number of lines handled. When one or two lines are installed and selling nicely, then it is time to think about others, for with an established side line business it is comparatively simple to spread out as conditions warrant.

Class of trade is another important item to be considered, for while there are many side lines that appeal strongly to all classes there are others which do not sell so readily in certain localities, not appealing to that particular trade. However, the dealer himself is the best judge of what he can profitably handle and he should choose his line accordingly.

For those who are desirous of taking on a line of sporting goods, cameras and photographic supplies or similar goods used chiefly in the spring and summer it is high time they gave the matter their earnest attention, for orders, if prompt shipment is desired, should be in hand next month. The manufacturers of such lines are already prepared, having their new goods made up and ready for the call. With such lines installed, at an early date the dealer will have an opportunity to display and advertise them in a manner to attract business when the actual buying begins.

The increasing demand for the higher priced machines and records tends to bring the better class of trade to the store of the average, people who are in a position to purchase whatever strikes their fancy without worrying about the amount. As they come back each month to hear and order the new records they will see and inspect the new side lines and thus many sales will be made practically automatically.

Then, too, there is no dealer with window space so small that he cannot spare at least a portion of one window for the display of his new lines, those interested in one feature sufficiently to stop naturally casting at least a glance at the others in the window. Careful arrangement of stock inside the store will also tend to help sales, an orderly and harmonious array of goods appealing to even the most casual observer.

Taken, all in all, the question of side lines to the progressive retailer to-day is one of utmost importance as removing the frequently narrow limitations that naturally exist where only one line of goods is handled and affording an opportunity for business growth with the attendant increase in profits.

In order to attract a customer the first care must be to provide an attractive store; goods well displayed are half sold. Do not be sparing of light; the public look for it like babies. People do not stop before a poorly lighted store, while they linger before a brilliantly illuminated window, they admire, and they enter.

It is important to ticket the goods. Out of ten possible customers nine fail to enter the store because they do not know the prices that they will be called upon to pay; they fear exorbitant prices on the part of the merchant, and they prefer to refrain from asking the price rather than be subjected to the embarrassment of leaving on the ground that the goods are too dear. That is to admit that they are not very wealthy—a declaration that very few people care to make, even to a stranger. Take care, therefore, that the passer-by and the loiterer who stops before your window knows in advance the amount which he will have to disburse; that disposes of hesitation and facilitates his entrance to your store. He knows that he has no unpleasant surprise to fear, he becomes accustomed to your prices, he returns again to your place because he has become acquainted with you.

The customer once inside the store, the fight is not yet won. Do not allow him to wander by himself around your counters, in search of a clerk to wait upon him. If you do not keep a clerk and you are yourself engaged with another customer, invite him to be seated and excuse yourself for keeping him waiting. Be prompt to serve him—he may be in a hurry—and your slowness and indifference may irritate him.

Never impose your own taste upon the customer. Leave him free to exercise his own appreciations, do not harrass him with solicitations with a view of selling him one kind of article in preference to another; when he asks for a certain article, specifying the size or the shape or the brand, do not say, "That is not made any more," or "That is no longer the fashion," or "I have something cheaper," for you will thus imply an ignorance or vulgarity on his part which will be far from pleasing to him.

Adopt a fixed price for your goods, so as to avoid the necessity of bargaining with your customer like the market-keepers.

Exhibit to all an equal courtesy, no matter what the character of the individual or the extent of his purchase. The customer who spends but fifty cents to-day may, to-morrow, be a purchaser to the amount of a hundred dollars.

When the article asked for is not in your stock express your regret and hope that you may be more fortunate another time. Do not display any bad temper over your disability; remain courteous and smiling.

Your customer must not go out of your store with a bad impression, or he will not return.

And finally remember, as the Furniture World aptly says, that while there is nothing complicated about all this, yet it is not so easy as might at first blush appear. To become accustomed to it, it is necessary sometimes—perhaps often— to do violence to one's own feelings, to be polite to disagreeable people, pleasant with grumblers, patient with the undecided, agreeable and in good humor with everybody. Once the habit is formed, everything will go easily.

Failures in commercial enterprises are due frequently to the neglect to know accurately the cost of the articles sold—take notice that the word "sold" is used and not "bought," for in the latter case the cost is represented simply by the price paid, whereas to know what they cost after they have passed over the counter is a more intricate matter, and one the neglect of which has spelt failure for many a retailer who, enthusiastic to give his customers the best value possible, overlooked that it cost him his success.

Every merchant should know the exact cost to him of each individual article he sells and the lowest price he can afford to sell it for with a fair margin of profit, says Business Helps, of London.

In the manufacturing branches of almost every industry the cost is compared on every unit produced. For instance, in a factory conducted in a systematic manner on good business principles, the cost of production of each single article is known, and while, of course, the margin of profit on one is very small, where many are turned out, each at some profit, the aggregate represent a profit on the entire business that is commensurate with the capital involved.

As the manufacturer figures his profit on each single article produced, it will be advisable for the retailer to do likewise. Of course, the retailer, with his comparatively small volume of business, must have a larger percentage of profit than does the producer, but the principle is the same—the difference and very often the only difference between the success and failure of a business is an accurate comprehension of the cost of conducting it.

Retailers generally know in a general way the amount of hire, rent, lighting, etc., but as a rule the real cost of the business, with all the main items and incidentals, is not well understood. Consequently the business is conducted in a more or less haphazard manner, articles of certain grades being sold at standard prices, and if there is a balance on the right side at the end of the year the merchant considers that he has "had a good year."

The profit to be made on each article will depend altogether upon the volume of business, and it is suggested that for setting a standard retailers should use the preceding year's total sales as a basis for calculation.

A stream of opportunities is constantly going by. Pick out the ones you can use and nab them.

He who would be a judge of men must be able to withhold judgment until certainty takes the place of assumption.

All work and no play makes Jack a dull boy, and a dull boy will sell very few goods and make no satisfied customers.

The man at the front is the man who bears the brunt of the fight. Don't be in a hurry to get there until you are fit for the position.

A good many employers seem to forget that the clerk has the same right to want a desirable boss as they have to want desirable help.

INTEREST in the Gillette Safety Razor is greater than ever since the introduction of the New Process Gillette Blades.

This New Process Blade is the keenest shaving edge ever devised by the skill of man—a new steel, made to special formula. It takes an edge so sharp, a temper so hard and tough that no cutting implement has ever been known to compare with it.

These blades are packed in handsome nickel-plated boxes, hermetically sealed, sanitary, damp-proof, anti-rust and antiseptic—unaffected by a sea voyage or any climate.

There is no razor like the GILLETTE: no handle, no blade like it.

It is the one "safety" razor that is safe—cannot cut the face. It is the only razor that can be adjusted for a light or a close shave.

Any man can give himself a clean, comfortable shave with the Gillette Safety Razor—despite tough beard or tender skin. No stropping; no honing.

The Gillette Safety Razor is easier to sell than any other. It is the only razor backed by broad national advertising.

Men believe in the GILLETTE. Two million satisfied users are talking about it. The GILLETTE is the razor that every man wants.

Dealers all over the country are getting a steady income out of the new blades alone.

OUTLOOK FOR THE NEW YEAR.

A Leading Business Man Reviewing the Trade Situation, Says That Good Has Come from the Halt in the Hot Pace Which Characterized Industrial and Commercial Life a Year Ago—Every Man Should Now Put His Shoulder to the Wheel.

The opinions of successful business men are read with keen interest in all lines, and the following expressions of George N. Pierce are well worthy of close perusal. Mr. Pierce was a pioneer bicycle manufacturer, and was the first to see the trend toward automobiles, and has built up an enormous business in that line as well. He is of the type of American who does things, and this is what he says concerning the new year. In a chat with The World Mr. Pierce said:

"The trade outlook for the new year is exceptionally bright; the depression of 1908 has passed into history. No tremendous disaster nor any great suffering is traced to this latest depression of business, and it may be seriously argued, from the viewpoint of general economy, that much good has resulted from the halt in the hot pace which characterized industrial and commercial life a year ago. Then credits were unquestioned, financial operations were conducted loosely and oftentimes manipulated for selfish ends. Labor of any sort was hard to obtain and high-class workmanship could only be had at exorbitant wages. The most extreme condition was met with in the lack of raw material. Manufacturers, in order to continue in business, had to anticipate their requirements by a full year.

"During the past several months credits and banking have been adjusted and finances are now sanely conducted. The employe now works with his old-time zest at a fair wage. Manufacturers are able to obtain anything they need within moderate time. Best of all is that money tied up a year ago is now in circulation, and the retailer, who for years had carried along dead, or at the best, slow-moving stock, has, by ordering little and selling as much as possible, disposed of surplus stock, consequently there is a very apparent tendency throughout the retail trade to order substantially for 1909. These conditions are gratifying alike to manufacturer and dealer.

"In order that times may steadily improve it is necessary that every man in commercial life should put his shoulder to the wheel. Every effort should be made to buoy up the public confidence in our governmental administration and in our banks. There is no reason why confidence should not be continued on every hand. So able an administration and such a well-regulated banking system as we enjoy merits nothing but trust from every man. Since the times are steadily improving, and especially in view of the fact that people in general have done but very little purchasing during the past year, except for things strictly necessary, retailers would do well to push their wares. The whole economic system upon which this country operates is fatally wrong unless money is kept in circulation; neither employer nor employe should hoard

GEORGE N. PIERCE.

his income. The retailer can do much to disseminate currency, and in doing so he assists the country, at the same time making himself prosperous.

"There is still another point which it is well always to bear in mind—the point of quality. This applies alike to all classes, from the producer to the consumer. A cheap article may be likened to a sickly child; neither lasts long and both were better not to have been. No dealer can expect to continue long in business if he peddles off inferior goods on his customers. High-class goods sold at a fair price insures continued patronage, and furthermore it invariably means more profit to the dealer, even at the outset.

"First-class goods, push, perseverance and honest dealings will bring success to any dealer, and it is not only pernicious but actually means ruin to adopt any other policy."

MOVING PICTURES IN HAWAII.

Part Played by Picture Shows in "Paradise of the Pacific"—How a Volcano Was Taken—Hawaii in Touch With World's Progress.

(Special to The Talking Machine World.)

Honolulu, Hawaii, Jan. 1, 1909.

A year ago a moving picture machine was a novelty in Hawaii. To-day half a dozen creaky phonographs, with horns protruding through holes in fronts of transformed store rooms, call attention to as many separate 5 and 10-cent shows of the motion picture class, in the city of Honolulu alone. Probably five or six more are scattered over the other islands, furnishing never failing entertainment to the hundreds of the motley population which surround them during every day, afternoon and evening.

"Canned theatricals" fill a long felt want in Hawaii. Owing to the 2,000 miles and more of ocean which separates the territory from any other land, the hero and heroine of the "realistic" one night stand "melodrama" find it difficult to negotiate the distance, and the territory not having a white population sufficiently large to maintain a stock company, went amusement hungry most of the time until the picture shows came.

The moving pictures have not only taken the place of the regular theaters, but their comparatively cheap cost makes them patronized far more regularly than the average troupe which spends a few weeks here once or twice a year. The cosmopolitan character of a picture show audience is one of the most interesting things to the visitor in Honolulu. The small auditorium will be crowded nightly with several hundred Americans, Portuguese, Japanese, Chinese, Hawaiians, with a sprinkling of almost every other nationality, and admixtures of the whole in every proportion. Old and young, men and women, attend in the broadest kind of democracy. A bevy of white girls, of Honolulu's upper crust of society may often be seen enjoying the active pantomime, while on one side a solemn visaged Chinaman in oriental splendor, may be convoying one or more demure little pantalooned ladies and a whole brood of almond-eyed children; and on the other side a Japanese family party may be gathered. Then there will be Hawaiians and Part-Hawaiians, and all the rest of the heterogeneous races which go to make up Hawaii's population. As elsewhere, these shows are continuous performances, and the audience is constantly changing.

Several of the theaters are located in the Oriental quarter and draw their patronage almost entirely from Japanese and Chinese, and when it is remembered that each one has to pay a license fee of $5 per day, and that the pictures have to be secured from the mainland, at no inconsiderable expense, some idea of the way the places are patronized may be gained.

Hawaii has been fortunate, moreover, in having had as a resident for the past two years one of the most expert moving picture artists in the United States, in the person of Mr. R. K. Bonine, whose Hawaiian films have attracted much attention all over the country. Recently he achieved his greatest triumph in successfully photographing on the moving picture film, the tremendous activity of the great volcano of Kilauea. Nearly a month was spent in securing the pictures, a portion of which shows the molten lava flowing like a thick sluggish river as seen by daylight. But the most remarkable, and only thing of its kind ever secured, are his pictures of the lake of fire taken at night by its own light. The result is a reproduction, tinted in flame color, that is spectacular in the extreme. Only two copies of this film have been sent to the mainland, where they are being displayed by prominent lecturers, and are making a great hit In securing the pictures of the

WILL J. COOPER.

THE NEW TARIFF ON POST CARDS.

Various Post Card Manufacturers Send Statements to Ways and Means Committee on the Question—High Duty Assessed on Quality Rather Than Weight Seems to be the Concensus of Opinion—Some Interesting Suggestions Made in This Connection.

(Special to The Talking Machine World.)
Washington, D. C., Jan. 5, 1909.

Among the various statements received by the Committee on Ways and Means, which recently held sessions in this city for the purpose of getting information on which to base a new tariff bill to be introduced at the Congress immediately following the inauguration of W. H. Taft, a great many were received from American manufacturers of post cards. The following is a synopsis of the demands made by the respective concerns:

The Crescent Embossing Company, of Trenton, N. J., state in brief: "With the return of business prosperity now setting in, the manufacture of post cards, pictures, and calendars in this country can be developed wonderfully if foreign goods are made to pay a reasonable duty. The present duty on post cards is only 5 cents per pound, which is practically nothing on high-priced cards, as it amounts to but about 35 cents to 40 cents per 1,000, and it seems a shame that the post cards representing views of all American cities should be made almost entirely in Germany, as they are at present. We do not feel that the American manufacturers are going out of business if the tariff is not made more protective, but we do feel that a reasonable increase in the tariff, amounting to 25 cents to 35 cents per pound, would result in a wonderful development of the industry in this country."

The Gray Lithograph Company, of New York, also asked for a substantial increase in the duty on post cards, owing to the fact that most of the colored cards were being printed abroad where workmen receive from $5.00 to $8.00 a week as compared with $18.00 to $25.00 for the same class of work in the United States.

Gartner & Bender, of Chicago, stated "that a rate of 35 cents per pound would be desirable and proper protection for domestic manufacturers."

The Rose Company, of Philadelphia, stated that "During 1907, $2,600,000 worth of post cards were imported from Germany alone in one year at an average of $4.00 per thousand. The duty on these cards on a basis of eight pounds at 5 cents per pound or forty cents per thousand, would total $260,000, with the average cost to the manufacturer at $4.40 per thousand, or $2,860,000. If a duty of 50 per cent. were levied and only $520,000 worth of cards were imported the United States government would receive a revenue fully as large as it did receive during the time specified. It is certain that no matter what duty is levied many cards will be imported on account of the originality of design, the novelty of make-up, or some other attractive feature, and we think the above estimate a fair one."

The following manufacturers of post cards in San Francisco: Edward H. Mitchell, Britton & Rey, Schmidt Lithograph Company, The Union Lithograph Company, Galloway Lithographing Company, William Hagen, Louis Roesch Co., petitioned for a duty of one-fourth of one per cent. on each picture postal card, and stated that at the present time these cards have no distinct classification, the result being that no uniform duty is charged on them at the various ports of entry, adding, "A tax of a fixed amount on each card would be more satisfactory, as it would eliminate all question as to the exact process by which the cards were made, whether printed, lithographed, or made by both processes and would thus make it impossible to deceive inspectors."

The Detroit Publishing Company, of Detroit, Mich., after an extended history of the evolution of the post card industry, claim that in order to give the American manufacturer an equal chance with the foreign manufacturer, it would be necescary to impose a specific tax per card in addition to an ad valorem duty on same as exists in the present tariff on playing cards. They say further, "In that case there is a specific duty per pack of cards plus 20 per cent. In the case of the souvenir mailing card we think there should be a specific duty of not less than one-fourth cent per card ($2.50 per thousand cards) plus the highest percentage rate applied to other prints of the same medium in any size."

The Lithographers International Protective and Beneficial Association also presented an argument for higher tariff on post cards and other lithographed matter. Letters of similar vein were received from the Chilton Printing Company, Philadelphia; Eugene A. Behr, 29 Mercer, street, New York, and J. C. Marble & Son, Mangum, Okla.

Among those who filed briefs in opposition to any increase in tariff rates are V. L. Johnson, of Germantown, who claimed that American post cards were inferior and that the foreign cards were necessary for the retailer to transact a successful business in this country.

CHILDREN AND PICTURE SONGS.

A Man With a Family Thinks the Songs Want Censoring, Too.

A man with a family, who has attended more than a thousand moving-picture shows in this city, pointed out the other day that there was one feature of the entertainment which has escaped attention, but which was just as demoralizing to the children as the pictures shown. This feature was the illustrated songs.

"The men who conduct the moving-picture shows," he said, "have always been on the watch to keep the moving pictures clean. The American makers of the pictures will not take any 'plot' for a picture show that portrays crime in any form, or in which vice is triumphant. The French pictures, however, show such scenes.

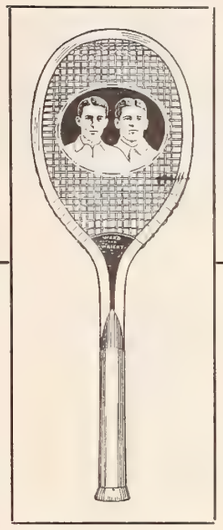
"There has not been such care apparently in the selection of the illustrated songs, which are an important part of the program in that class of amusement places. As the songs are sung the scenes are thrown upon the screen. Some of these songs are highly offensive to good taste, not to say decency, both in the words and in the scenes shown.

"Not long ago I went into a 'show' where there were fifty children. After a harmless and humor-provoking series of moving pictures a young man got up and sang in a cracked voice one of these offensive songs, while equally objectionable pictures were flashed for the entertainment of that juvenile band. The scenes were in a saloon, and showed men and women carousing together. They were offensive to the eye, but the words of the song ought to have attracted the censor to them before ever they were illustrated and sent out to corrupt the young.

"No series of pictures that I have seen have ever been directly indecent. They are watched too carefully for that; but as a matter of fact they furnish a too advanced course of education for very young children."

PAYS TO MENTION THE PRICE.

"Whatever you put into your windows, put the price on it," says a well known writer. "To fail to do this is to take about 50 per cent. off the value of the display. The window displays are to make money for you. To do that they must sell the goods; to sell the goods they must have the prices on them. There is no getting around the fact that nine hundred and ninety-nine people in a thousand like to walk into a store and say, 'I'll take that,' without having to ask what it costs and perhaps back down if the price is too high. Men are even more that way than women. It makes the average man feel about seven feet high to be able to buy things that way."



WRIGHT & DITSON

LAWN TENNIS GOODS

Dealers in Talking Machines who want to add a profitable side line to their business should put in a full line of Wright & Ditson's specialties. There is a splendid margin of profit, particularly on the rackets. The Wright & Ditson Lawn Tennis goods are the best known and are the best.

Our balls are used in all National Championships of the United States Lawn Tennis Association, and all the Champions use the Wright & Ditson rackets.

We supply catalogues free with dealers' imprint.

Correspondence solicited; send for catalogue and prices.

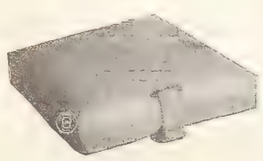
A. J. REACH COMPANY

DEPARTMENT A PHILADELPHIA, PENNA.



BILLIKEN, GROUCH-DISPELLER.

One of the Greatest Sellers of the Day—It Forces Joy Into the Home of Its Possessor.

Once in a blue moon some super-enterprising genius hits upon some little, simple, really ridiculous thing, which, by a freak of fate, or fortune, or perhaps just plain, ordinary, bull-headed luck, makes a hit which is the only original "loud noise."

Not often, however, does it happen that anything produces the stir and elicits the instant interest that have been occasioned by "Billiken," a grinning, hideous, atrociously mirth provoking little pseudo-Japanese image, red of hair and expansive of countenance, and though ugly enough in all conscience to startle a Hindu idol-worshipper, withal so ludicrous as to provoke a smile from the most confirmed old grouch who ever looked a pepsin tablet in the face.

Of all psychology, that governing our superstitions is perhaps the least understood. Omens, signs, and mascots seem to appeal alike to the ignorant and the educated, the young and the old.

Billiken is a mascot, the "God-of-things-as-they-ought-to-be," and maybe that has much to do with

his popularity. However, be the cause what it may, the fact remains that he has achieved a degree of publicity wonderful to contemplate.

Billiken songs, Billiken cartoons, stories of Billiken—Billiken in humorous vein and Billiken as the leading exponent of the Gospel of Good—Billiken in the library, the office, the department store or the railroad train. Billiken sleeping, waking, sober, drunk, industrious, lazy, but Billiken, Billiken, Billiken, as much in evidence as the mosquitoes in Jersey or the culture in Boston.

The press has accorded him his full share of space. He has been discussed at great length, and from every standpoint. Now, it being held that he encourages idolatry, anon, that he promotes Christian feelings, and so on through every possible phase and aspect of the subject, with the same earnestness, for the most part, as would be accorded to an international peace congress or the age of Ann.

In short, Billiken seems to be the season's only original I-T, IT, and to have "arrived with both feet."

He may be had either seated upon his ivory throne or without it, in sizes from decided miniature up to colossal hugeness, but either way, big or little, he may be depended upon to climb off your shelves with neatness and despatch, not to say alacrity. Why not—he's the epitome of Good Luck?

To be happy one must keep busy. There is no joy in idleness which goes further than rest and becomes one's profession.

PROFIT IN PHOTOGRAPHIC GOODS.

Sale of Cameras as a Side Line Means Steady Trade in Supplies—Summer the Best Season—The Possibilities in Handling Such a Line.

The retailer looking for a profitable side line cannot do better than investigate the possibilities of building up a trade in cameras and photographic materials in his particular locality. The leading makes of these goods are kept before the public by means of liberal advertising in the general magazines, and the dealer has only to acquaint his own trade with the fact that he handles such makes to attract business. And the competition is of the cleanest as prices are set by agreement, and it fares ill with the dealer who attempts to sell a camera below the stipulated price. Quality and possibilities therefore constitute the sole selling arguments, price being left out entirely.

Another feature worth noting is that a sale of a camera means necessarily many more sales of plates or films, developing and printing materials and various specialties in connection therewith. Then, too, visitors to the city frequently find it necessary to get fresh plates or films, and especially in summer this transient trade amounts to a considerable figure.

Rather than being an expensive luxury photography is now the amusement of the masses, for with kodaks and cameras selling at from $1 up, and with which highly satisfactory results can be obtained, there is no one too poor to enjoy the pleasures of the art. And a camera sale today means that the purchaser will be a regular customer next year, and in fact for years to come, thus proving the basis for an established and ever-growing trade.

PROTEST OVERRULED BY APPRAISERS

New York Importers Protest Against the Classification of Post Cards Under Paragraph 403—An Interesting Statement as to the Board's Stand in the Matter of Post Card Classification—General Appraiser Fischer's Ruling.

(Special to The Talking Machine World.)
Washington, D. C., Jan. 2, 1909.

Hensel, Buckman & Lorbacher, et al, of New York, lodged a protest with the Board of General Appraisers against the classification of post cards under Paragraph 403, Tariff Act of 1907, relating to printed matter. In over-ruling this protest General Appraiser Fischer said:

"The merchandise consists of a variety of elaborately made private mailing or souvenir post cards, made either wholly of paper of more than one thickness or of paper in single thickness combined with silk, wood, celluloid, etc. * * * The Board has held that articles of similar character to those here in question, manufactured wholly of paper in more than one thickness or of a single thickness, with silk or other material attached thereto, although some incidental printing appeared thereon, were dutiable as manufacturers of paper or silk rather than as printed matter. In these cases no new issue is raised, and the exhibits disclose merchandise differing in no essential particular from that considered in G. A. 6,547 (T. D. 27,935).

"There have been other and numerous rulings of the courts and this Board wherein articles of paper, though elaborately printed, have been held to be manufactures of paper against a contention that they were printed matter. As we view the exhibits in these cases now under consideration, we are of the opinion that the printing present on the cards should not in any way affect the status of the articles for purposes of tariff classification. We do not regard the printed matter as forming either a necessary or substantial part of the completed cards, and we think it should not determine the classification of the article of which it forms an immaterial part. The articles are not in the nature of material, ground or surface, upon which certain printing is to be exhibited, but as evidenced by the samples these silk, wood, celluloid, or paper cards are in most part elaborately embossed with designs or lettering, and colored by a spraying process.

"Regarding the printing, then, of secondary importance, these cards must assuredly be relegated to the provisons for manufactures of the various materials used in their construction. Coloring matter applied to a mat or screen does not necessarily cause such articles to become paintings. Lace paper tops, dollies, etc., although the actual quantity of printing on them much exceeds that on these post cards, are not printed matter. Lithographically printed wall pockets made by mounting lithographic prints on cardboard, then cut out and embossed, are not lithographic prints not printed matter, but manufactures of paper. Post cards composed of paper and soft rubber are dutiable as manufactures of paper. The cards passed on were printed cards on paper of single thickness, and were not further manipulated or mounted on another card afterwards.

"We may state here that under the postal laws and regulations it is not necessary to print on these private mailing cards the inscription 'post card.' In most of these exhibits, this inscription printed in different languages appears on a thin sheet of paper which is made to adhere to the embossed and sprayed silk, wood, celluloid, or other more substantial part of the completed article, and the part which is of least value should not govern the more valuable portion. To hold otherwise would permit any article to become printed matter by attaching thereto a sheet of paper on which the inscription 'post card' is printed."

LOYALTY—AS AN EMPLOYE SEES IT.

Loyalty in Business Should Not be Confined to Employe—What an Employer Owes His Men.

A well-known manager of a talking machine and sporting goods house in discussing the best method of increasing the efficiency of a force of salesmen said: "I have read hundreds of articles, chiefly written by theorists and heads of large establishments, upon the subject of 'Loyalty,' and, to be frank, about two-thirds of them nauseate me.

"These writers are very enthusiastic in ascribing loyalty as one of the prime requisites of an employe, how it means success and advancement and the appreciation of the powers that be. All very fine sentiments, to be sure, but is loyalty necessarily confined to one side of the business family?

"An employe is expected out of loyalty to make his own interests secondary to those of his employer, but does the employer ever think of the golden rule in that connection. Does he always give careful attention to his employe's interest? Not on your life.

"As a case in point I can cite an instance which occurred in a store not far from New York. A certain salesman had labored hard and faithfully for the house for several years, but when the assistant manager quit he was overlooked and a loud mouthed stranger was taken on to fill the vacant position. It developed that he was mostly bluff and he lasted just six weeks.

"Meanwhile the salesman who had worked quietly rather than boasted of what he could do, got disgusted and secured a better paying and more responsible position with a competing house, where he is making good, quite to the dismay of his former employer.

"How much better it would have been if the salesman had been given credit for having some brains and ability, or in other words, if his employer had been loyal to him all hands would have profited to a considerable extent. You can't tell how fast a horse can trot till you try him, and you can't tell how much a man can do until you give him the opportunity.

"Turn about is fair play and the employer who passes his old men by for outsiders because he is afraid to give them a fair trial under additional responsibility, is certainly not the one to hold up his hands with a pious air and prate about loyalty and what an employe owes to the man who pays him his salary. A salaried man generally exchanges more than the equivalent in work for the salary obtained anyhow."

PIERCE BICYCLES

Of Interest to Talking Machine Dealers

Pierce Agents wanted in every city, town and hamlet

Aside from regular bicycle dealers none can handle bicycles to better advantage than the Talking Machine or Sporting Goods trade. Beware of handling a *dead* line, however. You want the best that modern factory methods can produce and a brand that is known to the public. *Pierce* bicycles have always stood out ahead of any other make and they are made better today than ever in the past. As for reputation, the Pierce name is known everywhere and it is always associated with quality.

Assuredly you wish to *increase the profits* of your business especially when it can be done with little expense or trouble. If you will write us, we will make available to you the *best proposition ever offered to the trade.*

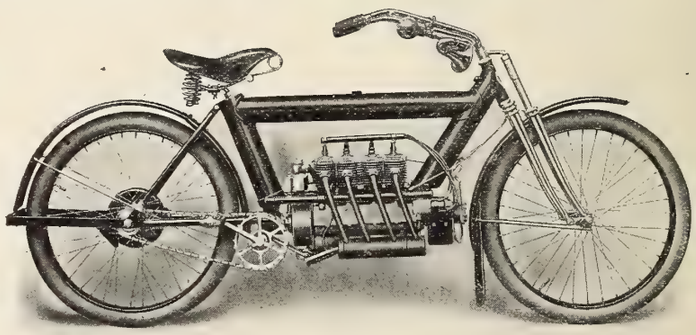
Send for 1909 catalog illustrating cushion frames, racers, roadsters and heavy service models.

THE PIERCE VIBRATIONLESS MOTORCYCLE

The only machine in the world without separate tanks. The only American made 4-cylinder, shaft drive machine.

The Pierce Vibrationless is in advance of all other motorcycles in many features.

Send for booklet which gives the whole story.



Wherever Talking Machines or Sporting Goods can be sold, there is a market for the four-cylinder Pierce. Not in large centers only, but everywhere the demand exists for this remarkable machine. So many orders have been received up to date, that our 1909 production is all but exhausted. Why sell a bicycle with a motor attached when you can have the agency for the only *real* motorcycle on the market?

A PROFITABLE COMBINATION

The combined agency of Pierce bicycles and the Motorcycle is a business in itself. Some dealers have no other resource, handling Pierce products exclusively. When you can secure such an asset *as a part of your business*, isn't it worth while to investigate? We shall be glad to quote you a proposition well worth knowing.

THE PIERCE CYCLE COMPANY

30 Hanover St., Buffalo, N. Y. **Branches: Oakland, Cal., and Denver**

CONDITIONS ARE SETTLED.

Business Prospects Excellent for the Year Says Alfred D. Engelhardt—Says the Sifting Process Has Made Present Conditions Secure.

Alfred D. Engelhardt, resident manager of the firm of F. Engelhardt & Sons, manufacturers of coin-operating pianos, St. Johnsville, New York, remarked:

"I view the business outlook for the new year in a most optimistic manner. It seems to me that trade in all lines must profit materially as a result of settled conditions. Certainly, there is no year that I can recall when we have started out with brighter prospects ahead, and I

ALFRED D. ENGELHARDT.

believe that we are going to have four years of unprecedented prosperity.

"There has been a good deal of a sifting process during the past twelve or fifteen months, and the country to-day is in a position to justify the most sanguine expectations as to business for the new year.

"I am confident that dealers in every line of business will feel the inspiring effect of better conditions. We are running our big factories on full time, and we have a good many advance orders. We are manufacturing a line of instruments which to my mind can be handled with profit by wide-awake merchants in those sections of the country where we are not already represented.

"It seems to me that the more side lines that dealers handle the better their prospects for trade will be. They have more than one string to their bow, so to speak, and when sales stop in one particular line they can place emphasis on the other lines and thus help out in the money-making powers of the enterprise."

THE REFLECTOGRAPH.

One of the Novelties Offered by Chas. W. Mayer of Interest to Dealers Handling Side-Lines—Adds to the Value of the Post Card Collection and Helps Sales.

Talking machine men will find a number of interesting offers in the announcement of Charles W. Mayer, of Rochester, N. Y., which appears on an adjoining page in this section. This enterprising man has by the excellence of his product built up an extensive trade in all parts of the world, and to-day is the largest manufacturer of post cards racks in the United States. The success of a post card department to a large degree depends on the manner in which the cards are displayed. There are good racks and there are decidedly poor racks and anyone desiring the best cannot go wrong by going to headquarters for the goods.

The Reflectograph is one of this firm's latter productions, and is certainly making a record for itself. This machine is not only a quick selling novelty in itself, but its sale greatly stimulates the demand for post cards. It is an ideal side line for talking machine firms, as through its use in connection with the talking machine, illustrated songs are made possible in every home.

FILM SERVICE ASSOCIATION MEET

At Hotel Imperial on January 9—Leading Manufacturers Organize the Motion Picture Patents Co.—To Discontinue Sale of Films Outright and Keep Control of Patent Rights for Renting Purposes—Details of the New Arrangement—Hoped to do Away With the Constant Litigation.

At the meeting of the Film Service Association, in which practically every State in the Union was represented, at the Hotel Imperial, January 9, the organization of the Motion Picture Patents Co. was ratified. The sale of films outright, hitherto the practice, will be abandoned, but the manufacturers in the foregoing company, who include the largest and leading concerns, have agreed to license renting exchanges that acknowledge the patent rights above set forth. An average royalty of $2 a week is to be paid for the privilege of each machine used, to be collected by the company. There are between 9,000 and 12,000 film exchanges in the country, and the granting of future license is to be entirely in the hands of the Motion Picture Patents Co.

The following officers of the Film Service Association were elected for the ensuing term: William Swanson, of Chicago, president; Carl Laemle, of Chicago, vice-president; Herbert Miles, of New York, secretary; Robert Lieber, of Indianapolis, treasurer. The executive committee includes: A. G. Gillingham, of Grand Rapids, Mich.; William F. Steiner and William F. Fox, of New York. The association's offices will be at 10 Fifth avenue, New York.

In response to an inquiry of The World, Frank L. Dyer, president of the National Phonograph Co., Orange, N. J., furnished the subjoined facts concerning the new arrangement of the principal factors of the motion picture manufacturing interests in America:

"All of the patents known by experts and authorities to have an important bearing on the manufacture of motion pictures and projecting machines have been purchased by a new concern, incorporated as the Motion Picture Patents Co., of which the following are the officers: President, Frank L. Dyer; vice-president, H. N. Marvin; treasurer, J. J. Kennedy; secretary, George F. Scull. It will be noted that the president and secretary are connected with the Edison Mfg. Co., while the vice-president and treasurer are from the American Mutoscope & Biograph Co. The capital of the new company is not announced, but its purpose is known to be the general betterment of the entire business from the manufacturer to the exhibitor.

"The licensees of the Motion Picture Patents Co. are as follows: Edison Mfg. Co., American Mutoscope & Biograph Co., Pathé Frères, George Melies Co. and the Vitagraph Co., of America, all of New York; Kalem Co., Inc., Essanay Co., Selig Polyscope Co. and the Kleine Optical Co., of Chicago; Lubin Mfg. Co., of Philadelphia, Pa. Motion pictures manufactured under the license of the Motion Picture Patents Co. will be leased, and not sold, and will be subject to return to the various manufacturers at stated intervals.

"Licensed motion pictures will be leased for use only on projecting machines which are also licensed by the Motion Picture Patents Co. There will be a nominal license fee to be paid by each exhibitor and the funds thus raised will be used in promoting the best interests of the business. None of the officers of the Motion Picture Patents Co. are salaried.

"It is hoped by this movement to do away with the vexatious litigation which has long harassed the business, to guarantee to the renters and the exhibitors a sufficient quantity of the best American and foreign films and to prevent the demoralized state of affairs which now prevails abroad, where no organization exists. All the licensees of the new Patents Co. must compete for the business of the country on their own merits. All of the licensees are manufacturers except George Kleine, Kleine Optical Co., who, as is well known, is the American representative of several of the best known and most meritorious of the foreign manufacturers. No increase in price of films is contemplated.

"Among the prominent patents which have been purchased—in addition to those of the Edison Co., and the Biograph Co.—may be mentioned the Armat patents, which are said to control projecting machines; the Jenkins patents, the Pross patents, the Vitagraph patents and the Campbell patent. The new license agreement went into effect January 1, 1909."

ROLLER SKATE POPULARITY

Grows With the Years—A Profitable Side Line for Progressive Dealers—Some Facts in This Connection of Interest to Readers.

The history of roller skating dates back to about 1880, at which time there was a very decided fad in this sport developed, which lasted until about 1886. At this time the skates were used in rinks exclusively. From 1886 to about 1900 there was very little roller skating done. About this time, however, the skates begun to be used by children on the sidewalks and asphalt streets in the large cities where asphalt pavements were laid to a considerable extent, and with the adoption of the asphalt pavement and better sidewalks in smaller towns, the skate has come into universal use.

The general popularity of skating on sidewalks grew to such an extent that about 1903 the roller skating rink again made its appearance, and rinks were opened in almost every town with a population of five thousand or more in the United States. A great many of these rinks are still running and are very popular.

The rink roller skating does not, however, affect the sidewalk skating in any way, for the reason that most of the skating done on sidewalks is by smaller children who would not patronize the rinks.

The improvement in roller skates during the last thirty years has been very great, and skates may be divided into four general classes, i. e., skates which are made particularly for use in rinks, and which are kept for rent. These are heavy strong skates; the extension pattern fitted with ball bearings, and designed for use of private owners who wish their own skates for use in the rinks; extension pattern skates with plain bearings, to be used by children on sidewalks and very small extension pattern skates with plain bearings to be used by smaller children.

The Union Hardware Co., of Torrington, Conn., incorporated in 1864, are among the largest manufacturers of these goods. For dealers contemplating adding this line, this company's special assortment of 100 pairs of best selling skates for $100, is worthy of attention; it consists of 20 pairs No. 2280, 5 pairs No. 2380, 16 pairs No. 11 steel, 30 pairs No. 12 steel, 11 pairs No. 5 steel, and 18 pairs No. 6 steel. The Union Hardware Co. will be very glad indeed to furnish information concerning roller skates as a side line upon receipt of request from jobbers or dealers.

KNOW YOUR GOODS.

It makes not the least difference in the world whether or not you are selling tin pans or pianos, if you do not know the goods, you cannot sell them successfully

Upon the arrival of a shipment at your store, every new article should be gone over critically and its advantages, or attractions, for the consumer carefully noted.

And the salespeople should be made to understand how to use these talking points to the best selling advantage.

You cannot expect people to buy your wares unless they are shown why they should buy them.

It is not enough that you should merely satisfy demands—you must create them.

You will sell more goods, and you will sell them at a greater profit, when everyone in your store thoroughly knows the things you offer for sale,

A MOST PROFITABLE SIDE LINE

THE MAYER REFLECTOGRAPH

THE MOST NOVEL, AMUSING, FASCINATING, ENTERTAINING AND INSTRUCTIVE PROJECTING DEVICE FOR YOUNG AND OLD THAT HAS EVER BEEN PLACED BEFORE THE PUBLIC!

WHAT IT WILL DO!

JUST THINK! You can take an ordinary picture post card, a photograph, or any opaque picture; place it in the "REFLECTOGRAPH" and the picture will be reproduced, life-size, with all the colorings of the original, on a sheet from 6 to 8 feet square. While it will do anything and more than a magic lantern will, it does away with the inconvenient and expensive glass slides. The cost is within the reach of the most humble. An evening entertainment can be given in any home by showing a collection of post cards and photographs through the "REFLECTOGRAPH." This magnificent device is made for use of either Acetylene, Gas or Electricity. It is perfectly safe for use in any home, and so easy to operate that a child can manipulate it.

Agencies Wanted in All Countries :: Liberal Discount to the Trade

DESCRIPTION: Height, 15 inches; Length, 13 inches. Made of Heavy Tin Plate and Steel. Finished in Black Enamel with Gold Panels.

BEST TIGER'S EYE LENSES

PRICES: Acetylene, $4.00; Gas, $4.00; Electricity, $4.00 Complete ready to run

Packed Separately In Strong Wooden Box

17 Styles Post Card Display Racks at Lowest Prices

LARGEST OUTPUT IN THE UNITED STATES

MAYER'S REVOLVING CARD RACK

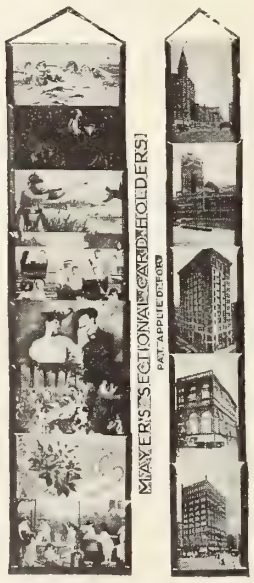
THE ONLY COLLAPSIBLE RACK OF THIS DESCRIPTION MADE HAS 50 POCKETS—HOLDS 1,500 CARDS

Height, 28 inches. Width, 11 inches. Packed in box K. H., 4x6x24; weight, 9 pounds.

This rack is a winner with both dealers and jobbers, and ships in one-third the amount of space as formerly, has specially improved outer arm supports, which prevent arms from becoming broken. Is also fitted with handsome top frame and heavy sectional cast-iron base, which insures steadiness.

MAYER'S SECTIONAL CARD HOLDERS

are the only single pocket holders that frame the cards and lock together. They are being universally used by card

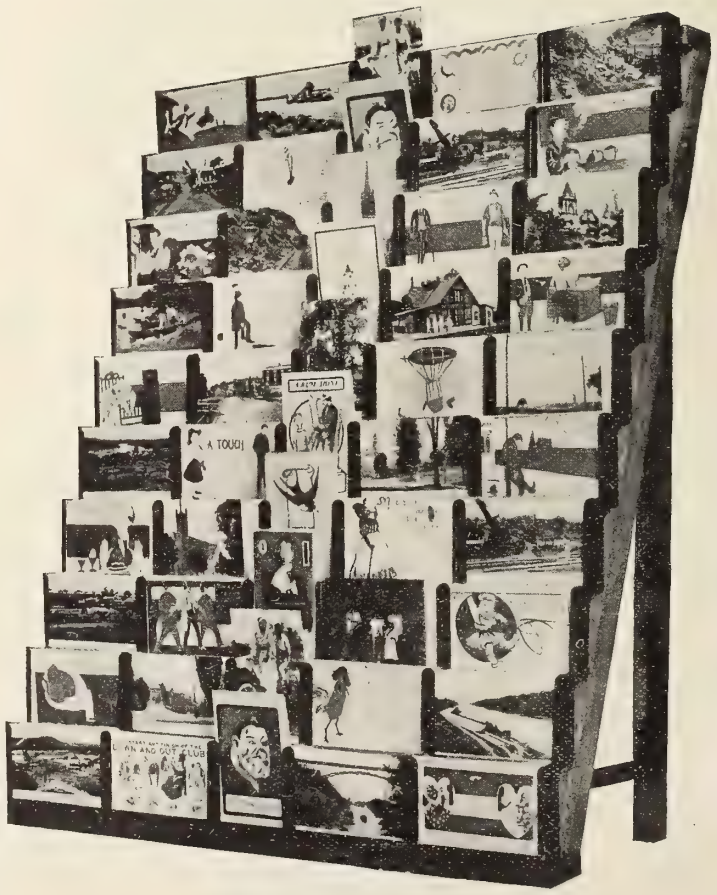


collectors for home use. Dealers find them superior to all other makes because they are mechanically correct; finely finished and can be hung to cover any amount of space.

THEY WILL NOT UNLOCK WHEN CARDS ARE REMOVED

Each section holds 40 cards, made of one piece steel plate and finished in baked enamel.

Packed 100 in a strong paste-board box. Ten boxes to a crate.



THE "ROCHESTER" OAK FRAME

Height, 35 inches. Width, 26 inches. Depth, 12 inches. Weight, crated, 20 pounds.

The Best Rack Made. Shows an Unobstructed View of the Entire Cards at a Glance and will Triple your Sales.

This rack displays 50 views, holding about 4,000 cards; made of heavy tin plate and steel and braced with oak supports; finished in black Japan and varnished.

The "Rochester" is constructed to fold up when used for out-door show, summer resorts and exhibitions, and can be easily carried, holding stock intact.

This rack is purposely designed to stand back to back, side by side, hung from the wall and in most any conceivable position to fit the space you have to spare.

to every devotee of the national sport. The Reach agency is worth a whole lot in your town and will mark you at once as an up-to-date and high-class store. They have some territory still open on a jobbing basis. Write early and don't lose this golden opportunity.

SELLING IN BYGONE DAYS.

Methods Adopted by Some of the Old Time Knights of the Grip Who in Their Peregrinations Used to Entertain a Whole Town—The Entertainment Feature Cut Out Nowadays.

"A salesman's life used to be a march of triumph compared to his existence nowadays," said the veteran specialty drummer to a little group of the fraternity gathered on the porch of an up-country hotel one night last week.

"I feel myself growing of less and less importance each year, as I make my trips and find that instead of the happy-go-lucky spendthrift of twenty-five years ago, whose entrance into a town was the signal to the storekeeper for a gala night at the village hotel (says August Carleton in The Traveling Man), I am hustling for trade day after day, and having each expense item scrutinized by a member of the firm. It galls me to have to make out an itemized expense account. My territory used to cover fifteen states, and sometimes visits were a year apart. Those were the times when a drummer could have his samples shipped to a hotel and invite the trade of the town in his line to come and inspect his wares. While the storekeepers were partaking of the best the house afforded at my expense, I could play the part of genial host, and when the conviviality was at its height, land every one of them for good sized orders. Not in these times, gentlemen, not much! Catch any storekeeper now putting himself to the trouble of calling at a hotel to inspect samples! If the salesman's case be as large as a Saratoga trunk it must be carried to the store, and every means and argument used to persuade the buyer to give an insignificant order. Another thing is making the trade more independent of the traveling salesman.

"Twenty-five years ago most of the drummers started from New York, Philadelphia or Boston. Now every town of importance has its wholesale house, and their representatives reach every village and hamlet at regular intervals. This waiting on the storekeepers has completely turned their heads, and instead of looking forward to a salesman's visit with a general line and reserving orders for him, a dozen traveling men a day are soliciting their orders on each individual specialty.

"No such prices, either, as we used to get, boys," continued the veteran, lighting a fresh cigar. "Why, if trade was good, my house could simply smile at an expense account that included theater parties, big dinners for a dozen, and a good time with storekeepers, where wine flowed like water, and Havanas went by the box. But now a little extra car fare, or livery hire, brings a sharp letter to curtail expenses. There used to be some pretty tall hustling when two of us in the same line struck a town at the same time. Then it was a question of entertaining and spending money to see who would get the orders. Those countrymen knew how to take all they could get. I remember one occasion when a rival drummer from a Boston house landed about the same time I did in an Eastern Pennsylvania town. There were about a dozen good stores in the locality and it was nip and tuck who won the palm. We both handled sundries of a similar grade and such talk as you fellows use about quality, advertising and World's Fair premiums did not cut any figure then. Get the storekeeper pat and the order followed. The Boston man opened the ball with a dinner and big time at the local hotel, and I followed with a stage ride and clam-bake next night. Still no orders. The Boston man made gifts of fancy pictures to the storekeepers' wives and promised some elaborate fixtures to the men for their stores. This nearly swamped me, but salvation came in the shape of the annual visit of the circus to town. I took the whole crowd, men, women and children, to the show. Dan Rice was the clown, I think. By an exchange of some of Uncle Sam's greenbacks, I induced him while in the ring to crack a few jokes on the Boston man's goods and root for mine. The storekeepers caught on and guyed the other fellow terribly. He was in the tent and looked sick as a wet cat. After the show they crowded around me like a flock of chickens. I filled the women and children with popcorn and red lemonade and bundled them off home. What a night I put in with those storekeepers at the hotel. When they were full of fire water and enthusiasm I commenced taking orders. A week later, before they were hardly over the effects of that racket, a solid carload of our goods was sidetracked at their nearest shipping depot. The firm nearly had a fit over the expense account, but with the order they were somewhat pacified. Now, compare those methods with those of to-day, and you will know why I feel a common, every day peddler. I arrive in town, take my grip and respectfully enter a store and even more humbly ask for an audience. Like a king the shopkeeper curtly informs me that his stock is amply supplied. If he does need anything in my line the orders are generally trifling and the price is so low that the margin of profit amounts to nothing. Each one of you boys sell some specialty that I used to carry in a general line. If I should mention a dinner or even a cigar to some prospective buyer nowadays my cause is doomed. 'No bribery here, sir!' is hurled at me. There is not the ghost of a show getting any better prices such as we used to. Local salesmen keep the buyer posted, while price lists from all over the country are received in the mail."

THE FIGURES TELL THE STORY.

While somewhat startling, the announcement of the Card Printer Co. in this issue, is based on fact. The figures having been compiled from records kept of these machines during the past two years, while in actual use, supplying as it does a universal necessity. The Card Printer is one of the biggest money-makers ever brought out in the slot machine industry, and, unlike the novelty devices, its attraction for the public is a permanent one. Talking machine men everywhere should write them at once.

MOVING PICTURE POSSIBILITIES.

Mr. Edison is experimenting with cinematograph films in color, but has not yet been able to overcome the difficulty of photographing red, and it cannot be done instantaneously. He is completing his simultaneous cinematograph and phonograph, and says that he finds no difficulty in making figures and voices act at the same moment, but there is difficulty in the perfection of the illusion. If the speaking apparatus is too close to the moving picture the effect of the voice is artificial. At present he is obliged to remove the phonograph some 100 feet behind the cinematograph.

The difficulty will be overcome, and Mr. Edison believes that in a few years every village in the world will be provided with its own cinematograph-phonograph theater, and this will be one means by which, Mr. Edison says, in combination with cheap houses and cheap transport, in the study of which Mr. Edison is also engaged, the great towns will be broken up and the population scattered back to the land.

J. CHAS. GROSHUT

Now Affiliated With the Manufacturers' Outlet Co.—J. S. Meng Becomes a Director.

J. Charles Groshut, for many years secretary of the Edwin A. Denham Co., has been elected secretary and treasurer of the well-known firm of the Manufacturers' Outlet Co., 271 Broadway, New York, of which W. L. Eckhardt is president, and he will devote his energies toward the further advancement of the firm in general.

J. S. Meng, head of the well-known banking establishment of Henry Bishoff & Co., has also been elected a director of the Manufacturers' Outlet Co.

This firm, having grown with such leaps and bounds during the past six months, will, at a very early date, move into more commodious quarters, which are now being fitted for their requirements.

The Manufacturers Outlet Co. are selling agents for The Acetograph, Cremona Pianos, Peerless Talking Machines, Rossmassler-Bonine Electric Motors, etc., besides being manufacturers of the well-known Peerless Suction Cleaners.

A SELLING SYSTEM.

Kohler & Campbell Have a Selling Plan Which Will Interest Dealers.

Talking machine dealers who are looking for widening business possibilities will do well to examine the announcement made by Kohler & Campbell, the well-known piano manufacturers of New York. They have a piano selling system which is meeting with wonderful success in trade building in various parts of the country.

The regular representatives of this concern have expressed great enthusiasm over the possibilities of this plan, and it would be a capital idea for talking machine men to address a communication to this company requesting special information as to how this plan will work with talking machine dealers who are contemplating taking on pianos.

AN OFFER WORTH CONSIDERING.

The American News Co., of this city, are making a special offer to this trade in their advertisement which appears on the inside front cover of this section, which will be of interest to all talking machine firms looking for live side lines. Beside being the largest publishers of view cards in North America, this company are direct agents for all the leading publishers in the world. Their stock includes every known card of merit, and buying as they do, in enormous quantities, they can quote rock bottom prices on all lines. Our readers should not fail to send for their complete catalog and vital hints on the successful handling of these goods.

There is displayed in front of a concern in Murray street, New York, the following sign: "If you don't buy here, we both lose money."

It takes a live fish to swim up stream. Any old lobster can float down.

Salesmanship is the fine art of knowing a thing thoroughly and telling about it intelligently.

THE PEERLESS SUCTION CLEANER
IS THE IDEAL MACHINE FOR HOME USE

A house cleaned every day with a broom is never clean, as the dirt rises to settle again. A weekly cleaning with the **Peerless** by the suction process is more effective and surely more healthful.

Brooms, brushes and carpet sweepers are harmful in their effect on rugs, carpets and draperies. **The Peerless renews their life and color.**

It is difficult to use brooms and sweepers without much moving of furniture. The **Peerless** floor tools can be used under and behind all heavy pieces without moving them. Daily or weekly cleaning by the ordinary method does not save the semi-annual house cleaning, with rugs, carpets and draperies removed for their usual "whipping." **With the Peerless, semi-annual cleanings are unknown.**

Dirty carpets and rugs breed vermin, germs, odor and disease.

Brushes, brooms and sweepers force a part of the dirt further in—the **Peerless takes it out.**

Brushes, brooms and sweepers distribute a part of the dirt over the furniture and draperies, also through the air you breathe. **The Peerless removes it entirely.**

With brushes, brooms and sweepers the same dirt is handled repeatedly. **With the Peerless the dirt is handled but once.**

Dirt may be present although hidden in the fabric of your rugs and carpets. The **Peerless Cleaner cleans the fabric.** It is not superficial but goes to the bottom.

Cracks and crevices impossible of access with brooms, brushes and carpet sweepers are easily cleaned with the **Peerless** which removes all roaches, bugs and germs concealed.

In the store and office as well as in the home the **Peerless Suction Cleaner** is a great time, labor and money saver. Talking machine men will find it of especial value in keeping their stock clean and salable.

Peerless Cleaners are easily carried from room to room and every machine is guaranteed against defects in material or workmanship.

SPECIFICATIONS :

THE PEERLESS SUCTION CLEANER AGENCY

THE IDEAL SIDE LINE

The talking machine business is one that depends to a large degree for its custom on the women folk—they are the purchasers.

Here is something that will appeal to each and every one of them, and what is more, on their most susceptible side, that of the Home and its proper management.

No one so fully realizes the immense amount of worry and care necessary to keep a home in a clean, bright and cheery condition, and anything that will not only give better satisfaction but will also decrease the work 75 per cent. will be greeted with spontaneous approval.

Handle the Peerless Suction Cleaner and Every Housekeeper in Your City or Town will Advertise it For You.

Easy to demonstrate and occupying but little floor space they make an ideal side line.

We Want You, Mr. Talking Machine Jobber or Dealer, to investigate this exceptional opportunity to broaden out and increase your earning capacity; we don't ask you to take our word about the Peerless, order a sample of each, electric and hand machine—test them thoroughly in your store, your office or your house, and when you are convinced of their utility and salability—write us concerning exclusive territorial rights and special discounts to agents.

SELLING POST CARDS FROM RACKS.

Customers Like to Wait on Themselves When Choosing Cards and Take Plenty of Time—Very Small Loss from Theft—How the Automatic Selling Idea Would Apply to Other Lines—A Suggestion Worth Considering.

Yesterday I was strolling through a big department store and saw something new. Down the center aisle were four very large revolving cases filled with souvenir post cards. On the top of each case was this sign: "Post cards, 1 cent; pay cashier."

Between the two center cases in this row was the cashier's desk.

Customers were swarming around the cases, and when one had chosen the cards he desired, he handed them to the cashier. She counted them and took the change.

No one paid attention to the selling of the cards, and the first thing the average merchant would ask is: "My! Wouldn't the people steal a lot?"

I don't know.

I know that that cashier had no time to watch for possible thieves, and I know that that firm had this system of selling postals figured down to a profitable basis.

If they didn't they wouldn't have done it that way.

The last time I was in that store they sold their post cards like any other merchandise—from behind the counter, with clerks to do the selling and wrappers to wrap them up and a cash carrier system to attend to the balance, says the Tramp in The Dry Goods Reporter.

I talked to a floorwalker, and he said they sold ten times as many cards as formerly and he thought it was because they let people pick them alone, so they would feel at liberty to take all the time to it they cared to. He thought that when clerks were in attendance on the sale of penny articles that the customers felt that they were taking up too much of the clerk's time for such small sales, and consequently walked away before buying as many as they would have done should they have been allowed to shop alone.

There is something in the floorwalker's argument, and it strikes me that the same could be done with many lines of low-price notions throughout the store.

The price need not be a penny for each article; let it run up to 5 cents, say.

Call it "Our Penny Counter." No article on this counter for more than 5 cents. Make your selections and pay the cashier.

Lay off this counter in square bins and fill each bin with goods at one price for choice, and have a price-ticket on each bin.

Have a girl to take in change and keep the stock in order and be pleasant.

But don't let her attend any customer who is shopping.

Let the goods and prices sell themselves.

You could fix up a whole of a counter of this kind right from your present stock.

You can pick goods for this purpose out of your home goods, hosiery, jewelry, neckwear, ribbons, ruching, laces, handkerchiefs and hundreds of items from the notion counter.

If it worked well you could get busy buying goods a purpose for it.

Would it work?

I don't know.

This is just a theory of mine. Maybe you can add to it.

Everything that ever did work was a theory first.

DEMAND FOR DRUMS AND TRAPS

Created by the Moving Picture Show—How the Drummer Helps the Pictures.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 10, 1909.

The moving picture business in its latest development is creating an immense demand for drums and traps. When the five cent theatres first began to blossom in Chicago, their musical equipment consisted, as a rule, of an electric piano, which kept things stirred up during the intermission, and a talking machine which did the illustrated song stunt. As competition increased singers were employed to accompany the song slides, and this required, of course, a real piano and a real pianist. The next step adopted by one or two of the big down town shows was an orchestra of four or five pieces. This proved too expensive, however, and it was reduced to piano and drum. This equipment furnishes plenty of noise and the drummer can imitate the various rough house stunts depicted by the films, such as collapse of a building, the tumble of a hero from the seventh story window, etc. The patter of a horse's hoofs as the steed bears its rider to the rescue of the villain-persued heroine, the merry shuffling of the feet of the southern nigger in a plantation break-down, the squeak of a pig as he wobbles away from a murderous-looking farmer's wife, all give the overworked drummer additional labor for the same money and create a demand for traps. "Almost every new film brings the moving picture people skirmishing over here for additional auxiliaries for the drum man," said a salesman for a small goods house this week. "Practically all the shows are using the drummer as the principal part of their equipment now and he keeps us wiring east to keep up with the demand."

POSITIVENESS IN CHARACTER.

We should all endeavor to acquire a positiveness and strength of character so that those with whom we come in contact will feel an enlightening and encouraging influence. There are many human beings in this wide world who need a sustaining and agreeable personality cast about them in order to develop into charming men and women.

Said an old merchant to his son: "When you are tempted to write a letter on impulse, write it. Make it as hot as you can. But don't mail it until the next day. Nine times out of ten you won't mail it at all."

MOVING PICTURE MANUFACTURERS' VIEWS ON TARIFF

Present Interesting Statement Before Ways and Means Committee Describing the Method of Production and the Growth and Importance of the Industry—Those Who Control the Production—80 Per Cent. of Films Used Are Made in This Country—The Present Duty and Its Uncertainty—Duty of 45 Per Cent. Ad Valorem Asked For.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 4, 1909.

At the recent tariff hearings by the committee on Ways and Means, held in this city, the manufacturers of moving pictures presented the following statement regarding duties on moving picture machines:

GENTLEMEN: We, the undersigned, manufacturers of moving pictures, address the committee on behalf of the moving picture manufacturing industry of this country.

Moving pictures are of comparatively recent origin, and at the date of the tariff act in 1897 they were known only to a very limited extent and not considered an important article of commerce. At that time the pictures were usually viewed directly in a coin-operated machine, whereas at the present time they are projected upon screens so as to be simultaneously viewed by hundreds of persons. It is true that to a very limited extent projecting machines were in use in this country in 1897, but such use was practically limited to a few foreign exhibitors and it has not been until very recent years that the industry has developed to an extensive size, although, as is well known, the art was first developed in his country by Mr. Edison a number of years before.

Because of these facts, moving pictures were not specifically provided for in the act of 1897, either as to the machines, which, like the magic lantern, project the pictures on a screen, or as to the pictures themselves, comprising very long strips of celluloid from 1 to 2,000 feet in length, and containing an enormous number of photographs of moving objects.

METHOD OF PRODUCTION.

The production of moving pictures is essentially an artistic work, the scenes being acted by trained performers before a moving picture camera containing sensitized negative film and in large studios having most of the accessories of a theater, and it was not unnatural, therefore, that the business should have found its first great development in France.

In recent years, however, the American manufacturers have very materially improved the quality of their output, so that the domestic pictures compare favorably with the best foreign productions.

Having obtained a suitable negative film in the studio, as explained, as many copies or positives are printed therefrom as may be necessary, and these copies or positives are sold by the manufacturers to various rental exchanges, by whom they are rented out from day to day to the many thousand 5-cent theaters or nickelodeons.

IMPORTANCE OF INDUSTRY.

At the present time, the business in this country, so far as manufacturing is concerned, is conducted by the following companies:

American Mutoscope and Biograph Co., whose studio is located in New York City, and whose printing and developing plant is located in Hoboken, N. J.; Edison Manufacturing Co., of Orange, N. J., whose studio is located near the Bronx Park, New York, N. Y., and whose developing and manufacturing plant is located at Orange, N. J.; Essanay Co., with a studio and printing and developing plant at Chicago, Ill.; Kalem Co., with a studio and printing and developing plant in New York City; S. Lubin, with a studio and printing and developing plant in Philadelphia; George Melies Co., whose studio is in Montreuil, France, and whose printing and developing plant is in New York City; Pathé Freres, whose studios are located at Paris, Vincennes and Montreuil, France, and whose printing and developing plant is located at Bound Brook, N. J.; Selig Polyscope Co., whose studio and plant are located at Chicago, Ill.; and the Vitagraph Co. of America, whose studio and plant are located near Brooklyn, N. Y.

These concerns comprise practically the entire manufacturing industry in this country, and turn out probably 99 per cent. of the moving pictures of American make. All of these concerns, with the exception of Pathé Freres and the George Melies Co., perform all of their manufacturing operations in this country, their studios being located here and the negatives pictures being manufactured at very great expense. In the case of Pathé Freres and the George Melies Co. the negatives are made in France and are exported into this country and positive prints manufactured from them here, but it is interesting to note that the celluloid films for both negatives and positives made by these companies are the products of the Eastman Kodak Co., of Rochester, N. Y., which supplies a very large part of the films used by foreign manufacturers for their own home consumption and for exportation to the United States.

Up to the past year considerably more than half of the moving pictures used in the United States were imported, but with the removal of the Pathé plant of this country in the summer of 1908 the large importations of films by them were stopped and an equivalent amount added to American manufacture, so that at the present time probably upward of 80 per cent. of the moving pictures used in this country are manufactured here.

The value of the actual investment at the present time in manufacturing plants in this country, excluding patents, trade-marks, and good will, is over $2,000,000, and between 1,000 and 2,000 employes are actually engaged in making the pictures, but the industry is developing rapidly and will, no doubt, in the future be very much larger.

COST OF AMERICAN MANUFACTURE.

At the present time the cost of moving pictures to the American manufacturers is not far from 6 cents per foot, the raw material purchased from the Eastman Kodak Co. costing 3 cents per foot, the cost of printing and developing and fixed charges amounting to about 1 cent per foot, the remaining 2 cents being taken up in the cost of manufacturing the negative. Of course, the cost of making the negative depends very largely upon the subject-matter and, in the case of an outdoor scene, the cost may be very low, and, besides this, the negative cost per foot depends, of course, upon the number of positive prints actually sold, but it is a fair statement to make that the average cost of the negative film per foot is not far from 2 cents. The films which thus cost the American manufacturers about 6 cents per foot are sold in this country for prices ranging from 10 cents per foot down to 5 cents per foot, depending upon the age of the film, the deterioration in value when a film is not sold promptly being such that the manufacturers are compelled, in order to get rid of them, to sell them below cost. In other words, the moving picture manufacturers are compelled to sacrifice their product when it is no longer current, in just the same way that a magazine publisher is unable to obtain the ordinary price for an out-of-date copy of his publication.

THE PRESENT DUTY AND ITS UNCERTAINTY.

When moving pictures were first imported into this country, they were classified by the customs authorities under section 17 of the act as "articles of which collodion or any compound of pyroxylin is the component material of chief value, sixty-five cents per pound and twenty-five per centum ad valorem." The specific duty of 65 cents per pound corresponds to substantially 5 per cent. or more on an invoiced value of 6 cents per foot or 1 franc per meter, which is the valuation accepted by the customs authorities in New York. The importers, however, protested against this classification and urged that the films should have been classified under section 458 of the act as "photographic dry plates or films, twenty-five per centum ad valorem." The matter of the 65 cents per pound specific duty was therefore protested, and these protests have recently been argued, we understand, by the importers before the Board of General Appraisers, of New York, who have not yet decided the question. If this specific duty is remitted by the customs authorities, the films under the present tariff act will be supject only to a duty of 25 per cent. ad valorem. A duty corresponding to that levied by the customs authorities under section 17 of the act (25 per cent ad valorem and 65 cents per pound) amounting in the aggregate to 30 per cent. ad valorem is necessary, as we shall show, if this industry is to develop in the face of foreign competition. It is, however, unsatisfactory to have any uncertainty on the question, and the American manufacturers respectfully hope that a duty on moving pictures be specially provided for in a future tariff schedule. Furthermore, it is a matter of common rumor that in the near future the Eastman Kodak Co. intends to put out a noninflammable film, which, we understand, is not made of celluloid or pyroxylin or collodion, so that unless a definite duty is now laid there will be grave doubt whether any section of the present act applies to this industry.

ADVANTAGE OF FOREIGN MANUFACTURERS.

The industry is a young and struggling one and is jeapordized at all times by the importation into this country for foreign films. In fact, the moving picture industry, so far as the films are concerned, offers an opportunity par excellence for "dumping," because the foreign manufacturer has a large home market from which he makes a profit, and he can afford to regard his negatives as being paid for by the European trade. Prints can be struck off with the same facility as one would make copies of a photo-lithographic plate, and the foreign pictures which are thus sent to this country are brought here for very much less than the cost of manufacture to the American producer. The foreign manufacturer, unless suitable protection were given, could afford to sell foreign-made moving pictures in this country for 6 cents per foot and still make a handsome profit, because his negatives have already been paid for by the demand in his home market and the prints which would be sold in this country would not cost more than 4 cents per foot. With the present duty, however, of 25 per cent. ad valorem based on an invoice value of 6 cents per foot and an additional 5 per cent. for the specific tax, the entire duty which the importer pays amounts to about 1.8 cents, so that the foreigner can land his films in this country for about 5.8 cents per foot or very slightly under the cost of manufacture by the American producer.

THE DUTY WHICH THE INDUSTRY REQUIRES FOR ITS PROTECTION.

All that the American moving picture manufacturers ask is the maintenance of a duty which places their domestic films on an equality with the imported foreign films, so that both practically compete on the same cost of production. A duty of 30 per cent. ad valorem, to which the present duty amounts in the aggregate, would add no more than this, and, if provided, the American manufacturers would be able to encounter the competition of the foreign manufacturers, who would then be required to sell their pictures in this country on terms of exact equality with the domestic product. We respectfully ask that this duty be specifically provided for in the forthcoming tarfiff schedule. As a matter of fact, the readiness with which foreign pictures may be dumped in this country would apparently make it necessary, in order that the industry may be properly protected, to have the tariff actually raised. This is especially true when we consider the fact that the invoiced value of 6 cents per foot placed on these films by the customs authorities in New York is purely arbitrary, since it is a well known fact that foreign films are now being imported into this country for as low as 5.4 cents per foot. If, therefore, foreign films were dumped in this country at cost (excluding the expense of the negatives), the invoice value might

be reduced to as low as 4 cents, so that the duty of 30 per cent. would enable them to leave the custom house at a total cost of 5.2 cents, or almost 1 cent below the actual cost to the American manufacturer.

At the present time moving pictures are immensely popular, a very great demand exists for them, and good, but by no means large, profits are obtained by the American manufacturer, as well as by the importers of foreign films; but this situation is due largely to the fact that the demand is greater than the supply, and when normal conditions are reached and it becomes a question of more active competition between the American and foreign pictures the American manufacturer will be no longer able to stay in the business unless he is given protection to at least the difference between what it costs him to make the pictures and the cost at which such pictures can be laid down in this country.

The industry which we represent is not large when compared with many American industries, but it contains the germ of enormous possibilities, and the time may not be far distant when most of the theatrical entertainments in this country will include, as a very important part, a moving picture machine.

THE DUTY ON MOVING-PICTURE MACHINE.

So far as the duty on machines is concerned, at the present time this is 45 per cent. ad valorem. It is difficult to make a fair statement as to the exact facts of this duty for the reason that the conditions of the American fire underwriters require the use of attachments and improvements which have so far not been adopted by the foreign manufacturers, so that practically no foreign machines are imported. The manufacture of moving picture machines is, however, an ordinary mechanical operation. Of the undersigned, only the Edison Company, the Selig Company and S. Lubin are active manufacturers in this country of these machines, although they are also manufactured by other makers in this country, who may be heard by the committee. Our conclusion regarding machines, therefore, is that they should have the same degree of protection that any similar piece of machinery should have, which under the present act is 45 per cent. ad valorem.

Very respectfully,
H. N. MARVIN,
Vice-President American Mutoscope and Biograph Company.
FRANK L. DYER,
Vice-President Edison Manufacturing Company.
GEORGE K. SPOOR,
President Essanay Company.
SAMUEL LONG,
President Kalem Company.
SIEGMUND LUBIN,
J. J. LODGE,
Vice-President George Melies Company.
J. A. BERST,
Vice-President Pathé Freres.
W. N. SELIG,
President Selig Polyscope Company.
W. T. ROCK,
President Vitagraph Company of America.

STRIKING SHOW WINDOWS

May be Created With the Title Pages of Music —A Line Which Blends Harmoniously With Talkers—A Suggestion to Wide Awake Merchants.

Talking machine dealers have not appreciated as yet the benefits of many side lines which can be used as a drawing power to their establishments. Take, for instance, sheet music.

What an attractive show window may be created with this attractive stock.

Take some of the bright title pages and the merchant may prepare a striking window in connection with talking machines. And when you come to think it over, what line can be more harmoniously blended with the sale of talking machines than music?

We would suggest to our readers that they take up the subject of representation with leading music houses. Certainly, there are business arrangements which may be entered into which will result in profit for the talking machine dealer. There is no question as to the truth of this.

We speak of a window being made attractive. In just the same manner any section of the store may be lighted up in a pleasing manner with the beautiful title pages of sheet music. There is an opportunity for business here which should not be overlooked. It is a field worth exploring, for it promises the most satisfactory kind of results.

One of the best selling instrumental catalogs at present on the market is that of the E. T. Paull Music Co., who publish all of E. T. Paull's great march compositions, which have a tremendous sale all over the country.

One of the chief characteristics of this catalog is the continual steady sale of the various instrumental numbers. It has been fourteen years since E. T. Paull placed his first composition, "The Ben Hur Chariot Race March," on the market. Since that time there have been any number of big sellers on the market, both instrumental and vocal, which at the present time are practically dead, whereas the sale of "The Chariot Race" has increased every year since it was first placed on the market. This experience is the same as with the additional march compositions of E. T. Paull's, which have been issued since "The Chariot Race."

Talking machine dealers from one end of the country to the other will find the publications of the E. T. Paull Music Co. big sellers and the universal satisfaction they give makes it both a pleasure and a profit to push the sale of their music.

In this section of The Talking Machine World, dealers will find a page advertisement of the E. T. Paull Music Co., making a special offer on their publications, which should be taken advantage of by every talking machine dealer. It will certainly be well worth the time and attention of every dealer to consider the proposition they offer, inasmuch as the special offers they make are the lowest prices ever made to the trade.

Every firm needs a head, but no firm can profit from blockheads, deadheads, or soreheads.

A NOVELTY IN PICTURES.

Moving Pictures of Naval Training Station at Newport.

(Special to The Talking Machine World.)

Newport, R. I., Dec. 31, 1908.

For the first time in the history of the Navy Department permission was given to-day to take pictures at the Naval Training Station for moving picture shows. A professional poser appeared on the scene. The man went through the various details of a recruit appearing on the island as a "rookie," and the progressive stages through the various barracks, until he has become a trained product ready for drafting to a sea-going vessel. While the film will be produced to afford amusement, its circulation through the thousands of picture shows about the country will undoubtedly assist in enlisting. For that reason the government afforded every possible facility for the making of the pictures.

M. HOHNER INCORPORATED.

The Celebrated Manufacturers Take This Step in Germany Merely as a Business Precaution —Went Into Force on January 1st.

The incorporation of M. Hohner, manufacturers of harmonicas and accordeons, Trossingen, Germany, is announced as having gone into effect January 1. The concern is incorporated in Germany, with a capitalization of 4,000,000 marks ($1,000,000), the five brothers, including H. Hohner, managing partner of the American branch house, 475 Broadway, New York, being named as incorporators, directors and officers. This step was taken simply as a business precaution.

INCORPORATED THIS MONTH.

The Unique Novelty Co., New York, has been incorporated at Albany with a capital of $20,000 to manufacture postcards, Easter cards, pictorial and other novelties. Incorporators: Dudley E. Phelps, 48 East 75th street, New York; Thomas F. Garrity, 286 President street; Patrick Moffat, 33 Marion street, both of Brooklyn.

The O'Brien Electrical Tubular Lamp Co., of Camden, has been incorporated under the laws of the State of New Jersey, to manufacture electric and gas lamps, globes, tubes, signs, novelties, etc., with a capital of $300,000. Incorporators: Walter C. Waldron, 431 Washington avenue, Brooklyn; William P. Fairman, 740 Drexel Building, Philadelphia; Dennis J. O'Brien, 5000 Locust street, Philadelphia; Matthew Jefferson, 301 Market street, Camden.

The Bart Manufacturing Co., Lynn, has been incorporated under the laws of the State of Massachusetts to manufacture and sell novelties with a capital of $20,000. President, Walter E. Bartholomew, Lynn; treasurer and clerk, George L. Johnson, 34 Mt. Everett avenue, Boston.

The R. E. Taylor Co., New York, has been incorporated under the laws of the State of New York, with a capital of $50,000, to manufacture moving picture machines and accessories, photographic business, theatrical, etc. Incorporators: Elmer E. Earnshaw, 1240 Broadway, New York; Roy E. Taylor, 941 Simpson street, The Bronx; Charles F. Goddard, 15 William street, New York.

American Phono-Film Co., No. 134 Monroe street, Chicago, have incorporated to manufacture phonographic and photographic supplies; capital, $25,000. Incorporators: Lavern W. Thompson, William C. Burns, M. Morrison.

The Cowles-Camp Co., of Rochester, has been incorporated with the Secretary of State of New York to manufacture metal, wood, card and paper novelties; capital, $25,000. Incorporators, Charles D. Camp, Ward H. Fisher, Howard F. Barnes, Rochester.

THE OUTLOOK IN THE CAMERA TRADE

Fred K. Townsend, of the Seneca Camera Co., Rochester, N. Y., Speaks Optimistically Regarding the Future of the Business—Rapid Development of the Camera Permits Amateurs to Get Almost as Good Results as Professionals—Summer the Best Season for Selling Cameras.

(Special to The Talking Machine World.)
Rochester, N. Y., Jan. 8, 1909.

In a chat recently with Fred K. Townsend, secretary and treasurer of the Seneca Camera Mfg. Co., of this city, he said: "Here in Rochester we are taking all bets that our good old Uncle Samuel will start something right away; at least as soon as he has changed business managers. When Mr. Taft gets under way he will undoubtedly swing along with some considerable momentum, and we expect more motion and less emotion. Business is coming all right.

"Replying more seriously to your query in regard to the general trade outlook, permit me to add that camera makers are as busy right now

FRED. K. TOWNSEND.

as they want to be, and they would much rather be busy as they are than talking about prospects.

"Of course it is true that we could do more; the fact is, we are extending our business all the time, that's why we are in the trade. The camera business is built on a firm foundation, for pictures interest everybody. Of late years inventive attention has been turned upon simplifying processes of picture making, until to-day the beginner will get as good results with his first achievement as the expert of a decade ago used to attain after months of study. Then, again, photography is profitable. There is always sale for good prints of interesting subjects.

"I know that the camera trade are appreciative of your efforts to interest talking machine dealers in cameras as a side line, and I am confident that you will be successful. The heaviest season in the camera business is in the summer, which, as I understand it, is the lean season for the talking machine business. For that and other reasons it seems to me the two lines of trade would work well together. It needs only push to win success."

TOOK ADVANTAGE OF A CHILD.

A small boy importuned his father for a baseball mask. "I can get one for twenty-five cents down at the notion store," he said.

His father gave him a dollar bill and said: "All right. Run and get one."

In a few minutes he came back. "Where's the change?" the father asked.

"There ain't any," said the little fellow. "The woman in the store said they had a much better one for a dollar, and here it is."

The father naturally was vexed; not at the boy, but at the mean trick played on him. "You take that back to-morrow," he said, "and get the other one, and make her give you the change."

After school on the following afternoon, the boy did as was ordered, and came home with his report. "She wouldn't take it back," he said. "They won't take back anything after it has been kept twenty-four hours."

The father knew what would happen if he went down to the store, but thought best to drop it. He simply passed a word to his wife, and the store lost from henceforth a customer who on the average was good for ten dollars a month.

THE BUILDING OF A BUSINESS.

A Story Which Goes to Show How Side Lines Help to Develop a Business—The Success of the Subject of This Talk Can be Duplicated by Any Live, Ambitious Reader of This Department Who Is the Owner of a Store.

[Written for the Side Line Section of The World, by F. B. Warner.]

It was just an ordinary pawn-shop; it was started in a city of about 60,000 population, by a man named—well, we will not reveal his identity (because he is still in business) but will simply call him John Enterprise Integrity.

John first had a hole in the wall and loaned money on such collateral as pawn-brokers in general come in contact with. John knew merchandise, was shrewd and conservative (by the way he was a "Yankee") as a mere matter of course he prospered.

Our hero soon realized that he required a watch maker; later on he had five, but before he reached the stage where five watch makers were needed other developments were taking place in his shop. His unredeemed pledges were not sufficient to supply the demand of the bargain seekers, therefore to supply this demand new goods for which there was a constant demand were put in stock. This was nothing new; other pawn-brokers had done the same before; John's methods of doing it were new, that's all. He did not attempt to make the new goods appear old; he sold them for what they were. To illustrate, the writer was in his place one time when a customer inquired if he had a high grade second-hand shot gun, mentioning one or two standard grades. John promptly replied "No, but I have them new." The customer demurred on account of the price. Oh, yes, John responded, there's nothing new so cheap as second-hand, nor nothing second-hand quite so good as new. With such logic as this seekers for second-hand goods were changed to new.

After a time an adjoining store was added to John's hole in the wall and the new lines added began to take the form of distinct departments. To-day John Enterprise Integrity occupies an entire building; his pawn-shop has become a department store with a manager for each department; his gun and sporting goods department occupies an entire floor; other lines are equally as important in size.

The pawn-shop department still exists, but its business is done in a space no larger than the original hole in the wall, which makes itself evident that if John had always adhered strictly to pawn-broking his success would have been a small one.

NOT ASHAMED OF ORIGINAL BUSINESS.

Although pawn-broking is to-day only a unit in the establishment, the pawn-brokers' sign of the golden balls is the first that catches the eye as you approach the building from either side. I once inquired of the manager if he thought the pawn-shop was to any great extent a factor in building up the business, to which he replied: "Yes, it supplied both advertising and customers; that the old man (John) saw the opportunity and rose to it."

Talking machine dealers have one of the greatest opportunities to introduce new side lines to their customers; the new issue of records brings your customers back month after month. Perhaps they ask for things. If you get many inquiries for the same thing that is a pointer. One successful general store-keeper never would say he did not have any article that was inquired for, but would reply, "I am getting it in; call again in a few days."

Don't injure your present business for the sake of experimenting with new lines. Don't go in debt for new lines, expecting they will make good before the bills are due; but when your line of talking machines and records is complete and there is nothing you can add that would enhance your revenue and you have some spare-capital, then look to add some new attraction. What? That depends upon your locality and trade. For one dealer it might be music and musical instruments, another jewelry or optical goods, while fire-arms and sporting goods is always a good line. It is sub-divided into many lines and you can take up one line at a time. Revolvers are something that always sell. They take up very little space but are attractive.

Aim to do just as much talking machine and record business as ever, plus all that you make on side lines. If you execute these ideas properly you will be surprised at your progress made in a year's time. Start with a few good specialties, something that is attractive both in price and quality. There are just as many cornerstones to build on in the talking machine business as in any other business. Don't get discouraged, brother.

GAMES AS A SIDE LINE.

Form an Attractive Quick Selling Line for Dealers Who Wish to Add Paying Novelties.

An attractive, desirable side line and one that adds brilliancy and interest to the store is a line of leading games.

Pastime Picture Puzzles, made by Parker Bros., the game of Deck Ring Toss (which had a very large sale in numerous sporting goods houses), Pit, Crazy Traveler and Japanola are items of great interest. To these should be added playing cards. The idea of the dealers should be to carry perhaps a dozen of these standard games such as above named, these having sale all the year round and as most of the sale is in the range from 50c. to $1.00, they move quickly where they are displayed and give brilliancy and life to a store, which is a thought well worthy always of a dealer's attention.

A side line of this class does not require much money to start. Fifty to one hundred dollars will sample these lines for a dealer. Few dealers can afford to pass by a line of this class in connection with sporting goods. A trial is relatively inexpensive and results in nine cases out of ten in a development of a very sizable business and one which catches the fancy of the public, acting as an added attraction to the store, which is a valuable consideration. Parker Brothers, Inc., Salem, Mass., are among the largest manufacturers of games of this class.

WRITING PINS AND RINGS.

Of the many novelties in the jewelry line the "writing pin" and "writing ring" are worthy of special mention. As is implied by their names, these articles are, respectively, a combination scarf pin and pencil and a ring, similarly equipped.

Both are arranged to use the regulation small leads made for fancy pencils, and are of practical utility for use in emergencies. They are made in a wide variety of styles and of solid gold as well as plate and, to quote the manufacturer, "literally sell themselves."

The gold pencils are invisible while the articles are being worn and do not in any way detract from the fine appearance of the goods.

The margin of profit on this line is large, and it should prove an attractive addition to the stock of the dealer who is looking for something at once up-to-date and unusual.

HERE AND THERE IN THE TRADE.

Conditions Improving Everywhere—Increased Call for Bicycles—Preparing for Tennis Season—Roller Skating Becoming More Popular—Reflectograph Now in Demand—Camping Equipment and Cameras Excellent Side Lines for Talking Machine Dealers.

After an extended tour throughout the country and after making a close study of conditions in various sections, it is apparent that business during the coming year will take a wonderful spurt. Everywhere one goes it's the same story. Dealers and jobbers in almost every line, after having taken inventory, are finding their stocks run down and are now rushing off their orders to the factories lest they be caught short. What is the consequence? Manufacturers who have been taking things easy are suddenly swamped with business, and though in many cases running extra shifts, find it impossible to make prompt deliveries. 1908 with its many disappointments is now a thing of the past. The new year, laden with golden opportunities, is before us. Are you preparing to get your share? If not, why not? It is time to wake up.

* * * *

"In the bicycle line there is almost sure to be an increased demand for the coming season." So says the New York Sporting Goods Co. Now that manufacturers in all lines are beginning to operate again with a full complement of men, the factory workers will once again have use for this admirable conveyance, and dealers can feel justified in making sales on the instalment plan. We also understand that the advantage of bicycling from the standpoint of health is again in the air, and it is certainly true that many old riders are turning to the wheel. Good work. Put a little more ginger in your talk this year, Mr. Dealer, and we'll yet have the old palmy days back again.

* * * *

Do you bear a reputation for always discounting your bills? No? Well, try it for a while. It is not only a nice thing to have such a reputation, but, you know, a little extra 2 per cent. does somehow figure up enormously by the end of the year. Sort of makes you feel good all over, too.

* * * *

Mr. Wright, the head of the well-known firm of Wright & Ditson, spoke very encouragingly of the outlook for tennis goods and supplies when seen by The World the other day. This game has steadily grown in popularity in this country until to-day it almost rivals its national competitor (baseball). One of the best things about this line is that it brings to the dealer's store the better class of trade—a customage that have money to spend and spare no expense in satisfying their hobby.

* * * *

The Stevens Arms & Tool Co., of Chicopee Falls, Mass., are preparing to bring out several new model guns, and hope to be able to give details by the time the February World goes to press.

* * * *

The Horton Mfg. Co., of Bristol, have inaugurated an extensive advertising campaign in all the leading periodicals throughout the country. Dealers handling their lines will find this a big help, as it not only saves them money, but will bring them numerous new customers.

* * * *

Who said roller skating has died out? You wouldn't think so if you had been along with The World representative when he visited the extensive factories of the Union Hardware Co. at Torrington, Conn., a week ago. This enterprising concern have just closed the biggest year in their history. To-day no matter where one goes their famous line of skates and fishing rods will be found. Dealers and jobbers who have pinned their faith to their standard are more than satisfied. For example, not long ago a World representative, in looking around for good side lines for the talking machine trade, called on S. B. Davega, of this city. When asked for his advice on the subject, he unhesitatingly pointed to the Union product and said: "There is the best seller I've got. The only kick I ever have is that I can't sometimes get the goods fast enough."

* * * *

Chas. Mayer, the well-known novelty manufacturer of Rochester, N. Y., reports an unexpectedly large demand for his post card projecting machine, known as the Reflectograph. This machine is one of the most powerful on the market and reflects all objects with remarkable clearness. Dealers would do well to investigate this article, as it sells for a price well within the reach of all, allowing a handsome margin of profit.

* * * *

One of the best and least exploited lines in the sporting goods field is that of tents and camping equipment. This branch of the industry has leaped into prominence during the last few years and every summer adds a large number of converts to this healthful recreation. The line is an extensive one, and takes in not only tents but cooking utensils of all kinds, clothing and a hundred and one other articles, all of which will mean much profit for the dealer handling them. Make your store headquarters this year; a little money spent in the local papers will do much and stir up a horde of new prospects.

* * * *

The Seneca Camera Co., of Rochester, N. Y., one of the largest independent manufacturers in this business, reports the outlook for 1909 as highly encouraging. Their products are known the world over for their high standard, and all a dealer has to do to move his stock is to hang out his sign and let the people know he has them in stock. Such is the power of a name.

* * * *

To sell a customer goods, and to sell and tie him to you for good, are two different things. Transient trade is all right, but regular custom is better. Acquire the art of making friends with your patrons. It pays.

* * *

Your best salesmen will lose some sales. Don't expect a man to be a successful hypnotist for ten or twelve dollars per.

FOR LIVE DEALERS ONLY

Here is a chance, Mr. Talking Machine Dealer, to form an alliance with a business concern which will mean a revolution in the money-making powers of your business.

We have the product and the plans which will help you to make money easier and more rapidly than ever before.

KOHLER & CAMPBELL

have a Piano Selling System which works Wonders For Dealers who co-operate with them. Positively sells pianos without expense to dealers. Without question the greatest scheme ever inaugurated. Hundreds of their representatives have reaped big returns from the plan. Why not you?

Do not delay writing for particulars concerning this business creating proposition. Delays will mean the postponement of money making. Can you afford to delay?

You can command our experience and knowledge gained and immediately apply it to your own trade development.

OUR CHICAGO NEWS BUDGET.

Post Cards and the Tariff—Sewing Machines as a Side Line—Talking Machine Dealers Using Goods as an Auxiliary—The Output Co. Makes Its Debut—Other Items Worth Noting.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 2, 1909.

Various expressions concerning the tariff on imported post cards are to be heard among the local manufacturers. Some hold that the duty of 5 cents a pound on imported souvenir post cards should be greatly increased. Others take a different position and say if they cannot produce an article of such obvious superiority that the consumer will prefer it, they are willing to forfeit their share of the trade. The post card line is one that can be handled to advantage by every talking machine dealer and one that should be utilized by them in the expansion policy that is becoming general.

The moving picture business has become an enormous one in this city. Nickel theaters are springing up more rapidly than ever, and the town seems to be moving picture mad. Films of almost every conceivable subject from a battle royal prize fight to the Passion Play keep the enthusiasm keyed up to a high pitch. This is going on all over the West. Even the small towns are catching the fever. This is certainly an opportune time for dealers to get in on the home moving picture machine business and reap the benefits incited by the "theaters."

Sewing machines furnish a side line opportunity, advantage of which has already been taken by quite a number of talking machine dealers. A fair-size stock takes up little room, and a dealer in "talkers" is already experienced in the handling of an instalment proposition. Furthermore a large percentage of dealers already have canvassers visiting homes in their city and vicinity, and need not increase their force in order to give the line proper attention. Another strong point is that women form a large percentage of the record purchasers, and in their frequent visits to the store can easily be interested in the latest models of sewing machines.

Many of the Chicago talking machine dealers are using sporting goods as an auxiliary line. This line is always a seasonable one, with its fishing tackle, golf equipment, baseball goods and tennis rackets for summer use; guns, ammunition and necessary clothing, to say nothing of football goods for fall; hockey sticks, skates and sleds for the red corpuscled winter lovers. Striking window displays can be made of these goods. The fact that there are no better athletes and sport-loving people in the world than can be found in this country, and that these are confined to no particular locality, is evidence of the salable qualities of these goods.

Fountain pens have become a modern necessity, and a good display on the record counter, reinforced by an attractive showing in the store window, should be the means of turning many a quick sale and materially enhancing the dealer's profits.

Talking machine jobbers are becoming alive to the advisability of catering to the demands of the dealers for attractive side lines. James I. Lyons, the well-known talking machine jobber, has long featured good side lines in his own retail stores, and is now making a push especially on home moving picture machines, post card projectors, and stereopticons, in a wholesale way as well.

The Output Co. of America, with offices at 1110 Heyworth building, is a new company in which talking machine men are largely interested, which is making a business of selling the outputs of factories making good specialties in the talking machine line or which can be handled to advantage with talking machines. They control the output of a large cut glass factory making a peculiarly attractive line of goods, which can be sold at a reasonable price. Enterprising dealers would do well to investigate this line, which, of course, lends itself to decidedly effective display.

SPECIAL POST CARD OFFER

Made by the F. & H. Levy Mfg. Co. of New York Should Appeal to Live Dealers.

An excellent opportunity to install a line of post-cards at low cost is offered by the F. & H. Levy Manufacturing Co., New York, who have a new rack and 3,000 cards for the special introductory price of $25. The rack holds 300 cards and runs on ball bearings facilitating inspection by the customer. The cards are all good quality, lithographed and embossed and including, as they do, new styles of Lincoln's and Washington's birthday, Easter and St. Patrick's Day and Fourth of July cards, etc., they should enjoy a ready sale. As a matter of fact, the cards themselves, if sold separately would bring over $25, and the rack, with the first order, is an inducement not to be overlooked.

THE PRESIDENT INK PENCIL.

Attractive Side Line for Talking Machine Men.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 7, 1909.

The President ink pencil is offered to dealers as an attractive side line by the manufacturers, the F. W. McIntosh Co., 179-181 Lake street, Chicago. While it fills with ink like a fountain pen it writes like a pencil. Stress is laid on the fact that it will not leak, carried in any position. It should commend itself especially to talking machine dealers, as it appeals to all classes of their customers. Business men will buy it on sight, women can carry it in their hand-bags with perfect safety, and the company have letters from teachers recommending it for the use of children learning to write with ink, as it avoids stains on hands or clothing, and blots on books. By properly displaying this article and by giving practical demonstration by using it before the customers in making out orders, memoranda, etc., a lucrative trade can be worked up.

THE "BRISTOL" LINE

OF STEEL FISHING RODS IS A PROFITABLE SIDE LINE FOR YOU

Three Qualities Now to Supply All Demands:

"Bristol" Steel Fishing Rods

Everybody now recognizes that the "BRISTOL" is responsible for the great demand for steel rods. Made of the best imported, high carbon, cold rolled steel hardened in oil, clock spring tempered. Nothing finer in material, workmanship or practicability can be made. Guaranteed for three years.
The wise dealer never sells a cheap article when he can sell a high-priced one; never sells a poor article when he can sell the best; never sells an unknown article when he can sell one with a big reputation. The steel fishing rod demand is for "BRISTOL"—the known and best and higher price rod.

"Rainbow" Steel Fishing Rods

But if a buyer cannot afford a "BRISTOL," the next best steel fishing rod is a "RAINBOW." Younger brother of the "BRISTOL" and actually better than any other steel fishing rod except the "BRISTOL." Moderate in price.

"Luckie" Steel Fishing Rods

The baby of the "BRISTOL" family. Sure to be the sensation of the year. Entirely reliable. Made purposely to supply the demand for a popular priced steel rod. Useful for boys and to loan to borrowing friends. Cheapness in price appeals to another class of buyers. Sell them the "LUCKIE." They will be better satisfied with it than with any other low-priced rod.

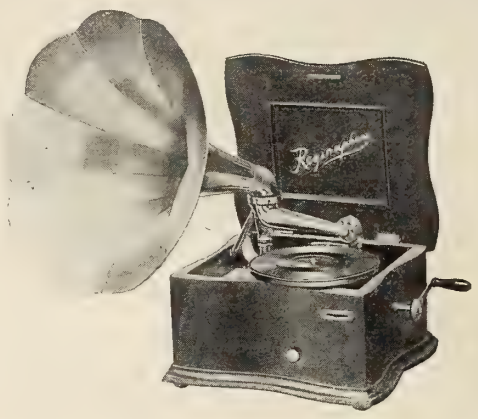
If interested, write for catalogs and trade prices. On receipt of your inquiry we will send you a copy of our beautiful 1909 "BRISTOL" Calendar mentioned on page 28 in this issue—*being sure to mention this Journal.*

THE HORTON MANUFACTURING COMPANY

Bristol, Conn., U. S. A.

COMBINATIONS

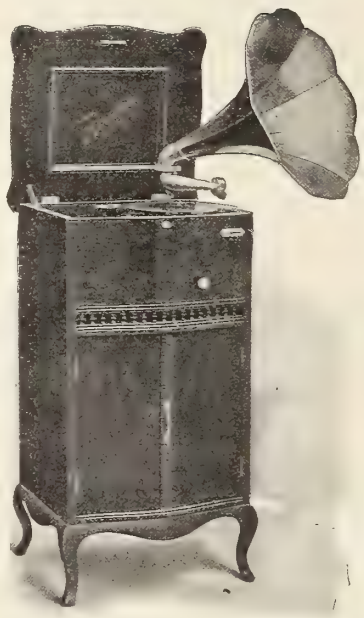
¶ Combinations—that's a live word in the business world to-day, and the right kind of a combination usually assists in business building. ¶ We have that kind of a combination. ¶ Have you seen it? ¶ It is The REGINAPHONE.



¶ It is a combination of the best music box in the world with an excellent talking machine.

¶ It's a combination that is simply unbeatable in the trade sense, and what is the most pleasing statement to make in this connection is that you get this combination—two instruments in one—at practically the price of a single good instrument. Worth considering, is it not?

¶ There is nothing created by human hands to-day that blends so perfectly with the talking machine line as the REGINAPHONE. ¶ It's a half brother to the talking machine and requires no effort on the part of the dealer to make sales.



¶ Just place a REGINAPHONE in your window, or in a good position in your store, and your sales begin from that hour.

¶ The motor mechanism is of the best and the workmanship throughout is unsurpassed. ¶ The illustrations shown on this page will give you an idea of just how the REGINAPHONE appears. But, you should see the real article—hear it—test it, then you will become a REGINAPHONE enthusiast.

¶ While on this subject, we might add that the complete REGINAPHONE line can be handled with advantage—It's replete with sellers—there is the REGINA HEXAPHONE which is a multiple cylinder talking machine holding six different records of the standard size. It is operated by a spring motor, and is provided with a coin-attachment for nickels or pennies. It contains a tune selecting device by means of which any one of the records may be played at will.

¶ Ask us about our REGINA specialties. They are all trade builders.

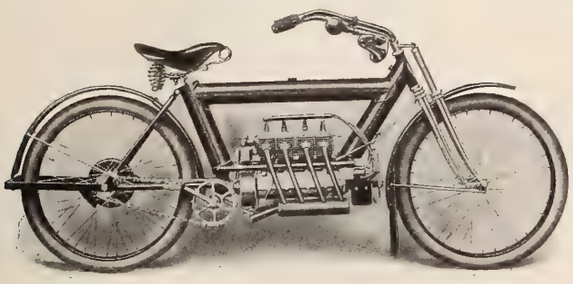
THE BICYCLE AS A SIDE LINE

For Talking Machine Men Is a Paying Investment—These Machines Have Won a New Vogue While the Motor-Cycle Is Wholly Up-to-Date and the Big Seller of the Day.

There are thousands of talking machine dealers who could largely increase their annual profits by handling some side line which would fit naturally into their business. Discrimination should be exercised in the selection of this side line. In deciding any business problem there are two issues to be considered: First, logic; second, experience. It takes but a moment's thought to show very clearly the feasibility of handling bicycles as a side line to talking machines. There is a kinship between these two lines that is readily recognized. A talking machine and a bicycle can be displayed side by side in a salesroom without incongruity. The experience of thousands of dealers who handle these two lines is very expressive of the success that attends such a business combination. During the winter, when bicycles move slowly, if at all, the dealer can devote all his time to phonographs, and, as a consequence, talking machines are recommended to the bicycle dealer as a good side line for his business.



PIERCE FOUR-CYLINDER MOTORCYCLE.

It may be very well to come to a decision to handle bicycles as a part of one's business, but it is quite as essential to have a good brand. In every branch of commerce there is one article, or brand, that appeals to the public. That is what the Pierce does in the cycle trade. Pierce bicycles are world renowned. This reputation has been made in part through the accustomed channels of advertising publicity, but mostly it has been made and altogether supported by a single factor—merit. Manufactured by a concern that has been established for over forty years—a house shipping goods into all parts of the world and everywhere known for the excellence of its product—the Pierce bicycle has naturally stood ahead of all competitors. All of the models made by the Pierce Cycle Co., of Buffalo, N. Y., are worthy of consideration. Their catalog for 1909 shows nine distinct types, with twenty-four assortments. A new model now produced for the first time is the heavy service bicycle. No other manufacturer produces a bicycle that will withstand abnormal use. There are also the Roadster and Racer models and the cushion frames—chain and chainless. The Pierce chainless cushion frame is acknowledged the world's foremost cycle construction. All the parts that go into a Pierce bicycle are made up in the Pierce factory. All hubs, cups, bearings, binders, etc., are turned from solid bar stock. Other makers use all or part sheet metal stampings. Every cone in a Pierce bicycle is made of the best cone steel, not from ordinary screw stock. A cheap bicycle may look as good as a Pierce, but the quality is not there. This the rider often discovers to his sorrow and cost. Cheap bicycles have been a great detriment to the industry, and dealers should sell high-quality goods, as they will thereby establish a profitable trade.

THE MOTORCYCLE AS A BUSINESS FACTOR.

With the advent of the Pierce vibrationless motorcycle—a four-cylinder, shaft-drive machine having every modern improvement—motorcycling has come more than ever to the fore. It is admitted on every side that not even automobiling is as pleasurable as riding a motorcycle. The sale of motorcycles thus far is as nothing compared with the number that will be sold in the near future. The Pierce motorcycle is one which takes readily with those who are acquainted with motorcycles. The general public, too, will consider riding the Pierce before giving thought to any other make. The Pierce is vibrationless, practically noiseless, has large tubing which dispenses with the use of separate tanks. There is no chain or belt to break or give trouble. The machine also has a phenomenal range of speed, viz.—six to sixty miles per hour.

A POPULAR PIERCE STYLE.

There are a good many talking machine jobbers and retailers who handle motorcycles, and all of them consider the combination exceedingly profitable, especially when supplemented by the sale of bicycles. The Pierce Cycle Co. establish exclusive agencies for their product, giving to the dealer most advantageous prices and terms. The combined agency of Pierce bicycles and motorcycles can be made to pay good profits as a business in itself. When that agency is an adjunct to another line the opportunity is well worth grasping, and talking machine dealers everywhere would do well to investigate the exceptional proposition offered for either of the Pierce lines. The investment necessary to secure the Pierce agency is inconsiderable and the money is turned very quickly.

GERMAN POST CARD MEN MEET.

Our Germanic Cousins Complain of the Decrease in Shipments of Souvenir Post Cards to America—Delegates to Convention in Rather Pessimistic Frame of Mind.

(Special to The Talking Machine World.)

Berlin, Germany, Dec. 31, 1908.

German manufacturers of souvenir post cards held a meeting in this city last week to consider the state of the trade, which it was agreed was going from bad to worse. The consensus of opinion among the long-faced delegates was that the slump in the post card craze in the United States was the chief cause of their troubles.

One or two years ago cards made in Germany were shipped to America literally by the million. Nowadays, the manufacturers state, they rejoice if they can get orders for as many thousands.

The meeting came to the lugubrious conclusion that the post card industry had seen its best days. The hope was expressed that people would soon take up another fad which would bring as rich profits as the post cards had.

AN ATHLETIC LINE.

Products of an Old Established Firm Who Make a Specialty of Athletic Goods.

The firm of Wright & Ditson, established in Boston in 1871, are manufacturers of fine athletic goods and have established a splendid quality reputation, so that whenever the name of Wright & Ditson appears upon any tennis goods, it is at once a guarantee of quality. Their rackets are used by the leading players, and in this connection we may say that the championship of America has been won with this company's rackets every year with one exception. Wright & Ditson's tennis balls are also used in all the national tournaments. Dealers who desire to handle a standard brand of all kinds of athletic goods will find that the Wright & Ditson firm, Boston, can meet all necessary requirements.

VALUE OF INITIATIVE.

The less you require looking after, the more able you are to stand alone and complete your tasks, the greater your reward. Then if you not only do your work, but direct intelligently and effectively the work of others, your reward is in exact ratio, and the more people you direct, and the higher the intelligence you can rightly lend, the more valuable is your life.—Fra Elbertus.

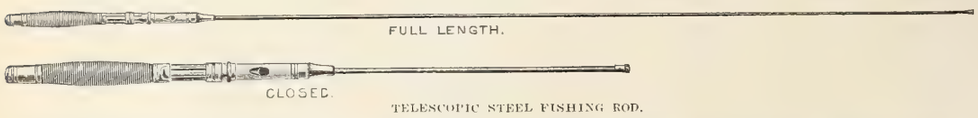
STEEL FISHING RODS BIG SELLERS.

Popularity of This Feature of the Angler's Outfit—Manufacture of Steel Rods Begun Over Twenty Years Ago—Story of Its Growth—A Side Line That Sells in Any Community.

Perhaps there is no sport which boasts more disciples than fishing, for once a fisherman always a fisherman, the boy with his crooked stick and bent pin growing up as an angler, but with a desire for better outfits. There is hardly a city or town in this great country of ours which does not offer a good market for fishing tackle, for even the village boasts of its fishing hole or trout stream. It holds, therefore, that fishing tackle, as a side line, should prove a paying proposition if handled intelligently.

At the present time there is a strong demand for steel fishing rods, and in this connection it would be well to investigate the leading features of the steel rods made by the Horton Manufacturing Co., Bristol, Conn. The manufacture of steel fishing rods was begun over twenty years ago by this company in a small wooden factory, employing less than a dozen men. At the present time they occupy a large modern brick factory and give work to over 100 employes during the season. The original output consisted only of two styles which were of the telescoping pattern. This, of course, refers to the original "Bristol" steel rods which were later made in the same style as wooden rods with joints which could be taken apart. "Bristol" rods are now made in nearly thirty different stock styles which can be furnished in a variety of special trimmings and with a large variety of different styles of handles.



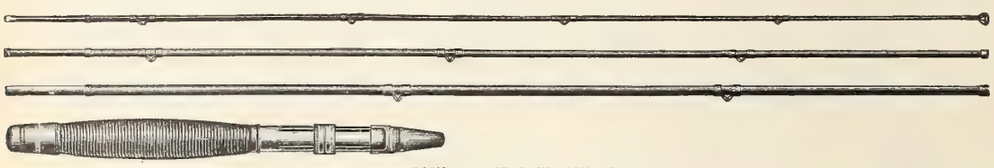
TELESCOPIC STEEL FISHING ROD.

The "Bristol" rods are strictly high grade rods, guaranteed against breakages due to defective material or poor workmanship for three years after leaving the factory. These rods have been extensively advertised for many years and have an enviable reputation among fishermen.

In addition to the "Bristol" rod, the line also consists of the Rainbow rods which are a medium priced rod, and the Luckie rod, which was made to supply the demand for a popular priced steel rod, very serviceable for boys and to sell when it is merely a matter of price.

It is not necessary for a dealer to invest any great amount of money in order to carry a small stock of steel rods, for if he has a few sample rods which would not represent an outlay of more than $10 to $20, he can order other rods from catalogs as he may have orders, although, of course, it is much better to carry a fair assortment so that a sale can be completed when a would-be purchaser is interested and ready to buy.

Catalogs and window signs are furnished gratis to dealers who do handle or intend handling fishing rods and also fishing cuts for local newspaper advertising. Dealers may also obtain, free, the handsome calendar issued each year by the Horton Manufacturing Co.; to other than dealers the calendar will be sent on receipt of 15c.



JOINTED STEEL FISHING ROD.

MOTION PICTURES IN MEXICO.

In answer to the many enquiries coming to the consulate at Tampico, Mexico, as to the possibilities of introducing the cinematograph and other motion-picture machines in that district, Vice-Consul Russell H. Millward states that the following information relative to the conditions at Tampico may be applied generally to other parts of Mexico:

"Little difficulty is found in renting suitable rooms or halls at a moderate rental and obtaining the necessary licenses, consisting of a federal, $6 gold per month, and a municipal, $2.50 to $5 per day. Two motion-picture shows are now being operated in Tampico, and while patronized to some extent can not be said to return more than a fair profit. Great care should be exercised before engaging in this new enterprise This city is lighted by electricity. The cost of installing averages about $1.50 per light (16 candlepower) and of maintaining about 75 cents per month. Lumber costs, in the rough, from $35 to $40 per thousand feet; dressed, $60 up per thousand feet."

"BRISTLES WITH PROFIT."

Those dealers who have been carrying "side lines" have doubtless discovered ere this that there is a ready market for razors, both "safety" and "old style." The logical accompaniment of a good razor is a good brush, and those who know from experience can testify as to the difficulty of securing a really dependable article of this character.

The most recent departure in this line is a brush which, to quote the manufacturer, "bristles with profit."

For more than a year an extensive advertising campaign has been under way, and the general masculine public has become thoroughly familiar with the good points of the brush.

The demand having been created, it is the part of wisdom for the retailer to place himself in a position to fill orders which are sure to be large if reasonable efforts on his part be made.

The vital point, naturally, in the manufacture of any brush, is to make certain that under all conditions it shall remain as near as possible in its original serviceable condition. In this case a setting of hard rubber insures that neither hot water nor hard usage shall interfere with the shape or the utility of the article. The most exacting tests have demonstrated the reliability of this brush in every condition of service, and no amount of bad treatment will affect its good qualities.

The same company has been working for several months to perfect a shaving cream which should fulfill certain ideal conditions, being at once aseptic, healing and profuse in lather. This end has been accomplished, and the cream is now offered for sale, and is sharing in the liberal advertising accorded to the brushes.

BILIOUSKIN.

I am the God of Grouchiness,
I hate like sin to smile;
For life is mere existence,
Not a cussed thing's worth while.
I put the worker on his neck—
Really it is no sin—
For I'm the God of Grouchiness,
My name is Biliouskin.

A violin with a string out of tune is of just as much use as an employe who is dissatisfied.

The VIASCOPE SPECIAL
NOW READY

¶ After years of study we have perfected a moving picture machine void of all vibration and absolutely flickerless. All working parts of mechanism encased in a highly polished nickel-plated steel case. Its construction is so simple that it can withstand the hardest usage without getting out of order.

The Talking Machine World

Vol. 5. No. 1. New York, January 15, 1909. Price Ten Cents

CHARTING THE VOICE.

A New Machine Called "the Tambour Apparatus" Invented by Dr. Scripture Which Records the Vibration of the Human Voice —Its Value from a Medical Standpoint Disclosed—Something of This Wonderful Creation—Will Interest Talking Machine Men.

When the science of melody has reached its last stage of development and the human larynx has become a plastic thing in the hands of the surgeon and scientist there will be a Caruso in every flat in town and a Tetrazzini in every kitchen. The three-thousand-dollar high C will become almost common property.

And recently a great stride has been made in this study of the voice of man. Dr. E. W. Scripture, the pioneer in this science, whose name is famous the world around among scientists, has just completed a machine for investigation of the vocal chords which he expects to use in the actual discovery of how each tone of the voice is created and discover incidentally just where defects lie, chart down these defects, note exactly how the big tones of famous artists are procured, and eventually perfect the science so that the voice may be brought to perfection and become not merely a "gift" but a properly acquired physical right of humanity.

In his investigations with Dr. L. Pierce Clark, Dr. Scripture discovered that the voices of epileptics, for instance, produce a chart that has a certain characteristic which the voices of normal humans avoid. With his voice-photographing machine—if it might be called such—he has picked out of 100 epileptics 75 who gave the epileptic voice chart so plainly that there could be no question of an actual physical means of the discovery of epilepsy having been made.

Dr. Scripture and Dr. Clark, seeing the great value of this discovery for the neurologists, immediately prepared a paper making it known and presented it to the New York Neurological Society. Outside of the value of the discovery for the alienists there is a humanitarian value in that a parent, fearful of hereditary epilepsy in his child, may have its voice charted, and if the epilepsy is denoted then begin early treatment for its eradication. Dr. Scripture says that even before the first epileptic convulsion the voice of the child will show whether it is the voice of an epileptic.

The news of this discovery is just reaching the outside world, for the little world of scientists is pretty well walled in from the timid and unscientific millions. No report of this event in science has reached the lay press until now.

In the little group of men bending their efforts for the fullness of scientific research into the mysteries of melody, Dr. Frank E. Miller offered a valuable suggestion. He thought that much might be found in the throat of Enrico Caruso, and Dr. Scripture forthwith went after the great tenor and soon had him in his laboratory a wondering but lamblike martyr to science.

The tenor sang into the record machine, and

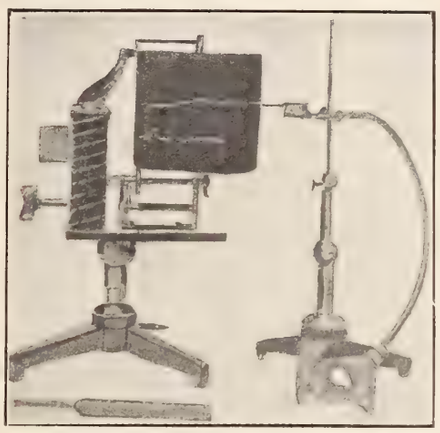
CARUSO'S HIGH C SUNG INTO RECORD MACHINE.

a strip of his high C from the aria in the last act of "Trovatore" is shown in the illustration in this article. But this is but a tiny pinch from the end of the record, for so fine is the machine in recording every vibration of the human voice that this one note required a film 160 feet in length. Caruso was astounded at the result. He had a pretty good idea that he was doing considerable artistic work for his wages, but he had never an idea that he was giving such quantity of melody for the money he got. To record all of his singing in one of the operas would require enough material to print a number of volumes.

Dr. Scripture is not at liberty to give to the scientific world as yet the products of his study of the great tenor's voice, the voice of Emperor Wilhelm, the voices of great statesmen, poets, thinkers and others, but it is promised that they bring out physiological and psychological facts which would be as interesting to the lay world as to the scientific world.

Dr. Scripture has named his new machine for the voice "the tambour apparatus."

The picture shows the mouthpiece at its base. This is connected to a small metal cap, the tambour, the top of which is covered with thin rubber, which yields to puffs and vibrations. A lever connecting to the rubber reaches to a revolving drum of smoked paper. This goes at high speed, for an average number of vibrations to the second is about 435, and one or two words



THE TAMBOUR APPARATUS.

will require much space to chronicle. When this record is finished the sounds are measured, and between given spaces are studied the vibrations, the microscope being used, and from these observations the pitch is secured. Then a tracing of a voice's record is made and the curves appear, as in the illustration depicting the record made by Caruso. This is the record of a normal man.

TO IMMORTALIZE TETRAZZINI.

Phonographic Record of the Diva's Songs to be Placed Sealed Under the Paris Opera House—Gift of Alfred Clark to Future Generations—Has Been Instrumental in Preserving Other Great Affairs.

A strange ceremony will be repeated in a few weeks in an underground passage of the Opera House in Paris, France. Then Mme. Tetrazzini's beautiful voice (for to be strictly accurate a phonographic record of it) will be buried solemnly, to remain silent, undisturbed for a hundred years. After three generations have passed to their tombs the record will be taken from its resting place and the voice which has delighted two hemispheres will sound again for people who, perhaps, may have forgotten even the name of Tetrazzini.

To Alfred Clark, a wealthy American, living in Paris now, belongs the credit of thus preserving those dulcet notes to which fickle fame might be deaf otherwise.

Mr. Clark has given to the French Government other phonographic records, which were gratefully accepted by the Minister of Fine Arts and the opera house officials, who were delighted with Mr. Clark's unique idea. The Government has decorated him in token of its appreciation.

Before a notable company, just a year ago, Mr. Clark gave records of the voices of Mmes. Patti, Melba, Schumann-Heink, Calve and other songstresses; of Caruso, Scotti and Plancon; of the wonderful Jan Kubelik's violin playing.

The casket in which these mute voices, these dumb records, repose under the opera house was scientifically sealed by direction of Charles Malherbe, keeper of the opera house archives.

Mr. Clark promised then to add to the collection from time to time, and the ceremony soon to be performed shows he is keeping his promise. Mme. Tetrazzini's voice will be the only new one laid away to charm the music-lovers of the year 2009, but records of new songs by Mme. Calve, Plancon and Renaud will be preserved.

SYSTEM IS ORDER

And the Lack of It Chaos—Some Remarks Worthy of the Consideration of the Man Who Wishes to Succeed.

System is order, instead of chaos. It is the neatly arranged shelves, instead of the miscellaneous heap in the corner. It is music, instead of noise. It is the organized army, instead of the mob. It is calmness, instead of confusion.

The systematic man works according to method, instead of in a haphazard way. He proceeds logically, instead of helter-skelter. He knows where to find his things when he wants them. He knows the what, the why, the where, and the when, of every phase of his business. He knows the quantity of goods he has on hand, how much was ordered, how much is yet to come, how much it cost, who made it, and how the stock is being kept.

He can tell from his records how fast the goods are going, how long it would take to get a repeat order, and what extras there are to consider. He can show what he wrote last year, and what the other man said in reply. He can locate a trouble quickly, and remedy it effectively and permanently.

When he takes hold of a new proposition he can think clearly, because his mind is not cobwebbed with the tangled threads of unfinished business, says Waldo P. Warren in his "Thoughts on Business." When he leaves the office he enjoys the assurance that something important has not been overlooked. When he retires at night he does not chase skywagons filled with the leftovers of a busy season. And when he rises in the morning it is with a clear head for another successful day.

"TALKERS" FOR CORONER'S DEPARTMENT

Many are the devices used by the police and subsidiary departments of a large city, but none is more interesting than the phonograph as it will be used by the coroner's department in Chicago. The phonographs will be used when possible in making records of the last denials or confessions of murderers about to pay the life penalty, and the dying statements of persons who have met with foul play. These records, in the actual voices of the persons deceased, will be filed away for reference or used in court as testimony.

FRENZIED FINANCIERING.

Columbus Washington Johnson Smith—W'at's de price er dem watermelons, Mr. Jackson?

Mr. Jackson (cunningly)—Ten cents erpiece and I picks 'em; 20 cents erpiece and you picks 'em, Mr. Smif.

PROSPERITY IN MILWAUKEE.

Talking Machine Men Close One of the Best Holiday Seasons in Many Years—All the Leading Dealers Are Enthusiastic and the Pessimism of Nine Months Ago Has Wholly Disappeared—Post-Holiday Trade Has Also Been Active—Auxetophone in Concert—Talkers for New Year's Festivities.

(Special to The Talking Machine World.)

Milwaukee, Wis., Jan. 8, 1909.

That the holiday trade was never better in all of their experience is the general opinion of Milwaukee talking machine dealers. Business was especially satisfactory in both the retail and wholesale lines, and sales far exceeded even the expectations of the most optimistic. The fact that there are so many new records and new machines in the field did much to brighten up the trade and to create the big demand that was evident for several weeks before Christmas. The after-Christmas trade even took on ample proportions, and at the present time there is every indication that the revival in business will hold good for the year 1909. Dealers were never more pleased with the past and present trade and with prospects for the future than at the present time. While the heavy trade of the holidays will probably not be maintained, the prospects for the year are exceptionally bright. General business and industries of all kinds have practically returned to the normal once more, and the natural result is that money is more plentiful and people will continue to buy talking machines. Cash sales are becoming more frequent and payments down are daily growing larger, say the dealers.

"The holiday trade was remarkable," said Lawrence McGreal, the well-known retailer and jobber. "In all of the years that I have been in the talking machine business I have never experienced such a rush as we did during the recent holidays. Machines, records and attachments, all were in demand, and my dealers all over Wisconsin seem to have met with the same success. The prospects for the new year were never better for Wisconsin talking machine dealers."

"The Christmas business this year was so far ahead of that of 1907 that a comparison is ridiculous," said A. D. Herriman, manager of the Columbia Phonograph Co. "It was a pretty dilapidated and worn set of salespeople who gathered about after we had closed up Christmas eve, and each one was congratulating himself that the two following days, Christmas and Saturday, would be days of rest. The Saturday following Christmas, however, was anything but a day of rest, and from 8.30 in the morning until long after regular closing hours the retail force was on the jump, and the remark, 'I thought Christmas was over,' was a by-word all day. When we opened for business the following Monday morning there was not much left to sell, especially in the line of machines and cabinets, and right here you can put me down as saying that the new indestructible and double-disc records are the real champions, and have come to stay. It was noticeable that the majority of sales consisted of the better and higher-priced outfits, and the initial payments on installment sales were in excess of requirements, which goes to show that prosperity has returned and the outlook for the coming year is bright indeed."

Now that the holiday trade is out of the way and dealers about the State will have something in the nature of a breathing spell, efforts will be made to complete the organization of the new Wisconsin Talking Machine Dealers' Association, the initial steps in the formation of which have already been taken. The new Milwaukee Talking Machine Dealers' Association is proving to be a most valuable organization to the dealers and trade. While little was done during the holidays the association planned several features for the holiday trade which were highly successful.

F. K. Dolbeer, general sales manager; E. H. Philips, manager of the credit department, and Peter Weber, superintendent of the Edison establishment at Orange, N. J., spent a recent Sunday with Lawrence McGreal.

William P. Hope, Wisconsin and upper Michigan representative of the National Phonograph Co., is spending a few days in Milwaukee, after a holiday visit with his parents at Cedar Rapids, Ia. Mr. Hope reports that the holiday business was phenomenal, and that the Amberol records and Edison attachments were wonderful sellers. Mr. Hope believes that had it been possible to secure more Home attachments sales would have reached even greater proportions.

The Columbia Graphophone played a very important part in the "Me, Him and I" production which played Christmas week at the Alhambra Theater, this city. R. W. Craig, the comedian, has Columbia records made especially for him at the factory at Bridgeport, Conn., and these are used to good advantage. The Graphophone is down on the program as "My New Partner," and goes through its part with a good, loud, clear ringing voice which brings forth many favorable comments from the well-pleased audience.

Milwaukee dealers are well pleased that they are now able to secure all of the new Edison attachments as readily as they care for them. No trouble was experienced during the holiday season in this line, except that there was some difficulty in securing Home attachments.

George D. Ornstein, manager salesman of the Victor Talking Machine Co., spent Christmas with relatives at Milwaukee and incidentally called upon Lawrence McGreal.

E. K. Courneen, Wisconsin representative of the Victor Talking Machine Co., spent Christmas with his sister and mother at Rochester, N. Y.

Many New Year's festivals and watch parties at Milwaukee were given added interest by the fact that Lawrence McGreal had supplied them with Victor and Edison machines for the occasion. The Sylvester party given by the Milwaukee Press Club was made merry by a big Victrola furnished by Mr. McGreal, and the club members were entertained by Caruso, Scotti, Eames, Gadski and other operatic stars.

Milwaukee talking machine dealers are much interested in the campaign that is being directed against the nickel theaters. Following the action of Mayor McClellan, of New York, Mayor Rose, of Milwaukee, has ordered a thorough investigation of all establishments of the kind in the city. Safety in particular will be looked to, as these theaters are becoming so numerous in different sections of the city that the authorities must be vigilant in watching them. In addition there is an ordinance to prohibit "barking" at the five-and-ten-cent theater entrances, and this bids fair to become a law. The measure has been acted upon favorably by the judiciary committee of the Common Council and will undoubtedly become a law.

The honors of a recent Sunday afternoon concert of Prof. Christopher Bach and his well-known Milwaukee orchestra were carried away by a Victor Auxetophone furnished by Lawrence McGreal. The idea of introducing a phonograph into a concert of this nature was a decided innovation in Milwaukee and was a daring venture upon the part of Professor Bach. That the introduction of the machine proved a happy one was proved by the great applause of the audience. The instrument carried songs by world-famous artists and accompanied by the Milwaukee orchestra, which found no end of difficulty in playing the part of accompanist. It was the universal opinion that the Auxetophone added to rather than detracted from the event. It is expected that the innovation will go far to settle the vexing problem of orchestra and soloist, and that the way will be paved for orchestra concerts without orchestra musicians.

"TALKER" GUILTY OF SEDITION.

British Authorities in India Prevent Sale of Records of Seditious Utterances.

Sedition by "talker" is a novel menace with which the British authorities in India are confronted. It has just been discovered that a German firm of disc record makers sent a representative to India equipped with all the appliances for turning out talking machine records. On his arrival he is said to have got into touch with the sedition mongers whose activity the Indian Government is endeavoring to stem.

The effect produced on the rural population in the interior of Bengal by inflammatory speeches uttered in the vernacular by their own coreligionists is said to be amazing. The ignorant ryots believe that a god speaks to them through the machine, which turns out to be a far more dangerous vehicle of subversive propaganda than printed pamphlets. The sale of these seditious records has been prohibited by the government.

The latter, in spite of the new law, continue to make their appearance periodically in the native quarters of the Indian cities.

The man who is right behind the counter sees things that the man in the office never sees. Encourage suggestions from the people who come into direct contact with the public.

OUR

VICTOR RECORDS

Guaranteed Perfect

We have arranged for two entirely distinct and separate stocks of VICTOR RECORDS ONE RETAIL, ONE WHOLESALE. By this system we are enabled to guarantee our Wholesale Trade that they will receive from us VICTOR RECORDS in absolutely the same condition they are supplied us by the factory.

NOT RECORDS THAT HAVE BEEN USED FOR DEMONSTRATING MACHINES;
NOT RECORDS THAT HAVE BEEN PLAYED FOR RETAIL PROSPECTS

But—

Absolutely New Unplayed Records

We don't need to enlarge upon the advantages of this system. You will appreciate it. We originated the system of supplying the high-grade

RED SEAL RECORDS IN SEALED ENVELOPES

This is appreciated by dealers in Victor Records, and we are sure the new method of filling wholesale orders from a stock which is in no way connected with our retail stock will be even more appreciated by them.

INDIANAPOLIS A BUSY CENTER.

Dealers Wearing Broad Smiles, All Having Closed a Great Holiday Trade—Mayer & Co. and Joseph Joiner Recent Columbia Dealers —Big Demand for Victor Victrolas—Indiana Co.'s Great Edison Trade—Outlook Most Encouraging and Dealers Are Optimistic.

(Special to The Talking Machine World.)

Indianapolis, Ind., Jan. 6, 1909.

Talking machine dealers are wearing broad smiles. The talking machine business during the last two months has been excellent and the holiday business was far beyond expectations. Many say that the holiday trade was fully up to that of two years ago. There was an increased tendency toward buying the best machines and the best records and the class of buyers was somewhat different from that of previous years. There were just as many buyers from the lower and middle classes, but there were more from the best families. The talking machine business in Indiana during the last year probably ran ahead of the business in any other line of musical merchandise.

The Columbia Co. have been having unusually good sales on the double disc records. These have been on the market only a comparatively short time, but they have gone like hot cakes. The indestructible records also are meeting with great favor. There was such a rush at the store of the Columbia Co. that twice during the week before Christmas the stock in certain lines was exhausted, and these were lines in which a heavy stock is always carried. Mr. Devine, the local manager, ordered goods by express to make up the deficiency. He says that a remarkable feature of his business during the pre-holiday trade was the cash sales, which were considerably in excess of that of past years, while the cash payments on installment sales were unusually large.

The Indiana Phonograph Co., who handle Edison machines, report an unusually good business during the last year. This firm was not under the same management this year that it was last Christmas, but the owners were well pleased with the holiday trade and they had good reports from all their dealers out in the State. The business was good during the thirty days before Christmas. The Indiana Phonograph Co. have been unable to keep "Rainbow" records in stock. This selection has proved to be one of the most popular that has been presented in Indiana in many years. "We haven't a single 'Rainbow' record in the house," said the manager of the store; "and what is more, we are unable to keep them in the house. This record has been in demand in the rural districts as well as in the city." This company are also having a great demand for the latest combination types of the Edison machines which play the two-minute and the four-minute records.

The Kipp-Link Co., Edison dealers, who report a good business, are advertising that by means of an inexpensive attachment any Edison machine may be equipped to play a four-minute record. The four-minute records are proving a "hit" in Indianapolis.

Carlin & Lennox, who handle the Victor machine, report an excellent Christmas trade on talking machines and music boxes. The trade in Mira music boxes, it is said, was far better than had been expected.

Mr. Israel, of the D. Sommers & Co., who handle the Columbia line, reports that this was the best season he has ever had in the talking machine business. He says it has been demonstrated to him that the talking machine is an essential, and that every up-to-date installment house should handle talking machines. His great increase in business he attributes to the double disc and indestructible records.

The literary society of the Manual Training High School gave an informal dance Christmas week, and the music was furnished by a Columbia Twentieth Century machine. The music went to every part of the large auditorium. Special dance records were used and were greatly enjoyed by the young people.

Charles Mayer & Co., one of the largest novelty stores in the middle west, have put a line of Columbia machines in their big West Washington street novelty and silverware store. It is expected that it was interest a class of talking machine buyers who otherwise would not be reached.

Joseph Joiner, piano dealer, Massachusetts avenue, has added the Columbia line to his stock, and he reports that he had a brisk holiday trade in talking machines, including also Victors and Edisons.

Among the out-of-town talking machine dealers who called in the city Christmas week were: George E. Cook and L. L. Bair, of Anderson, Ind.; Francis T. Mezingo, Kempton, Ind.; C. M. Carter, Arcadia, Ind., and John H. Whitlock, Rushville, Ind.

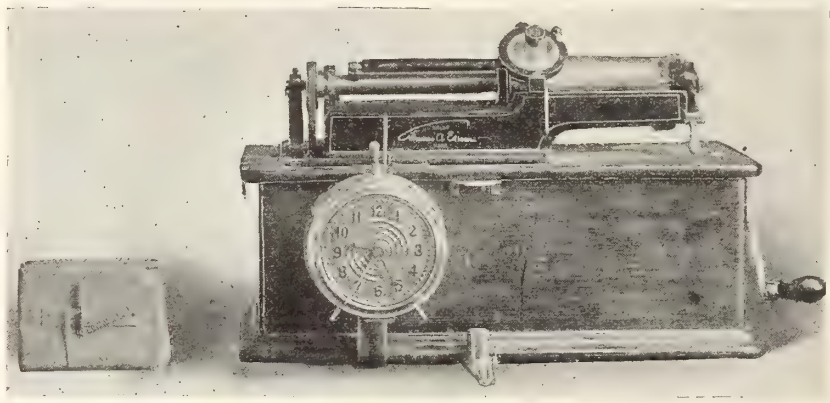
The five-cent theatres and penny auditoriums have done an excellent business during the last month and are looking to a good business during the next two months, when the regular session of the legislature will bring many country people to the city, and when many meetings of state societies will be held here.

The Mystic, on Pennsylvania street, has been featuring religious pictures. This is one of the theatres which was established to cater to the higher classes. In featuring religious pictures it has used a Columbia disc graphophone with special chimes record, "Lead Kindly Light." The graphophone was hidden behind a curtain and the chimes of a large bell served to draw the people to the amusement place.

The West Indianapolis five-cent theatre, which has always been a good paying proposition, has changed hands. This theatre, which was formerly under the management of John Ennis, is now controlled by John R. Truelock. Mr. Truelock is an experienced moving picture man, and it is expected that the theatre will be kept up to its usually high standard both as to attractiveness and in a financial way.

H. H. Myers, traveling representative of the Columbia Phonograph Co., spent Christmas with friends in Indianapolis.

Among the inquiries received by the Columbia Co. here during Christmas week was a card with the following: "Dear sirs: My hours are such that I cannot get to see you during business hours. I want to know the best price you will make on one of the mahogany graphophones in your window. Please call me up where I work and if possible send a man to see me. I want a machine and I want the one in your window, if it can be bought." This man was an engineer and he bought a $65 BY Columbia graphophone. This is one of the cases in which a good sale is attributed directly to an attractive window.



Patented

The Ravenskilde Talking Machine Starter

FOR EDISON AND ALL OTHER TALKING MACHINES

THE NOVELTY OF THE CENTURY

Put a record on the machine and set the clock at the time you want the record played. It will wake you to the sound of music divine or of any shout or remark you may have dictated into a blank record.

It's more than an Alarm Clock.
It will surprise and startle evening guests.
As a trade attractor in the store it is unexcelled.

It sells itself.
Can be operated by a child.
Is a perfect device. Does not get out of order

RETAIL PRICE, $5.00

Order sample to-day. If not satisfactory send it back and money will be refunded.

UDELL'S DISPLAY AT GRAND RAPIDS.

Will Show Their Full Line at the Furniture Exhibition This Month.

The Udell Works, of Indianapolis, Ind., will make a handsome display of their full line of cabinets for talking machines, sheet music and piano-player music at the Furniture Show, to be held in January in Grand Rapids, Mich. They will have the same space on the fourth floor of the Furniture Exhibition Building as before, and many new things in disc and cylinder cabinets will be shown that will doubtless interest the trade. Notwithstanding the depression of the past year the Udell Works have closed a most satisfactory business. They start in the new year with a busy plant and splendid prospects.

INDIANS LIKE THE TALKER.

Dance Around a Talking Phonograph in Wild-eyed Amazement.

(Special to The Talking Machine World.)

Hobart, Okla., Jan. 6. 1909.

Chief Lone Wolf, head of the Kiowa Indians, has taken a great liking to "canned" music. Recently he took a phonograph and some blank records among his people and had a number of his tribesmen talk and sing into the instrument. He then had the machine run off the newly made records much to the delight of the Indians who danced about the machine and eyed it with amazement.

The Chelsea Phonograph Co., Chelsea, Mass., who formerly conducted a talking machine business at 219 Summer street, Lynn, and also at 33 Washington avenue, Chelsea, will hereafter be located at 429 Broadway, Chelsea, Mass. This company carry a complete line of Edison phonographs, Victor talking machines, records and supplies of all kinds. Morris Robinson is manager.

A good deal of time is wasted in idle visiting. Find out what your visitor knows that you do not know and talk about that subject. Every man knows more about something than you do.

Quality

That's the big idea behind the *Victor*, the thing that has made the *Victor* business what it is to-day.

Quality has placed the *Victor* in a class by itself—has put it above competition.

That's the kind of instrument you are handling, Mr. Victor Dealer.

Make use of this "quality" idea. It will help you to build up your business, to make the most sales and the greatest profits, to add to your prestige, to establish yourself firmly with music lovers and people of wealth and refinement.

NEW YORK, JANUARY 15, 1909.

IN reviewing the business industry, of which this journal is the exponent, it must be admitted that during 1908 conditions were far from pleasing. Talking machine men had to suffer from the depression in business which affected all trades, but beyond this they had the added troubles which came from disturbed inner trade conditions; in fact, during the entire year there has been a feeling of unrest in talking machine circles. Changed conditions and restrictions imposed have all had the effect to disturb the trade in the talking machine line, and when everything is taken into consideration 1908 was a year filled with business disappointments.

Perhaps the talking machine men, on the whole, have been no greater sufferers than the men in other lines, but we have all had enough to make us sit up and take notice. There is no doubt about that. But let us forget it. Let us turn to the new year with confidence and with a fixed belief that things will move along all right during the next twelve months—that is, if we will all help them to move.

A YEAR ago the currency panic obtruded its terrifying effect upon a supersensitive people, many of whom were frightened into extreme measures of hoarding money. Currency and legal tenders were so difficult to get that substitutes for money were made with more or less disturbance to confidence. It seems peculiar now even, when we look back upon it, that such conditions could have existed, but, quite natural, such a panic was followed by extreme industrial depression and the country was filled with foreboding. Then, too, we were getting ready for the big presidential struggle, and, of course, that retarded business, and, in fact, when we commence to review the situation a dozen elements at once come to mind which helped to block the wheels of progress during 1908. So, perhaps, as the great Talleyrand once said of the "Reign of Terror," the most remarkable thing was he lived through it. We, too, have lived through the troublous times of 1908 somehow, and now thank heaven and Taft the indications point to a complete resumption of manufacturing and general business. Trade in all lines has received an impetus, and the railroad reports for December show an increase in the transportation of products and goods. The improved business conditions mean increased labor demands on all sides and a greater investment of capital, so let us not return to last year's business page. Let us close the book and leave it closed. Let us remember that the world demands good work in its development from each one of us, and let us figure that we may all contribute in a greater or less degree toward the complete restoration of business confidence. Let us remember that real progress is moving ahead, and let us remember we can all contribute toward assisting business on its onward and upward march.

SPECIAL attention is directed to a new feature of this publication designated the "Side Line Section." This is not a new idea, but one which has been carefully planned. For some months past we have conducted a feature of this paper a "Side Line Department," and advertisers who exploited their product in this particular department were successful in securing from talking machine men a goodly number of orders. Encouraged in this direction, we figured upon the establishment of a separate section which would give a broader and more comprehensive representation to the special products which can be harmoniously blended with the talking machine line. There are thousands of dealers who read The Talking Machine World regularly, who are naturally desirous of increasing their incomes, and many of them have ample space in their establishments which can be conveniently utilized for the display of special products and novelties. These have the power to attract trade in the business establishment, and the profits on the sales made help to defray fixed overhead charges and bring money storeward and supply talking machine men with a new trade with which to increase their business. Relying on one line of goods gives but one feeder, but when a number of specialties are sold it follows quite naturally that more money will be brought to establishment than if the sales are confined to one line exclusively. Everything which can contribute to increase the income of business men is certainly desirable, and there are a number of specialties offered in the "Side Line Section" which can with advantage be handled by talking machine men. These do not require a large investment, and the possibility of salesmaking is extremely good. By all means consult this new feature of The World, because it is put forth with a view of creating new business and new profits for the readers of this publication.

THE talking machine industry has established a record for legal encounters, and it is said that in this limited industry more than half a million dollars have been expended for litigation during the past few years. Surely that is a snug amount, and from present indications it will be increased materially, for there are a number of matters to be settled before the courts, which will probably be brought to point of issue during the present year. It would seem, too, that some of the matters which are now before the courts will have a far-reaching effect upon the future of the industry.

A MOST singular feature in connection with the sale of talking machines during the past twelve months of unprecedented dulness is the fact that high-priced machines and outfits have been steadily gaining demand. In fact, there has been such an insistent demand for the outfits which cost from $100 to $300 that the manufacturers have been unable to keep pace with it. It was felt by some that there was considerable doubt about the American people being willing to pay high prices for talking machines, but what has been the result? The higher the price the greater the demand, and there seems to be no limit to this branch of the trade. Plans are now being made to take care of the high-grade trade for the new year. Those who were sceptical at first admit that this demand has come to stay, and there is no more speculation as to whether the people will buy high-grade talking machine outfits or not. The record for the past twelve months has settled that, and no query mark can be placed after high-priced machines. Quality trade is a trade to be sought for and located if possible, and the greater the number of high-priced outfits put forth the greater the respect for the talker.

THE enormous advertising which the Columbia people are doing along lines of double-disc publicity is having the anticipated result in increasing the demand for the two-sided records. When double pages, back covers and single covers are secured in the leading magazines to exploit a special product, it would be strange indeed if the demand for the advertised specialty did not grow with surprising rapidity. The advertising campaign of the Columbia Co. is a most extensive one, and it shows that the battle of the records is now on in deadly earnest. The Columbia plan of exclusive representation, too, is creating a stir in trade circles.

THE Talking Machine Jobbers' Association under competent official direction has made satisfactory progress during the past year. A number of important matters have been taken up and discussed by this organization, and those who are fully acquainted with its accomplishments realize that it is a strong power for the good of the industry. A variety of subjects are now being considered by this association, which will be announced later. An organization of such character which stands for the general good of the trade should be warmly supported, and should have on its membership roll practically the entire trade. Just keep your trade eye on this organization.

CERTAIN handwritings on the trade wall indicates important changes which will be likely to occur in the talking machine circles before the year shall have advanced many moons. A little bird also whispers that new concerns will be formed, so that it is possible new competitive conditions will be created in this industry before a very long period shall have elapsed. Just what there is pending will be announced in due time in the columns of this publication. Judging from indications there will be plenty of things of interest happening, which will keep the trade tongues wagging at a good lively rate.

TRADE ON THE PACIFIC COAST.

Dealers Experience a Decided Improvement in Business—Columbia Co. News—Eilers Music Co. Make Pleasing Report—Kohler & Chase to Discontinue "Talker" Department in Seattle—Wiley B. Allen Co. Activities—Sherman, Clay & Co. Stock Cleaned Out During Holidays—The New Bacigalupi Quarters.

(Special to The Talking Machine World.)

San Francisco, Cal., Jan. 3, 1909.

Since the first of December there has been no complaint of dulness among the talking machine dealers in any part of the Pacific Coast territory, the difficulty in general being to provide a sufficient supply of goods to fill the insistent holiday demand. Reports of an excellent business in all lines of machines and records have come in from north and south, while the local dealers have their hands full. The business shows an immense improvement over the last holiday season, and some of the dealers in the city say they have never seen anything like the rush which has prevailed for the last two weeks. The rush of wholesale business may be partly attributed to the conservatism of the trade earlier in the season, which left them short of stock just when it was needed most.

Chas. E. Brown, otherwise known to the coast trade as "Talkophone" Brown, is again in the city after a visit to his store in Spokane, Wash. He says that some of the local dealers may think that he is canned and labeled, but he is still alive, and will show them a thing or two after the first of the year which had not been dreamed of in their philosophy. The trade is waiting to see what will happen.

Byron Mauzy received another shipment of the new Zonophone records a couple of weeks ago, and is now carrying the complete catalog. Now that the first demands of the trade are filled, it is less difficult to keep stock on hand, though they are still large sellers.

Large shipments of the new Columbia records have been coming in since last month, and the coast department is now well supplied with most of the catalogs, though there are quite a lot of numbers which it is almost impossible to keep in stock. The dealers throughout the country have been in a great hurry to get stock for the holidays, many orders coming in by telephone during the week before Christmas, and sales for the month would have been considerably larger if the supply of the most popular records had been on hand. P. H. Beck, manager of the San Francisco store, states that a larger business was done this year up to December 20 than during all last year. The holiday business of the coast department was the best the company has ever had, and the outlook for the next few months is decidedly good. The new $65 Columbia machine, type BY, with a mahogany cabinet, has appeared on the coast, and is proving a big seller. Many good-sized orders were taken before the stock was received, and deliveries are now being made as fast as possible. Edmund Cyrus, one of the outside men, is now in for the holidays, but will go out again by the beginning of next week. Mr. Beck will also probably take the road early in January, and expects to place a lot more exclusive agencies. It is expected that the San Francisco store, which is now on Van Ness avenue, will be moved down town during the spring or summer, though no arrangements have yet been made. The lease on the present location does not expire until next March, and no move will be made before that time.

Hy. Eilers, of the Eilers Music Co., is spending the holidays at the San Francisco store. He gives a very encouraging account of the talking machine business of his stores throughout the north. The D. S. Johnston Company, in which Mr. Eilers is largely interested, has had the lower floor of its store in Tacoma, Wash., remodeled in order to give more room for the talking machine department. This department formerly occupied the balcony, but the business has developed beyond the capacity of the former equipment. The talking machine department of the Eilers Music Company in this city has been placed in charge of the Standard Phonograph Co., which formerly operated the department of the Fillmore street store. This company also has two stores in Oakland. The Eilers department is in charge of Mr. Peel, and probably carries as complete a stock as is to be found on the coast, practically all lines being kept on hand. Mr. Peel states that the December business has been most satisfactory.

Geo. Q. Chase, of Kohler & Chase, is now visiting the Seattle store. The talking machine department of that branch is to be discontinued. C. M. Jones is now manager of the department in the San Francisco store, having charge of both wholesale and retail business. The department is being thoroughly reorganized, and some big developments are promised after the first of the year. The company reports a fine business for the last few weeks, and has had a large sale of new records.

The Wiley B. Allen Co. report an immense business in talking machines at the San Diego store the past month. The Los Angeles store, which recently put in a department, has also done very well. Little is being said at present about the talking machine department which will be installed in the new store in San Francisco, but this company are expected to cut quite a figure in the local trade as soon as the business is started.

For the last month Sherman, Clay & Co. have had a great run on talking machines, and the force in this department has had to work overtime, though everybody that could be was pressed into service. Mr. McCarthy states that the holiday business was the biggest in the history of the company. By Christmas the stock was practically cleaned out in many lines, very few Victrolas being left, and a great business has been done in all lines of Victor machines. Mr. McCarthy says the new double Victor records have not caused any great stir, though they have been on hand for several weeks, and are selling fairly well. Mr. McCarthy was actively interested for the last week in making the down-town New Year's celebration, the first to be held in the old business district since the fire. He was on the celebration committee of the Permanent Downtown Association, and took an active interest in the affair.

Benj. Curtaz & Son report a good all-round holiday business, though they expect to beat it next year, when they will be in their new building on Kearny street. With them, also, there has been an unusually large demand for Victrolas.

It will probably be well toward the end of January before Peter Bacigalupi & Son are able to occupy their new Market street store, though work has been rushed in the effort to have the place ready by the first of the year. The retail department will have seven large demonstrating rooms, and a number of other features are being prepared. Mr. Bacigalupi states that the Edison Amberol records have been large sellers throughout the month. The company has made a special offer for outside retail trade, as a result of which many orders have been coming in by mail.

VALUE OF WINDOW DISPLAY.

Robt. N. Watkin, of the Will A. Watkin Co., Dallas, Tex., Gives Excellent Advice on This Subject of General Importance.

Robert M. Watkin, secretary of the Will A. Watkin Co., Dallas, Tex., had the following to say on the subject of securing attention by window display in a recent issue of The Retail Merchant, of that city, which should prove interesting to dealers in talking machines and side lines:

"A store window offers the cheapest advertising a merchant can employ. Windows are often preferred to newspaper space because the results are quicker and surer; because showing an article will sell it more quickly than a printed description. Then, too, it is already an asset, as the rent is being paid just the same whether the window is used or not.

"The merchant is judged largely from the appearance of his window. Hence, the window should always have a fresh appearance and with this in view, they should be redressed regularly with strong attractive displays. The window displays need not necessarily be elaborate, for some of the most effective are simple and inexpensive.

"Put some definite idea into your display. Don't crowd too much into it. A variety of articles is often passed unnoticed where a few articles strongly presented will attract immediate attention. A good window display is one that associates the goods with some other person or event of current interest to the passerby, not in any way connected with the idea of buying or selling. In this manner you command attention and it is a recognized fact in salesmanship that if you can secure a person's attention, a good part of the work is already accomplished."

The Phillips & Crew Co., Savannah, Ga., have been giving a number of successful recitals in Lawson Memorial Hall, that city, at which the Victor talking machine and Steinway piano played prominent parts.

A Business "Because"

¶ To the Dealers of Michigan, Northern Ohio, and Northern Indiana, we send a solicitation for business on the plain business basis of giving the best possible service.

¶ We are safe in the statement that we can fill your orders immediately on receipt; that we can ship goods to you the same day in which we receive your order. We know we carry the most complete lines known to the jobbing trade. It is an exceedingly rare occasion when we are "out" of anything.

¶ You may send your orders to us by mail, or wire, or give them over the Long Distance Telephone, at our expense, and you will find us just as prompt in attending to your wants as we claim to be.

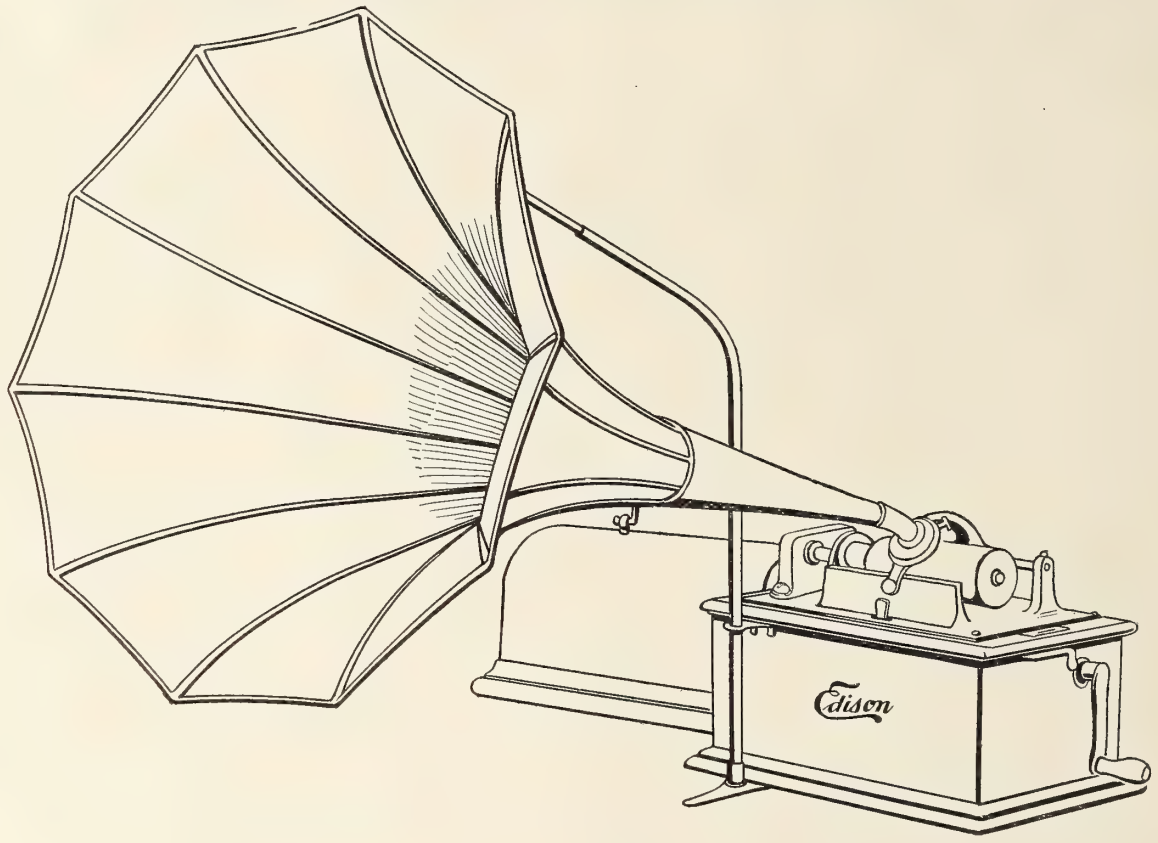
¶ Another thing; in every line our goods are new. We are abreast of our business every minute. As soon as anything new presents itself, we have it.

¶ 1909 is going to be, we believe, a good year and so every dealer should stock up well—not only be prepared for trade that comes but go after it and come to us to supply the goods.

American Phonograph Co.

106 Woodward Avenue, Detroit, Mich.

Have You The Amberol Record Attachments And Are You Putting Them On Phonographs Already Sold?



Every time you equip a Phonograph with the Amberol Attachments you create a new Amberol Record customer.

These attachments are easily put on and they pay you a profit. A Phonograph equipped with them will play both Amberol Records and the regular Edison Records.

So, in making Amberol Record customers of present Phonograph owners, you also retain their trade as standard Edison Record customers.

The new types of Phonographs are all equipped to play both styles of Records—an advantage that wins the choice every time.

You should see that your line is complete on instruments and both styles of Records; also that every Phonograph you have sold is brought up to date with the Amberol attachments.

The demand for Amberol Records grows as people hear them and the profit to you is big.

With the attachments, the Amberol Records and the new types of Phonographs, you ought to have everything your own way this year.

Edison jobbers are all supplied with the new goods. Write the one nearest you.

National Phonograph Company, 59 Lakeside Avenue ORANGE, N. J.

Have You The New Amberol Records And Are You Demonstrating Them?

Once your customers hear an Amberol Record a sale is made.

There is nothing in records that compares with them. Their long playing time is an argument. Their sweet tone is another, and the high grade of music and songs they offer is another.

An Amberol Record furnishes four minutes of delightful entertainment, without record-changing. That is twice the playing time of the standard Edison Records and a longer playing time than any other kind of record affords.

The tone of these new records is remarkable for its clearness, richness and fidelity and the selections are the work of the best talent obtainable.

Not since the perfection of the Phonograph has such a powerful selling argument been given the dealer as that represented by Amberol Records.

You should make the most of it. You should carry a complete stock of both Records and Phonographs. You should advertise them and demonstrate them. They represent your best opportunity for increasing sales during 1909.

Begin the year with a complete line. There is an Edison jobber near you who will be pleased to fill your orders.

National Phonograph Company, 59 Lakeside Avenue, ORANGE, N. J.

THE VALUE OF NEATNESS.

This Art Is a Necessity in the Talking Machine Business and Should be Cultivated by All Dealers Who Would Achieve Success.

Mr. Dealer, a word with you!

Is your place of business as attractive as your home? If not, why not?

This is a serious question and one well worth deep thought. For the success of the "talker" fraternity and the advancement of phonographic melody, it is imperative that the setting which this melody is given should be an appropriate one. Think for a moment of the exquisite surroundings in which grand opera is heard. The dainty decorations, the air of refinement and culture which exudes from every pillar and balcony, exhilarate even before the curtain ascends. Should not your store which is a grand opera house in miniature a place where the golden voices of the great song birds warble as sweetly as they do in the palace of Hammerstein, be in harmony with the goods you sell?

The jobber may say that he caters to the dealer only, and that he has no time to devote to unnecessary display. He is right to an extent, but, there are very few jobbers who do not have more or less retail business as well, and as this is the branch of his trade from which the greatest margin of profit springs, it is imperative that it should receive its full share of attention. The only way to draw retail trade from the class of people who really count—the purchasers of operatic records—is to make your establishment neat, attractive and homelike. Have a window display that will compel Miss Society, down town in her electric brougham on a shopping tour, to step forth and admire, and this accomplished to her satisfaction, to come in and buy. Feature your opera selections in the way they deserve by having neatly framed pictures of the artists, whom she worships, upon your tinted walls. If you do this, your fair visitor will be sure to express her delight. Then she will recline in the easy chair you draw out for her

AN ATTRACTIVE WINDOW.

reception, and pleased and comfortable, select at her leisure the records desired.

I happened in one of Philadelphia's most attractively appointed "talker" shops the other afternoon and witnessed just such an event as I have described above. A stylishly gowned young lady entered and began by congratulating the dealer upon his beautiful store. Then she asked to hear the following grand opera records: Sextette from Lucia, Quartette from Rigoletto, Plaisir d'Amour and Favorita. She was delighted with their superior tone and purchased them all, her bill amounting to $17.00, and she was not in the store more than a half hour.

"I never go into ordinary talking machine places," she remarked in parting, "but when I peeped in your window and saw the cozy room behind it, I could not resist. I shall surely come again very soon. Thank you so much for your courtesy," and with a rustle of silken skirts, she was gone.

It was the neatness and general refinement of the establishment that captured this customer, Mr. Dealer, and in closing, I want to ask you a question: If Miss Society happened to glance in your window to-day, would she favor you with a call?

HOWARD TAYLOR MIDDLETON.

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

MENTAL CURE FOR MALADIES.

How the Talking Machine May be Adapted to Some Purpose in These Days of the Emanuel Movement and Christian Science.

Are you insane? Try music. That is the sovereign cure for maladies of the mind, according to Miss Jessie A. Fowler, who spoke on the subject before the Rainy Day Club in the Hotel Astor recently. Miss Fowler has a kind of music for nearly every phase of aberration. Here, for example, is her catalog:

For simple mania, or just ordinary insanity, a few doses of slow, dreamy music on the talking machine. She did not specify in this regard, but it was noticeable that she didn't mention the "Merry Widow" waltz, which, although considered slow and dreamy, probably has made more lunatics than it has cured.

For acute mania, where the mind is agitated and one is inclined to violence, a moderate application of Beethoven's Moonlight Sonata has been found efficacious. Miss Fowler did not say whether this had anything to do with the ancient theory of the effect of the moon on the mind. Melodies like "Drink To Me Only With Thine Eyes" are also suggested, although, on account of the well known harmful effect of liquor on the brain, too much of this is forbidden.

For melancholia, what Miss Fowler calls "bright, quick" music must be applied. In this class one may try a teaspoonful of such lyrics as "I Like to Have a Lot of Little Girls Around Me" or any of George Cohan's works. Pieces like Chopin's "Marche Funebre" and the "Ave Maria" are not good in such cases.

For cases of paralysis—Miss Fowler neglected to say whether she meant paralysis of the mind or body—strong doses of Wagner are recommended. The "Ride of the Valkyries," for example, is calculated to awaken the dead, and certain parts of "Parsifal," although known on occasion to have had a somnolent effect upon certain kinds of minds will prove highly beneficial to those in whom all feeling is dead.

DR. BELL'S NEW FLYING MACHINE.

Dr. Alexander Graham Bell, who with C. A. Bell and Sumner Taintor, was interested in the invention of the graphophone, is reported to have completed a new flying machine. Dr. Bell is famous as an inventor and scientist. He was associated in Edinburgh and in London university, and upon coming to America in 1870 first went to Canada, but settled in Boston a year later, becoming professor of vocal physiology in Boston university. Soon after his investigations began that led to the invention of the telephone, the patent for which was granted in 1876. Various universities have conferred degrees upon Dr. Bell, who also is an officer of the French Legion of Honor, and he is a member of various scientific organizations and regent of the Smithsonian institution. His home is in Washington, and he has an extensive summer home at Sydney, Cape Breton, where he has just completed his new aerodrome.

PARCELS POST TO AUSTRIA.

On January 1, 1909, a parcels post arrangement between the United States and Austria (not including Hungary) went into effect. Under this agreement parcels to be exchanged between the two countries must not weigh more than 11 pounds, measure more than 3 feet 6 inches in length, nor 6 feet in length and girth combined. Postage must be prepaid at the rate of 12 cents per pound or fraction thereof. If necessary, a delivery charge not exceeding 5 cents will also be collected of the addressee on delivery of the parcel.

THE GOOD CHRISTMAS SALE.

How Salesman Franklin's Heart Was Touched by the Condition of a Poor Widow and Her Son—Provided With Christmas Music at the Expense of a Fancy Vest.

Edward R. Franklin decided he might order it. He had inspected, through the window of the Universal Clothing Co., the fancy material marked "Vest, $7.50," every morning this week, but his mind was not settled till to-day. But this morning he had told himself that he did not spend a great deal on his own person, and that the waistcoat might help him along in making sales. So in he went, got measured, and ran out of the store just in time to catch the car which was to carry him and his neat black carrying case to his territory for the day.

Not many hours passed before a heavy rain caused our young friend to take refuge in a small house in a big field.

It wasn't a pleasing Christmas picture he found there.

Just a poor old widow eking out an existence in company with an only son, bed-ridden since childhood with an incurable spinal complaint; but she was able to entertain her visitor: oh, yes—her good, dear husband had bought a "plate talking machine" the year Willie was born, and only a few months before his own life had been crushed out in a coal mine. They had never had any new records since; they simply could not afford them, but she hoped some day to be able to buy some. Willie loved the machine so! Let her put on "Mendelssohn's Spring Song." Willie liked to hear that as he lay in the other room, and she would go and do a little washing in the yard, now it had stopped raining, if the gentleman would excuse her.

Edward R. felt a sort of choking in the throat as he listened to the sweet strains of the "Spring Song" coming faintly from the poor, worn record. How gently he lifted the lid of the box that held the remaining cracked, chipped and seedy-looking records, and then how quickly he opened his own smart carrying case and seemed to lift something heavy out of it, and place it in the box so often touched by loving hands.

He had to go then. He told the old widow the rain had been a nuisance—he had so much to do.

* * * *

Edward R. Franklin walked briskly into the office, and in reply to the manager's inquiry, said he had had some fair sales and placed a small pile of bills on the cashier's desk, as he made out his sales' slips.

"That's a pretty fair sale," said the manager, glancing over the items, "twenty records to one man."

"Yes, sir; the poor fellow is a cripple."

"That's bad; good thing he's got money."

"Yes, sir. May I use the 'phone?"

"Why, of course."

"2684 R, please. Hello! Is this the Universal Clothing Co.? Well, this is Edward R. Franklin. Will you kindly cancel that order I gave you this morning for a vest? Right! Much obliged. Good-bye. ERNEST WERNINCK.

"THE WOLF" THRILLS THE WEST.

Scene of Fight in Which the Howling of Wolves Is Reproduced by Talking Machines.

During its recent visit to Denver, Colo., that intense drama of the Northwest, "The Wolf," written by Eugene Walter, a former newspaper man of that city, caused quite a sensation, and much favorable mention. Of course the fact that the author was a Denver man won for it a special consideration, but it was the howls of real wolves, heard in the play, that amazed old-time ranchers. The play works up to a duel to the death in the dark between the two principal characters accompanied by the howl of wolves, which is almost blood curdling. This realistic effect is secured by means of the talking machine. It will be remembered by readers of The World that records of the howls of real wolves were taken specially for this play and they have added much to the real Bowery or Drury Lane "thrill" occasioned by the performance.

MISCHA ELMAN'S SUCCESS.

Not in many years has a violinist scored such a success in New York as has Mischa Elman, the young Russian, who has been arousing great enthusiasm, both at his recitals and at the Sunday evening concerts at the Manhattan Opera House. Elman's success confirms the high praise bestowed upon him by the leading critics of Europe. He is no longer a boy prodigy, for his reputation

MISCHA ELMAN.

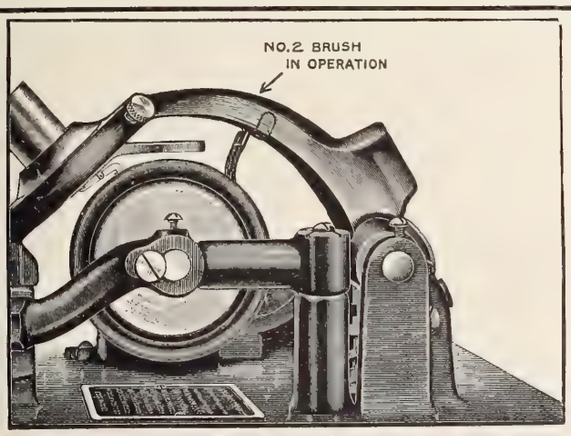
rests on a more substantial foundation. He is a mature artist, and while still a "prodigy" is no longer a boy. Talking machine dealers will find a great demand for Elman records at the different points to be visited by this artist during his six months' tour of the United States. Four fine Elman records are listed in the Victor Red Seal list, and they should be featured by dealers well in advance of the concert to be given by this artist in their locality. They will be well rewarded for their enterprise, because they are records of especial excellence, possessing that individual force which enables Elman to thrill his audiences and enthuse them.

SAVE THE LIFE OF YOUR RECORDS

BY USING THE PLACE AUTOMATIC RECORD BRUSH

FOR EDISON PHONOGRAPHS AND VICTOR TALKING MACHINES.

PATENTED { September 25 and October 2, 1906 and September 10, 1907.



PRICE, 15 CENTS

CAN BE USED ON ALL PHONOGRAPHS

Removes lint and dust from record automatically. Saves Sapphire from wearing flat and prevents rasping sound. Insures a perfect playing record. It is equally as efficient when recording. It is too cheap to be without.

No. 1 fits Triumph **No. 2** Standard and Home **No. 3** Gem

THE PLACE No. 10

TRADE IN THE ANTIPODES.

Talking Machine Business Shows Steady Improvement—Edison Line Gaining Ground—English and German Machines Popular—Low Prices and Too Much Competition Hurt Business—Dealer Restrained by Court from Handling Edison Goods After Being Cut Off List, Wins in Higher Court.

(Special to The Talking Machine World.)

Sydney, N. S. W., December 15, 1908.

Business conditions among talking machine men in this country are slowly improving, dealers reporting an increased demand for high class goods. The Edison line has a steadily growing following all through Australasia, and there can be no question as to the tremendous advertising value of the name of Edison. Of course this doesn't mean that the American manufacturers control the market exclusively for the English and German machines have also many admirers, the latter particularly in the lower-priced goods.

There has been a regular avalanche of cheap stuff on the market for some time past which has tended to injure the business as a whole. Moreover the general complaint is that there are too many factors in the business compared with the volume of trade done in this country. Things will undoubtedly right themselves in time, and it is clear that the line of demarcation between the higher classed goods and the very cheap is becoming more defined. The salvation of the trade seems to lie in having fewer and better factors, and in adhering to fixed prices. The policy of "getting business at any cost" is a mistaken one, and the talking machine men of this country are commencing to realize it. There is room for a national association or some assemblage of men with the interests of the trade at heart who will get the trade together and decide upon a plan of campaign that will tend to clear the skies, and put the business on a sound, healthy basis.

The recent decision handed down by the higher court on the points of law reserved in the action brought by the National Phonograph Co., of Australia, Ltd., a company incorporated and carrying on business in New South Wales, against Walter T. Menck, of Nicholson street, Fitzroy, has occasioned much comment in trade circles. The report of the proceedings and the judges' decision herewith, will doubtless interest your readers:

The plaintiff company deals wholesale in Edison phonographs and phonographic material throughout Australia. Defendant was a dealer, and entered into a certain contract, which purported to be made with the plaintiffs, but which was procured by a jobber of the plaintiffs. One of the terms of the contract was that if defendant was struck off plaintiff's list of dealers he would cease to handle, sell, or deal in goods dealt in by plaintiff, unless authorized by the plaintiff in writing. Plaintiff removed defendant's name from their list, but defendant was alleged to have continued to deal in and handle the plaintiff's goods. Plaintiff company, therefore, claimed an injunction to restrain the defendant from selling its goods, and £250 damages for certain particular breaches of the contract.

It was argued for plaintiff company that it was entitled to succeed on two grounds—that the contract had been broken, and that plaintiff company had attached certain conditions to the sale of goods, and goods must be sold subject to those conditions or not at all. This second right the plaintiff asserted arose from the nature of a patented article.

Defendant denied that such right existed, and, further, he asserted that the contract was illegal, as in restraint of trade, and that the removal of his name was illegal.

The Chief Justice, in delivering judgment, said: "The exact point of law involved has never been decided, and although there are expressions of English and American judges in favor of the plaintiff, I think the matter should be considered from fundamental principles. A patentee can, of course, make and enforce any contract he pleases with a purchaser or with a licensee. But he cannot, apart from the contract, attach to the product of his manufacture any conditions which would inhere in the product when it has since passed into the hands of persons with whom he is not in privity of contract. There is no ground on which plaintiff company can rest the very extensive powers of controlling the sale and use of products of their invention in the hands of the public which they have attempted to assert in this case. On the question of breach of contract, I think there was a contract with plaintiff binding on defendant, but that his name has been unlawfully removed from the dealers' list. Judgment should, therefore, be entered for the defendant with costs."

Mr. Justice Barton and Mr. Justice O'Connor, in separate judgments, agreed.

Mr. Justice Isaacs dissented, and said: "I think that the right of attaching conditions to the sale of patented goods does exist, as contended for by the plaintiff. That is the opinion of a number of English judges, and of some American judges. I am also of opinion that defendant has broken his contract, and that he has been rightfully removed from the dealers' list."

Mr. Justice Higgins agreed with the majority on the question of inability to attach conditions to sale of patented goods, but thought that on the question of breach of contract plaintiff ought to succeed.

Judgment was entered for defendant with costs, in accordance with the opinion of the majority.

A GREAT CHRISTMAS TRADE

Enjoyed by All the Leading Talking Machine Houses—Reached the Dimensions of Two Years Ago—Expensive Instruments Bought.

The holiday business with talking machine jobbers and dealers, in a great many sections of the country, was far beyond expectations. The week preceding Christmas was particularly active, and sales were only limited by failure to have a sufficient supply of goods to meet urgent demands. In short, trade throughout December really reached high water mark. In and about New York, with few exceptions, the jobbers and dealers who are most frequently mentioned as leaders spoke as follows:

G. T. Williams, general manager of the Victor Distributing and Export Co.: "Our December business was tremendous, and I am satisfied that dealers who went after trade have no complaint. It is true in the city some dealers wait for things to come their way, and they are the only ones whom I have heard speak of business other than in a cheerful strain. We could have sold at least 100 more Victor Victrolas if the factory had filled our orders. The outlook for the new year is excellent. Our trade is almost wholly wholesale, as you are aware."

J. Newcomb Blackman, president and general manager of the Blackman Talking Machine Trade: "We had a very active business, and when it came to supplying dealers with goods, no one on our regular list of between six and eight hundred suffered. We managed to satisfy their needs. Of course, dealers who turn up only when an emergency occurs are not always given the preference when it comes to a squeeze and stock is short."

John Kaiser, general manager of the Excelsior (nee Douglas) Phonograph Co.: "We had a great Christmas trade, several times over in volume what was sold last year. Of course, we could not get all the goods we could have handled, but we did a great trade nevertheless."

The Columbia Phonograph Co.: "Sales reached the top notch mark in December, and just before Christmas we worked overtime to fill orders. The year 1909 looks fine for Columbia goods."

WRITING TO THEMSELVES.

Traveling men are noted for doing as well as saying funny things, and one of the latest peculiar things that they do is to write to themselves and send the letter to the next town where they intend to stop. Sometimes it is done for a "bluff," but it is also done for a reason. A prominent hotel clerk, in speaking of the matter, said:

"Some men on the road write letters to themselves before they get to the next hotel, so they will appear important when they register and ask for their mail, but that isn't always the reason. We soon catch on to them, because we see their handwriting on the register and on their mail; and I noticed it once in a man whom I finally got to know very well.

"He wasn't the kind of a fellow who cared anything about appearing important, I found out, so I asked him why he did it. The explanation was very simple. He had a miserable memory, and when he was in another town and would think of something he had to do in Fargo, he would write it on a slip of paper and mail it to himself. He didn't put the memorandum in his pocket for fear that he would forget all about putting it there.

"He said he had used the plan for a long time, always writing ahead if there was something in another town he wanted to remember particularly, and said it was the best plan he had ever figured out to keep from forgetting things."

The Original House

We were the FIRST JOBBER of the Edison Phonograph and Victor Talking Machines in Philadelphia and have ever since maintained our position of "FIRST." We are FIRST in securing anything new, FIRST in making prompt and satisfactory shipments, and FIRST in caring for your interests.

WE INTEND TO CONTINUE FIRST AND IF YOU ARE NOT DEALING WITH US "GET NEXT."

PENN PHONOGRAPH CO.

17 South 9th Street Opposite Post Office PHILADELPHIA

MOVING-PICTURE SHOWS WIN.

Court Decides Mayor Cannot Close All on a Sweeping Order.

Deciding that the sweeping order of Mayor McClellan directing that all the motion-picture shows in the city be closed, was invalid, Supreme Court Justice Blackmar, in Brooklyn, granted to the showmen injunctions restraining the authorities from interfering with their exhibitions.

This order will act as a permanent restraint upon the city officials unless the decision of Justice Blackmar is upset by the higher courts. Mayor McClellan said later that the city would appeal the case as soon as possible. It will probably be carried up to the Court of Appeals.

Justice Blackmar holds that the Mayor was without the power to make the revocation of licenses; that he could not close up both the good and the bad shows indiscriminately. The Mayor, however, is not restrained from revoking the licenses of any or all of the shows not complying with the law upon the presentation to him of proper cause for such action.

It is the view of the court also that the moving-picture exhibitions do not come within the inhibition of the Sunday observance laws. About 540 such shows in the different boroughs of the city are affected by the decision.

In the opinion Justice Blackmar said: "There is a limit to the exercise of the power of revocation. It must not be arbitrary, tyrannical, or unreasonable. The Mayor might, perhaps, have revoked the licenses under whose protection indecent or improper pictures were shown and those licenses which were acquired by bribery. He could have revoked, or suspended, until required changes should be made, the licenses of those places insufficiently safeguarded against fire. And it is possible that there were other conditions shown at particular places which furnished cause for revocation.

"But the Mayor did not confine his act to those places against which cause was shown. He revoked each and every license he had granted. He included in the same condemnation the innocent and the guilty.

"It was held in People v. Hemleb that a moving picture show is not a public show within the meaning of the words used in Section 365 of the Penal Code. I do not mean to say that these shows may not be of such a nature that they would be illegal, but simply that all exhibitions of moving picture shows on Sunday are not necessarily illegal so long as the Hemleb case is unreversed.

"Within certain limits the discretion of the Mayor to determine whether licenses shall be revoked will not be controlled; within those limits the court will not substitute its judgment for that vested in the Chief Executive of the city, but a general order of revocation which is concededly based on an abuse of the privilege by a part only of the licenses is not a valid exercise of the power."

A committee of moving-picture men will call on the Mayor for the purpose, if possible, of adjusting their shows to the requirements of the law.

STANDARD CO. BUYS W. E. HENRY CO.

The Youngstown, O., Establishment of the W. E. Henry Co. Taken Over by the Standard Talking Machine Co., of Pittsburg—Organize Strong Selling Force—Vigorous Campaign for 1909 to be Inaugurated.

(Special to The Talking Machine World.)
Pittsburg, Pa., January 6, 1909.

The Standard Talking Machine Co., Inc., have just bought out and taken over the entire stock, merchandise and fixtures, of the W. E. Henry Co., Youngstown, O., who were jobbers of the Edison line. This, together with their recent purchase of the Powers & Henry Co. and the Pittsburg Phonograph Co., of this city, gives them one of the largest stocks of talking machines, records and supplies in the country. They are just starting out on a vigorous campaign, and expect to give their dealers better service, prompter shipments and more liberal terms than ever before.

S. A. Shirley, formerly of the Powers & Henry Co. and W. E. Henry Co., will represent the Standard Co. in lower West Virginia; J. C. Flinn, formerly of the W. E. Henry Co., in eastern Ohio; A. G. Higgins, formerly of the Victor Talking Machine Co., in Pennsylvania, and E. G. Bachtell in upper West Virginia and Maryland.

Chatting with the manager of the company today, he said: "We have found the fall talking machine business to be away beyond our expectations. In fact, our business for November and December was considerably more than the combined business of the Powers & Henry Co., Pittsburg Phonograph Co. and Standard Talking Machine Co. for the corresponding months of last year, and every indication points to a continued improvement. In fact, we feel confident that the talking machine business is due for a decided boom."

TO TRY AN EDISON STREET CAR.

Experiment With Nickel Storage Battery on Third Avenue Line.

The self-propelling street car with which Thomas A. Edison has been experimenting for the last seven or eight years, is now being put into its final form and will be tried out over the tracks of the Third Avenue system next spring. The car is to be operated by a storage battery the metal parts of which are of nickel instead of lead, and the chemical reaction of which is of an alkaline rather than of an acid nature. By these changes the inventor hopes to turn out a battery whose superior resistance to corrosion will prolong its life an indefinite number of years beyond that of the batteries now in use. Such a battery, he thinks, will make possible an electric car generating its power aboard which can be operated as cheaply as from a central station.

Frederick W. Whitridge, the receiver of the Third Avenue system, is also investigating the merits of another style of self-propelling car.

Fibre Needles FOR DISC RECORDS

ARE BEING SOLD BY THE MILLIONS

THE first and only ones on the market. The kind you have been waiting for. The kind that will not and cannot injure your records. The kind that cleans, polishes and improves your records to a greater extent each successive time they are played. **NO SCRATCHING, NO CUTTING, NO RASPING.**

The Records Are Yours to Enjoy FOREVER

ALWAYS NEW—ALWAYS CLEAN—ALWAYS IMPROVING

A needle that is essentially intended for the home or parlor. A needle that will appeal to the lover of good music—to the one who understands and appreciates a **correct reproduction.** A needle whose tone quality is rich and natural.

The Effect is Ideal In fact, a needle that is logically adapted to the varied and delicate requirements of a disc record—that preserves, instead of destroys—that glides, instead of cuts—that is silent, instead of rasping. Try them at home when alone. Then wonder how you ever did without them.

Each needle may be repointed with a special device for this purpose.

Send us your sound box so that it may be altered to take both fibre and steel needles.

B. & H. FIBRE MANUFACTURING CO.

208 E. KINZIE STREET, CHICAGO, ILL.

REGARDING USE OF VICTOR NAME

In Connection With Store and Advertising Signs—Important Letter from Victor Co.

Under date of December 30, 1908, the Victor Talking Machine Co., Camden, N. J., sent their distributers and dealers the appended interesting circular letter, as follows:

"A recent action by several of our eastern distributers in regard to the display of misleading signs, advertisements, etc., which tend to make the impression that their house is a branch of the Victor Co., a salesroom of the Victor Co., or directly connected with the Victor Co., has caused us much annoyance, and is such an obvious injustice to distributers and dealers that this circular letter is warranted and sent out to all of our trade. Any advertisement or representation that tends to convey the impression that the store is a branch of, or in any way connected directly with the factory, is misleading, and will not be tolerated.

"It is permissible only for the merchant to advertise his name as 'Victor talking machine distributer' or 'dealer,' or as 'Victor distributer and dealer,' but in each and every case the merchant's name must be fully as large and as prominently displayed as the word 'Victor.' Under no circumstances will one be permitted to use such words as 'headquarters,' 'factory,' 'shop,' 'Victor salesrooms,' 'distributers for America,' 'distributers for the United States' or other misleading phrases in any advertising matter, printed matter, signs or posters.

"The term 'salesrooms for Victor' is permissible in this form, provided the merchant's name is placed over or in front of that appellation in type fully as large and prominent as the above term. This seems to be a popular form with some dealers; hence the suggestion, as it avoids the impression of Victor ownership made by the objectionable 'Victor salesroom.' You are not permitted to advertise guarantees, premiums, unusual discounts, unusual inducements or anything tending to appear as an unusual inducement, such as repairs and adjustments, in connection with our product.

"We feel sure that all distributers and dealers who do not wish to take advantage of their competitors by some innuendo or sharp practice in their advertising will be agreeable to our request for fair play, and give us their hearty cooperation. In the case of further objectionable advertising or offense we shall be compelled to suspend negotiations with the offender."

The next best thing to knowing how to do it, is knowing how not to do it.

PHOTO-OPTICAL APPARATUS

Invented by Dr. Duncan a Great Aid to Medical Students—How Moving Pictures and Phonograph Are Employed.

A photo-optical apparatus, the invention of Dr. Charles H. Duncan, a surgeon-engineer, which was recently given a practical and successful test in New York, will, in addition to proving a great benefit to medical science, prove a relief to the suffering patient who, as is now the case, is placed on an operating table and subjected to the gaze of hundreds of students who attend the clinics throughout the city. This apparatus, which will revolutionize a custom in hospital surgery, according to learned medical men who have witnessed its performance, will be the means of doing away with the dread felt by patients submitted to operations of being exposed before embryonic surgeons, students and the public in general.

The machine, by means of mirrors and camera bellows, transports the vivid scene in its actual colors and proportions, life-size, from the operating room to a huge screen in the ampitheater where are gathered the spectators, not one of whom actually sets eyes on the patient, the nurses or the surgeons who are performing the operation.

In addition to this the patient is absolutely unaware that the operation is under observation; no sound penetrates the operating chamber; danger from septic poison broubht in on the clothes and shoes of the witnesses is eliminated, and annoyance caused by those going to and from their seats is obviated.

Moreover, moving pictures of the operation may be procured. Phonographic records, too, of the accompanying lecture are made, thus obtaining for future use valuable instruction for medical colleges all over the world.

As is now the case, even the best appointed surgical auditorium offers poor advantages for observing an operation. The student sees little beyond the backs of the surgeons and nurses unless he is one of the privileged half dozen guests who crowd around the patient.

The lens of the projectoscope throws the picture upon the screen or patient, so that the resulting actual operation is witnessed by every one in the amphitheater from one point of view. It is as though the spectator were gazing down upon the scene through an aperture six feet above the operating table. The face of the patient is covered and nothing whatever is thrown on the screen except the locality operated upon.

Dr. Duncan has succeeded in restoring in the projected picture the full color values through the employment of certain thin strata of chemical fluids intensifying the red, orange and green rays.

The device, which has consumed many months in perfecting, was transformed to the electrical testing laboratory of the Edison Company at Eightieth and East river, where special facilities were afforded for the application of the electric lights. Twenty-five prominent physicians, surgeons and scientists, together with the medical staff of St. Gregory's Hospital, witnessed the tests. A large number of scientific experiments were carried on.

When Dr. Duncan was questioned about his invention at his office, No. 233 Lexington avenue, he regretted that professional ethics prevented him giving any information aside from the acknowledgment of the fact that he had invented a projecting machine for use in hospital amphitheaters. He said that having invented the device and demonstrated its utility, he left it entirely in the hands of his professional brethren to place the apparatus in operation in the hospitals.

BUSINESS MAN'S TEN COMMANDMENTS.

1. Thou shalt not in any wise boast, brag, bounce, or bluster, or the wise man will hold thee in low esteem.
2. Thou shalt not permit thy wife to be living at the rate of $1,000 a year, when thy business is not yielding more than $999; nor shalt thou withhold from her the business information which, as a helpmate, she is entitled to receive.
3. Thou shalt not mock the unsuccessful man, for he may be richer in his poverty than thou art in thy boasted abundance.
4. Thou shalt not carry the counting house into the domestic circle, nor in any wise spoil the children's hour.
5. Thou shalt not hobnob with idle persons nor smoke with them, nor encourage them, nor approve their evil life.
6. Thou shalt not keep company with an unpunctual man, for he will certainly lead thee to carelessness and ruin.
7. Thou shalt not forget that a servant who can tell lies for thee may one day tell lies to thee.
8. As to hours of slumber and sleep, remember the good old rule: Nature requires five, custom gives seven; laziness takes nine, and wickedness eleven.
9. Neither a borrower nor a lender be, but give where well bestowed right cheerfully.
10. Be honest in copper, and in gold thy honesty will be sure.

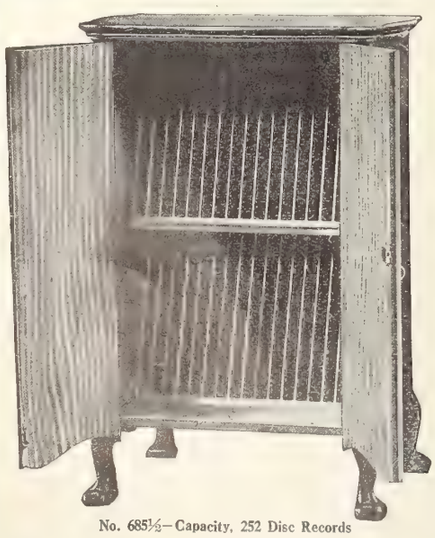
MARION DORIAN AT HEADQUARTRS.

Marion Dorian, who recently arrived in New York from London, Eng., where he was the manager of the branch house of the Columbia Phonograph Co., General, will remain at headquarters in the New York Tribune building in an important position, the exact nature of which has not yet been announced by the company. The post in London which Mr. Dorian vacated will probably be filled by Geo. W. Lyle, general manager, who got away to Europe Wednesday, on his arrival there. Marion Dorian is a brother to Frank Dorian, general European manager of the Columbia Co., and of John H. Dorian, now in China, and the general manager of the company's business in the entire Orient.

THE ZONOPHONE CALENDAR.

The 1909 calendar sent the trade last month by the Universal Talking Machine Mfg. Co., Newark, N. J., presents their "handsome kid" in attractive fashion, the colors showing the Royal machine and the trade-mark, "On Speaking Terms," most effectively.

"A PERSON WITH A RECORD CABINET and not enough records to fill it is the best kind of a prospect."



No. 685½—Capacity, 252 Disc Records

Furnish any customer with a cabinet and you will create a field for the sale of more records. You should be just as anxious to sell your customer a cabinet as you are a machine, because a cabinet is an absolute necessity to a possessor of a stock of records. They must be kept in a cabinet to be preserved, and the cabinet is an ornament in any parlor besides serving as a stand for the machine.

We want to sell you our cabinets and offer you a splendid line at very low prices. Exclusive designs, large variety, substantially made, finish unusually good. Need we say more? Write for prices.

Rockford Cabinet Co., 1920-30 12th Street, **Rockford, Ill.**

TRADE HAPPENINGS IN ENGLAND.

A Retrospective Glance Over Business Conditions for the Past Year—Opportunities for Foreign Trade Expansion Left Unheeded—Fire Damages Edison-Bell Plant—Some Excellent Records Make Their Appearance the Past Month—Gramophones and Sedition—Trade Troubles—The New Clarion Record—Van Biene Helps Music Hall Fund—How the Poor Are Entertained—Amberol Record Publicly Demonstrated—Seymour's New System of Recording—What Mr. Seymour Has to Say—An Interesting Chat With This Gentleman—Interesting Budget of News from the Provinces—After Effects of Labor Troubles.

(Special to The Talking Machine World.)

London, Eng., January 5, 1909.

A short resumé of the course of trade during the past year could not be written down as in any way advancing the interests of this industry, however optimistic one may be. Apart from the very keen competition which has existed, the whole year has been one of unprecedented general trade depression, and it is therefore not a matter of great surprise that the monetary loss has created a set-back from which we cannot hope to regain the normal until at least next season. It is unnecessary to dwell in detail upon the reasons of this decline, for it was largely the result of conditions over which we have no control. No doubt there have been many mistakes made on the commercial side, but traders should now look to the future with a determination to "make good" the lost ground. One great evil that can be remedied is the practice of giving indiscriminate and long credit. That this is an "evil" no trader will question, especially in view of the heavy losses most of us sustained last year. A month's credit is quite enough; at any rate, the limit should not exceed two, and while no hard and fast rule can be laid down, it is fairly obvious that if—say a dealer has sold the goods, or a goodly portion, and does not pay, his credit should be immediately stopped. But to do this and to prevent a delinquent going from one factor to another, a central exchange where such could be black-listed is necessary. It remains for one or two factors to start the ball rolling, and success is assured. Another matter is the enormous wastage of publicity literature. Thousands of pounds yearly are spent by the manufacturers on catalogs, bills, showcards, circulars and other pointers, all for the benefit of the factor and dealer. In many instances, to my own knowledge, this valuable matter is treated as so much waste paper—used up for packing and indiscriminate distribution. And when it gets to the dealer, in nine cases out of ten he just sticks it in some out-of-the-way corner, instead of making good use of the means given him to stimulate his trade. It is safe to say that over 50 per cent. is, without exaggeration, wasted in this fashion. It is a matter which calls for immediate reform, and as competition grows keener the maker will find that he cannot stand this great loss. It is only one of the many things which more strongly emphasizes the necessity for the formation of a trade protection society.

With the exception of perhaps Mr. Edison's latest discovery, 1908 has seen little scientific advance in improvements of the talking machine. I have, however, overlooked the significance of the wooden horn which has just been introduced; that it will supersede the metal trumpet is too much to say, but of a surety it will be a distinct feature in the new year's trade. The disc record, especially the double-sided variety, is far outstripping in popular favor the cylinder record, which succeeding years show is more proportionately on the wane than ever. This latter product still attains a large sale, and no doubt will always do so, but in nine cases out of ten the disc secures the new buyers, and in this connection it will interest our American readers to know that the introduction of double records in England has proved a decided success. If A. offers a single-sided record at 60 cents, and B. can do two of equal merit at 75 or 80 cents, which is the buyer going to have? The question answers itself, for it's human nature to get the most for money all the world over.

While British talking machine concerns are doing good trade with our colonies, it is a remarkable fact that opportunities of creating business with foreign countries are allowed to pass by. If it is not lack of capital, it must be want of enterprise, for golden chances present themselves to the man who will step out of the rut. Let us take an instance: The near East crisis has been responsible for great estrangement between the countries of Bulgaria, Austria and Turkey, in which latter country the Turks are simply clamoring for British goods against Austrian, which they are boycotting very vigorously. This, then, is the hour of the English merchant's opportunity in Turkey, and so far they have shown themselves utterly indifferent to the situation. The consular authorities have pointed out again and again the urgency of direct contact between the British producer and the Turkish consumer. As the Turks prefer to deal personally with an Englishman, and the business is there to be had, it furnishes me with a suggestion to British talking machine manufacturers; and it is that three representative houses with a cheap and high-grade disc product and a good cylinder line, in combination with a maker of accessories, would do well to equip a smart young Englishman knowing the language and send him out to directly trade on their behalf in Turkey. The same idea might apply to Bulgaria, Servia and some of the other small countries round about. Wake up, England!

All Enjoyed a Big Holiday Trade.

My reports from the makers and the leading wholesale houses go to show that they all had a very fine and busy Christmas. The orders were exceptionally heavy the last two weeks in December. Satisfaction is universal—to the coastline north, south, east and west.

Latest Favorite Records.

The following Favorite records are to hand: A pretty musical selection from "The Butterflies," part 1 and 2 (Nos. 2-63009-10), by the Earl of Londale's Private Military Band, which also plays "Unrequited Love" (No. 1-62021), and "Bid Me Good-Bye" (No. 1-62024), both records of exceptional tonal merit. Of songs we have "Loving Smile of Sister Kind" (No. 1-65135), by Harry Thornton, with organ accompaniment; on the reverse "It Was a Lover and His Lass" (No. 1-69077), duet by Miss Jessie Broughton and Harry Thornton, a record which gives evidence of the great advance in quality of the Favorite. In "Never Give In" (No. 1-65158) and "To Anthea" (No. 1-65157) Wilfrid Platt is at his best. "Once Again" (No. 1-65155) and "I'll Sing Thee Songs of Araby" (No. 1-65154) are two popular impressions well sung by Bernard Turner. On the humorous side the inimitable Fred Vernon is responsible for giving us a fund of enjoyment in "Put a Bit of Powder on It, Father" (No. 1-67073), on the reverse of which record is "Oh! Oh! Antonio" (No. 1-67074), the pantomime favorite.

Edison-Bell £6,000 Fire.

On December 21, at 7 a. m., a disastrous outbreak of fire was discovered at the Peckham factory of the Edison-Bell Co. It commenced in one of the molding rooms in the old building and rapidly spread to the new section of the factory, wherein were other molding tanks, boring machinery and many popular matrices, a good deal of which it was impossible to save. The damage is very considerable, and is estimated at over £6,000, fortunately covered by insurance. Some hundreds of employes have been thrown out of work, and altogether, coming, too, at a busy time, the fire has materially interfered with the company's business. The fire originated through a watchman neglecting his duty by letting the wax get 200 degrees too hot. After putting out the fires, instead of letting well alone, he started stirring up the molten wax, thus causing the release of an extra volume of gases, which resulted in spontaneous combustion.

FROM OUR LONDON HEADQUARTERS—(Contiuned.)

Postal News.

At most of the important branch postoffices in London letters for the South African mail on Saturdays may now be posted up to 12 noon (instead of 11.30 as hitherto) on the payment of one penny extra postage. Announcement is also made that the cash on delivery system has, besides Egypt, now been extended from the United Kingdom to the Bahama Islands, Bermuda, British Somaliland, Cayman Islands, Cypress, the Fiji Islands, Gambia, Gibraltar, the Gold Coast, Grenada, Jamaica, Leeward Islands, Malta, the Nyasaland Protectorate, St. Lucia, St. Vincent (West Indies), Southern Nigeria, the Straits Settlements, Trinidad, and the British postoffices at Beyrout, Constantinople, Salonica, Smyrna and Tangier.

Edison-Bell Reconstruction.

The Edison-Bell Co. have under consideration a scheme of reconstruction in order to continue business on more economical lines than in the past. Drastic changes are to be made, and in view of the tendency to retrench—and this applies generally to the talking machine trade—the Charing Cross premises will be vacated in the near future. It is a great pity this fine building cannot be maintained, as to some extent it stood for great influence in the talking machine industry, being as it was the most sumptuous and handsomely appointed salon anywhere.

A. O. Limb Retires.

A. O. Limb, after eleven years' faithful service with the Edison-Bell Co., has now severed his connection in order to join his father, who through failing health needs his son to manage their extensive lace manufacturing business in Nottingham. It's a far cry from talking machines to lace, Mr. Limb, but we all hope that as a reminder of old times you may establish a "record" in the Nottingham business, and to this end, allow us to wish you every success.

National Phonograph Co.'s Line Praised.

The National Phonograph Co. report that the new Edison record and the attachments are coming in for a deal of praise from factors and dealers all over the country. The only trouble is the company's inability to supply quick enough the markets of the world, for the demand is universal. This excellent report comes at an appropriate time, and indicates good prospects for the new year trade.

Mr. Birnbaum Resigns.

T. Birnbaum has resigned his position of managing director with the Gramophone Co.

Some Excellent Beka Records.

Some of the prettiest music on any record is contained in the following selections from the Beka records' current list: "Pantomime Memories" No. 1 and No. 2; "King Henry's Song," "Uncle Sammy" (march), "Graceful Dance," from "Henry VIII.," to mention only a few from the innumerable popular titles listed. O. Ruhl reports that trade shows distinct signs of revival, as evidenced by the enormous advance in the Beka sales this season.

No Timber in Twenty Years

A large timber merchant, giving evidence before the Afforestation Committee, said that in a few years there would be a very serious shortage of timber. He could not see how the present forests available for the world could last longer than twenty years. He did not think any substitute could be found for timber, and urged the government to go in for afforestation on a large scale.

A Clumsy Misquotation.

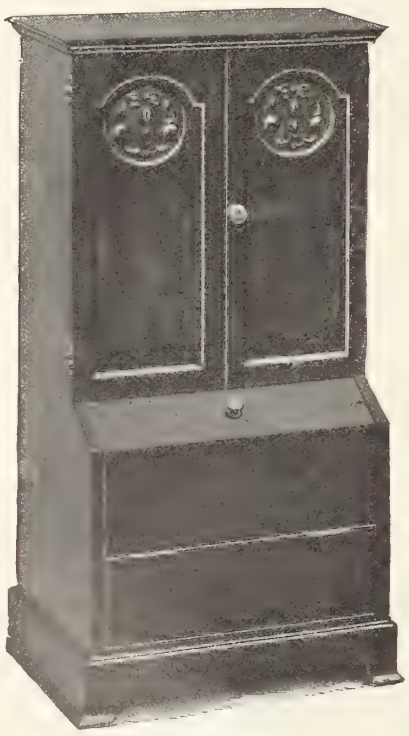
The announcement regarding the closing down of the Edison European factories came as no surprise; it had been "rumored" for some months past, but I would like to ask Mr. Edison, in this connection, if he gave the following to the London Times' American correspondent as the reason. Here is the text as it appeared in print: "The correspondent visited Mr. Edison at his laboratory in New Jersey. 'Say, what's the matter with your people over there?' he exclaimed. 'I've had to close down my phonograph factory in England—what's the name of the place? I've forgotten; somewhere near London. All the others in Europe paying, but we couldn't make that one pay. We get good work out of the French, and the Belgians, and the Germans and Austrians, but the English—no good.' It's all right, people, reading further, we find that Mr. Edison is referring to the ordinary laborer-man. We trust the success of any undertaking does not depend on such!" (See editorial reference elsewhere in The World.—Editor.)

Gramophone News.

A most adaptable and convenient envelope album is issued by the company for the preservation and classification of gramophone records. The album will stand open by itself on the floor or table, while the title of any record can be seen at a glance. In fact, the whole arrangement is of an ingenious and novel nature, and without doubt is the only album on the market of practical use to the record public.

The gramophone catalog of machines—in true-to-life colors, and printed on fine art paper, is the most beautiful work of its class. It is one, Mr. Dealer, that you can read with interest again

KLINGSOR



THE "WAGNER"
Highly finished solid Oak Cabinet.

THE new season is here and you cannot, to your own advantage, do better than to apply to us for our new colored illustrated catalogue of our celebrated ***Klingsor*** Talking Machines and Sundries. We challenge any machine on the market concerning working, tone-quality, finish, etc. We do not claim cheapness, as you are well aware that a good machine cannot be cheap, but we are still cheaper than any other machine for what we give you for your money.

All machines are of the best and solid wood, either in oak, mahogany or walnut, British made throughout, specially adapted for export to stand any change in temperature.

The machines are fitted with the best motor in the market "the well known and famous Excelsior Motor."

Letters patent No. 899,491 granted in America.

and again, and from which you can also derive much profit.

Another new departure is the marketing of the new gramophone wood horns in oak or mahogany. They give more mellow results than metal, and undoubtedly justify all the company's claims in this direction. A complete catalog of gramophone records for January, February and March, 1909, is now ready, and containing thousands of titles properly classified and indexed, it forms a ready and handy guide for the dealer.

The January list of gramophone records contains selections by the leading bands and artistes of the day. To mention a few, "Selection from overture 1812" and "Zampa overture," by the Band of H. M. Coldstream Guards. La Garde Republicaine gives "L'Invitation a la Valse", La Scala Symphony Orchestra (Milan) "Si j'etais Roi" overture. Under concert music I notice several fine pieces by notable artistes, while Harry Lauder and George Robey figure in the humorous section. Four pantomime hits appear. Mr. Bransby Williams "Sidney Carton's Farewell" is an effective monolog from "The Tale of Two Cities"—perhaps the most natural work written by the celebrated Charles Dickens. The concertina, as played by Alexander Prince, gives forth lively music in "High Jinks." Accredited traders should write to the nearest branch of the Gramophone Co. for full and complete particulars concerning terms of trading in machine and records.

Nobody's Satisfied.

Some time in January the Rena Mfg. Co. will issue a humorous record of exceptional interest. It is a comic song called "Nobody's Satisfied," and both sides of the disc are utilized for the full four verses. Further, a copy of the song, words and music in full sixpenny size, will be given free to each of the first 1,000 purchasers of the record. "Nobody's Satisfied" was first featured by Whit Cunliffe with great success at the London Coliseum and on the Moss and Stoll circuit, and is now being sung by Whit Cunliffe at the Grand Pantomime, Glasgow. The Rena double-record list for January literally teems with hits, and well justifies the company's claim that every record is a picked one.

Here's a Way of Doing Business.

A Yarmouth tradesman in the bankruptcy court said that he penciled the amounts his customers owed him on a board, and on the settlement of an account, he planed the entry off the board. The most novel system of single and double entry the court had ever heard of.

Not Gramophone Records.

The sedition in India has been largely responsible for a great show of brilliancy on the part of certain newspapers recently. Yellow journalism seizes with avidity anything of an inflammatory nature, and the latest to come under this heading is gramophone records. Without taking any trouble to verify the facts, newspaper reports were given to the effect that the government had decided to take action in the matter of alleged seditious songs and speeches, which "it was said, were circulated through the medium of gramophone records. The company, interviewed, say that they know nothing about the matter, excepting that the reported seizure is not of their goods, as particular care is exercised that nothing of a political nature is ever recorded. News agencies should be more careful in future not to call any and every record "gramophone." But, after all, it only shows what a lot there is in a name!

Troubles in the Trade.

In the matter of A. Lyon & Co. (and trading also under the style of the City Mfg. Co), City Rd., and Commercial Rd., London; the public examination was December 4, but debtor did not put in an appearance. The official receiver stated that he had reason to believe debtor had absconded, and caused much laughter by saying that Lyon had become a walking machine and would not be a talking machine in that court today. The public examination was also held of Jacob Lyon, of Bishopgate street, who stated that he was a Russian Jew by nationality, and when a child was taken to America, returning to this country eleven years ago. After working for his father, he commenced business on his own account under the style of the Universal Talking Machine and General Provider, with a capital of £55. He estimated losses by burglaries at £80, but the police had not caught the thieves, and his books would not show exactly how much he lost on this account. Liabilities amounted to over £380, against assets estimated to produce £10. Amongst the creditors are Gramophone Co., £15; Favorite Co., £10; Lugton & Co., £10; C. Ruhl, £14 12s. 6d.; Willibald, Tweer & Co., £21 15s.; Beka Record, £11 11s.; Hirsch & Co., £63 16s., and H. Pohl, £34 4s. 6d.

The official receivers report in regard to the liquidation of Cycledom, Ltd., of Blackfriars Rd., London, shows ranking liabilities at £5,193, 18s. 6d., and assets, £1,347 3s. 5d., which is all absorbed by the debenture holders' claims; thus leaving nothing for the creditors. Other business troubles cover J. H. Diggle, Miller Arcade and Strand Road, Preston (deed of arrangement), and Charles Evans, Worthgate street, Aberystwyth.

The "Clarion" 200 Thread.

It was promised some few weeks ago, and the record should be on the market now very soon. This new departure has excited a deal of interest in the trade, who are prepared to give it a very hearty reception. I recently heard some samples, and must say the quality of tone is exceedingly good, while as to volume they are naturally not up to the 100-thread record, but still quite sufficient for the average room. This is an advantage, to my mind, for the ordinary standard record is much too loud. By decreasing the volume somewhat, a much sweeter tone is obtained, which the public are not slow to appre-

ciate, as traders are now finding out, to their surprise. The majority boom their records as the loudest, and, let me say here, the louder they are, the less they sell. Moreover, it is doing a great deal of harm to the industry, and it will be found that the men (and they are many) who get tired of their machine and sell it, do so in the majority of cases because of the loud volume which characterizes the average record. You might ask, why therefore, was the purchase made? The answer is not far to seek. In the dealer's shop, sound has more room to disperse, and consequently it appears to the buyer to be just the right pitch, but when home it is another thing, the record seems twice as loud—through want of space—and is probably discarded altogether. Ask the buyer!

Russell Hunting & Co. Open Up.

The new concern foreshadowed in my last report as coming into existence, has now commenced trading under the name of Russell Hunting & Co., of which Alexander Ogden is the manager. Business is in full swing at the factory, and Mr. Ogden reports a good start, with plenty of orders in hand. Both a ninepenny and a shilling record will be put on the market, but it would be premature to say more now, although we shall, no doubt, have something further to report later.

Gramophone Concerts at Whiteley's.

At Messrs. Whiteley's great London store, gramophone concerts are now given every day from two till seven o'clock. The innovation has shown surprisingly good results, which should stimulate other stores to follow this excellent example.

Earlier Post for New York.

In order that Cunarders outward bound from Queenstown shall not be delayed in waiting for the mails, the postal authorities propose to close the time for posting letters intended for the Queenstown route two hours earlier on Saturdays in London. The mails will then reach Queenstown at 5:15 on Sunday mornings, instead of 7:15 as at present, and will therefore frequently arrive before the Cunarders come up. It is thought that the saving of time should result in the Lusitania and Mauretania reaching New York in time to land their passengers and mails on Thursday evenings. The public will be notified shortly the exact date this new arrangement will come into force.

Gramophone Co.'s Dividend.

The directors of the Gramophone Co. announce an interim dividend of 15 per cent. per annum (9d. per share) less income tax, on the ordinary shares for the past quarter, payable January 15.

Concession to Australian Newspapers.

In future Australian newspapers, weighing not more than 8 oz., will be delivered in this country for 1d. postage. A similar reduction to Australia is not to be given just yet.

New Departure in Cylinder Records.

A new departure in cylinder records is promised shortly; in the matter of length they will be 8 in. and 16 in. long, which, of course, can only be played on a special kind of machine.

Companies Registered.

The Favorite Disc Record Co., Ltd., capital 550,000 marks. Registered in Germany prior to June 30, 1905. British address 45 City Road, London, where A. F. Vische is authorized to accept service.

Express Rates to America.

In consequence of an increase in the charges made by the American Express Co. for defraying the cost of clearing parcels through the United States Customs, Sidney Buxton announces that it has become necessary to increase by sixpence per parcel the rates of postage on parcels sent to America by the semi-official parcel post from January 1. There is no increase in the official parcel post rates.

Van Biene Contributes to Music Hall Fund.

Auguste Van Biene, the great 'cello player, recently played in several London thoroughfares and collected 15s, 2d., which, with a £5 note, he has sent to the Music Hall Benevolent Fund. The action was the fulfilment of a vow made forty years ago. One day in 1868 a starving boy of seventeen was discovered playing in Hanover Square by Sir Michael Costa, who, remarking the boy's wonderful power, asked why he was playing in the gutter. "Because I am hungry," Van Biene replied in French. Sir Michael took him home and after hearing him play, found him a place as 'cello player in the Covent Garden Orchestra. He then vowed that on every anniversary of his deliverance from starvation, he would go back to the streets and play, and he has never broken that vow.

A Letter from Mr. Ruhl.

Dear Sir:—In your issue of December 15 I find a review of our records which I very much appreciate. I wish, however, to point out to you that the name of the artiste who played our piano solos is Mr. Henry E. Geehl. It may also interest you to know that Mr. Geehl is a composer of some note, "Valse Arabesque," which he played for us, is one of his compositions published under a pseudonym. I may say that I am always looking forward to your "Trade Happenings in England," which always contains a lot of interesting matter, and from which I get all the news in a concise form, and at a glance. Wishing you every success, etc.,

Postage Between England and France.

Headway is being made by the movement for the establishment of penny postage between England and France. The Posts and Telegraph Commission is strongly in favor of reducing the ordinary letter rate from two pence-halfpenny to one penny.

A New Columbia Catalog.

A new machine catalog, illustrating and describing all models of disc and cylinder graphophones, has just been issued by the Columbia Phonograph Co. It is a handsome, compact booklet printed on art paper with large half-tone illustrations. Special emphasis is laid on the tone of reproduction, mechanical efficiency, and appearance of Columbia instruments. The catalog offers a wide choice for selection, in models ranging from the £2 2s. "Trump" to the £45 "Symphony Grand." A section is devoted to talking machine accessories, and a list of the principal machine and repair parts, with prices, is given.

Piracy of Trade-Marks.

Regarding the increase of trade-mark infringement in Japan, the British Foreign Office advises owners of such marks to forward particulars of them to the Patent Bureau at Tokio. The difficulty of protecting trade-marks is greatly increased by the failure of foreigners to take any action to secure their rights. Traders are recommended to combine to appoint a common agent at Tokio to watch their interests.

Entertaining the Poor.

The workhouse officials throughout the country are gradually but surely coming to regard our beloved instruments as very necessary to the enjoyment and comfort of the inmates. We don't deplore the idea for one moment, but it really seems a very risky thing to do, for such fine musical records as are provided would seem to act upon the tramp like unto a magnet, with the result that the workhouses are full up, and

an increase in the poor rate is expected shortly. We hope the local dealer will at any rate counterbalance this tendency by reaping a good harvest on the sale of records, and there should be a fine turn-over, too, as the guardians, above all persons in the world, do know how to spend money—with too much ease in a good many cases, as witness the recent East London disclosures, etc. The latest workhouse converts to the Gramophone are at Ribchester (Mr. Preston), Lambeth, where only the other day £8 was voted for records; Cornwall, and others. Well, it means good trade for somebody, and perhaps the rates will not go up after all.

Talker a Christmas Entertainer

Mr. and Mrs. Will Crooks, with a large Gramophone, visted Poplar Workhouse on boxing day, and gave a series of Christmas entertainments to the aged inmates, who voted it the best time ever. Mrs. Crooks herself superintended the gramophone and joined in all the choruses, much to the delight and amusement of everyone.

Amberol Record Publicly Demonstrated.

Presided over by G. Croydon Marks, M.P., the National Phonograph Co. gave a highly successful demonstration of the new "Amberol" record to a large and influential gathering of newspaper representatives at Prince's Restaurant, December 10. The chairman's introductory remarks excited the interest—and no doubt provided a good deal of instruction—to his audience. We may hope so, at any rate, as in the past some of our esteemed contemporaries have not only held the talking machine up to ridicule, but through ignorance have made themselves more ridiculous still by not knowing the difference between a cylinder and a disc record, or machine. Happily this state of things is gradually being eliminated, and a few more such speeches as Croydon Marks gave would go further than anything to enlighten our friends of the pen. And remembering that the pen is mightier than the sword, I had better say no more on this point. In the course of his speech, Mr. Marks gave a few statistics of a remarkable and interesting character. For instance, who would have thought it possible that the length of thread or line of sound waves around an Amberol record amounted to over 5,076 inches? It seems hardly credible, but such is the case. Thirteen records on this basis would measure a mile of music! The meeting ended by sending a message to Mr. Edison through the medium of a record which was produced to the wondering audiences almost immediately after being recorded.

Nottingham Back in Harness.

Francis Nottingham, we are glad to say, is now back in harness at the office, and although he necessarily has to take things easy for a while, he expects to be quite his old self again in a few weeks.

A Correction.

The Colmore Depot report in our last issue was inadvertently headed "Manchester" instead of "Birmingham." I am asked to mention this, as the Colmore people do not factor Amberol or Zonophones in Manchester, but are the official factors in these goods for Birmingham and districts only. A colored poster, 60 x 40, of an attractive and original design, is being distributed to Colmore dealers to advertise their special and exclusive line, the Melbo-phone. The Colmore Depot will send this poster to any midland dealer with his name at the foot as local agent.

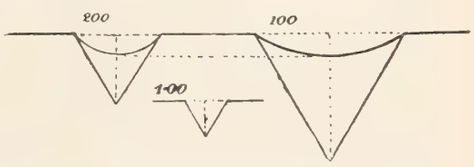
A Revolution in Recording.

Following the announcement in my last report that Henry Seymour had invented and applied for letters patent for a new system of recording, I can now give some further particulars relative thereto. He claims that it is possible to make an eight-minute record on the standard cylinder with precisely the same volume and tone quality as the standard records, whereas if he confines the limit to four minutes, he obtains just double the volume without the loss of quality, and enormously diminishes the surface noises in addition. I suggested that the appearance of the "Amberol" record had induced Mr. Seymour to devote himself to the problem of finer cutting, which he quickly contradicted; in fact, he reminded me that I had mentioned his experiments in this direction many months ago and that I had communicated the fact to the readers of The World.

I asked Mr. Seymour what he thought of the "Amberol," now that opportunity had been given to carefully judge it. He said that "it was a real advance, but Mr. Edison, however, had stuck to the original U track. Their tonal value is excellent, but the volume is much less than that of the standard cylinder.

"The volume of a record depends on two things: the depth of the vibratory cut and the extent of frictional contact by the reproducing stylus with the record track.

"The same area of track contact as that of the standard cylinder must be preserved to obtain the same volume, apart from the depth or amplitude of the vibratory cut, and this can never be preserved with the U form, since every unit of depth necessarily adds an increase in the width of the cut. This is so even with my new system (which is the V cut, formed by cutting edges which assume two sides of an equilateral



triangle, or maybe, a square), but not in the same degree. The employment of a cutting stylus in the latter form solves both the recording and the reproducing problems at once. I get more than double the depth of the 'Amberol' cut, and yet preserve the same frictional con-

tact as that of the 100-thread record. As the sides of an equilateral triangle are always mathematically equal, whatever its size, a reproducing stylus of any size of the same shape will never fail to properly engage the track; and this is of the greatest importance both technically and commercially, for sapphire grinders are unable to make circular styli of uniform diameter, except by accident, whereas the triangular shape is both easy and cheap to produce."

MR. SEYMOUR INSPECTING AN 8-MINUTE MASTER RECORD ON A 10-INCH BLANK.

"You propose to apply your system to the indestructible cylinder and to the phono disc?" I understand.

"Yes," replied Mr. Seymour; "the fine cut is just the one thing needed to make the indestructibles a success, for they will no longer be harsh in tone or noisy in surface. The samples of celluloid cylinders I have made are entirely without surface noise at all, but there is a little left with the 200-thread discs, which I hope to similarly eliminate."

I asked Mr. Seymour how he proposed to eliminate foreign noises entirely. He said that "theoretically it was impossible, but by making these noises correspond with the tones of the record they were practically obscured. In the delicate passages of a record the V cut would be very shallow and therefore would emit scarcely any surface noise at all. With the deeper cut, corresponding with the louder tones, the surface noises would be greater, but only relatively so, and the greater strength of tone would render the track noise inaudible. Of course, much surface noise in present records is due to coarse blanks or badly deposited matrices, or to both. The finer cut requires fine processes, and when everything is in proper order in the manufacture of the records by the new process, only the very squeamish of critics will be found to object to those trifling extraneous sounds which are entirely due to the mechanical processes necessarily involved in producing a mechanical sound record."

It occurred to me that a V-shaped reproducing stylus would tend to cut up the records, even though they were of the unbreakable type, and I asked Mr. Seymour about this. He said he had properly considered that as a plausible objection, which, however, was groundless. There would be no more pressure on the point than at any other part of the stylus, he said, because the two sides would constitute a natural check on the point. But to obviate any possible difficulty in this regard, the point could be slightly rounded in the reproducing stylus.

Mr. Seymour said the best results of the 200-thread were obtained in the disc form at present, the larger diameter favoring both volume and quality. He hoped to let me hear some samples when calling upon him again, although there were technical difficulties yet to overcome.

TRADE REPORTS FROM THE PROVINCES

LEEDS NOTES.

Leeds, January 3, 1909.

In Yorkshire, generally, trade is not so good as was anticipated. In Leeds and the neighborhood the retail trade, specially, has been somewhat slow, but on the northern coast, Middlesborough, Newcastle-on-Tyne, and the adjacent districts, sales are reported to be a great deal better.

Fortunately for the talking machine trade the labor disturbances which occurred during the early part of the year were settled just in time to allow the workers to recover themselves somewhat before Christmas week, thereby enabling them to spend more money in the north than on the south side of the country. There is, however, no energy displayed by the public to purchase, which limits the retailers to a smaller stock in proportion. As soon, however, as the areas that have been affected by the recent strikes and labor troubles get normal, there is not the slightest doubt but that trade will recover, and in all probability make up for past losses.

In Leeds, Scott & Co. report business as fairly moderate. Zonophones are selling exceptionally well with them, and the new "Amberol" records are now being taken up very freely by the dealers.

Business is reported good at Hilton & Co They have done exceptionally well in the north and northeast of the country, and are satisfied with the results in their extensive wholesale business, but in the retail depot business was reported as rather slow, only a moderate trade being maintained, notwithstanding local advertising and other publicity, the spending power of the public has not been free, owing to general business depression, and reports of a like nature come from Messrs. Hopkinson.

Appleton & Co. have recently removed from Upper Mill Hill to more extensive premises in Aire street, where they will be in a position to deal better with their customers' requirements.

"The Record Phone Co.," Thornton's Arcade, state that business with them is not quite so good as expected. Zonophones, Twins and Edisons are selling very well, and they expect that business will be altogether better shortly.

Mr. Jenkins, of Queen Victoria street, the original Pathé factor for Leeds, reports business as very good. He is also stocking Homophone records, and is very well pleased with them. Mr. Jenkins is now manufacturing his own machines and cases, having recently started a cabinet-making workshop. The models we saw are exceptionally nice, and being sold at a reasonable price, he hopes to do a very large trade.

Another firm of cabinet makers, "The Leeds Cabinet Phone Co.," are also making a large assortment of cabinets for the talking machine industry. They have probably, in all, about one dozen different designs, from £2 or £3 up to £30.

The well-known cycle agents, Messrs. Greenwood, and Messrs. Byrom, have taken up Pathé goods again this year, and from all appearances are doing well with them.

LIVERPOOL NOTES.

Liverpool, January 3, 1909.

In Liverpool and district generally trade has somewhat increased, but nothing compared to what it should be. In one or two cases traders appear to be busy, but it is the exception rather than the rule.

In the wholesale field, Messrs. Richardson are holding their own this season and concentrating upon the Amberol records, they appear well satisfied.

At Messrs. Johnson's they have been receiving a steady influx of orders from the country districts principally, and are well satisfied with the results.

At Thompson, Helsby & Co. business is reported as fairly good, but nothing startling.

We had the pleasure of a long chat with Messrs. Turner and Carter, who are the managing directors of the Melograph Disc Record Co., Ltd., a few days ago. They have had, so far, rather an uphill time owing to very severe competition, but express themselves as very hopeful regarding the near future. They have recently placed upon the market another special supplement containing some extra good titles, and although the business has not been quite so good

as they expected, they hope it will considerably increase in a short time.

In the retail business, Archer & Co. state that business is only moderate.

Cramer & Co. find that it has been considerably better recently, especially in the higher-class goods. Jake Graham has also been very busy.

In the other houses, although there is a certain amount of sales being made, there is a distinct lack of energy and enthusiasm with the buying public this season. The recent labor troubles have caused a serious set-back as regards machine sales, and on the record side, where last season a dozen were purchased, probably only two or three are bought now. In addition to this there has been recently large quantities of liquidative stocks and job lines placed on the market, and these have also caused a further diminution in sales of the ordinary goods.

Altogether, the past year, 1908, has not been what one would term a really successful one. Notwithstanding plenty of energy and hard work, very small profits are being made, and we rather anticipate that in not a few cases they will only just cover trading expenses.

Christmas and New Year festivities are now over, and we hope that the year 1909 will bring us better and more trade than did 1908.

MANCHESTER.

Manchester, January 4, 1909.

Generally speaking, the trade has not been so good as anticipated; disc records have sold fairly freely, especially the well-known makes. Disc machines have been somewhat slow. In cylinders, Edisons have, of course, taken the lead. Gems, Standard and Home machines have had a steady sale. The booming of the Amberol has caused this; nevertheless the market is very unsettled. Job lines, both recently offered, also others that are in view, bring down the prices, and make the dealer extra cautious in buying.

Messrs. Duwe have had quite a rush during December, the output being very large; machines not quite so freely, but records in quantities. Edison machines, also the new attachments, with Amberol records, have the call.

Messrs. Richardson have had a busy time also. Zonophones, Twins and their special Truetone disc machines, with Edison goods, have in each case found good sales.

Messrs. Burrows also report business as very good. At Frazer Watson's Pathé goods were strongly in evidence. They had, however, missed a good many sales during December from delay in delivery, but hope, now that the stock has arrived, to go ahead.

The Edison-Bell Phonograph Co., Ltd., closed up their depot at 22 Dantzig street on December 25. From what we gather there will be important changes in this concern before very long, with a view of bringing it right up to date upon lines that will enable the very severe competition to be met.

In the retail houses sales are less than last year; customers are more critical, spend much more time hearing records and buy less at the finish. Money during Christmas has not been spent so freely as in previous years, and it will be some months yet before business resumes its normal condition.

Eight-inch and sixteen-inch cylinder records will soon be placed on the market by a London concern.

ELEMENTS THAT COUNT.

Points to be Considered in Selling—Customer Should be Treated in Such a Manner That He Will Call Again.

In every sale there are three elements. The article to be sold, the person who wishes to sell—that is, the salesman—and the person to whom the sale is to be made. In all sales it is assumed that the article to be sold has merit and real value and will be of use to the purchaser. It is to be assumed, also, that the salesman may of right sell the article and that he understands the article thoroughly and can present its merits to the prospective purchaser. The third element in the sale, the person to whom the sale is to be made, is a most important factor in the transaction, and upon the salesman's understanding of his customer, his appreciation of the customer's needs, and his quick perception of his customer's peculiarities, will depend his skill and success as a salesman.

It is sound policy always for the salesman to treat the customer as though he expected to meet him again many times, and to make not only the present, but many future sales. The policy of treating the customer as though this were the only time when he and the salesman were to meet is not only bad ethics, but bad salesmanship, and it is best always for the salesman to sell to his customer something which the customer needs and something which is of proper value for the consideration received. In this way the transaction will beget confidence and when the salesman and the customer meet upon future occasions, the salesman has already stored up capital in the way of a reputation for fair dealing and reliability.

We are all salesmen of our wares, whether those wares be thread and needles and buttons, or whether they be flour and potatoes and hay, or whether they be publicity, as in the case of newspaper advertising, or whether they be services as in the case of a doctor or the schoolmaster or the public official.

In all the higher lines of salesmanship the study and understanding of the customer becomes a most important matter. The salesman must know where to find the person to whom he may sell. If he has valuable real estate to dispose of, he must know, first, the sort of property which will be useful to his customer, whether that customer needs a factory site or a place where he may build a retail store, or whether he needs a lot on which to erect his home. The salesman must, by a study of the customer, learn the man's resources and be able to suggest for his consideration the kind of property and of such value as the purchaser can not only use but pay for. Sometimes he must arouse in the customer an appreciation of the need he has for the property offered. He must be shown the advantages of the purchase, financial or social. In other words, an appetite must be created.

HAMMERSTEIN GETS McCORMACK.

The Great Irish Tenor Who Scored Such a Success at Covent Garden Will be Heard Here.

Oscar Hammerstein announced early last week that he has a new grand opera tenor, whose talking machine records are so much admired abroad and in this country. He is an Irishman and his name is John McCormack—probably the first Irishman ever engaged as a leading grand opera tenor by an American impresario. Mr. McCormack is already well known. He is described as tall and handsome, only 24 years old, and there are some connoisseurs who have gone so far as to say that he has "the most beautiful tenor voice of any singer now before the public." Mr. Hammerstein has taken him under a long contract, and he will make his first appearance in America at the Manhattan and Philadelphia opera houses early next season. Mr. McCormack came of humble parentage. A wealthy Irish woman was attracted by the marvelous beauty of his voice while visiting a sick tenant to whom he was singing. This woman sent him to Milan to study under Sabatini, with whom he stayed two years. While in Italy McCormack acquired stage experience and a repertoire of Italian operas. He came to London and made his first important appearance at the London ballad concerts. At this concert Mme. Clara Butt made her reappearance after a serious illness of six months. The Queen's Hall was packed to the walls. Mr. McCormack was No. 5 on the program and Mme. Butt No. 6. Everyone was on the qui vive to hear the latter, and when Mr. McCormack appeared to sing "Che Gelida Manina" from "La Boheme" the crowd became impatient. He had not sung ten bars when all ears were strained to hear him. He was recalled sixteen times. Then he sang a simple Irish ballad and was recalled ten times. Mr. McCormack's first appearance in Covent Garden opera was in October, 1907, in "Cavalleria Rusticana."

Max Landay, of the Talking Machine Supply Co., New York City, will make a western trip about January 15, going as far as Chicago.

TRADE NOTES FROM GERMANY.

Holiday Business Behind Previous Years—The Outlook—Talking Machine Manufacturers Unite to Protect Their Interest in New Copyright Matters—International Zonophone Co.'s Exchange Arrangement Popular—New Firm to Make Disc Records in Hanover—H. Bahre Closes Branch House—Dealers Fight Against Unfair Competition—Some of the Schemes Condemned as Unfair and How They Work.

(Special to The Talking Machine World.)

Berlin, Germany, Jan. 5, 1909.

Reports coming in from various sections of the Empire indicate that the holiday trade this year fell far short of that for 1907, though quite brisk as compared with business during the past few months. Nor is there any prospect of much improvement in conditions in the near future or so long as there are war clouds in the Balkans and the financial outlook is unsettled. However, the optimistic ones look for a change when the new taxes have been introduced and the country's finances put in order.

The talking machine trade bears up well in comparison to other lines. The factories as a rule keep fairly busy and retailers through strenuous efforts are able to make a comparatively good showing.

The decision of the Berlin copyright conference to the effect that in future the transfer of music pieces to automatic instruments (talking machines, records, etc.), will be considered an act of piracy, just as reprinting or relithographing, has greatly interested the talking machine and record manufacturers in this country. The decision is to take effect not later than October 1, 1910, and it may perhaps be much earlier in Germany and a royalty must then be paid for all copyrighted music transferred to automatic instruments.

As a result of the conference an association of German talking machine manufacturers has been formed to protect the interests of that industry in the matter of copyright. A committee was sent to the office of the Interior and were assured that their demands would be carefully considered before the government took any action on the copyright question in the Reichstag. It is feared that Germany is prepared to take more drastic action on the question than any other country represented at the Berlin conference.

The Deutsche Graphonic Gesellschaft, m. b. H., are a new firm who have commenced business in this city under the management of Herr Wilhelm Bree. They have a capital of M. 20,000 and will trade in writing and talking machines.

The arrangement made the International Zonophone G. m. b. H. for the redemption of worn records is proving highly popular. The plan, which became effective on December 1, provides that Ms. 50 will be allowed in Germany for every Zonophone record returned on condition that a new one is bought at the time. This firm have recently issued a lengthy list of Stuttgart records containing band and orchestra selections and a series of folk songs.

The Concordia Schallplattenfabrik G. m. b. H. are a new firm who have begun the manufacture of a new disc record in Hanover. The new record is made of specially hard material and are said to give excellent results.

H. Bahre have given their branch house in Koln in order to properly handle their extensive trade in this city. Herr Dinkelspiel will, however, act as their representative in Koln, with offices at Moltkerte 52.

When some years ago advertisements appeared in the German papers announcing that talking machines were to be "given away," there was a great stir in the ranks of the talking machine dealers. The first advertisements of this kind were worded in such a way as to make the public believe that the talking machines were really "given away," because the conditions connected with the "giving away" were scarcely mentioned.

These advertisements afforded the dealers an opportunity of successfully taking legal proceedings, on the ground of unfair competition, against the firms advertising in this way.

Under the law against unfair competition any person is liable to punishment who, in booming his goods, endeavors to create "the appearance of an exceptionally favorable offer," if in reality no such exceptionally favorable offer is made. Now an investigation of this "given away" business when the idea was first promoted shows that there is nothing in the nature of an exceptionally favorable offer connected with it, because a purchaser only received a talking machine gratis upon undertaking to purchase a large number of discs and to pay for them in weekly instalments. The article "given away," that is to say the talking machine, did not become his property until the entire amount had been paid.

There was further the fact that these firms in their advertisements endeavored to create the impression that the discs were being sold without addition to the price. As a matter of fact, the discs in question could be obtained from any regular retail dealer at m. 2.50 to m. 3 (mark equals about 24 cents), whereas the "given away" firms charged m. 3 for them.

After a compromise in a law suit for unfair competition the "given away" firm undertaking to no longer make use of the advertisements complained of in the old form, the remaining firms of this class became more careful. They went so far as to hint in their advertisements that anyone wishing to receive a talking machine gratis would have to "subscribe" for a "certain number" of discs.

The attempts to induce the public prosecutor to proceed against the people who inserted these advertisements on the ground of unfair competition were not successful, as the authorities took up the standpoint that it was only a "veiled instalment business" which could easily be "seen through."

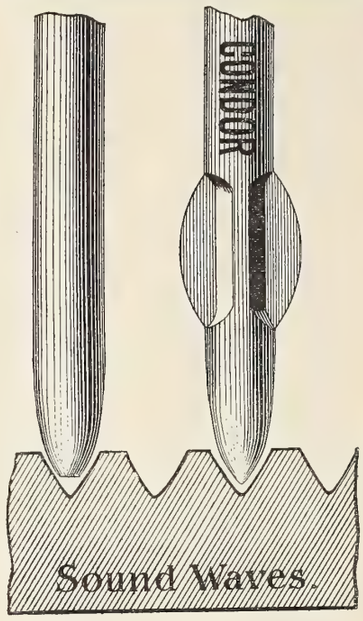
Now, as long as the "given away" firms increased the price of the discs, the competition was not of general importance to the dealers, although it made itself felt in some places. There was also no change in the situation when the "given away" firms in some cases put their own labels on discs, which could be bought in the ordinary course of business for M. 2.50 to M. 3. It was of more importance that the greater part of the public recognized that the discs were practically the same as could be purchased elsewhere at prices ranging from 90 pfg. to M. 1.40 cheaper. The more the public got to know about the different discs manufactured by the various firms the more probable did it become that they would object to the increased prices which the "given away" firms charged for their discs.

A change in the situation has taken place since last summer, as in the meantime the largest of the "given away" firms has closed a contract with a prominent disc manufacturer which enables it to supply, even in connection with the "given away" business, an undoubtedly first-class disc at the usual retail price of M. 3.

This company have been induced, in consideration of an order for 100,000 discs, to make the "given away' firm a special concession in the matter of price (in well-informed circles there are rumors of M. 1.05 or M. 1.10 as the cost of the discs to the "given away" firm). Under these circumstances the purchaser obtains discs from the "given away" firm at the price which he would have to pay the ordinary dealer for them, both being bound by contract not to sell at less than M. 3.

Now, in order to prove to the public that they are, nevertheless, being imposed upon, a leading Leipzig wholesale house has broken off its connections with the manufacturing concern referred to and has since that time sold these discs below price. This firm, and the dealers who take up the same position, are of opinion that the public must be shown that these discs are to be had at M. 2.25, so that they see that they are being continually imposed upon by the "given away" firms.

The calculation used in support of this contention is as follows: In order to obtain a machine gratis the customer must purchase 45



CONDOR

is the

Only Needle in the World having

AACHEN, - GERMANY

discs at M. 3.—(2 per week) so that the "given away" firm receives M. 135. The machine supplied is valued at the difference between the regular retail price of M. 3.—and the cutting price of M. 2.25, that is to say at M. 33.75, whereas it is really worth only about M. 20.

It is evident that this cutting policy can only last a certain length of time, that is until the firms taking part in the movement have exhausted their stock. On the other hand a close observer will regard this cutting of prices with mixed feelings. "A disc which is acknowledged to be first-class being thrown on the market at a retail price of M. 2.25," he will say, "shows that other discs are also not worth more."

The idea practiced by some of the dealers of boycotting the manufacturing company on account of this contract with the "given away" firm has had no practical result and will probably not have the desired effect. Further only a small number of dealers can afford to sell these discs at M. 2.25, as at this price they make no profit.

So far as the future of the "given away" business in Germany is concerned, it may be stated that if the advertisements are carefully worded it is impossible to combat the movement legally through the public prosecutor on the score of unfair competition. Even if a purchaser really believes that he has received an inferior machine from the "given away" firm, he will very seldom be prepared to go to the length of a law suit against them.

In one case in which certain dealers made use of a purchaser to institute proceedings against a "given away" firm a partial success was gained. However, too high a value must not be placed on this, as it is possible for the "given away" firm, by virtue of its large contracts to "give away" a comparatively good machine at a low price.

On the other hand, there are large sections of the public who would purchase talking machines, but have difficulty in getting together the necessary amount of money to purchase both apparatus and a number of discs for cash. A purchaser naturally wishes to have a few discs with his machine so that he can make use of it. The "given away" firms fill this want rather cleverly by supplying five discs with the machine and accepting a deposit of M. 15.

Viewed from an unbiassed point of view it must be admitted that the subscription for two discs a week provides a constant supply of new music, etc., and this greatly enhances the value of the machine in the eyes of the owner.

However, until one or more large "given away" firms establish permanent agencies in all the important places and open up the extensive market, which undoubtedly exists, by putting a large amount of capital into the business, these "given away" advertisements are of secondary importance. Should a number of financially strong firms develop this market in earnest, in which case they might possibly be able to reduce the weekly number of discs to one, talking machine dealers in Germany would probably lose a great part of their business. At the same time such steps would soon make the talking machine an everyday article for the general public, in which direction but a very modest beginning has so far been made.

The cover of the catalog supplement for January of the Edison records is a nifty affair. And the portrait of Cal Stewart ("Uncle Josh") is the frontispiece of the New Phonogram. Cal originates his own stories, and gives much time and attention to working out the details of his often inimitable series. As may be noted, Cal has returned to the staff of Edison artists, and Walter H. Miller, manager of the laboratory, is to be congratulated on having the gentle philosopher of Punkinville with him again.

Christmas Eve the establishment of J. F. Blackman & Son, 3937 Third avenue, New York, Edison jobbers, was visited by thieves and $300 purloined—a far from agreeable experience. Since then, however, a new safe has been installed, and the firm's ready cash is now considered safe, according to B. R. Barklow, of the National Co.'s force.

FORTUNES FROM INVENTIONS.

Inventors Usually Spoiled by Newspapers Through Fanciful Stories of Wealth in Patents.

We clip the following from the Indianapolis, Ind., News of recent date. It is only one of many relating to "fortunes" to be made from improvements in the talking machine. We cannot have too many minds working toward the betterment of this ever popular machine, yet the daily papers unquestionably print a lot of nonsense about fortunes to be made from minor inventions. We sincerely hope that Mr. Brown will make all that the News says he expects to make, but expectations are not always realizations. Here is the item to which we refer: "E A. Brown, formerly of Carmel, who recently invented a rapid-fire gun that attracted attention, has just applied for a patent on an ingenious device for a phonograph. The new appliance is small, not as large as an ordinary thimble. The device is attached to the cylinder, on which the records are placed. It holds the record so firmly that it is impossible for it to vary, thus doing away with the rasping noise. The record is placed on the cylinder, a miniature gate is closed and when the selection is finished the gate opens automatically and the record is removed. Mr. Brown believes his invention will bring him a small fortune."

VICTOR LITERATURE.

The Victor Talking Machine Co. have been sending more excellent literature to their dealers in the shape of reproductions of four of the page advertisements carried by the company in farm journals and an inspiring article upon taking advantage of the company's widespread publicity campaign by the local dealer. The text of the folder is to stimulate the dealer to get after the trade of the farmer and it should accomplish its purpose.

TIMELY TALKS ON TIMELY TOPICS

The attitude of the Victor Talking Machine Co. relative to the display of misleading signs and the employment of untruthful—it can be designated by no other term—advertising, is universally commended. Dealers who indulge in this method of inducing business to come their way by bamboozling the public, are taking that undue, if not unfair, advantage of the situation generally known in mercantile affairs as sharp practice. The Victor Co., in a circular letter that appears in this issue of The World, have administered a deserved rebuke to dealers who have strained a questionable point in this respect, and admonished others who may be inclined to follow in the same footsteps that there are limits in the use of their famous title beyond which even Victor dealers or distributers cannot go without incurring the danger of being "cut off." At the same time that great majority of the Victor army who are above such paltry subterfuges are greatly gratified that the company, whose good name has been taken in vain, have come to their rescue and checked a custom—growing to formidable proportions—that placed them in a false light, and apparently wrongly magnified the importance of competitors "guilty as charged in the indictment."

News paragraphs of ancient lineage and suspicious value are never suffered to pass out of existence by the daily press. Occasionally the so-called "scientific" publications are similar sinners. In this category the following, now "going the rounds" again, may be placed: "The talking postal card is the invention of a French engineer, and has become so popular in that country that the American rights have been secured and the device will be placed in the cities of the United States. The person wishing to send a talking postal card to a friend enters the booth and talks into a machine that records the words on the specially prepared postal card. When the recipient receives the card 100 or 1,000 miles away, he, or perhaps she, takes the card to the nearest postal booth and inserts it in a machine which talks the message it contains. The record on the postal card is indestructible and the exact voice of the sender is heard."

The "talking postal card" sounds extremely familiar, and is doubtless the same "novelty" introduced from abroad several years ago in the form of a small celluloid disc record pivoted to a card designed to send through the mails, the address, etc., appearing on the obverse side. To be sure, these were stock cards and the records a few bars of music to be reproduced on a small machine. However, as has been truthfully said of many ideas, it is but a step from the sublime to the ridiculous, and this may be applied with equal force to this "invention of a French engineer" when it comes to the recording of sound on any kind of record for reproduction. In the first place, the human voice, to be intelligible, must be of a certain tone quality, and cannot be recorded without suitable apparatus, the exercise of unusual skill and proper surroundings. Secondly, the popular fallacy that the recording of sound is a simple and child-like process, such as this "talking postal card" provides, condemns the article out of hand. And the necessity of using the special "postal booth" for the reproduction is equally absurd. The assertion that the American rights have been secured to place this invention in the principal cities of the United States is a figment of the imagination. The fool killer has long since finished his work regarding such schemes.

For a comprehensive view of current trade conditions the occasional conferences of the selling forces of the manufacturing companies afford an excellent opportunity. Recently, or to be exact, the western salesmen of the National Phonograph Co. assembled in Chicago December 28, meeting General Sales Manager Dolbeer. On January 4, at the factory in Orange, N. J., the eastern travelers came together. Among themselves the frankest expression of opinion was invited at both of these interesting gatherings of men who keep in the closest touch with the trade throughout the year. The meetings were executive, of course, but the reports coming therefrom indicate that these "knights of the grip" look forward with enthusiasm to the present year as one of great possibilities for the talking machine business. Doubtless the Victor, Columbia and Universal companies have gone over the same ground with their selling forces in their own way, and with like results. Concerns engaged in the manufacture of minor requisites and essentials, so far as can be ascertained, are in a similar frame of mind. It remains for the jobbers and dealers to gird up their loins, assume an aggressive and progressive attitude, and with a long pull and a strong pull and a pull all together, these predictions will be realized.

Still the several big things that were about ripe to be launched on the trade linger in the lap of uncertainty. Premature announcement is occasionally what may be forcibly described, colloquially, as a "bad break"; then, again, hope deferred maketh the heart sick. Patience, however, is a virtue, and under the circumstances it should be exercised in justice to those immediately concerned in these enterprises of great pith and moment.

Within the next few weeks will be adjudicated several of the crucial patent cases dealing with basic and constructive talking machine inventions that have been before the United States courts for years. By the time The World reaches its readers the Berliner suit will have been argued in the Supreme Court of the United States; the Jones process for duplicating disc records been again before the United States Circuit Court of Appeals; and the cause celebre of the New York Phonograph Co. against the National Phonograph Co. and others, heard by the same tribunal. Possibly before the next issue decisions in every one of these cases may have been rendered, and in that event, as was once observed, "we will know where we are at!"

A splendid large portrait of Thomas A. Edison in colors, sketched from life, appeared lately in the Sunday edition of the New York Herald, as the first of the ten greatest living Americans, excluding politicians. The series are confined to men who are paramount in philosophy, literature, invention and kindred fields of human endeavor. And lo! the "Wizard of Orange"—the inventor of the phonograph—heads the distinguished list. This is a reminder that on February 11 Mr. Edison will be sixty-two years of age—in the best of vigorous health and keenly interested in the many and varied subjects he has made his life study and to which his best intellectual efforts have been given.

In no one year has the work of the Columbia Phonograph Co., General, been so effective or created so favorable an impression in the trade at large. The increase in the list of Columbia jobbers and dealers is proof positive that 1908 was a red letter year, and General Manager Lyle, now on a well-earned vacation in Europe, is to be congratulated on the energetic and successful manner in which the new selling policy of his company was inaugurated, carried forward and firmly established.

Occasionally is heard the plaint that European manufacturers are "away ahead" of the United States in the perfection, completeness, elegance, practicability, utility—with a dozen more eulogistic adjectives additional and then some—of talking machines, records, etc., etc. Usually importing agencies who are unable to "butt in" the great market here are wont to express themselves in this jaundiced strain; but the soft impeachment will not hold water. Else why should our manufacturers—the inventors, originators and discoverers of nearly every vital improvement—desire to turn out their product under the personal supervision of their own factory experts, superintendents and capable working force in all branches? Goods of the same nature made in European plants lack uniformity and finish and will not pass muster under the high standards maintained here. At least, such is the opinion of men who speak by authority, being acquainted with both markets. When it comes to the "cheap and nasty," as one well-known traveling sales manager termed it, then "Europe is ace high"—a doubtful compliment. The aim here is not how cheap, but how good, with the best none too good. A distinction and a difference!

The building occupied by the Columbia Phonograph Co., General, in the City of Mexico, Mexico, is over 300 years old and is the oddest structure imaginable. The material of which it is constructed is a composition of volcanic stone and cement, and its most remarkable attribute is that for three centuries it has withstood the least sign of climatic exposure, particularly searching and wearing in that part of the world. Ancient hieroglyphics of historical significance ornament the outer walls, possibly prophesying the wonders of the modern talking machine that would be found on the premises later on. Export Manager Burns, when pressed for an interpretation, fancies something like this would go (nobody else knows the difference), but at the same time he will not "stand for the story." An excellent photograph of the antique place, ornamented with Columbia signs a la Español, adorn his private office at headquarters in the New York Tribune building.

A coal-black "coon" called at the office of the New York Talking Machine Co. (nee Victor Dis-

tributing & Export Co.), 83 Chambers street, New York, last month, and saw V. W. Moody, the urbane assistant manager. The "cullud gemmen" volunteered the information that he was president of the American National Purchasing Agency, and said he was in the habit of buying a good many Victor machines and would like to get the lowest and best discounts of Mr. Moody's company, adding the remark, evidently intended to strengthen the importance of the A. N. P. A. as a commercial factor: "Ahr concern buys as much as 1,000 needles at a time, sah!" Moody fell in a faint and feebly asked Moffatt to help him out, as he was unequal to the emergency.

With the announcement by the National Co. this week that the special licenses for the sale of second-hand machines were ready for distribution, the executive committee of the National Association of Talking Machine Jobbers state that this is another concession they have brought about for the benefit of the trade at large. The committee say it has taken some time to convince the National Co. of the justice of their contention, and now that the company have finally coincided in their views, they are sure jobbers and dealers will appreciate the good work the association is accomplishing. The Victor Talking Machine Co. have the same suggestion still under advisement.

G. H. Schubert, of Reno, Nevada, has sold out his Edison store in that city to the Menardo Stationery Co., of that city, and expects to leave at once for Chicago, where he will locate, and further the sale of his extensible record rack, which has proven a great success. Mr. Schubert found that being located so far West was somewhat of a disadvantage in properly placing his rack on the market.

Last week George F. Ornstein, chief of the Victor Talking Machine Co.'s staff of salesmen, was in New York City calling on the distributers. He was as debonair and genial as usual, and has a great handshake.

THE HERZOG DISPLAY

At the Furniture Exposition Which Opens in New York on Jan. 18 Will Contain a Full Line of Their Cabinet Specialties—A Greeting from Mr. Carpell.

M. A. CARPELL.

The New York Furniture Exposition will open its semi-annual exhibit on Monday, January 18, lasting until February 6, inclusive, at the Grand Central Palace, Lexington avenue and 43d street, New York. There M. A. Carpell, eastern manager of the Herzog Art Furniture Co., Saginaw, Mich., will display a complete line of cylinder and disc record cabinets, Pianola and music cabinets, ladies' desks, library and parlor tables, sewing cabinets and cellarettes. Two new features interesting to the talking machine trade are cabinets to hold Amberol record cartons, constructed under a new Herzog patent. Also disc cabinets equipped with the Eberhardt disc record holder, which separates each record inside the cabinet in an indexed and numerical way. Mr. Carpell will be very glad to receive all his friends during the exposition and show them the company's line. A full display of Edison and Victor machines will be shown in connection with the cabinets.

On behalf of the Herzog Art Furniture Co., Mr. Carpell wishes to thank the talking machine trade for their loyal and substantial patronage in the past, expressing the hope his friends will stand by the line and himself, in view of the fact that his is the only protected and restricted line of cabinets in the market. He also added: "I wish the year 1909 will again bring us all back the same measure of prosperity we enjoyed in 1906 and 1907."

NATIONAL CO. SALESMEN MEET

At the Company's Works in Orange—Greeted by Mr. Edison—Addresses by President Dyer and Other Officers—Those in Attendance.

January 4 a meeting of the National Phonograph Co.'s eastern salesmen was held in the library at the Edison works, Orange, N. J. At the morning session Thomas A. Edison saluted the "boys" with a short address of greeting and good wishes. Brief remarks were subsequently made by Frank L. Dyer, president of the company; C. H. Wilson, general manager; F. K. Dolbeer, sales manager; E. H. Phillips, manager of salesmen; Peter Weber, superintendent of the works; L. C. McChesney, manager of the advertising department. At 12.30 they adjourned to the Orange Club where a substantial dinner and the et ceteras were enjoyed for a couple of hours.

Another business session was held in the afternoon, whereat the selling and marketing of the Edison products were gone over in detail, each of the salesmen contributing a share of their experience coupled with practical suggestions. Besides the above the following members of the eastern road force were in attendance: A. C. Ireton, A. M. Hird, B. R. Barklow, F. W. Ewan (Canada), G. A. Hedden, F. L. Hough, Jr., F. H. Hird, Jr., J. W. Scott, J. F. Stanton, R. H. Veale, Jr., and C. D. Warren. The staff were enthusiastic over the prospects, and at the close of the conference started for their respective territory.

W. A. Lawrence, of the Standard Metal Mfg. Co., Newark, N. J., was in New York this week visiting the jobbing trade. Mr. Lawrence deplores the condition of the horn market, which he says was brought about by the indefensible practices of irresponsible makers of rubbish at ruinous prices. With the addition of a new specialty, he says, the S. M. M. Co's plant will be the largest of its kind in the country.

Rights for Live Dealers

There's nothing surprising in it, however—it's reasonable and legitimate thing. It enables a live ealer to get out and hustle on his own hook—o take advantage of all the broad Columbia pub-city and concentrate it in his particular territory y every means in his power, without any fear that ome fine morning he will wake up and find a fly-y-night concern established nearby with the same oods at the same prices.

The Columbia line is complete—a full line of disc machines, a full line of cylinder machines, an unmatchable record product in Double Discs and Indestructible Cylinders—and a rapidly growing popularity and good-will in the name "Columbia" which gives the exclusive dealer something to look forward to.

Write in for particulars anyway—don't make the mistake of not investigating—whatever you do.

'l, Tribune Bldg., New York

VICTOR-LEEDS & CATLIN CASE UP.

(Special to The Talking Machine World.)
Washington, D. C., January 14, 1909.

The case of the Victor Talking Machine Co., Camden, N. J., against the Leeds & Catlin Co., New York—Nos. 80 and 81 on the calendar—was reached to-day in the Supreme Court of the United States. It is an appeal from the findings of the United States Circuit Court of Appeals, second circuit, and involves the validity of the celebrated Berliner patent, which has been sustained by the lower court; also the fine of $1,000 imposed for contempt of court imposed by Judge Lacombe, United States Circuit Court, southern district of New York, for ignoring a judicial order in connection with the same patent. This is the first talking machine patent case to reach the Supreme Court, and its decree in connection therewith will be absolutely final. After the argument the court took the papers and reserved decision. Some pointed questions were asked by the learned justices during the hearing. The record is voluminous. Horace Pettit, of Philadelphia, appeared for the Victor Co., and Louis Hicks, New York, for the Leeds & Catlin Co.

GOGORZO RECORDS BIG SELLERS.

One of the most popular makers of records is that great artist, Emilio de Gogorza, whose baritone voice is familiar to all lovers of the talking machine. Mr. Gogorza received his musical training in the United States, and possesses a voice and a method that is equal to any of our imported artists. His repertoire is an extensive one, and there are few singers greater favorites in concert. In the West and Pacific coast especially Gogorza has scored a tremendous success the present season, but undoubtedly he sings to his largest audiences through the talking machine. His voice is always a delight. He sings with rare finish and charm. Dealers in talking machines should always make it a point to feature Gogorza records when he is scheduled to give a concert in their city or vicinity.

A CHAT WITH JOHN W. SCOTT.

Once in a while The World has the pleasure of meeting "Scotty"—John W. Scott, to use his formal and official title—who travels New England for the National Phonograph Co. He was "tu hum" in Newark, N. J., for the holidays, and before hitting the trail again had a word or two to say, in a philosophic strain, of course. about his trade, where he is known and prized as one of the best on the road. "Scotty" does not hesitate to say that, so far as his experience counted, the furniture people would not make a success of the talking machine proposition unless the department was placed in charge of a fully equipped talking machine man. Where this had been done the wise firm had made "all kinds of money." Then "Scotty" beamed, and said he would talk the matter over with the Boston representative of The World when he ran across him. Mr. Scott frankly admits his admiration for The World, and says he never wearies of saying good things about it to Edison dealers and jobbers. Thanks, indeed, and therefore The Worlds extends the sincere regard of its most distinguished consideration to the National Co.'s classy representative "down East."

WEINSTEIN MAY EXPAND.

M. Weinstein, who has the honor of having the smallest as well as the most conspicuous store of its kind in New York City, located in the famous Flatiron building, Broadway and 23d street, and who is a Victor as well as a music dealer, is seriously contemplating engaging larger quarters—another room in the same building upstairs—or moving further uptown. His floor capacity will permit of the display of a Victrola and a couple of Victor machines in the store and one in the window, besides his music stock, but the talking machine "department" has proved such a profitable addition that Mr. Weinstein desires to expand this end of the business, and enjoy the luxury of demonstrating booths, etc. For a long time Mr. Weinstein held off from adding talking machines, believing they did not class with music and would prove detrimental. Experience has proven the contrary by a large majority, and he has regretted not taking on the Victor long before he did. There are others.

January 14 the case of the New York Phonograph Co. against the National Phonograph Co. and others, of Orange, N. J., was reached in the United States Circuit Court of Appeals, New York. The argument was on an appeal from the decision of Judge Hazel, United States Circuit Court, rendered March 26, 1908, in which the National Co. was held in contempt and fined $2,500, which was stayed pending the hearing on the motion to set aside this finding. The opinion, in the main, however, favored the defense. Decision was reserved.

The man who is ashamed to work with his hands will never do any valuable work with his brains.

WANTED AT ONCE

Office and Factory: 387 East 158th St., NEW YORK

WORLD TABLOIDS.

J. B. Furber, well known in talking machine circles, has left with Mrs. Furber for a vacation to Florida.

F. K. Dolbeer, general sales manager of the National Phonograph Co., started on Monday on a trip to several New England points. He is expected back on Saturday.

J. A. Macnabb, vice-president and general manager of the Universal Talking Machine Mfg. Co., Newark, N. J., was in Hartford, Conn., on Wednesday for the purpose of attending the funeral of his brother George, who died recently in California.

The annual meeting of the stockholders of the American Graphophone Co. was held at the factory offices at Bridgeport, Conn., on Monday. The same officers, with E. N. Easton as president and general manager, were re-elected for the year.

Edward N. Burns, manager of the export department of the Columbia Phonograph Co., has returned from a trip to Havana, Cuba.

John Phelps, formerly connected with the business department of the Columbia Phonograph Co.'s Twenty-third street store, has been placed at the head of the export department's shipping bureau.

John Herzog, president of the Herzog Art Furniture Co., Saginaw, Mich., ran into New York Tuesday for a hurried conference of six hours with M. A. Carpell, the eastern manager.

RECENT INCORPORATIONS.

The Sonora Phonograph Co., of Yonkers, N. Y., was incorporated December 17 with a capital of $150,000. Incorporators: Henry F. Menten and Wm. E. Hoschke, of Brooklyn, and Chas. E. Lauton, of New York.

SAID IN PASSING.

It isn't so much what we learn, as what we forget, that makes us wise.

The way of the transgressor may be hard, but he has any number of companions.

If a man has really got anything in him he is never so strong as when he acts natural.

The only failure a man ought to fear is failure in cleaving to the purpose he sees to be best.

It is a curious fact that all the civil or religious peace that the world enjoys, they have had to fight for.

The woman who aims at the stars isn't going to hit them, but there is a certain kind of eloquence in that effort.

I admire patience, but I know lots of people who are patient just because they are too lazy to be anything else.

The Chippewa Phonograph Co., Chippewa Falls, Wis., is utilizing moving picture shows as a means of advertising its up-to-date Edison and Victor establishment.

FROM THE CITY OF BROTHERLY LOVE.

Good Trade Reported Especially in Higher Priced Goods—Business Prospects Excellent—Louis Buehn & Bros.' Good Service—Weymann & Sons Report Increase—Musical Echo Co. Have Busy December—Opera Season Gives Added Impetus to Talking Machine Trade—Other News of Interest to the Trade.

(Special to The Talking Machine World)

Philadelphia, Pa., January 9, 1909.

Members of the talking machine fraternity in this city enjoyed a fairly brisk holiday demand for their product. This was especially evidenced in the higher-priced outfits, and many Victrolas and new Edison machines were disposed of. The Columbia agents also reported a big showing. Their new double disc and Indestructible records having a great run.

The usual new year's slack was felt during the first week in January, but now things are adjusting themselves and there is every prospect of good business ahead.

Louis Buehn & Bro., of this city, are not letting any grass grow under their feet in getting after wholesale business. Having headquarters in both Philadelphia and Harrisburg, and traveling out from each, they not only can cover their territory more thoroughly, but give the dealer far better service in the rapid filling of orders.

Weymann & Sons report a large increase in both wholesale and retail departments. This company are large distributers of sheet music and musical merchandise, and are meeting with success in introducing these lines in the talking machine trade.

The Penn Phonograph Co. are enjoying an especially heavy demand for the new Edison outfits and Amberol records, while local business on Victor high-priced outfits is very satisfactory.

Since the establishment of the talking machine department on the ground floor, the C. J. Heppe Co. have felt a decided increase in their business. This, of course, has mostly been true in a retail way. Collections with them have greatly improved.

The Musical Echo Co. experienced a very large December business and an increase of over 20 per cent. over 1907. The retail business was particularly large and of the best quality, and, in the language of Mr. Gerson, the manager, it might be termed "a rich man's Christmas." Not that the medium class of retail buyers did not purchase plenteously, but the very fact that the largest percentage of purchasers wanted Victrolas, was an indication of the great popularity that this particular type of machine is now enjoying in the "Grand Opera City." The demand for Victrolas in Philadelphia was so great that it was impossible to supply the demand, purchasers of the Louis XVI. or gold trimmed Victor-Victrola being many. In fact, it was just as easy to sell this $250 Victrola, as it was the $200 type, owing to the scarcity of the latter.

The brilliant season of grand opera in Philadelphia, which is now second to none in the world, has given an additional impetus to the talking machine business, and a wonderful sale of records has ensued. In fact, it is not an unusual occurrence for the Musical Echo Co.'s store on its daily sales, to deliver Red Seal records averaging $400 to $500. The morning after an opera finds many of the opera goers purchasing the favorite records of the "star" of the preceding night. Philadelphia has five performances of opera every week in two opera houses, and to this, is due the enthusiasm of the opera goers who possess talking machines.

"MUSIC MASTER" HORNS IN DEMAND.

General Manager McMenimen Closes Some Big Sales—Successful Southern Trip.

H. N. McMenimen, general sales manager of Sheip & Vandegrift, Philadelphia, Pa., was in New York last week, and during his visit closed an important deal with the Columbia Phonograph Co., whereby they will handle "Music Master" wood horns in thirteen of their retail stores throughout the country. He also arranged for their representation by the Regina Co., and is negotiating with another leading talking machine company for the selection of these horns as part of their regular equipment.

Just before Christmas Mr. McMenimen returned from a five weeks' trip through the South and Southwest, covering 11,000 miles, in which he sold "Music Master" horns to practically every jobber in that section excepting two.

Mr. McMenimen, who leaves this week for a trip through the Canadian provinces, stated that Sheip & Vandegrift were very busy, and that their additional factory, which they only recently occupied, affords them none too much room to meet the growing demand for the "Music Master" horn. It is winning the golden opinions of jobbers, dealers and purchasers.

FEINBERG WITH UNIVERSAL CO.

B. Feinberg, the well-known talking machine man, this week signed with the Universal Talking Machine Co. as special representative to cover the principal cities in the United States. He left Wednesday night for the West, making his first stop at Buffalo. Mr. Feinberg, who was temporarily associated with Landay Bros.' 34th street store, will call on every jobber in the West.

This is only one of many moves on the part of the Universal Co. whereby the Zonophone products will be brought to the attention of the trade in a most convincing manner. Their new catalog, containing a list of 500 double-faced records—1,000 selections—is now on the press. It is to be gotten up with velvet cover and will be a most artistic production.

COLUMBIA CO. LEASE NEW QUARTERS.

The Columbia Phonograph Co., General, have acquired the lease of the store at 89 Chambers street, New York, now occupied by the Excelsior (formerly Douglas) Phonograph Co., and will remove their branch at 111, on the same street, to the new premises on or before May 1. The company have also secured the lease of the Powers & Henry store, 619 Penn avenue, Pittsburg, Pa., and will move there at the same time. Both are commanding locations.

THE "CONDOR" NEEDLES.

1908 Was Banner Year With Zimmermann.

Joseph Zimmermann, Aaschen, Germany, manufacturer of the famous "Condor" needles, is well pleased with the result of last year's business. Notwithstanding that 1908 was a dull year in trade circles, Mr. Zimmermann sold more "Condor" needles than the year previous. This product was first placed upon the market in 1904 and since then has acquired a world-wide reputation.

FOR SALE

Stock, Good Will and Fixtures of the large and well established Phonograph and Musical Business of the late O. F. KAUFFMAN of the City of Reading, Pennsylvania. Philadelphia, Pa., U. S. A.

NEWS OF THE MONTH FROM THE SAINTLY CITY.

Trade Conditions Active—Dealers Optimistic Regarding Outlook for 1909—St. Louis Talking Machine Co.'s Good Report—Columbia Co. News—Big Demand for Double Discs and Inside Indestructible Records—Manager E. B. Walthall Gives Theater Party to Staff.

(Special to The Talking Machine World.)

St. Louis, Mo., Jan. 8, 1909.

Trade conditions during the past four weeks were very active and reports for that period show that business was very good, and that all the dealers participated in the betterment. There is the most sanguine feeling that the new year will bring improvement all around, and that the talking machine business will be benefited.

O. A. Gressing, manager of the St. Louis Talking Machine Co., states that their business for December was the best since 1906, and that he believes that the trade will have a banner year for 1909. Mr. Gressing spent New Year's with his sister in Milwaukee, Wis. He will leave shortly for a week's trip through the South. H. F. Harrison and L. A. Cummins, both travelers for this company, spent the holidays at home, but leave early in January for trips through their respective territories. This concern recently sold an Auxetephone to the Jefferson Hotel, of this city, who use it in connection with their orchestra of ten pieces. They have also sold out all their Victrolas and are expecting a new supply soon.

Manager E. B. Walthall, of the Columbia Phonograph Co., reports a very active trade for December, and states that a noticeable feature was the large number of double disc and indestructible records sold for cash on the retail floor. On Wednesday night, December 30, Manager Walthall gave a dinner party to his entire force at one of our prominent hotels, and after dinner a theater party at one of our leading theaters. Those present were: C. L. Byars and wife, W. W. Spear and wife, E. B. Walthall and wife, J. W. Heibling and wife, Miss Lillian Biest Teresa Nevins, W. S. Byrd, Ralph Connor, H. T. Boxley, E. Schueddig, C. M. Morris, August Graber and C. H. Harmon.

D. K. Myers, the well known Zonophone jobber, claims that his business for December was the best in two years. It is steadily improving and looks for a big year for 1909. Mr. Knight, of the Knight Mercantile Co., also reports an active trade, and that business is exceptionally good on double disc records. P. E. Conroy, president of the Conroy Piano Co., says their talking machine business for December was good, and that it looks well for the new year. Max Silverstone, of the Silverstone Talking Machine Co., says business is now most favorable.

The Koerber-Brenner Music Co. have moved from their old quarters, in the Thiebes-Stierlin Music Co. building, to their new commodious location on the fourth floor of the new seven-story Misval building at 1508 Washington avenue. They will occupy the entire floor, giving them a space of 9,000 square feet, half of which they will use for their talking machine department. This firm's trade extends from Indiana to the Pacific Coast and through the South, Southeast and Southwest. Their business has increased so rapidly they were forced to seek much larger quarters, which resulted in their selecting this handsome modern equipped building with its very fine location. They have just closed a very successful year's business.

E. S. Payne, manager of the graphophone department of the Hollenberg Music Co., Little Rock, Ark., spent Christmas day here as the guest of C. L. Byars, manager of the retail sales department of the Columbia Phonograph Co.

A. L. Owen, manager of the talking machine department of the O. K. Houck Piano Co., Memphis, Tenn., accompanied by his wife, spent the holiday season here.

The St. Louis Talking Machine Co. obtained judgment recently against Charles Johnson, of this city, for $250, as the result of an automobile belonging to the latter crashing into a window of the plaintiff's.

THE TRADE IN THE "HUB."

Return of Harry Lauder Helps Record Sales—The Houghton & Dutton Department—What Other Houses Are Doing—Both Edison and Victor Lines Selling Strongly—Visitors at Ditson's—That Association.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 14.

The return of Harry Lauder to Boston affords a new opportunity to the talking machine dealers to boom the records containing his songs. A tour of the various stores this week revealed the fact that in every window are large photographs of the amusing Scot, and lists of his records. Since the first visit of the comedian, two months ago, the demand for his records has been steady. In fact, their popularity surpasses that of any other single individual except Caruso. "Foo the Noo" and "Stop Yer Ticklin'" are the most popular records just now.

Manager Howes, at the Houghton & Dutton talking machine department, has kept the Lauder records to the front since Mr. Lauder paid his department a visit and listened there for some time to the sound of his own voice. The Houghton & Dutton talking machine department is now in excellent quarters, and is effectually shut off from the rest of the store by glass partitions.

There has been a notable increase in the talking machine trade at the Jordan-Marsh Co. since the department was remodelled.

General Manager Junge, of the Columbia Phonograph Co., who has just made another brief trip to the various Columbia stores in this vicinity, sees nothing but prosperity ahead for the next few months. He expects retail trade to be good until the first of March, and then to be quiet until the last of May, when the summer business will begin to develop. The removal of Mr. Junge's private office from the street floor gives more room to the retail department. The salesmen here report a very good trade on the high class records and machines, while the cheaper grade are dragging behind.

At the Bowdoin Square Co.'s store, Manager Harrison is confident that the spring will be a good time for business. He finds that in his territory there is a call for the lively, snappy music and the so-called "popular" songs of comedians. His store is well stocked and the goods are well displayed.

Wholesale Manager Chamberlain at the Eastern Talking Machine Co. believes there is to be a big impetus to the Edison goods this spring. He says it is evidenced by the increases in the number of instruments and records ordered by the dealers in New England. Victor trade at this store is forging ahead as a result of the weekly Victor concerts. A number of high priced machines have been sold because of these. The new system of keeping the disc record stock works well, the individual envelope idea having been copied by a number of other firms.

Manager Winkelman, of the Ditson company's talking machine department, was delighted this week at the opportunity of showing the beauties and advantages of his department to Messrs. Fred Shaller and W. C. Holzbauer, of the Ditson Co., in Philadelphia, and H. L. Hunt, of the New York store. They were greatly pleased with it. The sale of Victor machines and records here has been trebled inside of a year.

Many of the local dealers are wondering what has become of the Dealers' Organization, which was in a state of embryo a few months ago. Nothing has been heard from it for a long time.

The man who bides his time has been commended a good deal, but if you ever watched one of those men who bide their time and succeed in the end, you will notice that while they wait they labor diligently.

Reg. U. S. Pat. Off.

Nothing Unusual
without some
Unusual Effort

¶ Our facilities of service are *unusual;* our stock is *unusually* "up-to-the-minute;" we have *unusual* methods of handling your orders, and the result—*unusual*

PERFECT
SERVICE

¶ We are daily proving the *unusual* merits of our SERVICE to hundreds of new Dealers.

ANENT SECOND-HAND MACHINES.

Special Licenses Suspending Price Restrictions Put Into Effect by National Co.

In bulletin No. 4 of the legal and agreement departments, dated December 20, 1908, the National Phonograph Co., Orange, N. J., deals with the future sale by dealers of second-hand machines, in part, as follows:

"The National Phonograph Co. has put into effect a system of special licenses suspending the price restrictions heretofore imposed upon the sale of second-hand or obsolete Edison phonographs which have been out of the factory for not less than one year. . . . A special license will be issued which, however, will go into effect only when the label on which it is printed has been securely pasted to the cabinet of the phonograph. These licenses will be numbered in rotation, and complete records thereof will be kept. The provisions of the jobbers' and dealers' agreements, with the exceptions of the restrictions of the selling price which will be suspended by the special license, will remain in force. The company reserves the right to cancel any such special license at any time.

"This plan, we believe, will offer a reasonable solution of one of the difficulties at present existing in the trade, and, without affecting the sales of new machines, ought to enable jobbers and dealers to satisfactorily dispose of their second-hand stock. At any rate, we propose to give the scheme a fair trial, reserving to ourselves the right to terminate the special licenses at any time, in case circumstances arise which in our judgment call for such action."

COLUMBIA-REGINA DEAL.

The Regina Co., New York, have taken on the disc machine and record line of the Columbia Phonograph Co., General, as jobbers and dealers. Negotiations to this end were completed last week. The store of the Columbia Co., 35-37 West 23d street, of the same city, will hereafter handle the Regina instruments, including the Reginaphone. Manager Wilber is confident the Regina store will establish a good trade with the Columbia goods.

From the Music Trade Review of January 9, 1909.

On Fame's Immortal Scroll

IS fame a bubble?

Not in all cases.

The management of the New York Sunday Herald recently commenced the publication of a series of articles entitled "The Ten Most Famous Americans Now Living." It was announced that politicians are to be excluded from the Herald's "most famous" class, so a number of interesting characters are brushed aside.

The first American thus honored was Thomas A. Edison, and accompanying the article was a reproduction of Mr. Edison's features by a well-known artist.

When we come to consider it, could there have been a wiser selection for the first of the series?

What Edison has done through his marvelous inventive genius is known to every school boy, and his name and fame is not confined alone to this country, for he ranks not only as one of the greatest Americans from an inventive viewpoint, but from an advertising standpoint he outranks them all, with the exception perhaps of Roosevelt, who will make the world ring shortly with his lion hunting exploits.

Think of the millions of talking machine records which have been put forth in cartons bearing the name, face and autograph of Edison. These have gone to every country in the world, and every island of the sea.

Edison has won undying fame in his reproduction of sound; then in the electrical field, his position is unquestioned.

I have seen the name of Edison advertised in connection with electrical inventions from the City of Mexico to Venice. There is scarcely a city in Europe where some Edison specialty is not exploited in the street cars and newspapers, and certainly in America, the name of Edison is familiar in every home circle in the land.

One does not have to ask who is Edison, for his name is everywhere, and yet there are those who say that fame is a bubble, and that it often costs more than it is worth.

That depends.

Sometimes a fleeting glimpse of notoriety is often mistaken for fame.

But really the scroll of fame is not crowded.

The immortals are few.

A man who perhaps occupied a high position during one generation is forgotten by the next.

Napoleon's name rests securely on Fame's scroll, and yet a great American, Ingersoll, once said, "I would rather have been a French peasant and worn wooden shoes, than to have been that imperial impersonation of force and murder, known as 'Napoleon the Great.'"

The works of men, whether good or bad, live after them and are not interred with their bones.

That song, "Drink to Me Only With Thine Eyes," is still a popular favorite, but its composer is unknown.

The fame of the great composers rests more securely than that of some statesman who struts across the stage and is quickly forgotten.

The fame of a man like Edison is not fleeting. It will not die with him like the fame of an actor, for instance, snuffed out with death.

It will live because Edison is a man who has done things. He has utilized natural forces for the entertainment—the education—the uplifting of man, and his name is chiseled on the imperishable scroll along with the greatest which this country has ever produced.

And yet Edison, like many another man, has won great heights, not by any easy route, but one paved with the roughest kind of obstacles. "The heights by great men gained and kept, were not won by sudden flight. For they, while their companions slept, were toiling upwards in the night."

Fame and fortune do not come easily to any man.

In truth, a man stands about as much show to win fame or even moderate business success without the closest application and sticktoitiveness, as a dewdrop has in Sheol.

EDWARD LYMAN BILL.

DOLBEER'S CHEERY REPORT.

The General Sales Manager Chats Enthusiastically of His Western Trip—Business Improving at All Points Visited—Factory in a Position to Fill Orders Promptly—Big Shipments to South America and Australia.

F. K. Dolbeer, general sales manager of the National Phonograph Co., Orange, N. J., got back to New York from his western trip in time to enjoy New Year's Day with his family. E. H. Phillips, manager of salesmen, returned with Mr. Dolbeer. In talking with The World, Mr. Dolbeer said:

"I had a most enjoyable time in meeting with our western salesmen last week. We discussed the trade situation thoroughly, and our men reported conditions excellent in the West and the Central States, the holiday sales running into big figures. In Texas business is still not what it should be, but it is coming around. That State was hard hit by the financial upheaval, and has not fully recovered from the shock. I arrived in Chicago on the limited at 8.55 a. m. and therefore had just five minutes to catch the train to Milwaukee to see Lawrence McGreal, and consequently made the jump from New York to that city in just twenty hours, which is going some. Mr. McGreal met us by appointment at his store, and a delightful chat over the situation followed. He has had a great holiday trade in Edison goods.

"When in Chicago I had the pleasure of meeting Messrs. Goodwin and Gregory, of Lyon & Healy. They have a fine talking machine department, the arrangement of the demonstrating booths being most admirable. I also had the pleasure of seeing E. H. Uhl, manager of the Rudolph Wurlitzer Co.'s branch house, and who is certainly a splendid fellow and an A1 business man; also Mr. Early, of the Early Music House, Edison jobbers at Fort Dodge and Sioux City, Ia., who told me he had a strong holiday trade in both places.

"The factory is now in position to fill all orders promptly for Amberol records and attachments. In about a month he will make big shipments of machines and records to Buenos Ayres, S. A., and Australia, going direct. A few record molds are still in Europe, but they will be sent to the factory here. Of course, everything, with this exception, goes from Orange, N. J., and goods are forwarded regularly to the various European Edison distributing centers. Yes, the prospects for an active and large business are very bright, and I am sure this will be a successful year for the talking machine trade."

A WIDESPREAD FALSEHOOD.

To the Effect That Ninety-five Per Cent. of American Business Men Fail—Due to the Original Statement Being Misconstrued—Bradstreet's Reports Only 1 Per Cent. of Failures During the Past Twenty-five Years.

How hard it is to stop the circulation of a falsehood when it has a smack of pessimism! A counterfeit dollar soon reveals its villainy when it gets into circulation, but not so the much-circulated libel on American business, viz.: that 95 per cent. of business men in this country fail and only 5 per cent. succeed.

This fiction has been given the authority of fact by much repetition and it has been accepted as gospel truth by a large portion of the public press. It has appeared so often in print that it will be a long time before its falsity can be thoroughly exposed. In fact, only recently a magazine of high standing in the commercial world prefaced an article with this false doctrine that 95 per cent. of business men fail and asked some of the most successful business men to point out the reasons why the great majority went to the wall.

Now, the serious feature of this mischievous tradition, or myth, or whatever it may be called, is that the word fail when applied to business means an insufficiency of assets to meet liabilities and consequent liquidation.

One interpretation of the statement that 95 per cent. of business men fail is that only 5 per cent. reach what we may call conspicuous success. But this is not the interpretation which the ordinary mind gives the statement referred to. The word fail, in the business lexicon, is synonymous with inability to pay creditors when bills are due.

Now what are the facts? According to Bradstreet's Commercial Agency, the average annual number of business failures during the last 25 years has been only 1 per cent. During the last ten years the commercial death rate has decreased until it is less than 1 per cent. In 1906 and 1907 it was the lowest on record, and during those years the number of business failures was only seven-tenths of 1 per cent.

Of course, this does not mean that only seven-tenths per cent. of business firms fail, for the average life of a business is longer than one year. But, to be liberal, say it is twenty or twenty-five years. This would make the percentage of failures for a term of years long enough to include the average life of business firms somewhere between 14 and 17½ per cent. This is far less than the 95 per cent. which tradition has long estimated as the business death rate. Instead of the great majority failing, it is the minority. As the Furniture World properly says: "Business is, of course, a hazardous undertaking, but not nearly so fatal to the majority who engage in it as the false tradition which has so long had circulation leads one to believe. It is time that the public press took pains to deny this commercial slander, which has so long hung like a cloud over American business men."

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 10, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York.

WURLITZER'S NEW YORK HOUSE.

In opening their new branch house at 25-27 West 29th street, New York, on the 1st, Rudolph Wurlitzer, president of the Rudolph Wurlitzer Co., Cincinnati, O., positively declared talking machines will not be handled. Possibly this may be considered later, but it hardly seems as if the company will change their firm attitude. While the manufacturing companies are averse to creating new jobbers in the Greater New York territory, the Wurlitzer Co., if they desired, would be made an exception.

VICTOR-REGINA LITIGATION.

Victor Co. Get Court Order Restraining Regina Co. and Offer Through Counsel to Take Back Stock—Decision of Judge Hough.

Immediately following the filing of the decision below, Horace Pettit went before Judge Hough and secured an order restraining the Regina Co. from selling Victor goods for less than the established price pending the argument on the case when heard on the merits. This order was made returnable before the same judge.

The Victor Talking Machine Co., Camden, N. J., through their counsel, Horace Pettit, of Philadelphia, Pa., on Dec. 30, in open court, before Judge Hough, sitting in the United States Circuit Court, New York, offered to take back from the Regina Co., of the same place, their stock of Victor machines and records. The proffer was accepted by Briesen & Knauth, attorneys for the Regina Co., and the Victor Co. were granted ten days to effect the transfer of the goods. This move, according to the Regina Co.'s counsel, vacated at once the stay obtained by the Victor Co., argument on which was to have been heard that day. The suit, however, will go to final hearing, the defense answering the bill of complaint, when testimony will be taken by both sides and the case made up for the calendar.

FIRST DECISION OF JUDGE HOUGH.

The opinion of Judge Hough, United States Circuit Court, New York, in the case of the Victor Talking Machine Co. against the Regina Co., argued November 27, was rendered December 16. The defense was charged with infringing the Berliner patent in selling Victor records at less than the established price. After reciting the essential facts in the suit, as presented by counsel, the court said in part:

"Defendant has been purchasing sound records and talking machines from complainant for several years past. In 1906 it signed what is known as complainant's 'distributers' agreement, under which it obtained certain discounts and had attention specifically drawn to the notices then affixed upon complainant's records. This 'distributers' agreement' is said to have nothing to do with the legal rights of complainant, but it seems to me to have a bearing on the fairness of the parties to this litigation. . . .

"As far back as 1903 defendants . . . made what they called a Reginaphone. . . . As long ago also as 1903 complainant threatened to bring suit against defendant for infringement of the Berliner patent in respect of the manufacture and sale of Reginaphones. On being told that the component parts of the Reginaphones were obtained from licensees under that patent they either deferred or abandoned action, and at all events have brought no suit down to the present time. It is impossible to believe that while selling these records for so many years to defendant, complainant did not know well the use to which defendant was putting them. . .

"Under date of October 15 notice was served on 'Victor distributers' that thereafter the complainant would refuse to fill orders for any Victor supplies from all distributers handling 'other lines of disc talking machines and disc records.' Thus the market for their Reginaphone was practically taken away, and it also rendered the Regina Co. unable to handle fresh Victor goods without discontinuing its own Reginaphone. Thus complainant practically left defendant with a business corpse on its hands after several years of what in my judgment amounts to tacit encouragement.

"The Regina Co. not being itself a retailer, offered to return its Victor goods at cost price to complainant, and on meeting with refusal of this overture it advertised the goods for sale at cut prices in order, as it asserts and as is easily believable, to minimize its loss. The alleged infringement above set forth consists in one of these cut sales. The nature of the Berliner patent needs no explanation in this court; the Johnson patent covers in terms what amounts to putting a printed label on a wax-like mass softened by heat and pressing it so that when the plastic substance hardens the label will be perfectly flush with the surface produced by pressure.

THE CRUX OF THE OPINION.

"The disc records under consideration are not in and of themselves covered by Berliner's patent. So far as that patent is concerned anyone can make them and anyone can sell them if he can find a market which does not involve the use of Berliner's patented combination. The questions raised therefore in this action on the Berliner patent are:

"1st. Whether one who purchases unpatented goods bearing a restrictive notice upon them—the terms of which are not actually brought home to the purchaser at the time of purchase, becomes a contributory infringer by selling either (a) at a less price than that fixed by the vendor or (b) without inquiry as to whether the subvendee will infringe the manufacturer's patented combination of which the article sold is the unpatented element. If the defendant herein were accused of violating the Johnson patent by manufacturing an article said to be covered by it, it would be inconceivable that on such a patent a preliminary injunction would issue.

"The question raised, therefore, in the Johnson case is whether in an action upon an unadjudicated patent of apparently very doubtful validity, a preliminary injunction should issue against the licensee whose license is spelled out of a notice printed on the thing sold, which thing had been an article of commerce between complainant and defendant for a considerable time before the notice thereon was so changed as to include the patent in question. I believe the above to be a fair statement of the interesting and difficult questions suggested by this litigation. As between parties of solvency unquestioned in this proceeding, it seems to me plain that preliminary injunction should not issue in such cases.

"I am, however, rendered certain of the propriety of refusing injunctions and leaving complainant to prove its case and damages, if any, by the history above set forth of the relations between these parties.

"So far as it can be shown by affidavits, it is shown here that complainant after permitting, and perhaps persuading defendants to acquire a stock of its goods, has practically rendered it impossible for defendants to dispose of them in the same way that complainant knows defendants have been disposing of them for nearly, if not quite, five years last past. This is not fair nor just, and though complainant may by resolving difficult questions of law be entitled to relief on final decree, it is not entitled to the preliminary assistance of equity at the present time.

"The existing stay orders are vacated and the motions for preliminary injunction denied."

TRADE IN THE SOUTHWEST.

Prospect for Spring Business Very Bright—What Various Houses Have to Report.

(Special to The Talking Machine World.)

Fort Smith, Ark., Jan. 9, 1909.

In looking over the talking machine and record situation for Arkansas, Oklahoma and Southern Missouri, the prospect for spring business is very bright indeed. A mild winter so far has stimulated business, especially in the smaller towns, and as last year's accounts are being settled, the country merchant is easier to approach and is giving orders for talking machine goods in a more liberal manner than ever before.

The Smith Phonograph Co., of Oklahoma City, are large jobbers and actively developing that section of the country in their line.

The R. C. Bollinger music house, of Fort Smith, Ark., have recently been installed as Edison jobbers, business with this old established music house is especially gratifying in the wholesale line. S. H. Womble, formerly of the National Phonograph Co., has charge of the phonograph department. With the assistance of two competent traveling salesmen business is being rapidly developed.

Much credit is due to the National Phonograph Co.'s traveling representative, E. A. Neff, who has worked very hard in developing and stimulating the growth of the Edison line in this section.

Attention

Dealers *and* Manufacturers

Mr. Dealer:

Do you handle Cut Glass?

If not, why not?

Purchase Victor Talking Machine Shop—A New Trade Poet—Jas. I. Lyons Showing Star Machines and Records—Western Sales Force of National Phonograph Co. in Conference—Those in Attendance—What the Out-of-Town Dealers Are Doing—Columbia Co. News—A. D. Geissler's Good Report—Lyon & Healy Department Has Good Year—Big Demand for Fibre Needles—A Canadian Visitor.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 7, 1909.

There has certainly been no complaint among local jobbers as to the volume of December business. It was away ahead of last year all along the line, and with some it was reported to have been a record-breaker. While business since September has shown a marked improvement, a great many dealers held off ordering until the holiday business was almost upon them. It was a month that taxed the ability and stocks of jobbers to the utmost and rolled up an excellent volume of business. From all reports dealers throughout the West had a fine trade, and judging from the freedom with which orders have been coming in, even since the holidays, have been stimulated to fresh effort and are starting the new year with the greatest of confidence. Higher priced outfits seemed to be the rule so far as the local retail trade was concerned. In several instances business was declared to have been not only ahead of 1907, but fully equal to, and in one or two cases ahead of 1906.

The Victor Talking Machine Shop, at 169 Michigan Boulevard, has been purchased by George and Cecil Davidson, who will conduct the business under the firm name of Davidson Bros. The new proprietors are both young men who are well known in the trade and have been connected with the Talking Machine Co. for several years past. The new firm take possession on Monday of next week. The store is in the Railway Exchange building immediately joining Orchestra, and as its name implies handles Victor goods exclusively.

A new trade poet hath arisen. He is L. H. Hockspeier, a dealer of Newhampton, Ia., and his muse warbles so gracefully in an advertisement in the "Gazette" of that city that the "alternating currents" man of the "Record-Herald" introduced it in its entirety. Pianos, sewing machines, post cards, and typewriters, are all duly exalted, but the finest strains are reserved for the phonograph as follows:

An Edison Phonograph—that is fine,
A special since we have the Amberol kind,
That is just what I have on my mind,
I will buy one of the four-minute kind,
Or if an Edison you have got
Last year from Hockspeier's finest lot,
A new Attachment this year is the thing
That will make your old one four minutes sing.

The effusion gracefully concludes with these lines:

Welcome one and welcome all,
Thanking you for just a call,
If you are tired and want to rest,
Then call at Hockspeier's Music Store,
Which is the very best.

A full line of the Star talking machines of the Hawthorne & Sheble Manufacturing Co. is now on exhibition at the warerooms of Jas. I. Lyons, 265 Fifth avenue. Especially admired are the two new cabinet Starola machines, retailing at $175 and $250 respectively. Harry K. Tilt, the Hawthorne & Sheble representative here, is doing yeoman work in their interest.

The usual annual conference of the western sales force of the National Phonograph Co. was held at the company's offices in this city on Monday, Tuesday and Wednesday of last week. Not only did F. K. Dolbeer, manager of sales, and D. H. Phillips, manager of salesmen, come on from the East this year to meet the men, but they were also accompanied by Peter Weber, superintendent of the great factory at Orange, N. J. Messrs. Dolbeer, Weber and Phillips left New York Saturday afternoon and arrived in Chicago Sunday morning at 8.55 and left for Milwaukee five minutes later, making the through trip to the Cream City in twenty hours. After spending the day with Lawrence McGreal they returned to Chicago, where all the western salesmen were on hand to meet them Monday morning. As usual the phonograph hustlers were given a taste of the National Co.'s well known hospitality. On Monday evening there was a dinner at Rector's, participated in not only by the Edison travelers, but by several dealers and jobbers who happened to be in town at the time. Besides Messrs. Dolbeer, Weber and Phillips, there were present the following travelers: A. V. Chandler, W. P. Hope, F. L. Fritchey, M. G. Kreusch, A. H. Kloehr, H. A. Turner, G. A. Renner, J. H. Gill, E. A. Neff, W. H. Hugg and John Hardin, western representative of the Edison Manufacturing Co. There were also present as guests, Chas. Armstrong, of Clinton, Ia.; William Meyers, of the J. F. Schmelzer Arms Co., of Kansas City; Chas. Stamen, manager of the talking machine department of the Early Music House, Fort Dodge, Ia., and Chas. F. Craig, formerly with the Indiana Phonograph Co. On Tuesday night there was a theater party at the Majestic. The three officials left for the East Wednesday noon. In talking of business, Mr. Dolbeer spoke in the most enthusiastic terms. "As an indication of improved conditions Mr. Weber tells me that the factory payroll has been higher this fall and winter than ever before," said he. "The new Amberol records are proving a tremendous success and we are at last ready to fill promptly orders for attachments on the Home and Triumph as well as Standard machines. We are all looking for a fine, normal year's business during 1909."

Good reports are heard here regarding the progress made in the talking machine line by H. T. Rawson & Co., of Rockford, Ill. They added talking machines only two or three months ago, putting in a good stock of Victor and Edison goods, but they are already doing an excellent business. They have a couple of canvassers out and are pushing things in an energetic and up-to-date fashion.

Another dealer who is doing things is J. M. Vreeland, of Gibson City, Ill. He certainly has ambition extending beyond his immediate town and has recently opened branch stores at Saybrook, Paxton, Melvin and Sibley, Ill. In all four of these towns he bought out the Edison dealer in order to control the situation in that line. He has been doing page advertising in the local papers, carries good stocks of both Victor and Edison goods, and from all reports has been reaping a fine harvest as the result of his enterprise.

E. C. Plume, western wholesale manager of the Columbia Co., made a brief western trip in December which resulted in several important deals. At Davenport, Ia., he made arrangements for the closing of their store in that point and selling the stock to Robert Smallfield, of the Smallfield Music House, who will push the Columbia product with might and main. At Lincoln, Neb., he closed a deal with the G. A. Crancer Co. to handle their goods in Lincoln. Mr. Crancer will give the talking machine end of their business his personal supervision. R. T. Ryan, formerly manager of the company's talking machine department, will travel in Nebraska for the Columbia Co. Mr. Plume arrived in Sioux City in time to attend the graphophone recital of the W. A. Dean Co. The graphophone was accompanied by a full orchestra and Mr. Nolan, the firm's confidential man, read an interesting paper on the history of the graphophone. It was only a few days after this that Mr. Nolan was killed in a street car accident, Mr. Plume receiving the sad news the day after his return to Chicago. A contract has been closed with the Dean Co. to handle Columbia goods exclusively for the northwest portion of Iowa and the northeast portion of Nebraska.

George Ornstein, manager of sales for the Victor Co., was in Chicago this week. He met the Victor Co.'s western salesmen in Milwaukee last week for the regular annual conference and entertained them in the style for which he is famous.

"Our business in November and December was excellent," remarked Arthur Geissler, general

The Economy Racks A NOTABLE INNOVATION

The Economy Disc Record Rack—Convenient, Portable. One record to a compartment. No handling of several to find the one you wish. Made in highly polished Mahogany or oak or oak mission. Attractive Billiard cloth cover. Retail prices—Rack for 10-inch records, $3.50; 12-inch, $3.75; Rack for insertion in cabinet, $1.50.

The Perfection Disc Record Racks—This is a rack similar to the Economy but less ornamental and therefore cheaper. Price, $1.50 for 10-inch records; $1.75 for 12-inch.

The Ideal Negative Rack—for photographers—Amateur rack, holds anything from a postal card to an 8x10 negative. Price, $1.25 retail. Professional rack, adjustable, holding anything from 8x10 to 14x17. Retail price, $1.75.

We can now make prompt shipment in Jobbing Quantities.

COMING—*The most unique talking machine cabinet ever introduced to the trade. It will embrace the "Economy" principle and will create a sensation.*

R. H. JONES, Patentee and Sole Manufacturer **1-17 Bryan Place, Chicago, Ill.**

CHICAGO

manager of the Talking Machine Co. "December was the best month that we have ever had. The new year is starting out well. There is a snap to the trade that is very gratifying to us. Collections are most satisfactory." The "cabinet that matches" maintains the popularity into which it sprang at its introduction. Another full car of these beautiful cabinets has just been shipped to Los Angeles. O. A. Gressing, manager of the St. Louis Talking Machine Co., and Mr. Pickens, president of the John Hoyt Co., of Davenport, Ia., were callers on Mr. Geissler last week.

C. E. Goodwin, manager of the talking machine department of Lyon & Healy's, was highly satisfied with the way the year wound up. "It was the biggest December that we have ever had. Wholesale trade picked up wonderfully the latter part of the year. The outlook, I think, is very bright. The thing that impresses me particularly is the evidence of the stability of the trade. In our retail department last month we sold a number of Victrolas to people who first bought machines from us seven or eight years ago. Our Victrola business, both in wholesale and retail, has been the largest that we have ever had."

W. C. Fuhri, district manager of the Columbia Phonograph Co., says that the December business of the Chicago house was double that of last year, notwithstanding the fact that all of the local branches that were in existence last year have been discontinued. The Kansas City office is ahead of 1906 and double the business of 1907 in December, while the St. Louis house makes a similarly favorable report.

At the local branch of Rudolph Wurlitzer the talking machine department had a business much in excess of last year, making a fair increase over 1906. In the retail it was stated that more high priced outfits were sold than ever before.

The B. & H. Fibre Manufacturing Co. report that the year opened up with them with orders from their principal jobbers of double the usual volume. The company is now installing special machinery by which absolute uniformity of product is assured. They have just received a special shipment of extra fine bamboo from the north of Japan, selected for them by an agent sent to the Orient especially for that purpose.

Arthur F. Tero, president of the Toronto Phonograph Co., of Toronto, Can., was a Chicago visitor last month. The company is moving its wholesale department to separate quarters, but will conduct three retail stores in Toronto, as in the past. They also manufacture record cabinets and supplies. Mr. Tero is personally the Canadian representative of the Columbia Phonograph Co., and has established an exclusive jobber for each province. He is very enthusiastic regarding the double disc record and says that it has met with universal favor across the border. He was also loud in his praises of the new indestructible record.

Frank Dilbahner, proprietor of the Western Talking Machine & Supply Co., made a flying trip to New York and Philadelphia the latter part of last month.

INTERESTING VICTOR SUPPLEMENT.

In preparing their first supplement for the New Year, the Victor Talking Machine Co. have many interesting novelties to offer their dealers and the public at large, including four records by Emmy Destinn, the farewell address of Admiral Evans to the Navy, an excellent record by the Percher Alpensingers of Berlin, three by the Whitney Brothers' Quartette, and new records by Harry Lauder and Nat Wills. The new Red Seal records will also include one by Mischa Elman, the young violinist so popular this season.

MAY BROS. MAKE ASSIGNMENT.

(Special to The Talking Machine World.)

Brenham, Tex., January 4, 1909.

May Bros., who conduct a music store in this city, have filed a petition of assignment. Mr. Kalkstein has been named as assignee, and no assets are given.

THE SALE OF HIGH PRICED OUTFITS.

Salesman Should Size Up Customer and Suggest Suitable Outfit—Sales Should be Made by Suggestion Rather Than Dictation—Talk Quality to the Man With the Educated Ear for Music and Demonstrate Possibilities of the Up-to-Date Machine and High Class Records.

BY L. K. CAMERON.

Let us start with the assumption that the prospective purchaser has been interested in talking machines in general and has stepped into your store to investigate the Victor. The salesman should, by his knowledge of human nature and by the appearance of the customer estimate the value of the machine he would be most interested in. It would be a waste of time and energy to dwell forcibly upon the advantages of the Victrola when you have a customer who has $40 or $50 to spend and could not by any effort pay more. In doing this you would only be making the customer feel that the $40 machine is not worthy of his attention. It should be the salesman's endeavor to put the customer at his ease and to awaken some enthusiasm. A surly discontented customer is hard to please and we must take particular pains that his feelings are in no way hurt, his temper ruffled or his suspicions aroused in any manner. Treat your customer as you would like to be treated yourself. Put yourself in his place and try to imagine the effect of your remarks upon him. The ability to put yourself in another's place is a salesman's most valuable asset, especially when coupled with tact, some horse sense and a good imagination.

In meeting a customer to whom price is no consideration, but who has no knowledge of the values in talking machines certain discretion should be used. The ordinary mortal likes to be led gradually to a certain point, and if you were to tell him the price of the Victrola before he is interested in it, it would serve in a way to counteract the results of your best efforts. The following is the method I have used successfully when I knew the customer was able and willing to pay a large price for his pleasure, especially when he knew he was getting the best value for his money. A customer enters the store and states that he is interested in talking machines and would like to hear a Victor. He has never heard the high class machines with good records and unconsciously has formed an opinion that they are all pretty bad from having heard some inferior machine in bad condition, grinding out records that set his teeth on edge. He says: "That if it were not for his wife, who wishes him to look into the matter he would never take the time to listen to one of the things." Now this is one of the best subjects to work upon. When a man is strongly prejudiced against the machine it is usually because he has a musical ear and has been tortured by the scraping and groaning of the cheap article. This kind of man can be impressed with the quality of tone and naturalness of reproduction. Ninety per cent. of the men who can spend $200 for a machine are fairly well educated and can appreciate the better class of music and the wonderful results that can be obtained from the good machines.

Having invited the gentleman into your private Victor salesroom and seated him comfortably, try to obtain an idea from his conversation and remarks as to the quality and style of music he is fond of. Just because a man may go to the opera occasionally is no sign that he wishes to be surfeited with Caruso and Melba records. The crankiest musician likes a catchy melody at times, even though it be the conventional "Rag." Show him all styles of machines and play a Victor 3d with a voice record. If he is fond of the classical, let the record be a Caruso, or if he cares for something in English a record of Allen Turner's will show up the machine to great advantage. After playing the record on the Victor 3d transfer it immediately to the Victrola and play it with the same style needle. Now dwell upon the difference in quality between the tone of the two machines, showing that although the Victor 3d is clear, brilliant and of good, natural quality, the construction of the Victrola tends to give the reproduction on this machine a rich, velvet quality which cannot be reproduced on any other instrument. The idea of "quality of tone" is one of the strongest selling points of the Victrola and the salesman should use it as much as possible.

Call his attention to the different effects produced by the manipulation of the little doors. Point out the graceful and artistic appearance of the Victrola and the beauty of design. If he seems interested go into the details of construction and explain the principles of sound waves (but be careful—he may know more than you), therefore study up so that you will be able to talk intelligently on the subject.

But for Heaven's sake don't talk too much. You may arouse his desire to buy in half an hour or less, but in the next ten minutes you may talk him out of it. Keep your eyes open and stop talking at the psychological moment. Remember you are not a talking machine. Let the Victor have a show.

VALUE OF THE TRADE PAPER.

How a Paper Like The World, for Instance, Benefits Its Advertisers and Supporters.

The importance of the trade paper to the industrial life of the country was fittingly described in a recent editorial in the "Fourth Estate," a leading magazine for newspapermen, published in New York. The editorial referred to read as follows:

"Few people outside of those directly interested have any idea of the number and value of the American trade publications.

"These are days when every business must have its representative paper, a periodical which will serve as the eye of the trade, watching out for every little item of news referring to it, seeking for all useful information, striving to supply every pointer which may possibly benefit its readers.

"The average man who takes up the average daily paper will find in it all the news of the day and page upon page of alluring advertisements of all descriptions, but only occasionally will he find anything directly referring to those

Kreiling & Company

Inventors and Sole Manufacturers

North 40th Ave. and Le Moyne St.

CHICAGO, U. S. A.

engaged in the same line of business as himself, unless it be a fire or a failure, the opening of a new building or the extension of an old one; in other words, news of general interest.

"This is quite natural. No one, two or even a dozen newspapers, could undertake the task of furnishing the readers in every line of business with all the news of interest to them in their particular branches of commerce.

"Thus the trade paper becomes a positive necessity, and by concentrating its energies on one trade and its closely allied branches it is enabled to present to its patrons not only all the news in that particular line of business, but also many advertisements setting forth all that is new, bright and attractive in that trade.

"Consequently the trade paper brings about a most valuable interchange of ideas and keeps everybody thoroughly posted on everything transpiring in the business represented by the paper.

"It is difficult to imagine that any trade could get along without the means of interchanging trade ideas, to say nothing of reading of the movements of captains of industry and trade solicitors, improvements in the different lines of business and the placing of fresh goods on the market.

"Any trade without such a representative journal would, according to modern ideas, be in a state of unhappy isolation, which would be almost fatal to progress and relegate its members back to the days, centuries ago, when all trades were confined to certain quarters of the large cities and the news of the day was exchanged over the wine cup, the beer pot, the coffee cup or the teapot.

"Finally the trade paper enables a business to be located in any part of the city, State or country, instead of squeezed up in a 'quarter,' for in its columns those who wish to do so can read of everything of interest transpiring in the trade, whether it be in New York, San Francisco, Chicago or New Orleans, London, Paris or Timbuctoo, Ceylon, Bombay or Singapore, St. Petersburg, Pekin or Tokio.

"Verily it cannot be denied that the trade paper appears to be a most useful publication."

TO MARKET FACTORY PRODUCTS.

The Output Company Will Help Manufacturers to Find a Market—O. W. Eckland Is Manager of a Strong Sales Force.

(Special to The Talking Machine World.)

Chicago, Ill., January 6, 1909.

The Output Company of America have been organized in this city for the purpose of marketing the factory product of concerns making good specialties and who will arrange with the company for the entire distribution of their output. The formation of the new company is of special interest to the talking machine trade, inasmuch as the manager, O. W. Eckland, is a man of long experience in this line and has the reputation of being a sales manager of unusual resourcefulness and energy. Furthermore, several well-known talking machine men are financially interested in the company. A strong sales force has been organized and the company, among other things, have contracted for the marketing of the entire output of the Central Cut Glass Co., of Chicago. They are open for good specialties in talking machine or other lines, and are especially desirous of obtaining the American representation for foreign manufacturers. The offices of the company are at 1110 Heyworth building.

CHICAGO'S TRADE FOR 1908.

Figures and Facts Submitted by James F. Bowers, Secretary of Lyon & Healy.

(Special to The Talking Machine World.)

Chicago, Ill., January 9, 1909.

James F. Bowers, secretary of Lyon & Healy, in an article prepared for the Chicago Record-Herald gives the following figures relating to the business transacted by the music trade industry in this city for the year 1908:

Sales 1908	$19,000,000
Sales 1907	19,000,000
Manufactures 1908	14,400,000
Manufactures 1907	16,000,000

Decrease, 10 per cent.

"The past year has been fairly good in the musical instrument industry. In the early part of the year sales were considerably better than might have been expected during a period of general depression; the summer months were dull, however, compared with the year before, and it was not until October that activity became apparent. But the year finished with a good Christmas, so that viewed as a whole the twelve months compares favorably with the output of a few years ago.

"Business in high-grade pianos was exceedingly good, more Steinways being sold than ever before in the course of a year. The demand for medium-priced pianos was also very fair. There was a large falling off in the sales of very cheap instruments. The pianola piano continued to increase in favor. This piano may be played by means of a regular keyboard or by means of a roll of perforated paper. The result is that such a piano opens up vast possibilities in music to families who heretofore were confined to very simple forms. The Victor-Victrola, a new form of talking machine, in which the horn has been done away with, made such strides in popularity during the past year that it was impossible to supply the demands. Early in December every Victrola that the factory could produce, by working night and day, had been sold, and the new year finds many orders for these instruments still unfilled.

"The feature of the year just past was the return to favor of the mandolin, guitar and banjo. These instruments were again in strong demand and, together with the violin, were selling in great quantities. Sheet music and book business showed a decided gain over 1907, which is proof positive that the teachers of music on the whole are in a prosperous condition.

"One remarkable novelty brought forth during the year was the Welte-Mignon piano, which reproduces exactly and wonderfully the playing of Paderewski and many other great artists."

MICA FOR DIAPHRAGMS.

Producers of Domestic Mica Want a Strong Duty Incorporated on the New Tariff Bill—A Petition Lodged With the Ways and Means Committee.

(Special to The Talking Machine World.)

Washington, D. C., January 7, 1909.

Mica is largely used for diaphragms in sound boxes, and therefore manufacturers are interested in the duty on this article. The grade of mica employed for this purpose is imported from India. In the sound boxes made by the Victor Talking Machine Co., Camden, N. J., and the Columbia Phonograph Co., General, New York, the mica diaphragm is used exclusively. The National Phonograph Co., Orange, N. J., have substituted copper for mica in the Edison sound boxes. The domestic and Canadian mica is totally unfit for diaphragms, and therefore cuts no figure so far as the trade are concerned.

Producers or miners of domestic mica—the most important deposits being found in North Carolina—are opposed to the importers as to the rate that should be embodied in the framing of the new tariff bill. The domestic miners avow the importers are trying to have mica placed on the free list, or the duty materially reduced. The importers, however, in a letter of December 18, addressed to the Ways and Means Committee of the House, say:

"We desire to go on record as follows in the matter of proposed tariff revision as applied to paragraph 184, act of 1897, which relates to mica: 1. We favor the removal of ad valorem duty of 20 per cent. 2. We favor the retention of the present specific rates, namely, 6 cents per pound on uncut mica and 12 cents per pound on cut mica. Specific duties of 6 cents per pound and 12 cents per pound, as stated above, return to the government a fair revenue and an equitable one to the importer, and fulfills the purpose of a specific duty. Protection is not required as far as mica is concerned in this country. Costs of production, etc., need no comment here. Domestic mica has not been bettered by the ad valorem duty in the present tariff, and, furthermore, consumers will continue to demand and to use foreign mica on account of quality and quantity and dependable supply thereof, as the past proves."

NATIONAL CO.'S EXCHANGE

Will Take Back Cut Out or Defective Edison Standard Records—The Conditions Specified.

On December 28 the National Phonograph Co., Orange, N. J., notified authorized Edison jobbers and dealers that beginning Jan. 4, and until Jan. 9, 1909, inclusive, they may return, for exchange, cut-out and defective (not surplus) Edison standard (not grand opera, Amberol or concert) records.

Jobbers must enclose with the above an order, for immediate shipment, of a quantity of standard or Amberol records equal to the total number of standard records he is returning from his own stock, and within 30 days from Jan. 9, 1909, he must order a quantity of standard or Amberol records equal to the number of standard records his dealers have returned to the factory to be credited through his jobber.

This proposition did not include records taken in exchange from consumers, slot machine operators or exhibitors, and any records of this nature, or second-hand records, returned were absolutely refused. Jobbers and dealers are given the option of ordering any quantity of Amberol records equal to, or in excess of standard cut-out or defective records returned, with the understanding that the number of such records ordered are to be charged at the price of Amberol records, while credit will be given for standard records returned, at the price of the standard records.

A meeting of the directors of the National Phonograph Co., Orange, N. J., was held in their New York offices, 10 Fifth avenue, Thursday. Business of importance was transacted.

TRADE NEWS FROM LOS ANGELES.

Record Holiday Business Helps Year's Average of Business—Big Victrola Sales—Jobbers Have Hard Work to Fill Orders—Bad Fire in Wiley B. Allen Co. Store—How Various Houses Find Business—T. B. Tessier Returns from Mexican Trip—Other Interesting Items of the Month.

(Special to The Talking Machine World.)

Los Angeles, Cal., Jan. 2, 1909.

The old year has ended to the satisfaction of every dealer in the trade. The great volume of holiday business has placed 1908 far in advance of all previous years. Victor Victrolas seemed to be most demanded by the trade of the large houses. Another noticeable feature was that mostly all was cash business, while a small amount was installments. A leading retail firm made a record by selling 55 Victrolas in sixty days, while others made proportionate new records.

Jobbers in all lines had all they could do to fill the hundreds of orders which came in by mail, telegraph, long distance telephone and special messenger. Most every dealer had to order time and time again only to find he had not ordered as much as he should have at first. The wholesalers and jobbers are to be congratulated for their splendid service.

The only unfortunate happening among the dealers was that of a fire which damaged the Wiley B. Allen Co.'s store to the extent of $25,000. A fortunate point was that the fire started about 10 o'clock Christmas evening, just after the big trade was over, and while some customers were just completing their purchases. The building was flooded with water, which did the most damage. The insurance company has purchased the damaged stock and claims on the same have been adjusted. The management has rented a large store a few doors south of the old location where they are temporarily located, and business has continued almost as though nothing had happened.

Sherman, Clay & Co., Victor jobbers, made the highest mark in the history of the Los Angeles branch. Manager Chas. Ruggles said: "I knew we would do a larger business than last season, but I hardly expected we would witness as great an increase as we did; had we received any more orders we would have had to put up a sign, 'Sold Out.'"

The Southern California Music Co., Edison and Zonophone jobbers, were in about the same position, having received orders from most every county in three States. Dealers from the northern part of the State telegraphed and telephoned for goods to be shipped by express up to the last minute. The branch houses of the same firm at San Diego, Riverside, San Bernardino, Santa Barbara and Oxnard did splendid retail business.

E. H. Philbrook, manager of the Edison Business Phonograph department of the Southern California Music Co., since receiving a large shipment of machines has installed several business outfits and is introducing the system to every large concern which employs an office force. The Business phonograph is comparatively a new venture in the trade here, but it has thus far met with great success and undoubtedly has a great future.

Arthur E. Burson, patentee of the Burson stopping device for all types of machines, has been in this city in company of Anton Gloetzner. Together they are making preparations for supplying the trade with the new product. After a short stay in the southern parts they will return to Santa Barbara.

After traveling through different parts of Mexico in the interests of the Southern California Music Co., T. B. Tessier has returned, bringing most favorable reports of trade conditions in the sister republic. Geo. L. Snider, of Kern, Cal., is among the many visiting dealers. Francisco Moreno has been appointed manager of the talking machine department of the Santa Barbara branch of the Southern California Music Co., while Edw. Borgum has taken a similar position in the San Diego branch of the same concern.

Geo. T. Exton, partner in the Exton Music Co., and one of the most prominent music dealers on the Pacific coast shot and killed himself December 29 in the basement of his store at 216 West Third street, in this city. No reason is understood for such an act, as he was in good circumstances and had an excellent standing, having been engaged in the music business in this city for the past 18 years.

THE GOSPEL OF FRESH AIR

Being Preached by the Talking Machine in the Anti-Tuberculosis Campaign.

In aiding the fight being waged against tuberculosis the streets of New York, Boston, Chicago and other great human hives ring with the music of the talking machines which are being used to spread the anti-tuberculosis propaganda. This method is simple and effective. The machines are brought from place to place on vehicles; the program opens with the rendition of "The Battle Cry of Freedom" or of some similar martial air. This collects the crowd. When the operator is satisfied with the size of his audience, he removes the musical record from the machine and substitutes a record that tells of the proper mode of living. This is what the eminent German specialist, Dr. Koch, calls "preaching the gospel of fresh air and sanitation."

GEORGE W. LYLE TO EUROPE.

The General Manager of the Columbia Co. Will Look Over the European Field—Conditions in the United States Most Satisfactory.

January 6 George W. Lyle, general manager of the Columbia Phonograph Co., General, sailed from New York for Europe on the swift turbiner "Lusitania," landing in Liverpool, England. He was accompanied by his daughter, Gertrude Lyle. The trip was decided upon after Mr. Lyle became satisfied that the new selling policy of the company regarding the establishment of Columbia jobbers and dealers in exclusive territory was permanently successful and working admirably. Also that the sale of indestructible cylinder and double-disc records was increasing beyond their most sanguine expectations, hence this pleasant state of affairs permitted him to go abroad on a tour of inspection. Mr. Lyle will be in consultation with Frank Dorian, the Columbia's capable representative in London, England, the greater part of his time, and will also visit a few of the principal offices on the Continent. He will be away about a month.

PERSUASIVE.

A rural manufacturer duns his subscribers in the following novel manner, says Harper's Weekly:

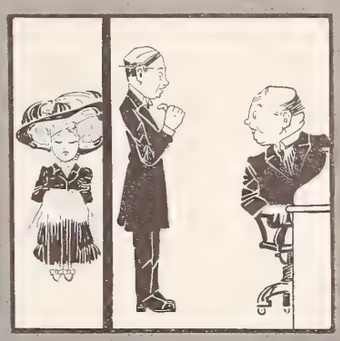
"All persons knowing themselves indebted to this concern are requested to call and settle. All those indebted to this concern, and not knowing it, are requested to call and find out.

"Those knowing themselves to be indebted, and not wishing to call, are requested to stay at one place long enough for us to reach them."

DEATH OF OLD EDISON EMPLOYE.

Peter Brady, one of the oldest employes at the Edison plant in Orange, N. J., died suddenly at his home in West Orange on December 24. For many years he had had charge of the men who took care of the buildings, and was popular with thousands inside and outside of the Edison works. He was born in Ireland sixty-four years ago.

Robert R. Smallfield, proprietor of the Smallfield Music House, 313-315 West Second street, Davenport, Ia., recently purchased the entire stock of the Columbia Phonograph Co., in that city, whose line he will handle. This is the fifth store that this enterprising dealer has purchased in Davenport since starting in business.



Don't keep your customers waiting

Maybe it is the fault of your jobber, but if you have the right kind of a jobber there won't be the least delay in filling your orders.

You can't afford to dilly-dally with a jobber and keep your customers on edge for their goods. Not every customer will stand that kind of treatment, and those who do won't put up with it any longer than they can help.

There's an easy way to get over these troublesome delays. Send us your orders for Victors, Victor Records, record cabinets, horns, fibre cases, English needles, and Victor accessories of every sort. You won't need to tell us to hurry—we always do that; send out goods the same day the orders are received.

That is the kind of service you always get here, and it puts you in position to take the best care of your customers and saves you a lot of needless worry.

Try us on your next rush order and see how we handle it. In the meantime you'd better get our catalogue, and booklet, "The Cabinet That Matches," which tells about our record cabinets that match perfectly each style Victor in design and finish.

Write for them to-day.

The Victor Distributing and Export Company

83 Chambers St., New York

POPULARITY OF THE STAR LINE.

The New Starola Cabinet Machine Has Made a Great "Hit"—Fifteen Models Constitute the Star Line—Plan a Big Campaign for 1909.

The Hawthorne & Sheble Mfg. Co., are achieving great success with their Starola cabinet machines which were introduced to the trade last month, and which are further referred to in their advertisement elsewhere is this issue. These instruments mark a further development of the plans of the Hawthorne & Sheble Co. who have been steadil, increasing their line with the result that the Star products are now made in fifteen models, with all distin tive features. Improvement and erfection are the keynotes of the Hawthorne & Sheble advance.

Dealers find the Star a most profitable line to handle, and are taking hold of them, as well as the Star records, with alacrity. The progressive policy which has characterized the Hawthorne & Sheble Mfg. Co. for the past twelve months will be not only further exemplified during the year just opened, but materially augmented, and nothing will be left undone to make the Star line a most attractive proposition to dealers—specialties that will give the utmost satisfaction to purchasers.

THE EXCELSIOR PHONOGRAPH CO.

Instead of succeeding the Douglas Phonograph Co., Inc., New York City, as "The Talking Machine Co., of New York," previously announced in The World of December 15, following the purchase of the property by P. A. Powers, of Rochester and Buffalo, N. Y., the title of the new concern will be "The Excelsior Phonograph Co." John Kaiser, general manager of the company, stated Tuesday, when the adoption of the latter designation was decided upon, that the change was made to avoid unnecessary complications and useless friction, a course satisfactory, in his judgment, to all parties in interest.

POINTS GAINED BY JOBBERS.

The Exact Line Victor Dealers Can Handle—Plans of Schemers Nipped—No Change in National Co.'s Practice of Furnishing Samples—Victor Double-Discs in Envelopes Hereafter.

The National Phonograph Co., Orange, N. J., recently transmitted a circular letter to their Edison jobbers, notifying them that after due consideration of the proposition placed before them by the executive committee of the National Association of Talking Machine Jobbers, following the Chicago conference, there would be no change in the company's practice of furnishing samples of records on the usual monthly dates. The committee had unanimously recommended that one set of samples only be sent each jobber, so as to have dealers call at their respective places to hear them played and then place the order; in this way all would be on the same footing and much valuable time saved and other annoyances avoided. There was a division of opinion among the National Co. securing a consensus by mail, the majority favoring the existing plan, hence their action. Doubtless this question will be brought before the annual meeting of the association in July for further discussion.

At the instance of the committee, however, the Victor Talking Machine Co., Camden, N. J., on December 18 informed their distributers that hereafter the initiatory minimum order for three machines to qualify as a dealer should not include a Victor Victrola or a Victor Auxetophone, but the regular line only. This step was taken to stop the practice of department stores aiding and abetting the purchase of high-price goods by private individuals at the dealers' price for holiday gifts, thereby robbing the legitimate store of sales. The methods of fake dealers and these transactions, on being explained to the Victor Co., the foregoing prohibitory order was issued, and the Christmas trade thereby kept in the proper channels.

As rapidly as it can be accomplished, the Victor Co. are placing their duplex or double-side records in stout envelopes, of uniform quality and color, thereby protecting them against injury and dust. This will relieve the dealer of "enveloping" the records at his own expense. This was also brought about through the representations and request of the association.

SOME CURIOUS COMMENTS

Made by a Correspondent of an English Paper on His Own People—Quotes Thomas A. Edison but His Interview Is so Utterly Unlike the Great Inventor That It Seems an Effort of His Imagination.

"The Englishman who succeeds is hardly ever a Londoner; the Englishman who fails completely is almost always a Londoner."

This is the statement which a special correspondent of the Times who has been traveling in Canada and part of the United States says he has heard everywhere. The correspondent visited Mr. Edison at his laboratory in New Jersey.

"Say, what's the matter with your people over there?" he exclaimed. "I've had to close down my phonograph factory in England—what's the name of the place? I've forgotten; somewhere near London. All the others in Europe paying. But we couldn't make that one pay. We get good work out of the French and the Belgians and the Germans and Austrians, but the English—no good.

"Mind, I'm not speaking of the English mechanic; none better in the world. I'm talking of the common laboring man you pick up on the streets. What is it? Too much booze, or general deterioration, or what?"

* * * *

Knowing the conservative and careful manner in which Thomas A. Edison talks to newspaper men, whom he avoids unless properly introduced, the above "talk" with the wizard of Menlo Park must be an effort of the reporter's imagination, as it is altogether at variance with the way in which Mr. Edison always discusses serious subjects.

Orders Filled Quickly and Fully Our Claim

LET US PROVE THIS TO YOU

SPECIAL—The illustration shows our No. 124—200 Peg—Cylinder Cabinet. Best value in the country. Large discount. Catalogue for the asking.

FIRST—We are Talking Machine Jobbers exclusively.

SECOND—Orders go only into hands of experienced men.

THIRD—Our two warerooms bring us closer to the dealer.

We mention this to show there is One Jobbing House that spares nothing in its efforts to "Serve You Right on Edison and Victor."

Our warerooms are filled from floor to ceiling with fresh new goods, to take care of all hurry-up orders.

Write, telephone or telegraph, and be convinced that Buehn's Rush Service is better than any you ever tried.

PHILADELPHIA — Everything for Talking Machine — HARRISBURG

THE COPYRIGHT SITUATION IN WASHINGTON.

Certain Now That no Legislation Regarding Copyright Will Become Law This Session—A Copyright Bill May be Reported in Some Form to the House of Representatives and May be Passed by the Lower Branch of Congress—The Real Stumbling Block Seems to be the Musical Clause—Committee Finds It Hard to Reach Unanimous Agreement on Certain Points—The World's Washington Correspondent Presents Some Interesting Contrasts as They Appear in the Different Bills—A Careful Analysis for the Busy Reader.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 9, 1909.

Talking machine men will be interested in knowing that there will be no copyright legislation during the present session of Congress. This much can be stated authoritatively without the slightest fear of successful contradiction. The best that can now be accomplished is the reporting of the copyright bill in some form to the House of Representatives and its possible passage through the lower branch of Congress. It is not even certain that this much can be accomplished. Several members of the House Committee on Patents are very positive in declaring the most that can be hoped for is the agreement upon some form of bill in committee and the submission of a report to the House.

But as for securing the passage of a bill through both the upper and lower branches of Congress—that is now as impossible as water running up hill. Even if the members of the House Committee were able to agree upon a measure and the House were to adopt it at once, there would be no legislation for the reason that it is the intention of the Senate Committee on Patents to go over the action of the House, section by section, and this would delay the reporting of the measure far beyond the 4th of next March, when the present session of Congress dies by constitutional limitation. When the Congress expires all measures die with it. In the next Congress they must all be reintroduced, referred to the Patent Committees and considered *de novo* just as though the subject had never before been broached.

Of course, if the House Committee can agree upon a bill finally before the end of the present session, even if that measure cannot become a law, the same measure can be introduced in the 61st Congress and quickly reported out of the Patents Committee unless there are many changes in the personnel of that committee in the general reorganization of committees for the next Congress.

THE REAL STUMBLING BLOCK.

The stumbling block of the copyright situation is now—as it has been ever since the movement for a new law was instituted several years ago—the musical clause. There is the same wide division of sentiment between the various influential interests specially concerned in this feature of the proposed law—the publishers of music, the composers, the manufacturers of talking machines and makers of various kinds of patented instruments for the mechanical reproduction of copyrighted music.

But for the dissension among these interests, and especially the efforts of the music publishers in blocking legislation, the copyright bill would long ago have been passed. There is no other single feature of the bill in its various forms that has excited anything like the controversy and opposition than has the music clause. With an agreement satisfactory to a large majority of the two Patent Committees on this clause, the bill could be reported to the House within three hours and passed within a fortnight.

COMPROMISE ATTEMPTED BUT FAILED.

Toward the end of the first session of the 61st Congress there was an attempt made to bring the various opposing interests together on the common ground of compromise. For a short while it looked as though this would succeed. But it failed. Some of those entering the compromise agreement—and it was only a provisional compromise—have since withdrawn from it and when the present second session of the same Congress convened the situation was practically no better than it was a year ago, except on the surface. Down underneath the apparently calm waters of the sea of conflicting copyright interests there were the same restless and insistent currents and cross-currents forming a veritable submarine maelstrom.

The House Patents Committee, if its members could agree, might report some sort of bill without paying further attention to these outside currents, but that would be futile. Unless those most deeply interested in the copyright section reach some sort of agreement it is a safe bet that there will never be a copyright law of a general character passed affecting the musical trade, because if there is no agreement as between those directly affected there would be a fight instituted on the floor of both houses in behalf of the various interests the moment the measure came up for consideration and the measure jeopardized of passage.

SUB-COMMITTEE HARD AT WORK.

At the close of the last session it will be recalled a sub-committee of the House Committee on Patents, headed by Representative Currier of New Hampshire, chairman of the full committee, and including Representatives Hinshaw of Nebraska, Chaney of Indiana, McGavin of Illinois, Washburn of Massachusetts, Legare of South Carolina and Sulzer of New York, was appointed with instructions to draft a bill. At the beginning of this session in December this subcommittee began its herculean task. Since December they have been going over the disputed music clause in an effort to reach an agreement and holding sessions almost every day. They have been making progress but have not yet reached an agreement. When they do their recommendations will have to be reported to the entire Committee on Patents before it can be reported to the House of Representatives. It is now the intention of this sub-committee to call before it Messrs. Arthur Stuart of Baltimore and John J. O'Connell of New York, who have been in conference with one another as representatives of the two principal sets of opposing interests, and trying to work out a satisfactory sort of music clause. They will submit a working draft for the consideration of the sub-committee, but it does not necessarily follow that the subcommittee will accept what these two gentlemen recommend.

Just what the outcome will be is as uncertain as a March hare. The best that the Patent committees members are hoping for now is that they will be able to agree upon something. It is not certain that they can, although since the Christmas recess the prospects seem a trifle more reassuring. The attitude of the House is equally problematical. If seven members of the subcommittee have met day in and out without agreeing after having devoted months of study to the subject, what can be expected of a body like the House of Representatives, composed of nearly four hundred men, many of them representing constituents who are kicking against what the constituents of other members want. The members of the Ways and Means Committee have trouble enough making tariffs, but their task is like writing laws with rose water compared to the work of those who have attempted for two years to frame a copyright law.

DIFFERENT BILLS CAUSE DEADLOCK.

There are sharp differences of opinion among the members of the Patents Committee just as there are among the interests outside of Congress. There is no hope of the Committee reaching a unanimous agreement, and unless they do their task will be more difficult whenever the matter reaches the stage of floor discussion. Altogether there are six principal bills on the subject under consideration. Two of them are Senate measures, Senate Bill 2900, introduced by Senator Kittredge, known as a pro-composers measure and Senate Bill 2499, introduced by Senator Smoot of Utah, who is still chairman of the Senate Patents Committee. For present purposes the four House Bills are the ones in which interest centers. They are:

House Bill No. 21592, introduced May 5, 1908, by Representative Washburn, of Massachusetts.

House Bill No. 22183, introduced May 26, 1908, by Representative Currier, following generally the lines of the Smoot Bill.

House Bill No. 24782, introduced December 19, 1908 (this session), by Representative Barchfeld of Pennsylvania.

House Bill No. 25162, introduced January 5, 1909, by Representative Sulzer of New York.

All four of these measures differ and they are before the Patents sub-committee. Some of the leading members of the House sub-committee favor the payment of a royalty of 2 cents a record or controller for the use of copyrighted composi-

FOLDING PHONOGRAPHIC HORN CO., 650-652 Ninth Ave., New York City

TORONTO PHONOGRAPH CO., Toronto, Ont., Canadian Agents

tions on mechanical music reproducing instruments. Several members of the sub-committee would, in order to secure an agreement, consent to the waiving of the 2-cent royalty and the substitution of a provision for the payments to be made on a percentage basis, but they assert that they would yield their convictions in favor of the 2 cents royalty very reluctantly. Opposed to these members are those who favor the payment of a high percentage royalty to the owners of copyrights for the use of copyrighted compositions for mechanical music-reproducing purposes. There is another provision that has developed a controversy, and that is the section of the Washburn bill which proposes to give to copyright owners the same rights which they would have under the common law.

All four of the above mentioned House bills provide "That the copyright secured by this Act shall include the exclusive right—

"(a) To print, reprint, publish, copy and vend the copyrighted work."

This is the only clause of the music section upon which there is absolute harmony, but when it comes to clauses (b), (c) and (e) they differ widely.

DIFFERENCE IN THE VARIOUS CLAUSES.

Take clause (b) for instance. The Currier bill would secure the exclusive right (B) "To translate the copyrighted work into other languages or dialects, or make any other version thereof, if it be a literary work, to dramatize it if it be a nondramatic work, to convert it into a novel or other nondramatic work if it be a drama, to complete, execute and finish it if it be a model or design for a work of art, to vary or adapt it if it be a work of art."

This clause of the Washburn Bill reads "(b) To translate the copyrighted work into other languages or dialects, to dramatize it if it be a nondramatic work, to convert it into a novel or other nondramatic work if it be a drama, TO ARRANGE OR ADAPT IT IF IT BE A MUSICAL WORK, to complete, execute and finish it if it be a model for a work of art."

And the Barchfeld Bill—it's clause (b) reads: "To translate the copyrighted work into other languages or dialects or make any other version of it if it be a literary work, to dramatize it if it be a nondramatic work, to convert it into a novel or other nondramatic work if it be a drama, TO ARRANGE OR ADAPT IT IF IT BE A MUSICAL WORK, to complete, execute and finish it if it be a model or design for a work of art, to vary or adapt it if it be a work of art."

Finally clause (b) of the new Sulzer bill, introduced Tuesday of this week says, "To translate the copyrighted work into other languages or dialects, or make any other version thereof if it be a literary work, to dramatize it if it be a nondramatic work, to convert it into a novel or other nondramatic work if it be a drama, to complete, execute and finish it if it be a model or design for a work of art, to vary or adapt it if it be a work of art, TO ARRANGE OR ADAPT IT IF IT BE A MUSICAL WORK."

THE DIFFERENT BILLS CONTRASTED.

It is apparent from the above extracts that the Currier Bill is the only one that does not use the phrase "to arrange or adapt it if it be a musical work." While some favor the use of the words "rearrange or adapt" others severely criticize their use and declare they must either go out of the bill or be qualified. It has been suggested that these words might prevent the use of a piece of music for a phonographic disk and the word "rearrange" along has been criticized for another reason. It is claimed by these critics that "arrange" has a well defined legal meaning, but that the word "rearrange" is new to the law. It has been suggested by them that "re-arrange" if it means anything means to re-arrange an arrangement.

All four bills agree on clause (c) which grants the exclusive right "To deliver or authorize the delivery of the copyright work in public for profit if it be a lecture, sermon, address or similar production," the phraseology of this clause being identical in the four measures. In clause (d) the bills again differ widely.

That of the Currier bill, for instance, reads:

(d) To perform or represent the copyrighted work publicly if it be a drama, or if it be a dramatic work and not reproduced in copies for sale, to vend any manuscript or any record whatsoever thereof; *to make or to procure the making of any transcription or record thereof by or from which, in whole or in part, it or any performance thereof may in any manner be performed, presented, produced, or reproduced, and to exhibit it or any performance or any representation or reproduction of it or any performance thereof whatsoever.*

In the Washburn this clause has been condensed into the following:

(d) To perform or represent the copyrighted work publicly if it be a drama;

It takes the following form in the Sulzer Bill:

(d) To perform or represent the copyrighted work publicly if it be a drama; *or to authorize the reproduction or the public representation of it by means of the cinematograph*:

Clause (d) of the Barchfeld Bill reads like this:

(d) To perform or represent the copyrighted work publicly if it be a drama.

Then when it comes to (e), the real bone of contention, there are as many differences as there are words almost in these four bills.

In the Currier Bill for instance which favors the 2 cents royalty the clause reads as follows:

(e) To perform the copyrighted work publicly for profit if it be a musical composition on which such right of public performance for profit has been reserved, as provided in section twenty-one of this Act, or to make any arrangement or setting of it or of the melody of it in any system of notation or any form of record in which the thought of an author may be recorded and from which it may be read or reproduced to the ear: *Provided, That the provisions of this Act, so far as they relate to instruments or machines or parts of instruments or machines which reproduce or serve to reproduce to the ear the musical work, shall include only compositions published and copyrighted after this Act takes effect*, and shall not include the works of a foreign author or composer unless the foreign state or nation of which such author or composer is a citizen or subject grants, either by treaty, convention, agreement, or law, to citizens of the United States similar rights:

Provided further, That any person may make use of the copyrighted work in the manufacture of records or controllers for mechanical music-producing machines, *however operated*, and *may sell or use such records for profit upon payment of a royalty* to the copyrighted proprietor by the manufacturer of such record or controller, as hereinafter provided:

And provided further, That in no event shall the payment of more than one royalty be required on any such record or controller.

In case of the use of such copyrighted composition on such interchangeable records or controllers of such mechanical music-producing instruments no criminal action shall be brought, and in a civil action no injunction shall be granted, but the plaintiff shall be *entitled to recover in lieu of profits and damages a royalty of two cents on each such record or controller, except in the case of disks for talking machines not exceeding eight inches in diameter or cylinders not exceeding four inches in length, in which case the royalty shall be one cent;* but in the case of the refusal of such manufacturer to pay to the copyright proprietor within thirty days after demand in writing the full sum of royalties due at the said rate at the date of such demand the court may award taxable costs to the plaintiff and a reasonable counsel fee, and the court may enter judgment therein for any sum above the amount found by the verdict as the actual damages, according to the circumstances of the case, not exceeding three times the amount of such verdict."

In the Washburn Bill this clause takes an entirely different expression, as follows:

(e) To perform the copyrighted work publicly for profit if it be a musical composition on which such right of public performance for profit has been reserved, as provided in section twenty of this Act, and for the purpose of public performance for profit, and, for the purposes set forth in subsection (a) hereof, to make any arrangement or setting of it or of the melody of it in any system of notation or any form of record in which the thought of an author may be recorded and from which it may be read or reproduced:

Provided, That the provisions of this Act so far as they secure copyright covering the parts of instruments serving to reproduce mechanically the musical work shall include only compositions published and copyrighted after the passage of this Act: *And provided further, That* whenever the owner of a musical copyright has used or permitted the use of the copyrighted work upon the parts of instruments serving to reproduce mechanically the musical work, any other person may make similar use of the copyrighted work upon the payment to the copyright proprietor of *a royalty equal to the royalty agreed to be paid by the licensee paying the lowest rate of royalty for instruments of the same class, and if no license has been granted then* [?] *per centum of the gross sum received by such person for the manufacture, use, or sale of such parts*, and in all cases the highest price in a series of transactions shall be adopted.

The Sulzer Bill expresses this clause in the following language:

(e) To perform the copyrighted work publicly for profit if it be a musical composition or if it be a dramatic work and not reproduced in copies for sale; to vend any manuscript or any record whatsoever thereof; to make or to procure the making of any transcription or record thereof by or from which, in whole or in part, it or *any performance thereof may in any manner be performed*, presented, produced, or reproduced, and to exhibit it or any performance or any representation or reproduction of it or any performance thereof whatsoever; and for the purpose of public performance for profit, or for the purposes set forth in subsection (a) hereof, *to make any arrangement or setting of it or of the melody of it in any system or notation*, or to make any form of record thereof in which the thought of an author may be recorded and from which it may be read or reproduced.

In the Barchfeld Bill the clause is more brief. It reads:

(e) To perform the copyrighted work publicly for profit if it be a musical composition on which such right of public performance for profit has been reserved as provided in section twenty of this Act; [and for the purpose of public performance for profit, or, for the purposes set forth in subsection (a) hereof] *to make any arrangement or setting of it or of the melody of it in any system or notation*, or to make any form of record thereof in which the thought of an author may be recorded and from which it may be read or reproduced.

PHOTOGRAPHING HEART BEATS.

By means of an ingenious combination of the stethoscope, microphone, phonograph and galvanometer, a Dutch physiologist obtains a photographic record of the heartbeats.

NEW YORK TALKING MACHINE CO.

Replaces the Victor Distributing & Export Co. —New Name Takes Effect from January 1 —No Change in Management or Staff—Manager Williams' Christmas Reminder.

Dating from January 1, 1909, the Victor Distributing & Export Co., 83 Chambers street, New York, ceases to exist, having been taken over by the New York Talking Machine Co., which has been incorporated under the laws of the State of New York. There will be no change in the management or policy of the company, the present staff being retained as follows: G. T. Williams, general manager; V. W. Moody, assistant; W. S. Moffatt, G. W. Williams and E. G. Evans. There may be some changes in the officers, to be announced later. The company will continue to transact a strictly domestic business with a tendency and purpose to confine themselves to the wholesale end.

Christmas eve Manager Williams was agreeably surprised when his associates and the clerical corps presented him with an elegant humidor, of quartered oak, copper lined, and containing a box of fragrant Havanas. The company remembered everybody with a gold piece and their best wishes for the future.

The company have uniformed their elevator attendant in a wine-colored suit, with the word "Victor" emblazoned on the jaunty cap and the military collar of the coat in brass script. It is a stunning outfit.

E. T. Severin has opened a talking machine store in Moline, Ill., occupying a part of the showroom of the Tri-City Piano Co. He will carry a complete line of Victor and Edison goods.

Bad personal habits in the employer or manager lead to bad personal habits in the employes. Don't make yourself an excuse for your clerk's misdeeds.

WANAMAKER USES "THE TALKER"

For His Address at the Convention of the Pennsylvania German Society.

An interesting feature of the recent convention of the Pennsylvania German Society at Lancaster was the address of John Wanamaker, the president, delivered entirely by phonograph to the large assemblage. Pushed with business, Mr. Wanamaker sent his annual address on phonographic records, to be delivered by machinery, with a letter regretting his inability to be present, in which he wrote: "I send you nine barrels of speech," referring to the records, and his utterance delivered to the society was possibly the first annual address so made. Mr. Wanamaker's "nine barrels of speech" covered the history of the society and outlined the work which is being done.

PUNCH BOWL FOR MR. BLACKMAN.

A handsome cut glass punch bowl was given J. Newcomb Blackman, president and general manager of the Blackman Talking Machine Co., New York, by the clerical, selling and office staff. R. E. Caldwell, the vice-president and manager of sales, did the honors the day before Christmas. Mr. Blackman, as is his annual custom, distributed an extra fat pay envelope, with his compliments, to the entire body of employes.

POSTAL RATE TO GERMANY REDUCED.

On January 1, it is announced, the postage on letters to Germany will be reduced to two cents per ounce, providing such letters are despatched by steamers proceeding directly from United States ports to German ports, otherwise the present rate of five cents per ounce will apply. This is a provision that need not worry the average business house, for, apparently, the reduced rate will apply in all cases except when letters are specifically addressed for despatch by some special steamship requiring transshipment of the mails through England, France or some third country. In general, then, for all other letters, the rate after January 1 will be the same for German letters as for domestic letters and as has so recently been made applicable to British letters.

NOW WASHINGTON MUSIC CO.

Tilley Co. Change Name and Take Allen Hansen Into the Business—Lease New and Larger Quarters at 118 Post Street.

(Special to The Talking Machine World.)

Spokane, Wash., Dec. 29, 1908.

The Washington Music Co., until now the Tilley Music Co., have taken a lease of the three-story building at 118 Post street. This building is located adjoining the quarters now occupied by the Tilley Music Co.

Homer H. Tilley, the former owner of the Tilley Music Co., has sold a half interest in the company to Allen Hansen and the firm has been reorganized under the name of the Washington Music Co. Mr. Tilley is the president and treasurer of the new company and Mr. Hansen, secretary and manager.

The first floor of the building will be used entirely in handling sheet music and phonographic records. The company intends to do a jobbing busines in sheet music, this being the first jobbing business in this line in Spokane. The second floor will be remodeled considerably and devoted to the handling of Edison phonographs, while the piano stock of the company will be carried on the third floor.

GET AGENCY FOR EDISON LINE.

The Koerber-Brenner Piano Co., St. Louis, Mo., have secured the agency for Edison phonographs and records and are preparing to push this branch of their business in energetic style.

WITH THE TRADE IN CLEVELAND.

The Business of 1908 in Retrospective—Excellent Prospects for Present Year—Good Demand for Ideal Horns—Wurlitzer Co. Buy Out Witt Music Co. Department—Pleasing Reports from Various Dealers—Robbins & Co. Succeed Robbins & Emerson—New Talking Machine Stores.

(Special to The Talking Machine World.)

Cleveland, O., Jan. 8, 1909.

In writing of present conditions in talking machine circles, one cannot help but retrospectively view the situation. The year 1908 opened in Cleveland with industry paralyzed, factories idle, wheels at rest; clearing house certificates doing the duty of specie and currency—in fact, deadlocked in the enervated condition of the first stage of convalescence following financial panic. The year closed with 75 per cent. of the prosperity volume of activity restored, and with fair prospects that this year will bring back most, if not all, that was lost. Among the first to feel the chilling blast of business adversity was the talking machine trade. The masses—mechanics and workmen—without work, had to forego the luxury of a machine, and those who had a machine, that of their habitual weekly new record purchases.

But all is now changed, and a brighter outlook forecasts a year of plenty. An unexpectedly large increase in both wholesale and retail trade developed in December, and the result was the demand was greater than the supply, and thereby the holiday trade suffered to a large extent. The consensus of opinion in the trade is that the present year will be one of continuous improvement, and that the manufacturers will be taxed to their utmost to supply the demand.

Louis Devineau started for Paris Jan. 1, where he has gone to look after a legacy bequeathed to his two little girls by an aunt. His wife and children have been there some weeks.

The Federal Mfg. Co. are busy these days on talking machine novelties, including the Ideal horn.

The Witt Music Co. have disposed of the automatic music department of their business at 206 Prospect street to the Rudolph Wurlitzer Co., who are continuing the business at that address.

The new Akron Graphophone Co., mention of which was made in last issue of The World, report business opened up in the most satisfactory manner, and that they enjoyed a splendid holiday trade.

W. J. Roberts, Jr., reports a very satisfactory year's business, which extended into the new year. He said his sales of Victrolas and Amberol attachments and records were circumscribed only by the inability of the factories to supply them.

Mr. Towell, of the Eclipse Musical Co., says their December business was exceptionally good. He says they still have unfilled orders for Victrolas and some of the higher-priced machines on their books.

"Business," said G. J. Probeck, of G. J. Probeck & Co., exclusive distributers of Columbia goods, "is very good—both in machines and records. The prospects for the winter season are very promising. Our new double-disc and Indestructible cylinder records have given an impetus to business of the most desirable character. Our holiday trade was far beyond our most sanguine expectations. We sold a large number of the higher priced machines."

Mr. Emerson, of Robbins & Emerson, has sold his interest to the firm of Robbins & Co. They have moved from 145, the Euclid avenue floor of The Arcade, to No. 42, on the Superior avenue floor, with larger rooms and better facilities for doing business. Mr. Robbins stated that during Christmas week they sold a number of Victrolas and the better grade of machines, with a good record trade. Business with the new firm has started in fine with the new year. They are selling large numbers of the Amberol and Red Seal records.

Their new location, 2010 East Ninth street, magnificent rooms and large and complete stock of Victor and Edison goods is accounted the reason by W. H. Buescher & Sons for their largely increased business. They had a splendid holiday trade, and it has continued right up to the present time.

"The Victor and Edison Talking Machine Store" has opened up at No. 27 the Taylor Arcade, under the management of Edna Rankin, formerly with the Witt Music Co. A full line of Edison and Victor machines and records is carried, and Miss Rankin says that the holiday trade was exceptionally fine.

At the store of Brown Bros., Columbia dealers, 2040-44 Ontario street, business was reported exceedingly good in the talking machine department by Loretta H. Byrne.

The International Talking Machine Co. opened their new store at No. 13 the Taylor Arcade just prior to the holiday season, and had satisfactory patronage. The company handle Columbia goods, Fonotipia, and a full line of imported records. Mr. Bourgeois, manager, is an old-timer (though a young man) in the business, and very popular.

Collister & Sayle report business exceptionally good with the advent of the new year. During the holiday season they sold out their entire stock of Victrolas and one Auxetophone, the latter installed in the "Crystal Room" of the Hollenden Hotel. Phil Dorn, manager, is enthusiastic over the outlook.

E. A. Friedlander, manager of the talking machine department of the Bailey Co., said that they had the best holiday trade in the history of the company, with big sales of Victrolas, high-priced Edisons, Victors and Zonophones. The sales of Amberol attachments and records was exceptionally large.

Mr. McNulty, manager of the talking machine department of the May Co., reported an exceptionally good holiday trade, principally of Victrolas and the higher grade machines. The sales of records run up into thousands, including a large number of Red Seal and the new four-minute Amberols.

Business is reported only fair in the talking machine department of Flesheim & Smith.

The manager of the talking machine department of the Caldwell Piano Co. made an encouraging report regarding business. A full line of Victor and Edison goods are carried.

Holiday trade has been of the most satisfactory character at the Hartwell Phonograph Store. There is a big demand for Victor records, including a very large number of Amberols.

John Reiling, who purchased the West Side Columbia Phonograph Store, No. 1831 West 25th street, is an old-time and popular resident of that section. He stated he had a fine holiday trade, and that the business prospects were highly encouraging. He carries a fine stock of Columbia machines and records, and caters largely to the foreign element, not forgetting his Yankee friends.

Here's the **Best Talking Machine** ever offered for the money

IT'S THE BIG SUCCESS

THIS is not a toy, but a perfect machine with elegant quartered oak cabinet and fitted with high grade diaphragm and Reproducer of concert size. Has 14" flower horn with 12" bell opening.

The motor is of standard clock-gear movement type and is carefully adjusted.

The entire machine is of

Superior Mechanical Construction

In shipping, the machine is concealed within the cabinet, making shipment entirely safe. Let us tell you more about it and quote our "Factory to You" PRICE.

Cabinet size 12½ x 5½

CATALOGS IN AUSTRALIA.

Duty Levied on All Advertising Matter Sent Into That Country Under New Tariff Act.

(Special to The Talking Machine World.)

Washington, D. C., January 2, 1909.

Consul H. D. Baker, of Hobart, Tasmania, writing to the Department of Commerce and Labor under date of November 23, 1908, calls attention of merchants and manufacturers in the United States who send catalogs to Australia to the fact that under the new tariff act of the Commonwealth of Australia a duty is levied on catalogs, price lists, trade circulars, and all similar advertising matter introduced through the post, at the rate of sixpence per pound, even when forwarded in single copies addressed to individuals, provided the duty on the whole quantity posted by the consignor by any one mail to any one State of the Commonwealth exceeds 1 shilling.

50,000 COLUMBIA RECORDS ORDERED

For Export Shipment, of the Double-Faced Family—Export Business Generally Good.

The export department of the Columbia Phonograph Co., General, have a single order for 50,000 double-face records, to be ready for shipment Saturday, December 19. E. N. Burns, the manager, had been rushing around for that week getting things in shape, and supplicating the Bridgeport plant not to "throw him down." The factory worked like beavers in the pressing department, and made Mr. Burns happy by delivering the goods on time. Business was never so brisk with the department as now.

The export section is sending out a new hanger in colors, subject, "A Daughter of Spain," a reproduction of a painting reflecting the true Castilian spirit in pose, action and costume of the fair femininity, the personal choice of Messrs. Burns, Sause and the interpreter, assisted by other experts in Spanish graphic art. The hanger exploits "Grafofonos Columbia, discos dobles."

There is more to honesty than good policy. But if you can't be honest because it's right, be honest for what there is in it.

TRADE IN THE MONUMENTAL CITY.

December Breaks All Records for Sales According to Dealers' Reports—Post Holiday Trade Also Good—Changes Among the Local Columbia Co. Staff—New Agency Established—What Other Houses Have Been Doing Recently—Other News Worth Recording.

(Special to The Talking Machine World.)
Baltimore, Md., Jan. 9, 1909.

December seems to have broken all records for sales during the year just passed, according to the statements of the dealers in general. All of them report that the business during the past month, particularly that of the two weeks preceding Christmas, was the best they have experienced for a long while. Since the first of the year there has been a slacking off, as was expected, yet the majority of those in the trade declare that this has not been as great as was anticipated. Some of the dealers, in fact, go so far as to declare that their business has kept up very satisfactory the past week and that the indications are promising for a continuance of this unlooked for condition right after the holidays.

Speaking along this line, Manager Ansell, of the Baltimore street store of Cohen & Hughes, who handle the Victor machines, said that his firm has had a splendid after-holiday trade. The holiday sales were, of course, heavy, and the clerks were kept busy from morning until evening looking after the wants of the customers.

Manager M. E. Lyle, of the local branch of the Columbia Phonograph Co., stated that the Baltimore store recorded a larger number of sales during December than during any previous month for the last year and a half. This pertains to both the wholesale and retail trade. Continuing, Mr. Lyle said: "Our wholesale trade, especially since last October, when our fiscal year began, has more than doubled that for the same period of last year. The prospects are better than at any time for many months for this good condition in the trade to continue unabated."

Several changes have taken place among the members of the force of the local Columbia store. J. M. Bayliss, chief clerk at this store, has been transferred to the New York office, while Tredwell K. Lyle, formerly stationed at the Paterson, N. J., branch, has been placed in charge of the retail floor in this city. Mr. Lyle is a brother of Manager M. E. Lyle, of the local branch. J. S. Mathews, formerly in charge of the retail department here, has been promoted to the position of chief clerk in place of Mr. Bayliss. W. O. Cooper, of the local sales force, is on a business trip in Western Maryland.

An agency has been established with the C. Falk Music Co., of Asheville, N. C., through the local branch of the Columbia Phonograph Co.

Edison and Victor machines have been going well since the first of the year at E. F. Droop & Sons Co., according to Manager Grottendick. In fact, the demand for high class goods was never more apparent than during the past month. This applies to both machines and records.

Sanders & Stayman had a heavy rush on the various priced Columbia and Victor machines during December. The demand for records was also lively. The $200 cabinet machines proved so popular as Christmas presents that the stock was nearly exhausted.

The latest addition at the Star Talking Machine branch, Fred Scheller, manager, is the Starola cabinet grand, which is becoming a good seller. It is a handsome creation. Star machines were greatly in demand during the holidays and have been going well since the New Year.

COLUMBIA CO.'S GRAND OPERA LIST.

A very handsome volume has just been issued by the Columbia Phonograph Co., devoted to their grand opera records—Fonotipia and Symphony series. Estimated from every viewpoint, it reflects the greatest skill in designing, construction and editing. The list of records, with extended descriptive matter, as well as the portraits of the artists singing them, appear within marginal tints on each page, while there is a careful index on the closing page which enables the user to at once get at the records of any artist desired. The lettering on the cover is in embossed gold on marbleized paper. Indeed, the volume is one that reflects the highest credit on all concerned in its production.

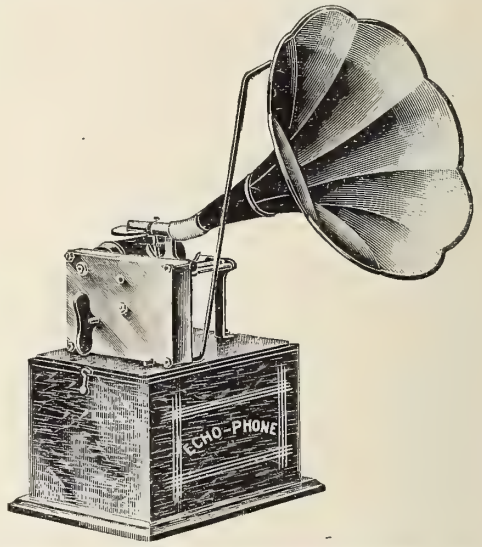
WILLIAM F. NYE
NEW BEDFORD, MASS.

UNITED TALKING MACHINE CO.'S LINE.

After a delay of some weeks the United Talking Machine Co., of this city, are at last in a position to fill orders for their two machines, Nos. 5 and 10. This delay was caused by several minor improvements, which it was found possible to make in their construction at the last moment, and they deemed it best to hold up all orders rather than have any trouble later on. The improved model 10 is an excellent machine for the money, retailing, as it does, for $10, with a wide margin of profit for both dealer and jobber. The illustration herewith will give some idea of its appearance. The outfit consists of a 17-inch enameled flower horn with rubber connection, detachable crane and concert-sized reproducer. The cabinet is of highly-polished oak (light or dark); motor; extra heavy single spring encased in a powerful gear spring; cup. It can be wound while running and will play two records with one winding. The governor is driven by a metal worm gear, and the carriage is propelled by a 50-thread feed screw. All metal parts are heavily nickeled and highly polished. The company's exclusive agency proposition is a most attractive one, and should be of interest to all members of the talking machine trade throughout the world.



Because you made a little money last year, don't rush ahead and increase expenses for the coming year.

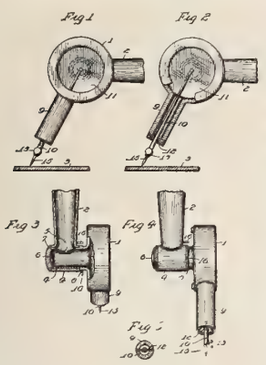
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)
Washington, D. C., Jan. 8, 1909.

TALKING MACHINE. Delaware J. Hood, Philadelphia, Pa. Patent No. 907,362.

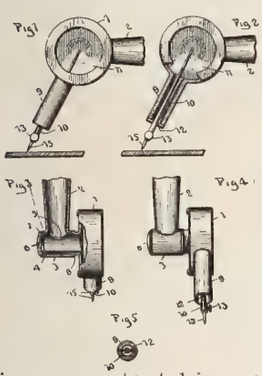
The main objects of this invention are to provide an improved mounting for a stylus bar; to provide improved means for connecting a sound box to its mounting.

In the accompanying drawings: Figure 1 is a fragmentary side elevation of a sound box and sound conveying arm constructed in accordance with this invention, showing the same in its operative relation to a record tablet; Fig. 2 a similar view partly in section; Fig. 3 a fragmentary top plan view of the same partially in section; Fig. 4 a top plan view of the same but showing the round box rotated into position for changing needles; Fig. 5 a transverse section of the stylus bar mounting taken in the plane of the axis of oscillation of the bar.



TALKING MACHINE. Delaware J. Hood, Philadelphia, Pa. Patent No. 907,363.

The main objects of this invention are to provide improved means, of simple, durable construction, for connecting a sound box to a hollow sound conveying arm, and which will be easy to operate and effective in action; to provide improved means for holding the stylus needle in contact with the record.

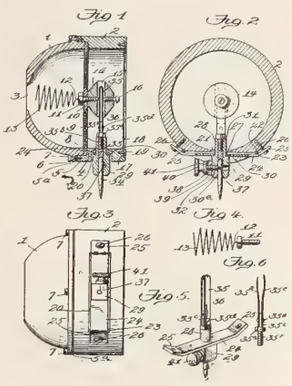


In the accompanying drawings: Figure 1 is a fragmentary side elevation of a sound box and sound conveying arm constructed in accordance with this invention, showing the same in its operative relation to a record tablet; Fig. 2 a similar view partly in section; Fig. 3 a fragmentary top plan view of the same partially in section; Fig. 4 a top plan view of the same but showing the sound box rotated into position for changing needles; Fig. 5 a transverse section of the stylus bar mounting taken in the plane of the axis of oscillation of the bar; and Fig. 6 is a side elevation of a talking machine constructed in accordance with this invention.

SOUND-BOX. William H. Martin, Mobile, Ala. Patent No. 905,899.

This invention relates to sound reproducing boxes for use in connection with sound-recording and reproducing machines, and is designed, primarily as an improvement upon the form of sound boxes disclosed in application Serial Number 336,473, filed September 27, 1906, and the object thereof is to provide a sound box for graphophones whereby an improved character of sound is produced, and furthermore whereby the sound can be regulated when occasion so requires, and whereby all scratching of the stylus on the disc is practically obliterated, being reduced to a minimum.

In the drawings, wherein like reference characters denote corresponding parts throughout the several views—Figure 1 is a vertical sectional view of a sound box in accordance with this invention; Fig. 2 is a like view taken at right angles to Fig. 1; Fig. 3 is a bottom plan; Fig. 4 is a detail; Fig. 5 is a perspective view showing the supporting means for the stylus head, the latter having a stylus bar and stylus attached thereto. Fig. 6 is a side elevation showing a modified form of stylus bar.



PHONOGRAPHIC HORN. Louis H. Devineau, Cleveland, O. Patent No. 905,855.

This invention relates to phonographic horns and the means for supporting the same in cooperation with the phonograph. The object of the invention is first, the provision of a support which will distribute the weight of the horn upon the members which support it, at the same time allowing the horn to be freely rotated in a horizontal plane; second, the arrangement of the supporting portion of the horn so that the swivel comes in the line of the center of gravity of the horn.

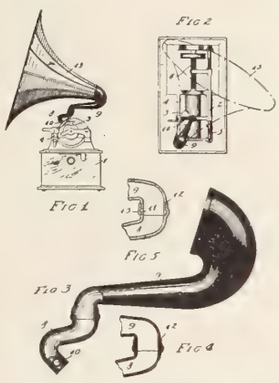


Figure 1 is a side elevation of a phonograph, showing the horn supported in proper position; Fig. 2 is a plan view of Fig. 1, the bell of the horn being indicated in dotted lines; Fig. 3 is a side elevation, partly sectional, of the horn and swiveled section; Fig. 4 is a sectional elevation of the swivel joint; Fig. 5 is a similar view sectioned without reference to the nature of the material preferred.

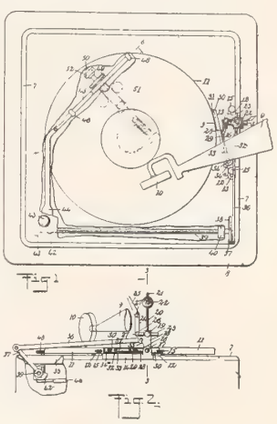
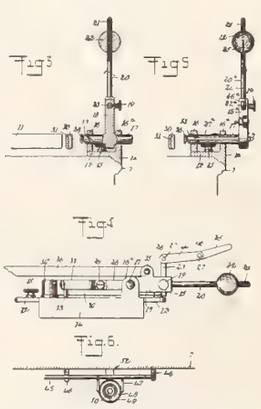
AUTOMATIC STOP FOR TALKING MACHINES. Richard Bartholomew Smith, New York. Patent No. 906,319.

This invention relates to talking machines, the more particular purpose being to enable a moving member carried by the machine and having a travel related to the progress made by the record in play, to act upon and operate one or more brakes for the purpose of stopping the machine promptly when the playing of the record is completed.



While for the sake of simplicity the invention is shown as applied to an ordinary talking machine of the Victor type, it will be understood that the invention may be applied to any other type of talking machine.

Briefly stated, this invention contemplates the use of a brake to be applied directly to the rotary disc or equivalent member supporting the record, and a weight controllable by a movement of the horn and adapted to be tripped when the horn reaches a point representing the end of the performance, that is, the finish of the music or other production, so that the brake is applied promptly as the performance is finished, the point of stoppage being, to some extent, independent of whether the performance be long or short for a given size record.



This invention further contemplates an auxiliary brake to be operated in connection with the governor mechanism, for the purpose of applying to the latter a braking action in-

MIRAPHONE

Combination Music Box and Talking Machine

In every respect a superior instrument Musically and Mechanically. Giving you and your customers splendid value.

Jacot Music Box Co.
No. 39 Union Square, New York

dependent of the braking action exerted upon the disc or its equivalent, and in this manner to enable the entire machine to be stopped positively because of the cumulative action of two separate brakes related mechanically to each other.

Figure 1 is a fragmentary plan of disc talking machine equipped with this invention, this view showing a disc, an improved brake for gripping the edge thereof and designated as the "main brake," a gravity-controlled trip for actuating this brake, and further showing the governor mechanism together with an auxiliary brake for stopping movement of the latter, this auxiliary brake being connected by various movable parts with the main brake and controllable therewith as a unit by the gravity-controlled trip; Fig. 2 is a fragmentary side elevation showing the gravity-controlled trip and the movable horn of the machine, as adapted to actuate this trip, for the purpose of controlling the brake mechanism; Fig. 3 is an enlarged fragmentary section upon the line 3—3 of Fig. 2, looking in the direction of the arrow, showing the gravity-controlled trip used for the purpose of actuating the brakes; Fig. 4 is a fragmentary side elevation of the mechanism shown in Fig. 3; Fig. 5 is a view somewhat similar to Fig. 3, but showing a slightly modified form of gravity-controlled trip mechanism; and Fig. 6 is a fragmentary section upon the line 6—6 of Fig. 1, looking in the direction of the arrow, and showing the auxiliary brake for the governor mechanism.

TALKING MACHINE. James Edward Hough, London, England. Patent No. 905,134.

In talking machines as now commonly constructed it is customary to mount the disc carrying the reproducing stylus in an arm or frame, one end of which embraces a guiding rod, while the arm also carries a half nut adapted to engage with the screwed traverser rod, the half nut and the disc being raised out of or lowered into engagement by a pivoted cam adapted to rest on a fixed bar of the machine. Various slight modifications of this well-known construction have also been suggested.

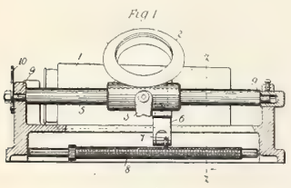

Fig 1

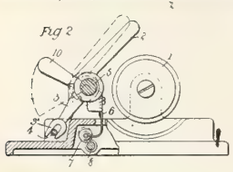

Fig 2

According to the present invention, it is proposed that the guiding rod should be eccentrically and movably mounted in the frame or in an eccentrically movable bushing so as to act as a species of crank which can be partially rotated so as to bring the frame or arm carrying the disc nearer to or farther from the mandrel on which the record is to be placed, or as an equivalent, the eccentric bushing may be interposed between the rod and the arm, in either case the motion preferably at the same time bringing the half nut or other engaging or feeding device into or removing it from contact with the screwed transverser bar.

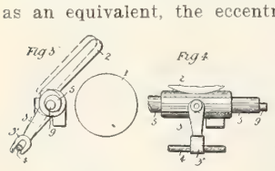

Fig 3 Fig 4

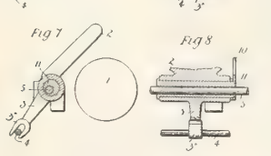

Fig 7 Fig 8

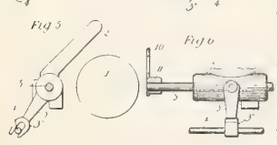

Fig 5 Fig 6

Where the frame or arm is supported upon a guiding rod and arranged in front of the mandrel, a convenient arrangement is to have a rearward extension formed rigidly with and projecting substantially diametrically opposite to such arm and embracing a fixed rod situated in a plane outside of and below that of the guiding rod and adapted to take some of the weight of an overhanging horn, where that is employed.

In the accompanying drawings, illustrating the invention, Figure 1 is a front elevation, partly in section, illustrating a method of carrying out the invention. Fig. 2 is an end view on the line z—z, showing some of the parts omitted, of Fig. 1. Fig. 3 is an end view, showing the different positions the frame can be made to take. Fig. 4 a front view of same. Figs. 5 and 6 show the eccentric bushing applied to the ends of the guiding rod, and Figs. 7 and 8 show the bushing between such rod and the carrying arm.

TALKING MACHINE. Horace H. Taylor, San Jose, Cal., assignor of one-half to himself and one-half to Joseph Pearse, Oakland, Cal. Patent No. 906,469.

This invention relates to talking machines, and has for its object to provide a new and improved construction by means of which the sound-box may be more easily and better applied to and lifted off from the record upon which it rests, and by which the operator is enabled better to insert in the sound-box the usual needle. Heretofore it has been customary for the operator to take hold of the sound-box itself in these operations. While this has no bad effect if carefully and properly done, yet injury either to the fingers of the operator or to the instrument, or to both, very often occurs—for example, when it becomes necessary to remove the sound-box quickly from the record to prevent injury to the instrument—in which case the needle sometimes causes painful or even dangerous injuries, or the mica diaphragm is broken or the sound-box otherwise injured or thrown out of adjustment.

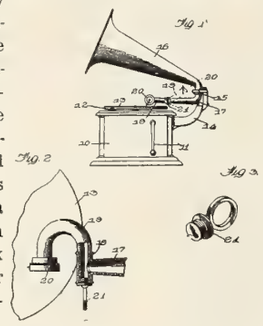

Fig 1 Fig 2 Fig 3

In the drawings: Figure 1 is a side elevation of a talking machine embodying one form of the invention, the sound-box being shown in two different positions, one in dotted lines. Fig. 2 is an enlarged detail, showing a part only of the machine and illustrating the manner of applying the handle or thumb-screw by which the inventor is enabled to accomplish this purpose. Fig. 3 is an enlarged perspective view of the thumb-screw.

TONE-MODULATOR FOR GRAPHOPHONES. Jesse E. O'Neil and Eugene Jenkins, Tillamook, Oregon. Patent No. 905,220.

The present invention relates to improvements in tone-modulating devices for graphophones, and it resides, generally, in the provision of an extremely simple, inexpensive, and efficient device adapted for attachment to a sound-box of any ordinary type and including a pair of oppositely-disposed jaws movable into and out of engagement with the vibrating transmitter-bar of the sound-box, so as to control the amplitude of the vibrations.

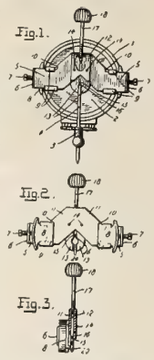

Fig 1. Fig 2. Fig 3.

Of the said drawings, Figure 1 is a front elevation of the sound-box of a graphophone with the improved modulator attached thereto, a portion of the tongue of the clamp being broken away. Fig. 2 is a rear elevation of the modulator. Fig. 3 is a section taken vertically through the modulator.

APPARATUS FOR CONTROLLING SOUND-RECORDS. Elias E. Ries, New York. Patent No. 907,177.

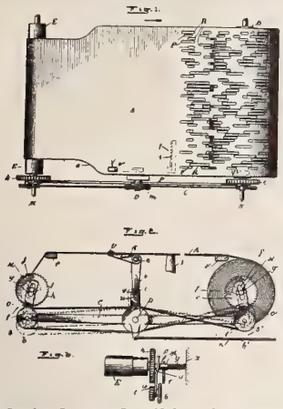
This invention relates generally to that class of instruments which are operated by prepared records or record surfaces in the form of perforated or other rolls, sheets, strips or bands such as organettes, self-playing pianos and organs, orchestrions, music-boxes and the like.

This invention is likewise applicable to and intended for use in connection with record media in the form of cylinders, discs or strips such as used for phonographs, gramophones, kinetoscopes and other reproducing and projection apparatus. The particular embodiment shown in the accompanying drawings for the purpose of illustrating the invention is that of a perforated music sheet suitable for organs or pianos and one form of feeding and reversing mechanism, which this invention may assume, for operating the same.

In musical and certain other instruments of the character described, it is customary to have the roll, or other record to be reproduced, wound upon a spool or drum, which spool is introduced into the instrument and slowly unwound, the sheet or strip containing the record, meanwhile, being drawn across the record-translating device or playing surface, such as a tracker-board or its equivalent, and wound upon another drum.

The principal object of the present invention is to provide a record medium, such as a record sheet, having two sets of records thereon in opposite directions, together with means for reversing the movement of such medium and for automatically shifting it sidewise at the end of one of the records, for the purpose of bringing the other into action in the reverse direction of

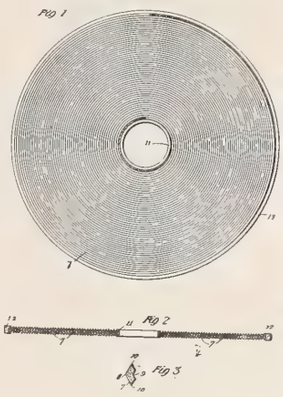
travel of the sheet. With such a record medium and with such means for controlling the movements thereof two parts of a continuous record, one part running in one direction and the other part in the other direction, may be successsively brought into operative relation with the translating device or tracker-board and separately reproduced without interrupting the continuity of the reproduction, this result being attained by the automatic reversal of the direction of travel of the medium and the automatic shifting of the other set into action. In this manner a record may be indefinitely reproduced without break or interruption as long as the same may be desired, and this is especially important in the case of records containing, for example, dance music or other selections having a large number of similar verses or of alternate stanzas and chorus, which can thus be indefinitely and economically reproduced without curtailment and with considerably less attention on the part of the operator or attendant than is now required.



In the drawings, which clearly show one means of carrying out the invention, illustrated as applied to perforated music strips for organettes, pianos, orchestrions, etc., Figure 1 is a top view showing a record sheet with two sets of perforations and an operating and feeding mechanism therefor, Fig. 2 is a side view of the same, and Fig. 3 an enlarged, detailed view of a portion of the shifting mechanism of the invention set forth.

RECORD DISC FOR TELEGRAPHONES. John A. Lieb, New York, assignor to the American Telegraphone Co., District of Columbia. Patent No. 907,383.

This invention relates to an improvement in the recording discs which are used with the telegraphone, and in which a magnetic sound record is made by magnetising the steel in a spiral path under the influence of an electromagnet in a telephone circuit. For this purpose plain steel discs have been used, but it is necessary with a flat or plane disc to have a separate and special guiding means for moving the electromagnet radially over the face of the disc as the latter rotates. It is evident that in case of wear, or certain imperfections in the mechanism, the path traced in the reproduction may not exactly accord to that of the recording operation. Moreover, in case the disc is removed from one machine to be used in another, or in case it is attempted to use a number of records with one machine in succession, the placing and readjustment of the discs may not be properly made. For these reasons it is desirable to have the guiding means on the face of the disc itself. In carrying out the invention this result is secured in a very simple and easy way by spirally winding a steel strip or wire so as to produce a built-up disc with a flat face. This construction has certain additional advantages from the standpoint of efficiency of reproduction, as will be later pointed out.



In the drawings: Figure 1 is a front or face view of a magnetic reproduction disc embodying the principles of the invention; Fig. 2 is a sectional view of the same; Fig. 3 is a detail sectional view of the strip of wire employed therefor.

SOUND-REGULATOR. William S. Cobb, Flushing, N. Y. Patent No. 906,388.

This invention relates to sound regulators and is placed in the horn or sound outlet of musical instruments or talking machines for the purpose of reducing and regulating the volume of sound produced, and to improve the quality of said tones produced in the instrument or machine and to eliminate as far as possible the objectionable and noisy features produced in the same.

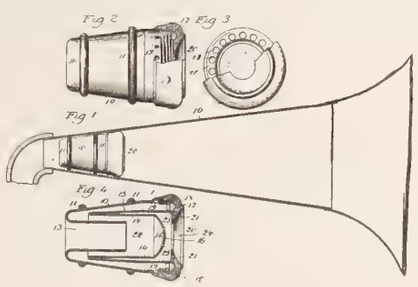


Figure 1 is a sectional view of the horn of a talking machine with the improved regulator

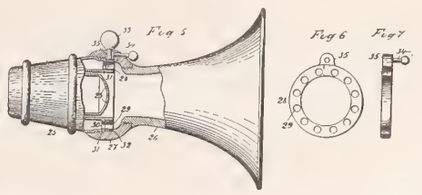

located therein. Fig. 2 is a side elevation of the regulator partly in section. Fig. 3 is a front view with certain parts broken away. Fig. 4 is a longitudinal sectional view. Fig. 5 shows a modified form. Figs. 6 and 7 are detail views of the latter form.

INSTALL NEW DEPARTMENT.

Denton, Cottier & Daniels Put in Line of Talking Machines on December 1—H. G. Towne, Manager.

(Special to The Talking Machine World.)

Buffalo, N. Y., January 2, 1909.

The new talking machine department opened in the great store of Denton, Cottier & Daniels, on December 1, is now running nicely and has secured a large share of the recent holiday business. H. G. Towne, formerly with the Zed Co., New York, is manager of the new department, and a complete stock of both Edison and Victor machines and records is carried. C. N. Andrews, manager of W. D. Andrews' local store, opened the Denton, Cottier & Daniels account. The latter firm hold an enviable position in the music trade of this city, having been established in 1827. They do an immense business in pianos, small goods and sheet music.

PHONOGRAPH GIVES EVIDENCE.

Machine Made Testimony Admitted by Pittsburg Magistrate.

(Special to The Talking Machine World.)

Pittsburg, December 29, 1908.

A phonograph record was one of the star witnesses to-day in the trial of C. A. Rumstay, an agent and collector for a talking machine company, who was held on a charge of assault and battery this morning by Magistrate G. H. England. The information was made by John E. Hinds on behalf of his wife. When the alleged assault was committed the screams of the woman were recorded on a blank record which had been placed in the machine to reproduce a piano solo which a friend of Mrs. Hinds was playing. The music suddenly ceased and the disc recorded cries for help. The record was admitted as evidence by the police court judge. The record is clear and the voices can be easily distinguished

It is alleged that Rumstay went to the house to get a phonograph he had sold to a Mrs. Rinehart, formerly a tenant of the house. Mrs. Rinehart had sold her phonograph to the Hinds family. Mrs. Hinds explained the facts to Rumstay, and it is asserted that he wanted to take the instrument away. Mrs. Hinds refused to give up the property and, it is alleged, Rumstay struck her and knocked her down.

TO INVESTIGATE ENGLISH PATENT LAW.

A committee of twelve has been appointed by the Merchants Association of New York to investigate and consider the new English patent law which has recently gone into effect in that country, and thereby get an idea of its influence on American trade and commerce.

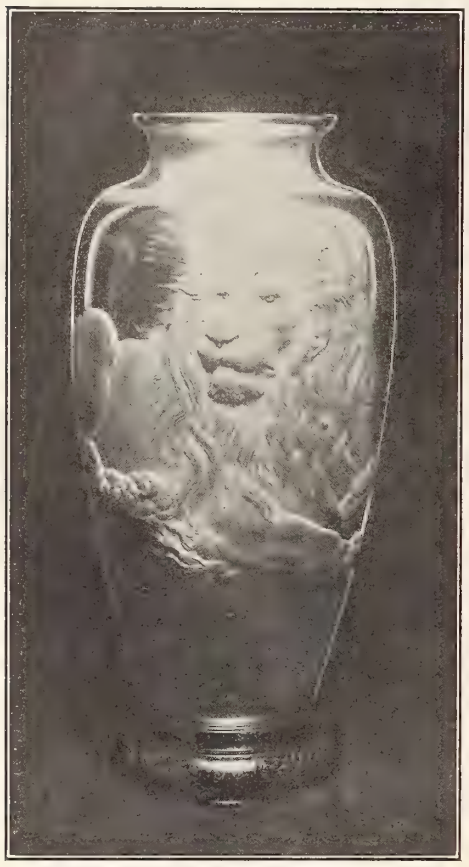
THE TALKING MACHINE SUPPLY CO., 400 FIFTH AVENUE NEW YORK

THE TALKING MACHINE IN JAPAN.

Kingoro Ezawa One of the Leaders in Inducing Manufacturers to Record the Music of This People—The Nation's History in Song—Two Very Interesting Examples of Japanese Art Work from Mr. Ezawa's Factory.

We present here a picture of one of the most elegant examples of Japanese art. This carving is all done by hand on a sterling silver vase. This is possibly one of the finest pieces of work of its kind ever executed. The accuracy and careful attention to details as shown in same is characteristic of Japanese workmanship.

Among the many men who have been instrumental in developing education and commerce in Japan, Kingoro Ezawa has always occupied a



PRODUCT OF MR. EZAWA'S FACTORY.

prominent place. He was one of the first men to recognize the great facilities the talking machine offered as a means of education, as well as for purely amusement purposes.

On two occasions Mr. Ezawa has had record makers of the Columbia Phonograph Co., General, go to Japan and record the music of his people. Among the selections made for Mr. Ezawa several years ago there are some recorded by the oldest and most cherished bards of Japan—many of whom have since died. The records of these men can still be had and their reproduction affords much pleasure and means of instruction to the Japanese. Like all other nations, the Japanese take great pride in the deeds of the

REVERSE SIDE OF VASE.

forefathers. Many of these lays are traditions that have been handed down from generation to generation, and have been kept before the public by the music of these bards. There is a great deal of historical association in all of these stories. Many of the old families in Japan have one or more of these bards as members of their households, whom they respect and maintain in order that they may enjoy chanting of their lays.

It will be noted on one of the pictures showing the reverse side of the vase—which is a product of Mr. Ezawa's factory in Japan—that certain Japanese characters are inscribed. These are writings of some of the greatest statesmen in Japan, and important historical events are connected with same. This vase was bought by Prince Ito, the resident general of Corea—it being his intention to present it to Dr. Radd, of Yale University. This was to have been carried to Dr. Radd by the late Dr. Stephens, who was recently murdered in San Francisco. Owing to the fact that it was necessary for Mr. Stephens to leave Japan before he originally intended to, some of the engraving by Prince Ito was not completed.

NEW SHIPPING AND SALES DATES

For Advance Records for the Next Year—Announcement Issued Recently.

The sales department of the National Phonograph Co., Orange, N. J., in bulletin No. 29, dated December 11, call the attention of Edison jobbers to the appended shipping and sales dates for advance records from December 1, 1908, up to and including December, 1909:

Shipping dates, 8 a. m.—December 23, 1908; January, 23, 1909; February, 24; March 24; April 23; May 24; June 24; July 23; August, 24; September 24; October 23; November 24; December 23. The selling date is the day immediately following the shipping dates named, at 8 a. m., excepting when it falls on Saturday, when the succeeding Monday is designated.

The bulletin concludes by saying: "In future we will permit jobbers to make shipment of advance records at 8 a. m. on all shipping dates. This advance from 2 p. m. to 8 a. m. was made at the request of a number of our jobbers. Any jobber or dealer who makes shipment of records, or places them on sale in advance of the hour specified herein, violates the terms of his agreement, and will be dealt with accordingly."

INTERESTING FACTS REVEALED

In the Report Filed in the Probate Court in Regard to the Defunct Broadway Savings Bank of Toledo—The Talk-o-Phone Co., A. L. Irish and D. V. R. Manley Were Makers and Endorsers of Paper to the Amount of $50,000.

(Special to The Talking Machine World.)
Toledo, O., Dec. 31, 1908.

Tuesday the expert accountant who examined the books and condition of the defunct Broadway Savings Bank of this city, as trustee for the benefit of the depositors and creditors, made his official report to the probate court. It will be remembered that the Talk-o-phone Co., and its successor, the Atlantic Phonograph Co., both bankrupt, though the latter was "capitalized" at $2,000,000, figured largely as borrowers on the books of the bank. The name of A. L. Irish, at one time president of the Talk-o-phone Co., and latterly vice-president of the Atlantic Co., as well as D. V. R. Manley, president and general manager of the Atlantic Co., also appear personally as makers and endorsers of paper to the amount of nearly $50,000. The notes of the two companies are listed as collateral on loans made to Irish. Overdrafts, among others, were charged up against the following on May 5, 1907: Talk-o-phone Co., $21,940.71; Atlantic Phonograph Co., $8,353.28; A. L. Irish $8,496.92; Hayes Music Co., $2.902.25.

The report says: "Altogether the officers, consisting of president, former presidents, cashier and directors of the Broadway Savings Bank, together with the account of A. L. Irish, were makers and endorsers of paper owing the bank, together with their unpaid stock liability, on April 2, 1908, when the bank closed, the sum of $201,755.04. This was 76 per cent. of the entire amount owing the bank on loans and discount and capital stock."

Concluding the trustee's statement grimly observes: "If the Metzger notes, amounting to about $100,000, can be collected, the depositors will receive about 50 cents on the dollar. In case a judgment against Metzger cannot be collected, the depositors must be satisfied with about fifteen cents on the dollar." The bank was looted from the day it was opened.

Would This Interest You?

¶ Show a merchant that you can increase his business at no added expense to him, and you won't get out of his office until a contract is signed.

¶ If the closing of such a deal would mean a large and immediate profit for you, and if every new customer gained for the merchant meant a new one for you on your own line, don't you think the exclusive control of such a proposition in your territory would be worth obtaining?

For Particulars Address

UNITED TALKING MACHINE CO.

Entered as second-class matter May 2, 1905, at the post office at New York, N. Y., under the act of Congress of M[illegible]

Do You Desire to Make Dollars?

GOOD COIN OF THE REALM?

We suppose Yes! Well then, we can help you

¶ We have a special proposition of interest, which will assist talking machine men to increase their incomes.

¶ There is no doubt of it.

¶ The suggestions which we are able to make in this particular will be of monetary advantage to every talking machine man who wishes to broaden his sphere of operations.

¶ It will be easy to increase your income, without materially increasing your expenses, for the suggestions which we will make do not include a large outlay of money.

¶ We have gone into this subject exhaustively and we know that we are on the right road.

¶ We know that we can do precisely what we say regarding bringing about increased incomes for talking machine men.

Write and see how we can make good

There's Big Money In This For YOU

INCREASE YOUR INCOME

It makes no difference where you live or what business you are engaged in, you can positively increase your present income by handling our machines. They require very little attention—just fill the machine and take out the money. Every machine is fully guaranteed and with ordinary care will last a lifetime. They are just the thing for men with small capital, because they bring quick returns and large profits. $5.00 to $50.00 a day (according to the number operated) easily made.

The Talking Scale—Speaks Your Weight

An automatic device which calls out in a loud clear tone the weight of the person standing on the machine, after placing a coin in the slot. It is a nickel-eater that never fails to attract the crowd. Just read the amounts being made: Dreamland Moving Picture Theatre, Cleveland, Ohio, $35.20 from one scale in two weeks. L. J. Denkler, Macon, Ga., $120 from three scales in 10 days. H. S. Donnerd, Indianapolis, Ind., $24.36 from one scale in one day. What others are doing you can do—so don't delay, but fill in and mail the attached coupon to-day before someone else gets into your territory. We are the leading house in the United States for all kinds of Automatic Weighing Machines and Automatic Vending Devices.

WEIGHING MACHINE

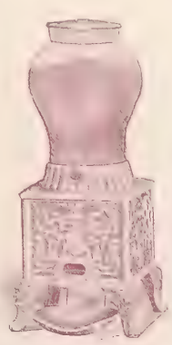
Our Automatic Peanut Machines

are positive winners, over one thousand Peanut Machines being operated in Cleveland, Ohio, alone. This demonstrates that the business is profitable.

Champion Gum Vending Machines

have been adopted by nearly every railroad in the country, including Illinois Central, Southern Pacific, Baltimore & Ohio, etc.

CHAMPION GUM AND CHOCOLATE VENDING MACHINE



MACHINE FOR VENDING SALTED PEANUTS

A Word of Authority About the Opportunities

The chief difference between the man of success and the unsuccessful man is that the former is quicker to recognize and utilize opportunities for money making. Opportunities, however great, are of no value unless acted upon—unless utilized. They come to-day and are gone to-morrow; hence it is that in laying before you the exceptional opportunity for money making afforded by the establishment of a line of our weighing and vending machines, we urge prompt decision. You cannot lose.

Your investment is absolutely under your own control. You take no risks such as bank failures or mining stock schemes, etc., etc.

Better fill in the coupon NOW. Tell us what machine you are interested in and we will show you how you can invest your savings where they will make money for you day and night. While you sleep they are working for you. We operate our own machines in Cleveland, Ohio, and know what they will do.

VALUE OF WINDOW DISPLAY.

The Appearance of a Window Like the Appearance of a Man Is Often an Index of Character—It Pays to Pride One on the Attractiveness of the Store and the Window Is a Splendid Indication of One's Progressiveness.

The value of window publicity is an old but always a "live" topic. While all the world despises the man who lives for appearances only, while we all are agreed that the habit of judging our fellows merely by appearances is vicious, still we are agreed also that appearances go a long way, and are often an important index to character. If a man persists in coming to business day after day without a tie, and if his waistcoat front is an advertisement of what he ate for breakfast, we come to the conclusion that he is shiftless and untidy.

So it is with your store; you pride yourself on its general appearance of neatness. You have it swept daily, or perhaps twice daily, and you insist that your salesmen have a smart and clean appearance and that they welcome your customers courteously. You want as fine a display of goods as your clientage will permit—all these things are as a matter of course.

But do you make that last extra effort to attract your customers to your store? Do you make the first impression so inviting that when they turn into your street or glance at your store from across the way they pause and feel a desire to enter; or, if they go on, feel and remember that you have the very finest display in town?

Don't forget the value of first impressions.

As the eye of man is the window through which his character may be read, so, in literal truth, your show front is the window through which the character of your store may be read.

POST CARDS FOR EASTER.

The Easter Season Next to Christmas Is One of the Best Periods for Post Card Selling in the Year—However Talking Machine Dealers Stocking Side Lines Need Not Confine Themselves to Easter, but Should Carry a Line for All Seasons and Holidays in the Year.

Talking machine men will soon be face to face with the Easter demand for all kinds of post cards and other novelties. In view of the widespread popularity of the fancy post card as a medium for seasonable greetings, retailers should make a point of stocking a sufficient quantity of Easter styles. At a time like this the higher priced and therefore more profitable lines are the kind that will find quickest sale. By this we mean cards that will retail at from six for a quarter to three for a quarter, though, of course, there will always be those who desire the cheaper grade. After Easter, however, the special day card will be dropped temporarily and the view card will come into its own. Each year adds to the popularity of these cards and the retailer who keeps his stock well supplied will find himself well repaid for his investment. While novelty cards (by that we mean special day cards) change each year the view cards are standard and as long as they are of good quality there is no fear of their becoming dead stock. Local views are especially live sellers and the dealer in any city or town who neglects having a full assortment is losing a lot of good money. Buyers never tire of them and the more there are and the better they are the more liberal and more profitable the business. Advance orders are essential and the dealer who has not placed his orders for these cards is quite likely to have more or less trouble securing the goods when he wants them.

Whenever it is possible it is well to obtain some exclusive views. This can often be done by either taking a photograph or having one taken for you of the particular object or objects of interest in your locality and either sending this with your order for so many thousand to your manufacturer, who will print your own name along the margin of the address side—or else send your photograph to some well known engraver who makes a specialty of this work and have a cut made, from which almost any local printer can run off any desired number. By the latter process time can often be saved especially if manufacturers have a rush on.

There is no question that the German manufacturers have never quite been able to understand and execute a typical American card. This is now being demonstrated by the large increase in American manufacturers who are meeting with wonderful success. The native product naturally comes a great deal nearer pleasing the average American than any imported line. Home grown humor is more striking and local art seems much better adapted to bring it out.

MAN'S BEST TRADE-MARK.

Reputation Is Not What a Man Thinks of Himself, But What Others Think of Him—Some Salient Points for Business Men to Consider.

A good reputation is a man's best trade-mark. Reputation is not what a man thinks of himself, but what others think of him. A man's estimate of himself isn't apt to pass current. Most men would put the value far too high. Some few would put it too low. Generally the estimate is in inverse ratio to the value, but an unprejudiced public may be trusted to strike a just level.

When it is announced that a new miracle-working electric device has been invented the world is skeptical. If it is stated that Edison is the inventor, skepticism is changed to faith. In the reputation of the Wizard of Menlo the public puts its trust.

George Bernard Shaw says he has written and can write better plays than Shakespeare's. But Shaw's opinion and Shaw's reputation are a long ways apart, and the verdict is still in favor of the poet of Stratford.

N. P. Willis, who is scarcely remembered by a succeeding generation, considered himself the greatest American poet. That was Willis' estimate.

Bryant, Longfellow and Holmes set themselves upon no pedestal, but their reputations were and are secure. They rest upon the estimate of the public.

We can build but we cannot dictate a reputation.

A prominent western advertiser was once asked what he considered the most essential element in advertising. His reply was, "Reputation." "A page advertisement," said he, "is of little value unless the man making the announcement has a reputation to back it up." It isn't so much what a merchant offers as the fact that he offers it.

Reputation multiplies the value of printer's ink. When, after a lapse of fifteen years, it was announced that Verdi had written a new opera, the musical world was on "the tiptoe of expectancy." It was not the title of the opera, nor the Shakespearian theme, nor any star cast that aroused public interest. It was Verdi. "Rigoletto," "Trovatore," "Traviata" and "Aida" had established his reputation. "Otello's" reception was cordial, as a natural consequence.

Washington's reputation was invulnerable. When a president was wanted for the new republic there was no question as to the man. The man in whom the public puts its trust is the man who points the way to great events.

Reputation is worth more than riches. Wealth in the hands of one who is discredited becomes a curse. "I have lost my reputation, and what remains is bestial," cries Cassio. He who is without reputation is like a rudderless ship without a sail.

A tree of a century's growth can be felled in an hour. So with reputation! Difficult to attain, priceless to possess, it must be jealously guarded.

Hard-earned reputations have sold innumerable square feet of bedaubed canvas. Such betrayals are always extravagantly expensive. The public is hard to win, but easy to lose. Deception is a double-edged dagger. As a prominent writer pertinently says: "A reputation is too valuable an asset to be sacrificed to greed. It is so valuable that it should be the aim of every man to attain."

SOME BUSINESS SUGGESTIONS.

How to Increase Trade and Keep Sales Force Occupied.

The aim of the "Side Line Section" is to place a line of manufacturers in touch with responsible retail forces, so that the two may work along satisfactory lines of distribution.

It will pay dealers and jobbers to investigate the offerings made in this issue by manufacturers, and if there is further information desired, it should be understood that the Editor of the "Side Line Section" stands ready at all times to supply information which will assist dealers to broaden their lines of business operations.

Here are three links in the chain of gold, which will bind you to success: Intelligent buying, good salesmanship, effective advertising. A chain is no stronger than its weakest link. You owe it to yourself—you owe it to your business—to see that each of these links is as strong as your best effort can make it.

NEW YORK, FEBRUARY 15, 1909

The moving picture theater has become so much a matter of course that when Mayor McClellan moved a few days ago to revoke the licenses of such resorts in New York few realized what the industry meant in dollars, time, and number of persons employed.

Cheap, and even humble, as many of these shows may be, inquiry proves that they represent a growth hardly paralleled in the history of amusements in this country. Within the last five years their glaring signs, strident music, and brightly lighted portals have been multiplied by thousands with a rapidity almost magical. In the larger cities they are numbered by hundreds. Few towns of any size or country fairs lack one or more of them. Flourishing on the thin family purses which go with financial depression, they have affected the theatrical business so seriously that some types of sensational melodramas have been almost driven from the field. Yet these facts hardly give a hint of the scope of the subject—the millions of dollars invested in such shows, the outlays for lanterns, films, and theaters, the stream of nickels and dimes which flow into the box offices of such resorts every week, the growth of a wonderful scientific invention and the ingenuity displayed by a dozen manufacturers of films in supplying novelties. The growth of the industry in the United States, as figured by the New York Times, may be summarized thus:

Capital invested	$40,000,000
Value of films made annually	102,000
Value of picture machines in use	2,000,000
Weekly wages drawn by employes	2,000,000
Receipts per week	3,000,000
Number of picture shows in the United States	10,000
Number of employes at exhibitions	100,000
Persons attending shows every week	45,000,000

Twelve millions of dollars invested in moving picture shows in Greater New York alone was an estimate made by an expert in the business. There are in round numbers 500 "store shows" in the city, besides twenty regular theaters devoted to the exhibition of moving pictures.

An average investment of $4,000 for each "store show" was considered conservative. The cheapest of them cost $500, the more pretentious $25,000. The finest "store show" properties in the city include one in Harlem, costing $30,000, and another in Fourteenth street, representing an investment of $80,000. An average of $500,000 each was placed on the twenty regular theaters with picture shows. Into this estimate the value of the real estate entered in some cases, that of the good will in others, but, as one owner remarked, there is from present prospects no better amusement to place in the theaters.

Four thousand dollars each was considered a fair average valuation for the picture shows outside of New York. There were 10,000 of these when the last count was made about a year ago. This year, one expert said, the number is nearer 15,000 than 10,000.

"You cannot gain an idea of the growth of the business," he remarked, "unless you travel from city to city and see these show places. Chicago has nearly 350, Philadelphia about 200. One theater in the latter city cost $150,000; another meant an investment of $75,000. It is safe to say that there is hardly a town east of the Rocky Mountains of 2,000 population or more that has not a moving picture show. In many cities of from 75,000 to 100,000 population you find surprisingly elaborate theaters of the sort costing $50,000 or upward. If the average investment of $4,000 each is placed on 10,000 theaters in the country the investment would be $40,000,000.

The films made in America every year for the picture shows are worth at least $102,000. The manufacture of the films is practically controlled by nine concerns. Eight of these are licensed under the Edison patents, the ninth has just formed a combination with a company representing some of the foreign manufacturers. With an output of twelve films a week by the licensed concerns and a total output of two American films and three imported every week by the new combination there are at least seventeen films put on the market every seven days.

Adopting an average of 1,000 feet as the length of each film, and the current selling price of 12 cents a foot, as a valuation, each film represents an investment of $120. The weekly output is worth $2,040, the cost of films annually is $102,000. The moving picture show usually consists of four films, each requiring fifteen minutes to exhibit, and three or four illustrated songs, each costing from $15 to $18 a week. In the larger theatres the films are withdrawn and new subjects substituted every second day. The films are rented to the proprietors of the shows for $50 each a week.

The moving picture machines now in use, with their lenses, powerful lights, and reels, are worth $2,000,000. They are sold at prices ranging from $175 to $225 each, with $200 as the average price.

A well equipped picture exhibition also requires the services of ten people. By this is meant the working force of a "store show," not a theater. The list includes a piano player, a drummer, a man at the lantern and his assistant, and two ushers only. Their wages average about $200 a week. With 10,000 such shows the payrolls would be $2,000,000 for a force of 100,000 persons.

Into the box offices of these moving picture shows at least $3,000,000 is passed in dimes and nickels every week by American pleasure-seekers. The average "store show" takes in $300 a week, the proprietors counting on an audience of 200 persons at each performance. In the theaters devoted to moving picture shows receipts of $3,000 a week are considered good business. The latter class are excluded from the $3,000,000 estimate, the sum being based on 10,000 "store shows" at $300 each.

With one-half of the $3,000,000 receipts representing nickel admissions and one-half tickets costing a dime, the receipts would indicate that 45,000,000 persons visited these shows every week, or nearly every other person in he United States.

ROLLER SKATES NOT MODERN.

Their Invention Dates Back to 1760—American Manufacturers Now Excel in This Field.

It is only necessary to visit the plant of the Union Hardware Co., Torrington, Conn., to get an idea of the immense number of roller skates which are used in this country. They are undoubtedly among the most popular of the many devices used to give people both amusement and health. Contrary to general opinion the roller skate is not a recent invention. It dates back to 1760 and the inventor was a Dutchman named Merlin, who went to England in that year. Eight years later he exhibited a "pair of skates contrived to run on wheels" at a museum in Spring Gardens, and also gave public exhibitions of his prowess in skating over a smooth floor, playing a violin the while. It appears, however, that his demonstrations were, on occasions, rather more exciting than successful, for it is recorded that he used to fall about and smash into mirrors and pictures which covered the walls of the room. There are some old Londoners, no doubt, who remember the performance of a ballet entitled "Les Plaisirs de l'Hiver," at Her Majesty's Theater about 1849—which the artistes acted on wheeled skates. The ballet made a "tremendous sensation" and helped to establish the pastime in the public favor.

A RICH FIELD FOR DEALERS.

The Spring and Summer Seasons Unfold Great Possibilities for the Talking Machine Dealer Who Puts in a Line of Camera and Photographic Supplies—Now Is the Time to Prepare for Profitable Business.

With the coming spring a rich field opens up to the talking machine man in cameras and photographic supplies, the possibilities of which are only limited to the amount of ingenuity displayed by the retailer. Each day brings us nearer to the warm, balmy period which follows the winter and heralds the birth of new and joyous life everywhere. It is amidst this rejuvenation that the love of outdoor pastimes comes upon young and old alike and with it the insatiable desire to preserve these beauties of nature in the one way known to science, namely, photography. Are you going to let this opportunity slip by, Mr. Dealer? If so, it will be only to regret it when it is too late. Why not take time by the forelock and investigate this field thoroughly now?

Of course it may be that other lines will appeal more to your particular customers; of that you must be the judge. But the fact remains that if a retailer possesses enough push and ambition, competition, or anything else, cannot stand in his way with these goods. Every man, woman or child is a prospective purchaser of photographic goods if handled in the right way, and many schemes can be worked up to win over a good majority. For instance, make it a point to offer each month cash or other prizes for the best picture submitted by your customers. This will start a keen competition and by a judicious amount of advertising in local dailies will add many names to your list of purchasers. Start camera clubs and spread the news broadcast about the pleasure to be derived from hunting with the camera. Why is deer hunting so fascinating a sport? Simply because of the skill, patience and endurance necessary to get a shot, and yet from experience the writer can vouch for the fact that it is a far more difficult feat to obtain a good negative than it is a shot. And once let a person get into the habit of trailing with a camera and it is next to impossible to break its influence. There are no game laws to affect this sport, and if one has any sentiment against the rapid disappearance of game in this country it is at least some satisfaction to feel as one turns over the pages of his album and glances at this animal or that bird, that as far as he is concerned they are still enjoying life to the fullest extent.

A REVIVAL IS EVIDENT.

Renaissance of the Bicycle in Public Favor—The Motor Cycle Also a Big Factor in Renewing Interest in These Creations.

To judge from reports which reach this office from various quarters, 1909 will see a strong revival in the bicycle business in this country. While for some years this business has lain dormant in reality it was only regaining its wind after the craze which swept over the country some seven or eight years ago, and is even now preparing for another lively campaign, which, while it may not equal the former vogue, will certainly be of large enough proportions to enable firms in the business to make a very respectable amount of money. Then, too, before there was no motor cycle to help things along, while now there are at least a half dozen well-known makes to tempt the purchaser. These machines are daily becoming more and more popular and dealers who have been fortunate enough to obtain agency rights are reaping a harvest for their forethought.

If your advertising does not lie, the inquiries it brings are of real value. It is foolish, then, not to properly handle these inquiries—not to have the right kind of literature to send out, and convincing follow-up letters, based upon a winning scheme.

TRADE Gillette MARK
KNOWN THE WORLD OVER

ALL seasons are good for the Gillette Safety Razor. Make your Gillette business a steady source of income. Keep your stock on display. Let your store be known as GILLETTE headquarters.

It is astonishing how many sales can be made by merely suggesting the razor and explaining its qualities. Most men know of the GILLETTE, but many of them are not posted on what the razor will actually do. They don't realize what it would mean to them in comfort and economy.

You will find that it pays to tell customers about the GILLETTE. The only limit to the business is the enthusiasm you and your sales force put into it.

Use the GILLETTE signs and trade helps.

The GILLETTE is a live proposition for any store. It pays to be identified with it.

ILLUSTRATED RECORDS.

Talking Machine Records Can be Illustrated at a Trifling Cost by Means of Reflecting Machine and Picture Cards—Talker Fraternity Take Notice of This Innovation.

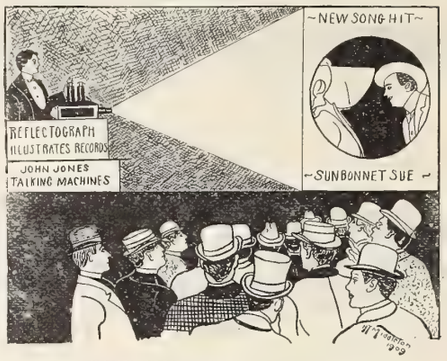
Since the Side Line Section has made its appearance in The Talking Machine World, the writer has indulged in some hard thinking, endeavoring to give birth to an idea which might prove of value to the "talker" man in connection with the side line end of his business, and he thinks he is now able to "deliver the goods."

How many times have you sat in a theater where illustrated songs were rendered, and while admiring the beautiful pictures thrown upon the curtain, longed for some method of illustrating records without the large expense involved in the purchase of a stereopticon and glass slides? The writer has had just such experiences, but how little did he dream how soon his wish could be realized. Now that the opportunity has arrived, it remains for you, Mr. Dealer, to get in ahead of the other fellow, and push it strenuously forward to the success it deserves.

Records illustrated for a few pennies! Think of the hit such an announcement will make with your customers. Will they not be delighted, when they call upon you to hear the new monthly supplements, to learn that they can procure from you an outfit capable of producing beautiful colored illustrations life-size on a screen, and when they hear you name the price they will undoubtedly purchase it on sight.

Mr. Dealer, the writer sincerely believes his idea is worth money to you, and he thinks you will agree with him in a moment. Listen:

The machine capable of doing the illustrating is already before the public and can be purchased at retail as low as $4, so no time need



USING ILLUSTRATED POST CARDS.

be taken up with a description of it. It is simply necessary to state that it will do the work, and do it well.

What he wishes to bring to your special attention is the fact that some progressive gentleman can make a bunch of money right now by having pictures similar to the colored postal cards, now so popular, printed to illustrate records. When you think, Mr. Dealer, that artistic picture post cards can be bought at any news stand, drug store, or from venders on the street for as low a price as three for a nickel, you can easily imagine how cheap you can afford to sell cards of a similar quality, made especially to illustrate talking machine records. It looks good to you, doesn't it?

As a side line, Mr. Dealer, this proposition will prove "the greatest ever," "the one big noise," for it will set the pace for your record sales, stimulating old trade, and establishing new. In fact, it cannot but be a boom to the "talker" man from the very outset.

There is a varied assortment of ballads, march songs and descriptive selections already listed in the catalogs of the different talking machine companies, and new ones coming every month, which are well adapted for illustration purposes, and when the public learns that this can be done at trifling cost, it will enhance the value of their machines to a vast extent. Ask them and see if I am not right.

The writer is not in a position at this time to state the exact amount of money likely to be involved in the manufacture of these record illustrations. It would depend largely upon the subjects, of course, but the demand would be so great, and, consequently, the number sold so enormous, that even though the costuming, posing, etc., of the talent employed in making pictures proved somewhat costly, the margin of profit would still be extremely satisfactory.

While penning this article the writer has wondered whether the idea he has been bragging about is really a product of his brain alone, or whether at this very moment someone is not turning out a few million song pictures.

He can only agree with the illusionist at the vaudeville show who, when about to attempt a particularly difficult feat, turned to the audience and remarked: "This is a good trick if I don't do it."

ILLUSTRATED RECORDS.

(Air—"When Love is Young.")

When songs are sung in future
Upon the phonograph,
What do you think may happen
To help you cry or laugh?
What joy will hold you spellbound
While bugle blasts ring high?
You'll see the singer there, and then
The troops march by.

HENDE MFG. CO. PUBLICITY.

The Hende Mfg. Co. have favored us with a catalog of their Indian motorcycles, showing all their latest styles and containing as well as a detailed, descriptive and illustrated story of the special features that enter into the 1909 Indian. The volume is handsomely gotten up, cleverly written and should prove a forceful means of conveying desired information to dealers and would-be purchasers regarding the individual merits of these creations. The headquarters of the Hende Mfg. Co. is located in an imposing building at Springfield, Mass., where they have built up a splendid trade based upon quality.

SPORTING GOODS MEN IN NEW YORK.

The National Sporting Goods Dealers' Association will hold its annual meeting in New York during the present month. There will undoubtedly be a large attendance at this most important event, when officers will be elected and the plans for the year outlined. It would pay dealers to manifest a closer interest in this organization, for in this way the dignity of the sporting goods trade will not only be maintained, but many matters of great interest and of trade advancement will be inaugurated, all tending to the prosperity of the retailer, jobber and manufacturer.

SPALDING AGAIN IN PHILADELPHIA.

A. D. Spalding & Bros. have secured a lease of the building, 1210 Chestnut street, Philadelphia, Pa., where they intend to open up an establishment under the management of F. J. Gray. The Spalding people retired from the retail sporting goods business in Philadelphia some ten years ago, but find now that Philadelphia is waking up, perhaps since Hammerstein captured the Quaker capital.

To secure economical results you must systematize your work. If enough time can be saved in this manner to increase your business by one order per week it will pay you well for the effort. By way of demonstrating we suggest that a few minutes each evening be spent in arranging and laying out your work for the following day. Try it.

REASONS FOR SUCCESS.

The J. A. Peach Co., Incor., Gloversville, N. Y., Have Built Up Quite a Business as Manufacturers of Baseball Gloves and Mitts—Reasons Responsible for Their Success.

(Special to The Talking Machine World.)
Gloversville, N. Y., Feb. 6, 1909.

Among the progressive establishments of this famous glove center is the J. A. Peach Co., Incorporated, who are winning quite a reputation as manufacturers of sporting goods. The problem of manufacturing baseball gloves and mitts found its inception in the organization of this company in this city within the past three years. In a general way little was known then of the firm, the members, or the product they represented. They started the manufacture of these specialties in a modest way with the realization that not only one but many questions figured in the successful marketing of their particular class of merchandise. Their goods have now been sufficiently long on the market to have attained a well earned and deserved measure of recognition among dealers and jobbers throughout the United States.

In a measure success or failure in this manufacturing era lies primarily in the attitude, or wise policy laid out, and that strictly adhered to. Fulfilment of obligations and retention of confidence are two of the basic reasons specially emphasized by the J. A. Peach Co., Incorporated, as responsible for their successful advent as factors of importance and standing among the manufacturers of sporting goods.

As may be noted from their advertisement elsewhere they are turning out a large line of gloves and mitts covering all prices and styles. In talking with a member of the firm the other day he said: "Our line is especially suitable for progressive talking machine men who desire to handle a side line which will pay them good profit, and bring many customers to their store. The sporting season will soon be with us, and it behooves those who desire to get in line to prepare for one of the best seasons in many years by stocking early."

KING MOTORCYCLE.

Present Heavy Demand for These Machines Which Is Constantly Growing—Wonderful Improvements Made in Their Manufacture—Profits in Handling Such a Line.

Perhaps no revival has come so rapidly and so surely as that of the bicycle craze. One has but to watch the growing throng of cyclists flying along the streets of cities and towns or along country roads to realize that such a revival is real. And it has brought with it the motorcycle, that automobile for one, which from a crude, cumbersome affair of a few years ago has developed into a handsome high-powered machine built like a watch and capable of reeling off a mile a minute if necessary. Of course the chief improvements have been in the engine in the direction of reducing weight necessary per horse power until at the present time it is possible to secure a four-cylinder engine of as high as seven horse power which may be installed in the frame of a bicycle not much larger than the ordinary styles. Just how acute is the interest in motorcycles at present was exemplified at the Automobile show recently held in Madison Square Garden, New York, and where over a score of motorcycle manufacturers displayed their latest and most perfect creations.

The entire basement was given over to these machines and the exhibits were visited and inspected by thousands.

Many talking machine dealers formerly handled bicycles when the craze for them was at its height and they can appreciate the profits in handling such a line. It is the wise man indeed who does not hesitate to investigate the present live opportunity of profiting by the revival and the coming of the motorcycle and put in a stock of these machines.

Within two months at least the roads in most sections of the country will be fit for bicycling, and when that time comes it is the dealer who has the vehicles to offer who will reap the reward.

INCORPORATED THIS MONTH.

The World Patent Vending Co., of 172 Washington street, Chicago, Ill., has been incorporated to carry on a general mercantile business with a capital of $1,000. Hiram I. Keck, John W. Clark and Michael Baccash are the incorporators.

* * * *

Among the new incorporations in the State of Illinois is the Commercial Appliance Co., 135 Adams street, Chicago, organized with a capital of $3,000 to manufacture novelties. The incorporators are M. M. Wood, George W. Conover and Arthur MacNeal.

* * * *

The International Film Mfg. Co. has been incorporated at Dover, Del., with a capital of $10,000. The incorporators are: Orrin B. Faussett and Isaac Kriebel, of Philadelphia, and William C. Popp, Wilmington.

* * * *

The Knickerbocker Leather & Novelty Co., New York, has been incorporated under the laws of the State of New York, to manufacture leather goods and advertising novelties, with a capital of $60,000. Incorporators: William Tager, 1109 Forest avenue; Barnett Epstein, 1110 Jackson avenue; Morris Epstein, 1105 Forest avenue; Saul L. Kowarsky, 1107 Forest avenue, New York.

* * * *

The Payne Mfg. Co., of New York, has been incorporated under the laws of the State of New York to manufacture novelties, notions, etc., with a capital of $10,000. The incorporators are: Hulbert Payne and Ellen D. Payne, 3 Burling Slip; James J. Wilson, 288 St. Nicholas avenue, all of New York.

* * * *

The Calumet Film Exchange, of 184 La Salle street, Chicago, has been incorporated under the laws of the State of Illinois with a capital of $21,000 to deal in moving picture films. H. Heinemann, John A. Verhoeven and George Hoke are the incorporators.

* * * *

The Illinois Metallic Novelty Co., of 908 Unity Building, Chicago, Ill., was incorporated during the month to manufacture novelties, etc., with a capital of $3,000. Incorporators: George E. Miller, James G. Kellogg, William H. Feindt, Jr.

* * * *

The George K. Spoor Co., of 184 La Salle street, Chicago, have been incorporated recently to deal in moving picture supplies with a capital of $5,000. Incorporators: John A. Verhoeven, L. R. Verhoeven, Robert Verhoeven.

* * * *

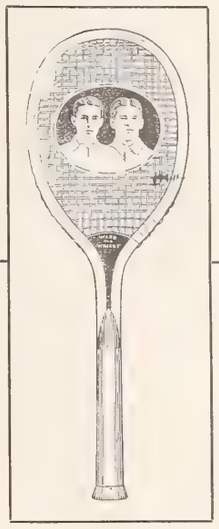
The World Machine Co., Irvington, N. J., has been incorporated to manufacture vending machines with a capital of $250,000. Incorporators: H. M. Browne, F. W. Mills, E. J. Forhan.

FEBRUARY, THE SHORT.

"I suppose you know how the month of February happened to have but 28 days," said the snake editor to the horse editor.

"Yes, I do," was the reply. "When Julius Cæsar revised the calendar, he named a month after himself, July. The following month was left with its old name, Sextillis, or the sixth month, for that was its number in the Roman calendar. When Augustus became emperor, he thought he had as good a right to have a month named after him as Julius had, so he renamed Sextillis and called it August. At that time Sextillis had but 30 days, while July had 31. Augustus thought his month should have as many days as Julius, and one was taken from poor little February to accomplish the object."

"I always supposed that something of the sort happened, but my idea was that Augustus had been working so hard one February that he took a day off, and it never was replaced."



WRIGHT & DITSON

LAWN TENNIS GOODS

Dealers in Talking Machines who want to add a profitable side line to their business should put in a full line of Wright & Ditson's specialties. There is a splendid margin of profit, particularly on the rackets. The Wright & Ditson Lawn Tennis goods are the best known and are the best.

Our balls are used in all National Championships of the United States Lawn Tennis Association, and all the Champions use the Wright & Ditson rackets.

We supply catalogues free with dealers' imprint.

Correspondence solicited; send for catalogue and prices.

ATTEMPTS AND ACCOMPLISHMENTS.

"The Reason Why Most Men do Not Accomplish More Is Because They do Not Attempt More," Says U. G. Case in Modern Methods.

The above is most likely applicable, in a sense, or in a degree, to every individual. There is a marked tendency in human nature to do only that which is required or ordered, or sufficient to create an income to satisfy ordinary desires of a personal nature—living and pleasure.

Decided successes may generally be traced to definite causes, embodying an attempt always to do more than is required of you, or through having greater than ordinary desires. Yet, decided successes are also sometimes a fortunate combination of circumstances—called luck by some.

Non-success cannot always be traced to inability, lack of personal characteristics, or an insufficient strong will, or lack of interest, or of desire to succeed. That word fate seems to enter strongly into their lives. Unfortunately there are some people who can't accomplish any degree of success.

This is generally traced to some reasonable and explainable cause, and yet they cannot overcome the cause. Probably, it is the work of a higher force. A millennium probably never will make its appearance; probably we would then be worse off than now. If equality existed there would be nothing to strive for.

This suggests ambition. The world's advancement is gaged by man's ambition. To be satisfied is to have no ambition. To be dissatisfied is to desire more—greater accomplishments mentally, bodily, worldly and spiritually. Hence ambition creating. Ambition works overtime, attempts more, accomplishes more.

If we only do what we are ordered to do, we put ourselves on a level with the lower instincts of uncivilization, or the lower animals that do man's bidding. An equality of humankind from prehistoric days to the twentieth century, would set us back almost that many centuries compared to the present world's progress.

If we only do what we are ordered to do, we find no pleasure in the work, in the accomplishment—we only await pay day—meanwhile probably labor against will—rather a slaving proposition. To sleep the required number of hours, work ten hours a day, do some necessary personal work during balance of time, leaves us a small proportion for pleasure.

Consequently, blessed and fortunate is the man who gets pleasure out of his work—works with a pleasure. It is he who endeavors to do the best possible—the best in him—it is he who attempts more, hence accomplishes more, resulting in advancing himself mentally, bodily and increases his income.

Success in any sphere of life is, therefore, traced primarily to an ambition for advancement mentally and in the work allotted to us; to improve ourselves so we can improve on our work results; to always attempt more than we are requested to do, and to do it—not theoretically, but practically. Deeds count to yourself—to your employer.

Applied to salesmanship, they mean you should, to attain decided success, advance yourself mentally. This means knowledge of a general kind. Create a personality that carries with it a force that attracts—that is magnetism. This force is the power that wins—makes friends—brings orders—retains friends—continues orders—broadly speaking, means Success.

It means you should constantly seek a better knowledge, better general understanding of your goods. You should know as much as possible of your competitor's goods. You can never know too much. Properly fortified you can hold out indefinitely. Read and study all you can secure on your line of goods. Knowledge is power—someone said.

It means an inate desire to succeed—ambition of a higher order, the kind that wins character, honorable orders and money—not the wrecking kind.

Create records, keep up by all possible and honorable means such records. Do not rest on well-earned, well-deserved laurels. Look for higher laurels. Do not take for granted your company is satisfied. They never are—all business houses are grasping. Even if apparently satisfied, strive yourself for increased orders—it's the one positive way to increase salary.

Work the required time—sometimes more—it pays. Rob your employer of nothing—not even time. Time means money to him—he pays you for it. Never think you do too much. Those that do don't succeed—they become grouchy because too all-important—to themselves—expect too much. Attempt more—do more—the reward is bound to come some day.

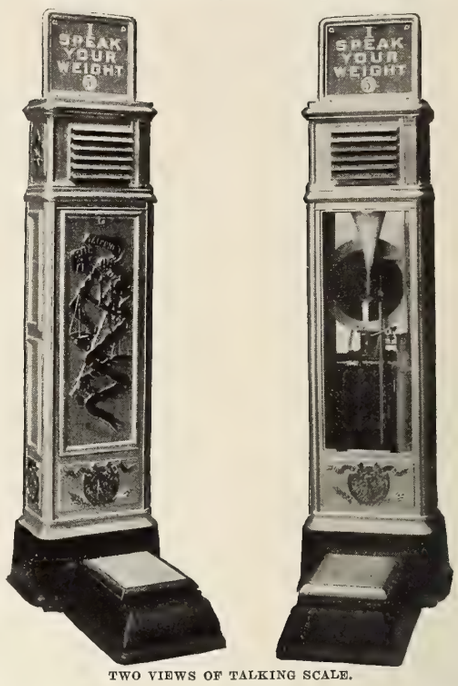
Do not attempt more because no other salesman with your company gets more salary, or because he gets less. Do not guide yourself by others. Every "man is the architect of his own fortune"; so also of his standing and place in his company. Aim to surpass all other salesmen; when you surpass, aim still higher—the reward is yours—not the other salesman's.

Moral: "The reason many salesmen accomplish more than others is because they attempt more—the reward is self-evident."

THE NICKEL EATER.

The Man in the Box Who Is Constantly Crying for More Coin—A Novelty Which Is Attracting Great Attention in All Parts of the Country—Splendid Possibilities in This Device—A Novel Invention Is the American Talking Scale—It Speaks Your Weight.

The Talking Scale is an automatic device which calls out in a perfectly audible tone the weight of the person standing on the scale, after placing the coin in the slot. It's a big money-maker. The novel money-maker is not an experiment, but a method of cleverly combining the two well-known perfect machines—a scale and a talking machine.



TWO VIEWS OF TALKING SCALE.

The Talking Scale is equipped with a 10-inch disc record. The different weights are recorded on the record in the same manner that a song is recorded; that is, after the scales announce "one hundred pounds" the scale speaks "one hundred pounds," according to the weight of the person standing on the platform.

When a person stands on the platform of the scale there is an attachment connected with the platform which draws the reproducer or sound-box down to the line on the record which is to announce the correct weight. When the coin is inserted in the slot it falls down the chute and releases the disc, which makes one revolution, calling out the correct weight. This announcement is carried directly to the opening of the machine by the aid of a metal horn.

This marvelous device is manufactured by the United Vending Machine Co., Cleveland, O.

This concern operates hundreds of machines and have a perfect index system for keeping account of labor, supplies and percentage paid to location, so that in an instant they can ascertain all particulars relating to any machine, no matter where located. They can supply valuable statistical matter to assist their agents in every part of the country.

The opportunities this product offers to bright, energetic business men are manifold. The closest investigation is invited and the manufacturers desire representatives who will take hold of this business proposition with determination.

There are hundreds of first-class places where the machines can be placed to advantage, such as hotels, cafes, railroad stations, waiting rooms, summer and winter resorts, cigar stores, etc.

They are money-makers, and they attract the curiosity of the public.

Here is an opportunity for talking machine men to get in touch with a money-making proposition. The company will be pleased to supply all necessary data and information, and it is interesting to note what money-makers are these coin-operating machines.

CARDS FOR NATIONAL HOLIDAYS.

Among the Most Profitable According to Those Who Have Given the Field a Thorough Trial Are the St. Patrick's Day Emblems—Some Interesting Data in This Connection.

Chatting the other day with a talking machine dealer who has made quite a success of post cards as side lines he said that among the various special cards he handled of St. Valentine's Day, Easter, Washington's Birthday, Lincoln's Birthday, St. Patrick's Day, Decoration Day, Fourth of July, Labor Day and other festivals, his best sellers are those designed for Irish celebrations, and that of the various buttons, badges, shamrocks, ornaments, brooches and rosettes made up for Irish celebrations there are sold in this country altogether about a thousand million annually, or as many as are sold of similar emblems for the celebrations of all other nationalities put together.

As the dealer puts it, suppose there are in this country of Irishmen and their immediate descendents, say 10,000,000 people; that would give 10,000,000 Irish purchasers. But there are sold of these Irish emblems a thousand million a year, or a hundred times ten million, and who buys them?

They are sold for souvenirs at dinners and they are sold at fairs and to be worn at various celebrations as well as on St. Patrick's day. Many are lost or broken, others being bought to replace them. Many are bought to be given away; individual purchasers buy a dozen at a time and give them to their friends. Irish emblems appear also to be bought and worn by people of various other nationalities.

The sale of the shamrock and other Irish emblems in the streets is confined to a few days about St. Patrick's day, but preparations for this brief period of public sale, when novelties are introduced, are made months in advance. Emblems that will be offered in the streets here on March 17 may have been designed and the manufacture of them begun last September. New York dealers in these emblems and in the multitudinous variety of novelties that are produced for all sorts of other occasions as well, sell goods all over the country and samples must be out early.

Of St. Patrick's day emblems, for example, there are now offered about a hundred varieties, and the manufacturers get out new styles every year. Dealers in distant localities, as for instance on the Pacific Coast, must have these samples to select from well in advance to enable them to give their orders in time, and it takes time to manufacture and transport the goods, which must arrive at their destinations in ample time for distribution.

And the same is true of the little hatchets and badges, emblems of one sort and another that are specially designed for Washington's Birthday, as it is also for the many kinds of emblems that are made for the various other days in the course of the year on which emblems are worn. They are all designed and the work of manufacturing them is begun long in advance, and of all these many emblems thus designed for wear on special days there are sold altogether in the United States about 2,000,000,000 yearly.

COLOR CHRONOPHOTOGRAPHY

Seems to be Nearing Its Final Solution—Some Recent Developments.

After the successful solution of the problem of color photography by the Lumière Brothers, the problem of color chronophotography seemed to be nearing its final solution. But the practical difficulties encountered were far greater than in ordinary photography. Flexible films of 100 feet and more in length must be handled, instead of glass plates of limited size. On the other hand, the Lumière process is suitable only for the making of transparencies. Duplicate positives from a series of negatives are out of the question.

A novel system has recently been invented by a Roman painter, Signor Barricelli, for the cinematographic reproduction of animated scenes in their natural colors, says the Scientific American. The coloring of the films is obtained by means of the three-color process, but in a novel way. Instead of coloring the film itself, the inventor reaches his result by a rapid presentation of images, each of which is colored in one of the three fundamental colors—red, yellow, blue. By virtue of the well known phenomenon of visual persistence, these images will give the impression of a complete three-color image.

In order to reproduce a given scene in its natural colors it is sufficient to photograph the object three times through properly colored screens, each of which will allow only the light rays of a given color to pass. Thus, three analytical color negatives are obtained. The corresponding positives printed from these negatives in black and white must be projected in rapid succession on a white wall, each through the same color screen used in obtaining the negative. The eye will then perceive a multicolored image, provided the rate of succession be such that the individual impressions due to the various colors on the retina may superpose themselves on one another. The length of the photographic film, as well as the speed of succession, should, accordingly, be three times as great as in the ordinary cinematograph. The system adopted by Barricelli for insuring the succession of the various color screens in front of the objective, both during the taking of the views and during projection, is of remarkable simplicity. A glass disc divided into three colored sectors, according to the fundamental colors red, yellow, blue—is rotated in front of the objective so as to change the screen at each move of the cinematograph shutter.

Energy, system, perserverance; these were the cardinal principles of Napoleon's success. You need them all in your business if you desire to achieve success.

NO USE FOR OLD FOGY METHODS

In These Modern-Method Days—"Investments" and "Expenses"—How to Build Up a Steady Patronage—Ideas Abound in Every Direction—Profit Made Out of Honesty.

It takes all kinds of people to make a world, and all kinds of people have all kinds of opinions. There is the old fogy merchant, for instance, who does not believe in the so-called up-to-date methods—up-to-date store fixings and arrangements. He is afraid that any radical change will drive away the old-established and steady-going trade that the store has been years in building up.

Up to date means increased expenses to him; it is just a clever scheme to wheedle some of his cash away. He forgets that the old reliable trade will, in the process of time, if through no other cause, die off, and that unless new trade is continually added the days of his business are surely numbered.

In order to do a successful business, and keep it ever on the path of progress, the confidence of the public must be secured.

Nowadays people have little confidence in any business that does not make some pretensions to being up to date. They have an idea that the men who run it are themselves behind the times; that they do not keep posted on styles, fashions and methods. And who would patronize a store for supplies if they felt that the goods displayed were more likely to be old style and out of date than just fitted to the season's requirements.

The appearance of the store has much to do in making a good impression, and an erroneous impression once formed is the hardest thing to overcome.

The bugbear of expense often stands between a man and success. Have you ever seriously considered what expense means—what it is?

Stocking a store with goods is an expense, and a pretty big one. Clerk hire is another large item of expense; so is rent, heating, lighting, advertising, etc.

The biggest amounts are usually dignified with the term "investment," the little fellows are simply called "expense," and every merchant makes it his business to cut the latter as much as possible.

Call them all investments, treat them as such, and you will be more likely to get profitable returns.

USING DENATURED ALCOHOL.

Quite a Demand for Convenient Utensils to Use Denatured Alcohol as Fuel—New Field Opened Up by an Enterprising Dealer—Within a Short Time Denatured Alcohol Will Become the Proper Fuel.

A line that is being energetically pushed by the manufacturers is that consisting of utensils for using denatured alcohol. When only the pure alcohol was obtainable there were various forms of stoves and lamps put on the market, but the high cost of the alcohol practically made its regular use out of the question in the average household.

Since the time the Government recognized the industrial standing of denatured alcohol and the fact that when thus prepared it was unfit for human consumption, thereupon removing the revenue tax from the denatured product, there has been a strong stimulus in the devising of convenient utensils to use that fuel.

Concerns have sprung up having for their exclusive purpose the exploiting of such utensils, special cooking demonstrations for housewives being given several times each day.

At the present time articles for using denatured alcohol include heaters, various forms of cooking stoves for the home, yacht or for travelers, self-heating irons and various forms of lamps. A line of these specialties presents a most attractive appearance and their novelty appeals strongly to the progressive housekeeper.

The standard price for denatured alcohol is about sixty cents per gallon and it is even now readily obtainable even in the smaller towns. The growing demand for it will naturally mean that it will be handled by other dealers besides druggists, who practically control the sale of denatured alcohol at present.

Dealers looking for a handsome, easily handled and attractive side line should investigate the possibilities of articles mentioned. Their novelty will appeal strongly to the casual caller and the cleanliness of denatured alcohol as a fuel combined with the absence of disagreeable odors and danger of explosion should interest those who desire handy cooking contrivances for the heated months and for the vacation period. However, the lamps and, in fact, all the articles are decidedly in season all year round, their uses being manifold.

NATIONAL SALES MANAGERS MEET.

The National Sales Managers' Association was perfected recently at Chicago. About fifty-five sales managers of Chicago industrial and commercial concerns enrolled as charter members and a permanent organization was effected. The following were the officers elected to serve the first term of six months:

President, H. H. Cushman, of the L. A. Becker Co.; vice-presidents, C. A. S. Howlett, of the Western Electric Co.; L. G. Muller, of the Columbian Bank Note Co.; Geo. C. Ebeling, of Gage Bros. & Co.; secretary, John T. Webber, of the Wabash Cabinet Co.; treasurer, R. L. De Nise, of the Adams & Elting Co. While the membership is at present limited to Chicago sales managers, it is the purpose to make the organization national in its scope and steps will be taken to extend the membership accordingly.

Successful salesmanship is based upon an intimate knowledge of human nature. Study your customers. Get acquainted with their individual characteristics and humor their fancies.

A SIDE LINE

which may soon become

YOUR MAIN LINE

We can refer to quite a number of talking machine dealers who have taken on our line of

PIANOS and PLAYER PIANOS

and feel well pleased with the results achieved! Suppose you consider this proposition!

We control the output of two large factories furnishing a complete line of pianos and player pianos of unexcelled merits!

Let us hear from you.

WINTER & CO.

Manufacturers

220 Southern Boulevard (cor. E. 137th St.) **NEW YORK CITY**

SOME EXCELLENT SIDE LINES

Made in the West—New Viascope Co. Catalog—Post Cards and Accessories—F. W. McIntosh Co. Specialties—The Output Co.'s Lines—Other Goods That Should Interest Talking Machine Dealers—The World's Special Side Line Section Praised.

(Special to The Talking Machine World.)

Chicago, Ill., Feb. 6, 1909.

The special side line section which made its debut in separate covers last month has attracted a great deal of attention, and much favorable comment has been heard in the trade regarding the importance of side lines, which in this day of expansion fill the aching void in the talking machine stores. A perusal of the side line supplement, with the various offers of its attractive side lines, has been found by Chicago dealers with their already numerous variety of lines to be worthy of consideration.

When one considers that good side lines not only make the store more attractive in the ornamental sense, but earn enough on the practical side to balance the rental, light, heat and other expenses he will wonder how he ever did without them.

The Viascope Co., of this city, have just brought out a very attractive catalog describing "the latest and best moving picture machine." In this five-cent theater era talking machine dealers have not only sold these machines, but in many towns have secured five-cent theater privileges, thus opening for themselves another profitable business.

The post card industry of Chicago is a very live one at the present time and offers to the dealers a meritorious side line. Gartner & Bender, 107 East Madison street, have just brought out some very fine styles that are making quite a hit with the trade.

For those dealers who handle post cards, newspapers, magazines, etc., the Gier & Dail Manufacturing Co., of Lansing, Mich., have several cabinets that represent the latest up-to-date improvements of that line. "We make the only post card cabinet with a center disc. We have seven different styles of revolving post card racks. We have post card and magazine pockets in any length strip to fit in any space in your store," they inform your correspondent.

The F. W. McIntosh Co., 179 Lake street, have several side lines which could be used as auxiliaries by dealers. The President ink pencil, which is guaranteed to be a perfect writing instrument and one worthy of the name, can be used alike by men, women and children. It can be handled with good profit and should offer a good side line. A line of statuettes that can be used as ornaments and oddities and that are live wires in the selling field are also offered by the company.

The Output Co. of America, with offices at 1110 Heyworth building, are not only having excellent results in marketing the output of the Cut Glass Works, but will in the course of a couple of weeks consummate arrangements for the handling of several lines which will make peculiarly good sellers for talking machine dealers.

The Automatic Machine and Tool Co., of this city, have a very excellent slot machine containing 24 disc records that they will put before the trade in a very short time. It offers everything modern in this type of machine and is a money-maker.

The sporting goods factories are turning out baseball goods galore at the present time, and many of them are so rushed on present orders that their plants will be run to capacity limit for the next four months, irrespective of future business.

A post card concern that has its busy signal out almost all of the time is Alfred Holzeman, of 2815 Wabash avenue. Mr. Holzeman is a worker and is a specialist in his own particular field.

There has been nothing of recent years that has magnetized the trade as has the "Billiken," god of happiness, luckiness and prosperity. It is the invention of a Chicago girl, and is marketed by a Chicago company. Not only have most of the retail stores these goods on display, but they are seen in private residences all over the city. The object of the "Billiken" seems to be to destroy the "grouch."

Talking machines speak for themselves, and the fact that many dealers are adding fountain pens as an auxiliary side line would seem to indicate that the pens would write for themselves.

J. C. GROSHUT ON WESTERN TRIP.

Secretary of Manufacturers' Outlet Co. Expects to do Record Business—His Extensive Itinerary Covering About Two Months—Another Trip Planned.

The same day that the Manufacturers' Outlet Co. removed to their new offices and factory, on the second floor of 89 Chambers street, New York, namely, February 1, J. Chas. Groshut, secretary and treasurer, started on a selling trip that will take him through the Middle and Central Western States and through the Northwest. With the company's lines, which he believes will appeal to the general talking machine trade looking for profitable side lines, Mr. Groshut expects his sales will exceed $100,000. He is an experienced traveler and seasoned salesman.

J. CHAS. GROSHUT.

His itinerary is as follows: Albany, Schenectady, Utica, Syracuse, Rochester and Buffalo, N. Y.; Cleveland and Toledo, O.; Detroit, Lansing, Grand Rapids and Kalamazoo, Mich.; Chicago, Ill.; Racine, Milwaukee and La Crosse, Wis.; Minneapolis, St. Paul and Duluth, Minn.; Dubuque, Cedar Rapids and Des Moines, Ia.; Omaha and Lincoln, Neb.; Topeka, Kan.; St. Joseph, Kansas City, Jefferson City, St. Louis and Springfield, Mo.; Decatur, Ill.; Terre Haute and Indianapolis, Ind.; Louisville, Ky.; Cincinnati, Dayton, Springfield and Columbus, O.; Wheeling, W. Va.; Pittsburg, Harrisburg and Philadelphia, Pa.; Trenton, N. J.

Mr. Groshut will probably be away at least two months, and on returning will go through the South and Southwest.

HOW THE DOLLAR MOVES.

An Illustration in Multiplication Which Like the Acorn Grows Large Oaks of Profit.

Here is a simple problem in multiplication: If you invest a certain amount of money in a piece of music, or a banjo, mandolin, or harmonica, or any other side line item which you handle, and then sell it at an advance of 15 cents, you have made 15 cents.

If you use the same money for the purchase of similar goods, and make four such deals in a year, you have cleared 60 cents.

If you have $10,000 in your business, and are able to turn it over four times a year, you are on the same level as the man who has $40,000 and turns it over once in a year.

If the above don't carry its own moral, then there is no moral to be made out of it.

That is a great question in selling goods: To sell the goods, and get the money out of them; to have that money to put back into other goods, to sell again.

If you have a dollar locked up in some old slow-coach of an article, go at it with all your might, and get that dollar out. Then speed it forth after something else that will move livelier; keep it at work, and make it earn something all the time.

Better have your money in a savings bank at 3 per cent. than in some old "storekeeper" at nothing at all.

STATIONERY AS A SIDE LINE.

A Line Always in Demand—The Local Dealer Gets the Trade—An Excellent Offer to Those About to Install Such a Line.

Everybody writes letters, and consequently everybody must buy stationery either in large or small quantities, and the general inclination is to buy it at the most convenient store. The dealer who has a side line of writing paper and envelopes is therefore in a position to build up a large and profitable trade in same in his immediate vicinity. Those considering installing such a line should not fail to peruse the announcement of the Berlin & Jones Co., New York, offering an assortment of writing paper and envelopes, 100 boxes, sufficient for the nucleus of a stock, for $15. The stationery is of good quality and sells for 25 cents and more per box, ensuring an excellent profit for but little effort.

HOW PIANOS MEAN PROFIT

For the Talking Machine Dealer—Appeal to His Customers Who Appreciate Music—How Coin-Operated Electric Pianos Can be Made to Produce Large and Steady Income.

Many talking machine dealers have realized the advisability of installing pianos as a side line, and the success that has attended such a move has been most pleasing. Pianos, as musical instruments, naturally appeal to those people who are regular purchasers of talking machines and records, for such people have an appreciation of music, and generally have a desire to get away from the machine-made product occasionally and make their own music by means of various instruments. Several lines of pianos have been exploited in the columns of The Talking Machine World, and dealers have shown marked interest in the possibilities of handling such a line.

Coin-operated electric player-pianos are a line that brings profit to the dealer two ways. He can sell them outright to amusement resorts, cafés, etc., at a good figure, and incidentally create a customer for additional music rolls, or make still more money by installing the pianos in various public places on a commission. The gross earnings of these instruments in a fairly good location make a surprising total, and the cost of the piano is soon cleared, the further receipts being gilt-edged profit.

JAPAN AS A BICYCLE CENTER.

Japan is quite a center for bicycles, according to Consul John H. Snodgrass, who, writing to the Department of Commerce and Labor at Washington, from Kobe, states that, although the imports of bicycles into Japan have notably decreased of late, there are still some 40,000 vehicles imported every year. In that country they are now used rather for practical purposes than for pleasure. In addition to those imported entire, separate parts are imported, it is estimated, sufficient to make about 50,000 bicycles. Besides imported machines, some 40,000 or 50,000 are manufactured in the country every year. The total number of bicycles now in use in Japan is estimated at about 350,000, and their duration of life is not longer than five years, on an average. The demand for tires is estimated at 200 pairs per day. Not more than 60 pairs are made in Japan, the rest being imported. In 1907 Great Britain furnished 30,000 bicycles to Japan, and in addition $270,000 worth of parts, while the United States furnished 3,218 bicycles and $178,000 worth of parts.

HERE AND THERE IN THE TRADE

Within three months the majority of the amusement parks in all sections of the country will be in operation for another season, and as last year most of them will include among the attractions a roller skating rink. These rinks offer an excellent field for the dealer handling roller skates, for new skates have to be purchased each season, as the old ones are lost, broken or worn out. If the local dealer is industrious he will land that rink trade by energetic action. Then, true, there are the private skating enthusiasts and the children to be catered to, whose interest in the sport is kept alive by the proximity of the rinks. A good line of roller skates is a paying investment, and a line to the Union Hardware Co., Torrington, Conn., who make roller skates, will bring valuable information on the subject.

* * * *

It's easy enough to be cheerful when life flows along like a song, and after all it's not so hard to be cheerful habitually if you take the pains to get the habit.

* * * *

The value of the post card collection is enhanced manyfold by the use of the Mayer Reflectograph manufactured by Charles W. Mayer, Rochester, N. Y. The views on the cards are enlarged to pictures from 6 to 8 feet square, with all the colors of the original preserved and brought out. Acetylene, gas or electricity may be used in the Reflectograph with equally good results.

* * * *

Don't worry when you hear that a purchaser to whom you had almost sold goes across the street and buys from your rival. In a similar manner, you have made a good many sales which your rival thought he had safe in hand.

* * * *

Wright & Ditson's celebrated tennis balls are as usual to be used at the National Championship Tennis Tournament to be held shortly. The great majority of the tennis champions ascribe a large part of their success to their wisdom in using the Wright & Ditson rackets. The dealer will profit by writing to Wright & Ditson, Boston, for a catalog of their lawn tennis goods and ascertaining the advantages in handling the line.

* * * *

Don't tell your story too glibly. The man who rattles off his piece about the goods, as if he had said it a thousand times, doesn't inspire any too much confidence.

* * * *

In a very few months, when Nature puts on her garb of spring, outdoor photography will again be in high favor. Have you a line of cameras and supplies to supply the enthusiasts in your section, cameras that when once sold, stay sold? If not it will pay you to communicate with the Seneca Camera Co., Rochester, N. Y., who have some very interesting information on tap.

* * * *

Don't lavish all your exquisite politeness on the pretty young ladies and well-dressed people who come into the store. The old man with a gingham umbrella and cowhide boots has silver and gold sometimes in his pockets.

* * * *

The season is rapidly approaching when the lover of outdoor sports comes into his own when gun and rod, golf club and racket again reign supreme. Dealers are now getting in touch with the newest features in the year's line of sporting and overhauling stocks preparatory to placing orders. Those familiar with conditions in the sporting goods field predict a record-breaking season for the dealers who are prepared. Are you numbered among them?

MARATHON CRAZE HELPS TRADE.

S. B. Davega Reports Heavy Demand for Running Outfits—His Success With General Sporting Goods.

Thanks to the Marathon craze, S. B. Davega, of 126 University Place, is realizing considerable in the sale of running pants, sweaters and other requirements for the athlete. He has proved thereby to his satisfaction the efficacy of sporting goods as a side line to his talking machine stock.

Mr. Davega has left his Fourteenth street store and converted a wing of his store on University Place into a spacious emporium with a gallery. There he has moved his entire stock.

While carrying on his extensive wholesale trade, Mr. Davega sells sporting goods of all varieties. Cameras, ice skates, tennis paraphernalia, Ingersoll watches, college pennants, deer heads and other specialties are conspicuously exhibited and from their sale is realized no small profit.

The wide-open success of S. B. Davega's side lines bear testimony to the fact that there is little narrow-mindedness on the part of tradespeople dealing exclusively in wholesale. The latter in few cases are prejudiced by the appearance of side lines with the general stock. If there has been any loss in the wholesale trade it has not been observed by Mr. Davega, whose side lines have spelled for him in increased business capacity and many extra dollars.

THE HERO WHO WOULD NOT ADVERTISE.

Captain Mark Casto, of Atlantic City, N. J., breveted "hero" by thousands of newspapers two years ago, is a bankrupt. The sheriff took his property last week and sold it at auction. He is a silent man. He shrinks from the spotlights. He put away his "hero" decorations in the bureau drawer. And so he failed, because he knew not how to advertise, or he had not the advertising temperament, says a writer in the Editor and Publisher.

Two years ago a big ship with many passengers ran on the bar off Atlantic City. The wind screamed. The waves pounded her to pieces. The population of Atlantic City stared incompetently from the Board Walk. The official life savers could not launch their boats, nor send any help.

Then came Mark Casto, a fisherman, with his little sloop, of which he was skipper and dubbed "captain." He sailed his craft out in the teeth of the storm. He took off the passengers. If ever there was a gallant feat of seamanship that was one. Honest sailors are not given to the use of the word "hero." They do what is to be done. So do men of the fire departments—"all in the line of duty."

Nevertheless, the newspapers said Casto's grit and good seamanship was "heroism." His name was in the headlines of 2,000 dailies and several thousand weeklies—always with the adjective "Hero."

A few months later the writer of this was at Atlantic City. He said: "Where is Casto? I'd like to sail an hour with him. He must be making lots of money taking people out for a ride at 50 cents a head."

But no Casto was near. He was away by himself, a cable length from the beaten way, mending fishing nets. Said a shrew skipper:

"Casto is a fool. He ought to be coining money. If I was him I'd have a broad pennant big as a man o' war ensign, flying from the masthead with 'Casto, the Hero,' on it big enough to see a mile off. An' I'd have my ad. in all the papers. What's the use of bein' a hero if you stick to fish nets?"

Alack, the fishing at Atlantic City has been poor. The times have been hard. Casto's boat was like the other boats, and how could the crowd pick a hero's boat if the hero didn't speak up?

Poor hero Casto! And to think that he performed a fine, gallant piece of seamanship, such as real sailormen know!

What's the use of being a hero, if "heroism" is not advertised?

SEEKING FOREIGN TRADE.

Some Important Suggestions to Safeguard Manufacturers of Talking Machines and Supplies as Well as Other Merchants in Making Trade Inquiries Abroad.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 9, 1909.

The following suggestions concerning the best means of safeguarding Americans seeking foreign trade through consular inquiry, and from foreign inquirers seeking American trade through the same channel, a system which has grown to unexpected proportions, is furnished by Consul W. Henry Robertson, of Gothenburg, Sweden:

"American manufacturers or exporters writing to a consulate regarding the introduction of their goods abroad, and asking that their letters be referred to some one who might act as their foreign agent, or who might purchase from them, should invariably give their exact prices, terms and conditions as far as possible, and should furnish at the same time banking or commercial references. Otherwise, in this consular district at least, it is practically impossible to induce anyone to take the slightest interest in such inquiries. Many important trade opportunities are lost through inattention by our exporters to these all-important details. Foreign dealers will not take the trouble to enter into correspondence with American firms without at least prima facie evidence that good results are likely to ensue.

"Where American exporters write to a consulate, looking to an increased sale of their articles abroad, they should invariably advise it as to any agents they may already have in the consular district, or the country itself, so that embarrassing situations may be avoided and the consulate may be assured, before seeking additional agents for such firms, that the ordinary ethics and usages of honorable dealing are not being violated. This consulate, in one instance at least, was allowed to suffer the embarrassment of submitting such a letter of inquiry of an American house to the firm's own agents here, who had happened just before that to have made a very fine sale for it.

FOREIGN IMPORTERS SEEKING INFORMATION.

"Where foreign importers apply to a consulate for the names of American exporters, or where such inquiries are referred by the consulate to the Department of Commerce and Labor, it is thought that it would frequently save not only much useless correspondence, but possibly some unfavorable business connections for American exporters, were such inquirers invariably required by the consulate to first furnish such banking or commercial references as would indicate on the surface that connections with them were justifiable and likely to be profitable to our trade. In other words, without carrying with it any undue responsibility upon the consulate in the matter, the very fact that the latter had furnished a foreign inquirer with the names of American exporters in his line, or that it had referred his request for the same to the Department of Commerce and Labor, should of itself justify a favorable assumption at home with regard to such inquirer as a foreign purchaser or agent. Moreover, such foreign inquirer should understand that his overtures would be given a much more prompt and satisfactory attention in the United States if as clear a statement as possible of his terms and conditions, and of his ideas of the general possibilities of the foreign market for the goods in question, would accompany his inquiry.

"It is assumed that most of our consulates, without taking upon themselves any responsibility for connections that may result, extend a general standing invitation, indirectly through the local press or otherwise, to possible importers of American products within their several districts to file with them their names and the articles in which they are specially interested. It would seem still better if the banking and commercial references of these parties and their general terms and conditions could be filed at the same time, with permission for their full use

properly by the consulate. In this way we could not only put our exporters in touch with all the reputable houses in our several districts, but it could be seen that so far as the consulate was concerned they got in touch with no others and were spared no end of useless correspondence and investigation.

"It would also be of great advantage in several ways if foreign importers or agents could be induced in all cases to let the consulate know exactly the names of American firms from whom they import, or whom they represent, and the articles that they receive. In all such instances the exporter, the importer, and the consulate can only have a common interest, and this can always be best advanced where there is a mutual understanding of the situation, mutual confidence, and a thorough co-operation in the matter. For example, in the case of newspaper or other attacks upon American products in a foreign country, far better methods for combating and for measuring the effects of these can be adopted through united than through individual effort.

CENTRAL BUREAU OF COMMERCIAL INFORMATION.

"A very serious and practically needless loss of valuable time would be saved our consulates and American trade interests abroad would be far better subserved in every direction, were American exporters repeatedly encouraged, through the medium of the Daily Consular and Trade Reports, to look more and more to the Department of Commerce and Labor, rather than directly to our consulates, for just the advice and information needed for the successful introduction of their goods abroad. In fact, if our consulates are to properly perform the time-consuming duties now expected of them, along with their other work of keeping the Government promptly and accurately posted on all commercial facts and figures of their respective districts and on the opportunities therein for American trade, not only exporters but the American public as a whole must be brought to increasingly regard the Department of Commerce and Labor and its Bureau of Manufactures as a central bureau of information on all commercial matters, foreign and domestic, and our consulates as contributing, but not distributing, sources of such information.

"If consular officers are to spend the time necessary for properly procuring the commercial information now exacted of them, they cannot possibly have enough left for disseminating this information in answer to the constantly increasing number of repeated inquiries on the same subjects. It is, therefore, strongly suggested that as the Department of Commerce and Labor is put more and more by consular officers in possession of the commercial data and conditions of their various districts and countries it should constantly make use of the most available means at its disposal to educate our people, whether private parties, firms, corporations, State officials, or others, to allow all their requests for information on commercial or any other subjects on which we are supposed to keep our Government posted to reach us through the Department of Commerce and Labor, and not directly.

UNNECESSARY LABOR FOR CONSULS.

"Whatever criticisms may be made against the consular service of the United States as a whole, I have never heard it charged with a lack of industry or alertness, and the plea herein made is not at all one for lessening work, but against wasted or misdirected effort. It is merely intended that with the same amount of energy in more practical directions much more useful results shall be achieved. As it is now, a formidable and constantly increasing mass of inquiries is received in practically each United States mail, many of them very comprehensive and on subjects on which each consulate has already repeatedly reported to Washington and to various individual Americans interested in the same lines. These inquiries would never have been addressed to the consulates at all, or certainly not in the form in which many of them are made, if the writers themselves had only thought of first consulting the proper department of the Government at Washington; and if they are to increase as rapidly in the future as they have done in the past, it will be impossible for even a consulate of the grade of Gothenburg to take care of them.

"A single instance may be given. My predecessor reported last June upon a miniature telephone, or microphone, invented by a Swede, which was expected to be of great convenience to employes at telephone stations, and also of service to persons with defective hearing. This report gave all the information on the subject available at the time, and carefully stated the name and address of the inventor [which was filed for public reference at the Bureau of Manufactures], so that those interested might apply to him for further details. Instead of thus disposing of the matter, so far as the consulate itself was concerned, it has done just the contrary. The press of the United States evidently made some incomplete reference to the report that was widely copied throughout the world, for the consulate has already been obliged to answer some 47 letters of inquiry on the subject from all parts of the United States, Great Britain, Cuba, Australia, Canada, etc., and they are still coming. It will readily be understood that, with the limited clerical assistance at consulates and with no funds for preparing printed replies to such inquiries, such an experience, which is not at all an uncommon one, almost deters a consul from making such reports at all, since the alert, energetic officer who makes the most reports, and consequently has the least time to spare for needlessly repeating them, is the one who gets the most inquiries. It would seem only fair, then, if consuls are to carefully collect the information, that the Department of Commerce and Labor, with its special equipment for this very purpose, should disseminate it.

ADVANTAGES OF SYSTEMATIC WORK.

"In the case of trade inquiries, a requirement that these should come through the Department of Commerce and Labor would not only spare consulates and the Departments of State and of Commerce and Labor the present system of circumlocution, but would have other distinct advantages: (1) The Department of Commerce and Labor could best judge whether the character of the inquirer and of the inquiry justified such a reply as consular officers now always feel obliged to make; (2) all the information desired may already be on the files of that department, which could almost always give it in more complete and accurate form for a whole country than could a single consular district; (3) in many cases where a consul now has to give long lists of importers, manufacturers, etc., and to make comprehensive reports on matters that can only come to naught, the Department of Commerce and Labor could briefly point out in reply that the difficulties in the way of introducing this or that article into a certain foreign market were simply insuperable, and that would be an end of it for all concerned; (4) the loss of time to the writer of having to await an answer from abroad, instead of from Washington, would be obviated.

"Nothing in this report is intended to mean that a consulate should not at all times be called upon wherever any American desires information from its district which the Government decides it is proper to thus secure, and which has not already been furnished to the proper department at Washington. Such inquiries could be readily referred to consulates by the Department of Commerce and Labor."

BURNS-BRITTAIN CO. SCHEDULES.

Schedules in bankruptcy of the Burns-Brittain Co., mail order business for phonographs, moving pictures, etc., 194 Broadway, show liabilities of $4,792 and five claims, whose amounts are unknown, and nominal assets of $72,326, consisting of stock, $3,050; machinery and fixtures, $2,900; phonographs held by others, $500; accounts, $4,154; open accounts on consigned goods, $60,000; cash on hand and in bank, $72, and cash deposits on contracts forfeited, $1,650.

THE ERA OF THE SUCTION CLEANER.

"Away with dust and dirt" is one of the slogans in the war against tuberculosis now being carried on all over the world, and it is the careful housewife who insists on going through the house every day with broom and duster who really does not heed the cry. Sweeping simply removes the dirt and dust from one spot and deposits it in another, largely in the lungs of those nearby. The Peerless Suction Cleaner, exploited by the Manufacturers Outlet Co., New York, however, entirely removes dirt and dust by suction, and besides being a perfect cleaning device, is a safeguard to health. The dealer will find that the prices make sales easy, with a tidy profit insured.

It doesn't pay to recommend goods a bit higher than they will stand. A customer fooled that way once, won't give you a second chance. It pays to be square.

A MOST PROFITABLE SIDE LINE

You can take an ordinary picture post card, a photograph or any opaque picture; place it in the "REFLECTOGRAPH" and the picture will be reproduced, life size, with all the colorings of the original, on a sheet from 6 to 8 feet square. While it will do anything and more than a magic lantern will, it does away with the inconvenient and expensive glass slides.

DESCRIPTION: Height, 15 inches; length, 13 inches. Made of Heavy Tin Plate and Steel. Finished in Black Enamel with Gold Panels. **BEST TIGER'S EYE LENSES.**

PRICES: Acetylene, $5.00; Gas, $5.00; Electricity, $5.00. Complete, ready to run.

We also manufacture 17 styles of Post Card Display Racks at lowest prices, including **Mayer's Revolving Card Rack,** Collapsible—50 pockets holding 1,500 Cards. **Mayer's Sectional Holders** for home use, and **The "Rochester" Oak Frame,** Displaying 50 cards and holding 4,000. AGENCIES WANTED IN ALL COUNTRIES.

FOR FURTHER PARTICULARS, ADDRESS

CHARLES W. MAYER, 10-12 Furnace Street, **Rochester, N. Y., U. S. A.**

VISITING A BASEBALL FACTORY.

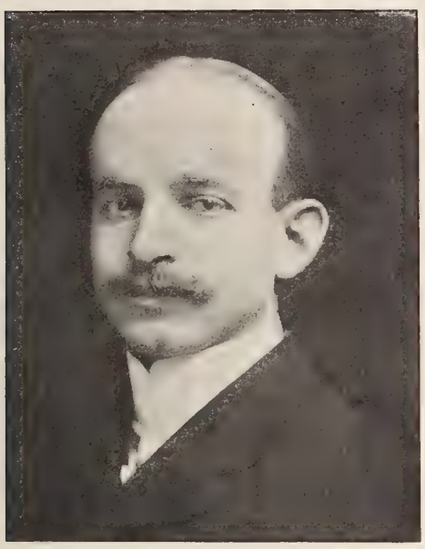
The Representative of the Side Line Section of The World Spends a Pleasant Time Inspecting the Great Plant of Goldsmith's Sons.

(Special to The Talking Machine World.)

Cincinnati, O., Feb. 2, 1909.

It was the good fortune of The World representative during a recent visit to this city to be shown through the factory of P. Goldsmith's Sons, one of the large sporting goods manufacturers of the United States. This concern manufacture 6,500 baseballs every day, varying in grades from the 5-cent to the $1.25 league ball.

In the manufacture of the cheaper balls the operation is so fast that it requires two men to operate the machine that compresses the substance into shape—one for loading and the other for finishing. The better grade of baseballs are



ONE OF THE GOLDSMITH "BOYS."

wound on special winding machines of wonderful accuracy and precision.

In the manufacture of a league ball there are a great many operations that the ball passes through before the cover is sewed on. Starting from the rubber center, the four-ply wool yarn is wrapped on under very heavy tension until the ball reaches a certain diameter, and then three-ply white yarn follows, until the ball reaches a certain diameter.

In the next operation the ball is placed back on the machines and then wound with the finishing extra fine-grade three-ply yarn, and then the finishing twine for the outside surface of the ball. The ball next passes through an inspector's hands, who tests it for weight and circumference, and if there is the slightest variation from the standard gage, the balls are returned to the winding room. Those that have passed inspection are now ready for the cover.

Owing to the large output, this concern has its own tannery in Covington, Ky., for tanning the sheepskin covers for the baseballs, and another plant in Newport, Ky., that does the sewing.

This plant turns out over 2,500 balls per day, and in addition to this they have two delivery wagons operating as far as 40 miles into the surrounding country, delivering a case containing 60 dozen baseballs, covers, needles and thread sufficient to cover them. These balls are sewed by the country folk at their leisure time, and when finished the delivery wagon on its regular trip calls for the finished work and then leaves another case to be sewed. The baseballs when finished are brought to the factory and then inspected and stamped upon a stamping machine, which was the first machine of its kind ever used for the purpose, stamping the trade-mark, number, name, etc., on in one operation, while heretofore it required many girls, as there was different stamping. This machine turns out twenty complete stamped balls a minute.

In the glove and mitt department, which is operated under a separate superintendent, who is a specialist in his line, the same attention is paid to detail and to special machinery to turn out each and every item exactly alike. A very large and heavy power press is on this floor for cutting out the felt linings for fielders' gloves and catchers' mitts. Heavy steel dies are used which cut out as high as two dozen linings in one stroke. The better grade of goods are cut by expert hand cutters, who sort the best part of the hides for the various grades. All finished gloves and mitts then pass to the inspection department, where they are carefully examined, stamped, a guarantee ticket attached, and then carefully packed.

In the clothing department, which is also in charge of a separate superintendent, who is an expert in this line, we find them busy making baseball suits, athletic shirts, running pants and college pennants.

One of the features so noticeable in these various departments is the arrangement of motors, each and every department having from one to two motors. Mr. Goldsmith, who showed me through, stated that they found this a very great convenience, each department being entirely separate and convenient when operating at night.

Within the last six months a new system was introduced with the selling and manufacturing department of placing an unrestricted guarantee on all of the goods which they manufacture. They want those who buy Goldsmith sporting goods to know that the manufacturer stands behind them and are only too glad and ready to replace any article which does not give full measure of service and satisfaction.

Goods are being shipped to Europe, Australia, South America, and as far as Japan, and the Goldsmith line is well represented and sold by the largest jobbing houses and dealers in the United States and Canada.

This firm issue four very attractive catalogs each season, as follows: Baseball and Baseball Supplies; Striking Bag, Boxing Glove, Football Supplies, Athletic Clothing; Felt Pennant and Pillow Covers; Baseball Stock Uniforms, which they make from $6.75 per dozen upward; Color Book of Athletic Flannels for Baseball Suits made to order. These will be gladly sent upon request to those who are interested. They report business as exceptionally good and the outlook for the coming baseball season to be brighter than ever.

ADVERTISING AS AN ADVANCE AGENT.

The traveling salesman entered the hardware store, walked up to the proprietor briskly, and handed him a card.

"I am introducing," said he, "the metal anti-absorbent corrugated vehicle wheel, that has been warranted——"

"Never heard of it," said the merchant, as he turned away. "We have a lot of the old kind, and they are good enough for us."

"But I would like to show you a sample. They are warranted to——"

"I guess you will have to excuse me; never heard of them, and have no interest in them." And he turned away, and shook hands with a customer who was coming in.

The same store, twenty-four hours later: Enter a salesman, who hands his card.

"We are the manufacturers," said he, "of a patent rapid-action assorted demi-toned steel trimmer, that——"

"Glad to see you," said the merchant. "I have never seen one of those, but have wanted to. I saw a cut in the ———— Magazine, and your card has stared at me from its pages for two months past. See, here is the card. Show me how it works."

A natural interest had been aroused; the salesman had easy sailing, and a new customer was made.—Hardware Magazine.

PUT YOURSELF IN EMPLOYER'S PLACE.

Try imagining yourself in your employer's place and see what sort of a clerk you think you are making from his point of view.

66⅔ Per Cent. Profit For YOU

A selection of one hundred boxes of writing paper to retail at the popular price of 25c. or over.

Twenty-five cover designs—four each of a design—flower, fancy heads, and regular cover paper. Boxes contain one quire and twenty-four envelopes of good linen-finish paper in sizes now used.

We have been in business fifty-nine years and guarantee this assortment as being one of the best we ever put out. Save you trouble of selecting the right thing.

Display matter included without charge.

A KNOWLEDGE OF HISTORY

Carried on by Means of Post Cards—Historic Speeches Made Known—W. G. Frazer's Clever Plan to Aid the Dealer.

There is not a large city in the United States or, for that matter, in any country where there are not buildings of historic interest, views of local, national or even international interest, or perhaps it may be just a view or views that are shown to the visitor only because of local pride.

While the foregoing is true in all large cities wherever located it is just as true only in a less conspicuous way in every town throughout these United States, either in the North, South, East or West. It goes without saying that there are more historic views in the East than in the West, it is equally true that there are more scenes of local and national interest in the West than in the East, nevertheless our country is honeycombed with scenes of which we are all very proud.

More than twenty-five years ago it dawned upon the people of Germany, Italy and France that they too had a very large number of scenes, buildings and historic spots, and that it would be a very wise thing to make these known to the world in an effective but necessarily an economical way.

After repeated efforts and experiments it developed that a card could be printed showing the outlines of the building that they wished to describe, but not giving a very good view of the scenes in which they wished to interest the world.

From this feeble effort but earnest desire to illustrate these different subjects in an original way has grown the modern post card.

During the year 1908 the sale of these modern local post cards in the United States was larger than ever before, and the orders given for delivery during 1909 will make the actual sale for this year of record breaking proportions. This progress has been made in spite of the financial conservatism with which the country has been afflicted during the last twelve or fourteen months.

Many manufacturers have advertised themselves as publishers of these post cards, some of them have spent large sums of money in their efforts to bring their cards to the attention of the retail dealers, but usually orders have not been forthcoming without a large amount of correspondence or the visit of a traveling salesman.

Wm. G. Frazer, manager of the post card department of the American News Co., New York City, has devised a plan that will cut off all the unnecessary correspondence and also the visits of salesmen, especially to the dealer who wishes only to supply himself with cards which will please his customers and yet offer them a reasonable variety of good quality at a fair price. If you will write Mr. Frazer you will receive by return mail all the necessary information condensed so that you will be able to place your order at once without asking a single question.

This house is long and favorably known as keeping their agreements and the dealer placing his order with them will take no risk as to quality, price or delivery on time agreed.

In addition to these matters in connection with your orders they will guard your photographs with zealous care and other cards will not be published from them no matter what inducements may be offered this company.

Now is the time to arrange for a stock of cards for the spring and summer trade so that there will be no chance of disappointment in deliveries.

SIDE LINE QUESTION DISCUSSED.

Interesting Views Entirely in Sympathy With Those Previously Expressed in These Columns of a Prominent Trade Authority—Sporting Goods a Suitable and Productive Side Line for Talking Machine Dealers.

(Special to The Talking Machine World.)
Philadelphia, Pa., Feb. 8, 1909.

Chatting recently with one of the brainy executives of the A. J. Reach Co., of this city, on trade elasticity he said: "You are right when you say that one of the crying needs of the talking machine business is a suitable and productive side line. This is a matter that has so often been discussed and advocated that I only state it as the premise of what follows. Admitting the need of a side line the question has always been presented, and never quite satisfactorily answered, as to what would constitute a suitable and productive side line—suitable as to combination, and productive enough to warrant the expenditure of time and money to warrant its prosecution in connection with the main line, the talking machine business.

"Mature reflection has led me to the conclusion that sporting goods furnish the very best side line for several potent reasons. Such goods appeal to the same vast and varied class to which the talking machine business appeals—to the class which desires amusement, must have it, and is always willing to pay the price. The sporting goods line, moreover, is clean, compact, easily handled, with limited manufacture and competition; and it affords a good margin of profit to the retailer—a very important consideration in these days of close prices."

Now having determined upon the advisability of sporting goods as a side line it is not a matter of great difficulty to determine upon the source of supply. It is not too much to say, for it is widely admitted, that a leading house in this field is the A. J. Reach Co. They are strictly a manufacturing concern, maintain a uniform level of prices, do not retail at all, and in all ways protect the retail dealers who are their chief, in fact, their only customers.

ENORMOUS SUM FOR CALENDARS.

It is roughly estimated that $18,000,000 have been spent by business men of the United States for calendars which are given away as gifts during the year just opened. Some of these calendars cost to produce from fifty cents to a dollar.

FOR LIVE DEALERS ONLY

Here is a chance, Mr. Talking Machine Dealer, to form an alliance with a business concern which will mean a revolution in the money-making powers of your business.

We have the product and the plans which will help you to make money easier and more rapidly than ever before.

KOHLER & CAMPBELL

have a Piano Selling System which works Wonders For Dealers who co-operate with them. Positively sells pianos without expense to dealers. Without question the greatest scheme ever inaugurated. Hundreds of their representatives have reaped big returns from the plan. Why not you?

Do not delay writing for particulars concerning this business creating proposition. Delays will mean the postponement of money making. Can you afford to delay?

You can command our experience and knowledge gained and immediately apply it to your own trade development. Write for particulars.

KOHLER & CAMPBELL, PIANO MANUFACTURERS STATION G, **New York City**

NOTE—Last month's insertion of this announcement brought in a large number of inquiries from Talking Machine dealers all over the States, to whom we have communicated our successful piano selling plan, and we are glad to say that they are already reaping very gratifying benefits therefrom. We can do the same for you!

DO IT NOW

Note—Mention "Side Line Section."

ANNOUNCEMENT FROM REGINA CO.

Move Wholesale Headquarters from Rahway to New York—Visitors Heartily Welcome.

Rahway, N. J., Jan. 22, 1909.

To the Trade:—On Monday, January 25, 1909, we shall move our wholesale headquarters from Rahway to New York City, combining the same with our retail sales department, at Broadway and 17th street.

To facilitate the handling of business and to avoid delays, all dealers who have been accustomed to address us at Rahway should from now on address all orders and correspondence to us at Broadway and 17th street, New York.

Shipments will be made from Rahway as heretofore.

Our accounting department will remain at Rahway, and all remittances and correspondence relating to settlements should be directed to the Regina Co., Rahway, N. J.

All instruments or parts of instruments returned for repair, exchange or credit should be sent to Rahway, N. J., but correspondence regarding such shipments should be sent to New York.

Dealers in the West who have been transacting business through our Chicago office, at 259 Wabash avenue, may continue to do so as heretofore.

Dealers visiting New York are invited to call and inspect our new lines of samples and to make our New York office their headquarters if they so desire. Old customers, as well as new ones, will be cordially welcomed. Yours very truly,

THE REGINA CO.

On Jan. 30, Jos. Blumberg, general manager and L. T. Gibson, secretary, of the Regina Co., occupied their offices in the company's premises, Broadway and 17th street, New York. Maurice Chaillet has also come over from Rahway, N. J., and will be permanently in the city also. About a third of the store floor will be utilized for the company's general office, the remainder, with the basement, will be devoted to a display of a complete line of their music boxes and slot machines, in which they will carry on both a wholesale and retail business.

NO END TO INGENUITY IN SELLING.

This is the story of a man who had a $20,000 stock and wanted to turn it into money in a hurry. The unnamed genius was a South Carolina retailer who had enough sporting blood in his veins to think of a variety of live things to do. He arranged a dog and wagon race, free for all, to the dog-owning boys of the town. Entrants were required to register at the store and be credited with at least $100 sales. These sales were managed in this way: When the boy reported as a contestant his name was given to the cashier, and then when a customer made a purchase the clerk either asked or the customer indicated to what boy the credit was to be given and his name was written on the sales slip, and when this went to the cashier the credit was given to the proper boy. When he had reached $100 to his credit an entry card was issued to him. The boys solicited their friends, relatives and everyone they could get hold of to buy at this man's place, so they could get the credit.

For ten days before the date of the races it increased his sales, over the same days of the year before, from $100 to $400 a day. On the day of the race his sales were almost double the best he had had. The day following was a little quiet, his sales dropping off just a little, but they were $100 more than they were on the same day the previous year.

The race came off on schedule time and people came from all the countryside to see it. The winner was awarded a dog cart and harness, furnished by the local wagon and harness maker, in return for the liberal advertising afforded by the contest.

It was a big success all round, and the merchant had to replenish his stock to care for the new trade drawn to his store by the unique advertisement.

Brains certainly do pay well anywhere; and a little ingenuity will tide almost any merchant over a tight place.

IS THIS THE PERFECT MAN?

An Analysis of What the Hundred-Point Man Is—Nearly Approaches Perfection.

Elbert Hubbard descanted recently in his inimitable way about men and things in the Philistine. He said: "A hundred-point man is one who is true to every trust; who keeps his word; who is loyal to the firm that employs him; who does not listen for insults nor look for slights; who carries a civil tongue in his head; who is polite to strangers without being fresh; who is considerate towards servants; who is moderate in his eating and drinking; who is willing to learn; who is cautious and yet courageous.

"Hundred-point men may vary much in ability, but this is always true—they are safe men to deal with, whether drivers or drays, motormen, clerks, cashiers, engineers, or presidents of railroads.

"The hundred-point man may not look just like all other men, or dress like them, or talk like them, but what he does is true to his own nature. he is himself.

"He is more interested in doing his work than in what people will say about it. He does not consider the gallery. He acts his thought and thinks little of the act.

"The hundred-point man looks after just one individual, and that is the man under his own hat; he is one who does not spend money until he earns it; who pays his way; who knows that nothing is ever given for nothing; who keeps his digits off other people's property. When he does not know what to say, why, he says nothing, and when he does not know what to do, does not do it."

DISCOVER THE WEAK POINT

In Competitor's Lines and Then Profit by That Knowledge, the Secret of Successful Dealing.

Whenever two men meet with the same class of merchandise to sell, the one must show an advantage over his competitor by way of price or quality of the merchandise, or he must be more quick in argument and state his claims with more force than is possible for his competitor to do. The purchaser will be controlled in his decision by what seems to him to be to his advantage. This is what every retailer wishes to accomplish by his articles of publicity. He wants to show the people that it is to their interests to buy his goods; that they will save money by coming to his establishment; that he had a line of goods superior in quality; that he offers better opportunity to his customers for making a good collection; that he carries nothing but merchandise of the latest introductions. He must study the tactics of his competitor as closely as a general would study the movements of an enemy, that he may learn the weak points in his methods says the Clothier and Furnisher. This weak point having been found and the attack made, an advantage is at once gained by which he will profit. The attack is not made in a way to bring forward the competition, but through the article of publicity, so as to cover the weak method observed in the competitor's system of meeting competition.

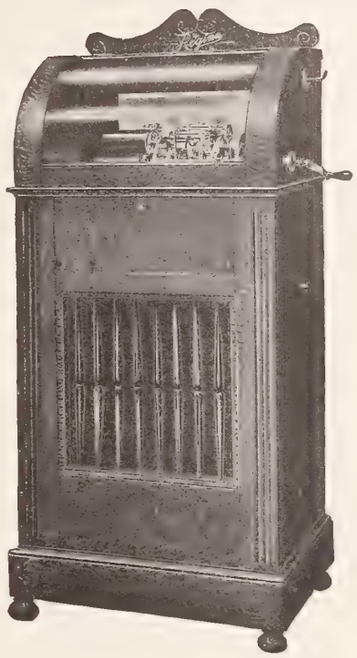
ROTHLEDER'S TRIP TO DAYTON.

(Special to The Talking Machine World.)

Dayton, O., Feb. 1, 1909.

C. F. Rothleder, a prominent piano dealer of Pittsburg, Pa., and a member of the firm of Rothleder & Schwalm, who own several of the largest picture theaters throughout the country, including the Jewel and the Third Street Theater in this city, was recently in the city looking after his business interests. Mr. Rothleder is optimistic over business conditions.

HERE IS A Money Maker



The New Regina-Hexaphone.

Have you seen it ?

It has a slot attachment, and you will see from the illustration above that it does away completely with the unsightly horn; the one used in the Hexaphone is concealed inside the cabinet.

There is big money in the Hexaphone agency for live dealers, and there is no instrument that will produce better results.

It's a money maker.

It requires less room than many of the coin operating machines, and has little liability to get out of order.

It makes money while you sleep.

If you wish to increase your business profits, get the Hexaphone Agency.

The New Regina-Hexaphone is a new talking machine holding six different cylinder records. After inserting coin any one of the six records can be selected and played

It takes standard talking machine cylinder records, which are very inexpensive, easily procured, and offers an endless assortmen of all kinds of music. These records can be easily taken out and changed by the operator.

The Regina-Hexaphone is simple, substantial and compact, has an excellent tone and is a big attraction and a winner.

The Regina-Hexaphone is a very popular instrument with slot machine operators; it pays well, is easily handled, weighs but little and a large number can be operated at a very small expense.

The Regina-Hexaphone requires but little manipulation—is always ready—can be played anywhere—will play an unlimited number of airs.

DOING TWO THINGS AT ONCE.

Business vs. Hot Birds and Cold Bottles—The Text: If Whiskey, Cards, Automobiles, or Vacations Interfere With Your Business, Give Up Your Business—No Use Trying to do Two Things at Once!

There was an old fellow down in the hoop-pole region whose eyes were not properly matched when nature was assigning him his various bodily members. And because he was cross-eyed and could look two ways at once, he thought he could do two things at once as well as men who had not been visually crossed could do one thing at a time. And because he tried to do two things at once, he did not do them as well or as quickly as he could have done had he stuck to the one thing before he began upon the other. He was a cutter of hoop-poles, and while he was cutting one, he employed his rolling eye in looking up another. But when the night came and the tale of poles was made, his pile was not as large as that of his more concentrated partner.

The man who is out for the hoop-poles of success in the wilderness of business, sometimes feels a pride of possession in some bias of mental activity that he regards as an asset, when in reality it is a liability. He keeps one eye on the pole he is cutting, while with the other he is looking about for another pole; and neither of the performances can he do well. He is pegging away at the desk bodily, while his mind is somewhere else—on pleasure, politics, outside schemes, the stock market, whiskey, cards, automobiles, vacations—or a lot of other things. Better for him to chuck the business to someone else who can do it properly; and if he must go to idleness or ruin, go it alone, and not take the business with him.

I am not preaching the doctrine of the nose to the grindstone, says a writer in the Hardware Dealers' Magazine. If too much work makes Jack a dull boy, too much work and no fun will make Jack's father a fossil before his time. No man should be so busy, or so full of his business that he cannot unbend his mind and his body, and get out at the right time, and kick up his heels with the colts. Judicious golf has saved many a spleen and doctored many a liver. Put on your coat and skip away, no matter how old or how busy you may be. But don't do the golf act in the office or see visions of automobiles and hot birds and cold bottles while at the desk.

There was a Kentucky old-school gentleman who had over his desk a placard which read: "All business with me must be disposed of before 3 p. m. I shall then go out for a drink. There is no telling what may happen after that." He was a splendid business man. At 9 o'clock in the morning he was at his desk. He drove things like an engine through the day. He was all business. No social calls or semi-foolishness under the name of business could reach him. At 3 o'clock he shut his desk, put on his hat, and went out. No matter what he did, he did not mix his business and his drinks.

The sane business man is the one who gives himself one full, glorious, restful month out of the twelve. He allows his main understudy, or his several understudies, free vacation swing in June and July, and reserves August for himself. He pulls out for his vacation grounds on the first day of the month, and not a letter or telegram reaches him; not a problem is sent to him for settlement; not a word is heard from him, until the first of September sees his sunburned face at the door, and he comes back to his desk, full up to the safety valve of the steam that is to run the machine for the rest of the year. The sane business man, I said. Of course there are others.

The young business man is in more danger from a confused conglomeration of autos, factory costs, cards, invoices, wines, bills of lading, soubrettes and office management, than is his father. The old man has imbibed wisdom from Solomon, and has cut out the foolishness and the frills. The boy is so full of virile strength, and so hard on the bit, that he foolishly thinks he can do two things at once. He is cross-eyed enough to think that he is cutting more poles than he is.

PATENT PENDING

No. 20 MAGAZINE CABINET

Dail's Display Cabinets

Solve the problems of displaying magazines, tablets, post cards and sheet music. These fixtures economize space, make the most attractive way of displaying goods ever conceived. Every one entering your store must see them and *Attention Means Increased Sales.* Built of bessemer steel, each section of pockets being pressed from one piece of metal, no joints or solder to break, nothing on the market compares with them in strength, durability and merit. We have ideas that will interest every retailer, we have made a study of displaying goods in retail stores, our suggestions are

PATENT PENDING

No. 1 POST CARD CABINET

DOING THINGS RIGHT AND WRONG.

A clerk in a well-known lithographic establishment who is business clear through all right, was entrusted with some special work. The concern received a circular recently from a big western bank, announcing the death of the president of the institution. The clerk was instructed to write a letter of condolence in reply. This is what he wrote—here's the very note: "We are greatly pained to learn of the loss sustained by your bank, and extend to you our heartiest sympathy. We notice that the circular you send us announcing Mr. Brown's death was lithographed by a Chicago house. We regret that you did not allow us to figure on the job. The next time there is a bereavement in your bank we shall be glad to quote you on lithographed circulars, and are confident that we can give you better work at less cost than any other house in the business. Trusting that we may soon have an opportunity to quote you prices, we remain, with profound sympathy, etc."

PIRATED PLEASANTRIES.

A certain prominent lawyer of Toronto is in the habit of lecturing his office staff from the junior partner down, and Tommy, the office boy, comes in for his full share of the admonition. That his words were appreciated was made evident to the lawyer by a conversation between Tommy and another office boy on the same floor which he recently overheard.

"Wotcher wages?" asked the other boy.

"Ten thousand a year," replied Tommy.

"Aw, g'wan!"

"Sure," insisted Tommy, unabashed. "Four dollars a week in cash, an' de rest in legal advice."

A young man engaged board and lodging in a private family who were extremely devout. Before each meal a long grace was said. To their dismay and horror the new boarder sat bolt upright while the others at table reverently bowed their heads. When the second day passed and the young man evinced no disposition to unbend, the good lady of the house could endure the situation no longer. "Atheism?" asked she sharply. "No, madam," humbly responded the new boarder; "boil."

The following colloquy took place between Councilor Sealingwax and a witness who "would talk back": "You say, sir, the prisoner is a thief?" "Yes, sir." "'Cause why?" "She has confessed she was." "And you also swear she worked for you after this confession?" "Yes, sir." "Then we are to understand that you employ dishonest people to work for you, even after their rascalities are known?" "Of course. How else would I get assistance from a lawyer?"

"A sailor," said Rear Admiral Mead, "brought a tin cup to an inspecting officer and exclaimed: 'Taste this, sir. That is all I ask. Just taste it.' The officer took a sip. 'Well, really, my man,' he said, 'this is not bad soup at all.' 'Yes,' said the sailor, bitterly, 'and yet they want to persuade us, sir, that it's tea.'"

"Prove if you can that I ever got one dollar otherwise than in accordance with law!" said Mr. Dustin Stax.

"And if I do, what then?"

"Why, we'll appeal the case and hire some more lawyers."

From now on you will meet every little while the mysterious man with sources of political information not open to those who are paying thousands of dollars to find out things.

One of the Greek philosophers expresses the following beautiful thought: "If there is any good deed I can do, or kindness I can show, let me do it now. Let me not defer or neglect it, for I shall not pass this way again."

Mark Twain, while visiting a friend's house, was asked his opinion of a new marble bust representing a young woman coiling her hair. "Very beautiful," said the humorist, "only it isn't true to life." "Why not?" asked the owner. "Hasn't her mouth full of hairpins," said Mark.

"Big talker," declared the Indian who had been listening to a local candidate. "Heap scrap."

"And what if he is not elected?"

"Scrap heap."

"Remember," said the political adviser, "that consistency is a jewel. "Yes," answered Senator Sorghum, "but these days a lavish display of jewelry is not considered polite."

A PROFIT-SHARING PLAN.

Stockholders and Employes of New York Sporting Goods Co. Each Receive a Dividend.

The following address was made by P. R. Robinson, president of the New York Sporting Goods Co., 17 Warren street, New York, at a meeting of the employes called for the purpose of distributing a percentage of the profits for the year 1908:

"The object in calling you together is to confer about our business for 1909, and to present you with a small token of our appreciation of your efforts in behalf of our company in 1908. Our first obligation is to the stockholders, who have invested their money and assumed financial risks, giving us all an opportunity of earning a livelihood. The board of directors have declared a dividend of 5 per cent. on the capital stock of the company, and also a dividend of 5 per cent. to the employes based on the salary each employe has drawn during the past year. I have the pleasure, therefore, of presenting you each with a check representing your share of the bonus. I want to thank you for your loyalty to the company, and am glad to say that your efforts have resulted in a fairly good year in spite of the general business depression.

"I would like to explain that this gratuity is wholly voluntary and is not to be considered as a precedent. It is, nevertheless, the general opinion of the management of the company that some profit-sharing plan of this kind is good for the general business, and while we cannot promise repetition of this distribution, we always want to show our appreciation of your efforts. In other words, I think I am safe in saying that your interests and the company's are identical, and if every employe will do his utmost to increase sales and keep down expenses, his welfare will not be overlooked.

"I sincerely hope and believe that every employe from errand boy to department manager will use his or her best efforts to make 1909 the biggest year we have ever had since the New York Sporting Goods Co. hung out its shingle. I thank you one and all in behalf of the stockholders, directors and officers of our company."

SAFETY RAZORS BIG SELLERS.

Talking Machine Men Enthusiastic Over This Line as Custom Makers.

During some extensive trips the past month The World has had an opportunity of getting into close physical touch with a large number of talking machine men, and we have taken the trouble to investigate how safety razors and accessories are "panning out" as a side line with those who have handled them for some time. In view of what we learned we can unhesitatingly recommend this line to any one desiring a live seller which has at the same time that added feature—a good profit. Of course, like in other lines, there are good and bad razors and while we cannot, of course, be specific we would certainly recommend those that have stood the test of constant use and are well known to the public, for there is no question about the selling value of a name or trade-mark that is well and favorably known.

BANNER YEAR FOR POST CARDS.

James H. Weaver Tells Why Records Will be Broken in 1909—Home Manufacturers Being Preferred to the Foreigners.

(Special to The Talking Machine World.)

Cincinnati, O., Feb. 6, 1909.

James H. Weaver, of the National Colortype Co., of this city, makers of view cards, says that the past year has been the best in their history, adding "what might have been" had general business been normal. "As the general business depression of 1908 is passed, the outlook is exceptionally bright, and the way our orders are being booked shows this will be the banner year," says Mr. Weaver. "Some of our customers, who carry post cards as a side line, write us that it was actually the post cards that pulled them through the hard times of 1908, and that the post card business for the summer months will be satisfactory.

"The German manufacturers say of the post card business in the United States that they only get thousands where they used to get millions. Why? Because the 'millions' are now made in this country, and not as they say, because business has dropped off. I absolutely know that more cards are being sold in the United States now than when the Europeans were getting their orders by the millions. The American business man is too full of energy to wait from four to six months for cards when he can get them at home in two to four weeks, even if he has to pay more for the home cards.

"One of our customers writes us that a canvass among his customers shows that the sales in January of post cards, especially the local view cards, far exceed the previous years."

PUSH PROFITABLE GOODS.

It Will Pay the Dealer Handling Side Lines as Well as Talking Machines.

Profit is the main object of all business. When the end of the year comes and you figure out the result of your twelve months' work the amount of your sales cuts very little ice—it's the amount of the profits you're interested in.

What's the good of doing $100,000 worth of business if the cost of the goods sold, plus the expense of handling them amounts to $100,000, too? You won't feel a bit better for it.

Keep your eyes open for the profitable lines. What if your competitor does more business than you, as long as your profits show up better? It's profit that counts.

You can make a wonderful difference in results of your business by pushing the profitable goods. Let the goods which pay a profit barely sufficient to cover the cost of handling them sell themselves. Put your energy into selling specialties—items which admit of a better margin and don't cost so much to handle.

THE SEASON FOR SPORTS

Rapidly Approaching—Importance of Stocking Sporting Goods at Once—Why Such a Line Means Profit for the Dealer—The Enthusiast Demands the Best.

With the daily papers all over the country devoting large sections of their sporting pages to news of the stars of the great baseball leagues and the doings and plans of these organizations, it is a reminder to the live dealer that now is the time to stock the various paraphernalia of this great national game, for soon the amateurs will begin organizing and equipping "nines" for the coming season. And baseball goods with "class" are the ones that appeal to the enthusiast whether he be seven or seventy years old. One has but to hear the twelve-year-old captain of the "Blinktown Terrors" hold forth upon the merits of a "league" ball or bat or exhibit a first class glove to realize how the quality of the "tools" of the game are appreciated. This game has grown steadily in popularity by leaps and bounds and dealers who are in the sporting goods business are not only making a good thing out of it, but by publicity on their own hook are giving the thing an extra boost. Now while this national game is perhaps at this time of year heard more about than others it is not the only fish in the pond by a long shot—tennis, golf, cricket, basketball, roller skating, fishing and many other sports have their own enthusiastic followers, and as with baseball these enthusiasts demand sporting goods of recognized name and quality, for 'twere approaching sacrilege to risk the losing of an amateur record through a defect in the outfit used.

The devotion of the enthusiast to his particular sport means profit for the dealer handling the goods desired. If any one doubts the opportunities open to those entering this field we would respectfully request him to step around to the nearest place of this kind, where if seeing is believing, it won't be long before some manufacturer in this field will receive his order for the line. One of the beauties of this business is that once you win a customer his purchases are very apt to be not only good, but what is equally important, frequent. If he plays golf he will want new sticks, balls, shoes, stockings, etc., and if he plays very much it almost amounts to a standing order. This is also true of nearly all the lines—they needing constant replenishing to keep in first class condition. We want to lay especial stress on the importance of dealers getting in line early. Now is the time to get orders in for if you put things off any longer, not only will you lose many of the initial purchasers which are generally the largest, but the manufacturers, once the season is in full swing, will be too rushed to give your order anything like prompt attention.

Talking machine men who are contemplating adding sporting and athletic goods as a side line should not put off ordering a day longer than necessary, because once the season has fairly opened, manufacturers and jobbers of these lines will be so swamped with the inrush of business that it will be impossible to give anything like prompt attention to newcomers. At best it means delayed shipments, and the talking machine dealer or jobber who desires to get the best results out of this line cannot afford to let the public overlook his new addition.

MOVING PICTURES AS EVIDENCE.

Play a New Role in a Brooklyn Court—Make Quite an Impression But Judge Later Discredits Them—Jury Not Influenced.

Moving pictures were introduced for the first time as evidence before Judge Aspinwall in the Supreme Court of Brooklyn, last week, in a $50,000 damage suit, brought against the Coney Island & Brooklyn Railroad Co. by Patrick McGorty, acting as guardian for his son, Stephen McGorty, ten years old. The boy was a passenger on a Franklin avenue car on March 17, 1905, with his mother, aunt, and a brother, when an altercation arose over the payment of his fare. It was claimed that the conductor threw the boy from the car at Franklin avenue and Lefferts place, and as a result he was injured so badly that he has been, he asserts, compelled to wear a brace.

After the testimony of the plaintiff was all in the lawyers for the railroad company put the moving picture scene in exhibition. This move was unexpected, and in spite of the objection of the counsel for McGorty, Justice Aspinwall decided to allow the moving picture show to be produced in court.

The courtroom was darkened after a while canvas was spread, and several pictures were thrown on the sheet in plain view of the jury, showing the injured boy and several of his companions in his neighborhood at play without the use of a brace. He was seen running, jumping, and wrestling with his companions and he appeared as lively as the rest of them.

This is the first time in court proceedings that a moving picture exhibition of this kind has been used as evidence. The pictures were taken two years after the accident, and were offered as evidence to prove that the boy was not permanently injured, as it is claimed in the suit.

The general public seemed to believe that the moving picture exhibition was conclusive evidence in favor of the company's side, but was much surprised to learn that the jury, after due deliberation, gave McGorty a verdict of $8,500.

The attorney for the railroad protested vigorously and moved for a new trial. The judge stated, however, that he had refrained from passing any remarks until now, but would say that he did not think the moving picture would ever again be introduced as evidence in a case of this kind. He stated that it was clear that the boy was induced by the promise of money to take the brace off his foot and run a short distance, and that the operator moved the mechanism of the machine so rapidly when working the film in court that he had the boy running at a rapid pace. It was also stated that the boy was taunted to fight on another occasion by some boys who were "interested." They "got his Irish up" to the extent that he endeavored to wallop another boy about his size. The moving picture man was, of course, "on the job," and this was the fighting exhibition shown in the court. In other words, the judge considered the moving picture evidence was "made to order."

The case in many ways was unusual, because of the introduction of the moving picture as a witness and the peculiar developments which came to light in connection with it.

PROMPT COLLECTIONS HELP

The Retail Store and Do Not Drive Away Customers as Some Think.

Prompt collection of accounts does not drive away customers from a retail store. On the contrary, it makes them feel in closer touch with the establishment.

Such results as this have been secured in a store whose credit manager does not allow any accounts to run more than a month without shutting off the customer's credit and taking immediate steps to collect from him.

All bills for any month are due on the 10th of the following month. That is several days after the statements have been sent out. In some special cases where men receive their wages at unusual times during the month we make arrangements that their bills shall fall due on the 15th or 17th.

On the 20th, if payment has not been made, a copy of the statement is again sent, and a settlement is demanded.

After that collectors are sent out to look up overdue accounts, and from the 20th until the 30th generally succeed in getting a good share of the money, or at least a promise.

All accounts remaining unpaid after the 1st of the following month are shut off, and the customer cannot get any more goods without arranging definitely for a settlement.

The result is that this establishment is able to collect every month 87 per cent. of its accounts.

Customers do not care to have their accounts closed and their credit impaired. They do not take offense at the rule, because they know it is applied to every patron without exception.

So a large amount of money is turned back into the working balance which other stores have tied up in customers' accounts.

CHICAGO'S BUSINESS MEN'S SHOW.

From February 27 to March 6 are the dates set for the tenth annual Chicago Business Men's Show which will be held at the Coliseum. Judging from the advance bookings it looks as if this will be one of the most successful held in many years.

J. A. Flett, Ltd., Vancouver, B. C., have added a large sporting goods department in charge of C. L. Burch, formerly with the sporting goods department of the J. H. Ashdown Hardware Co., of Winnipeg, Canada.

HAVE FAITH IN YOUR GOODS

Or Else Find Another Job—Learn All About Them—In This Way You Enthuse Your Customer.

If you can't believe in your line of goods, find another job where you can believe in them. Your lack of faith in the goods you sell will undermine you.

Having the goods in which you believe, stand by them. Learn all you can about them—about their manufacture, their quality, lasting nature and pleasing possession. Having this pride in those things which you sell, you can't help showing it both to employer and customer in your handling of them, replacing them neatly and keeping things ship shape. Your manner in speaking of them will carry conviction to the extent that you know about them.

Out of this condition you will hear your customer asking: "Now, what do you think as between this and this." When you hear that question, it is a tribute to your salesmanship. Store these things in your recollections—they are invaluable as a stimulus to confidence.

Cultivate the ability to remember faces and to call the customer by his right name. Remember his address if you can. These may seem small things, but they are vital—human nature never will be above the implied compliment.

Your tactfulness will come of your own education of yourself in dealing with all kinds of people. You will have learned more when you can send the cranky person home satisfied than you could have learned of scores of easily pleased customers.—The Macey Monthly.

The Athletic Manufacturers' Credit Association will hold its fourth annual meeting in Chicago, Ill., on February 8-10, at the Auditorium Hotel.

MISTAKING BUSTLE FOR HUSTLE.

Too Many Business Men Undervalue the Slow Plodding Employe Who Never Fails to Get There While He Is Impressed With the Bustling Man Who Makes Much Noise But Hardly Ever Gets Results.

People are often mistaken in their judgment of employes as well as men generally. Too many mistake bustle for hustle. Frequently the remark is heard that so and so seems to be slow without inquiring whether the party referred to does not accomplish as much as some of the persons who make more noise. Now let us consider the matter. Did you ever notice the carts removing the earth from an excavation? Ever see them in a line passing along a thoroughfare, the horses tugging at their tasks, but ever on the move and ever making by the most direct course for their destination? Haven't you often pointed to a new building foundation where a week or a few days before was a barren lot with the exclamation: "That certainly was quick work"? And yet, every step in the procedure was slow. It is like the local on the railroad that puffs and snorts and shrieks and jerks with a great howdy-do; and the express, traveling only at the best rate of the local, but making fewer stops, nips seconds and minutes and hours from the running time, with no noise and no bluster, and is well back on the return journey when it salutes the boisterous local still making laboriously for the main depot.

Judge your man by what he does, not by what he seems to be. A lot of bosses have had their eyes opened to the merits of the quiet plodder. He not only gets there, but if he's loyal and conscientious and sincere, he puts it all over the shuffling, talkative bluffer. He's more dependable because his judgment is sounder. He's quicker because he has less to undo. He proves his worth by his work. And some day, when he hies suddenly off to a more responsible position, his erstwhile employer rubs his eyes and wonders why he had been so blind to real merit. Remember this. One of your clerks may be more valuable to you as a friend-maker than as a salesman.

Your prestige means your profit. When you find your establishment is rated higher than your competitor's, that people prefer to deal with you and have more confidence in you, give the credit where it is due. The modest plodder is a worthwhile asset, after all.

Now we are nearing dangerous ground. The employe asks: "Shall I change my location if better prospects appear?" Assuredly. The man who pays your weekly wage doesn't add a few extra dollars for sentiment's sake, does he? Not unless he's the rare exception. With him it's a business proposition, pure and simple. If he can get another man to do your work at material reduction in salary, he's going to do it.

Don't mistake our meaning. We do not insinuate that years of devoted service go unrewarded. But we do insist that the young man who aims high and would reach the summit must avail of every opportunity to get there. He can't afford to stay in a rut. He can't afford to quibble and parley over every advance. Time is fleeting. Your best days are these days. Put your very soul into your daily task, and if, knowing you deserve recognition you do not get it, quit! That's plain talk. It's common sense. The merchant who disagrees is the sort that makes promises and fails to keep them in the belief that his subordinate wouldn't dare to be independent. Think it over.

THE ART SIDE OF STATIONERY.

Interesting Observations on Styles and Tendencies as Shaped To-day by Popular Demand—The Place of Heraldry—By John O'Shea in The National Stationer.

The variety of material, useful and otherwise, that comes under the heading of stationery, is so vast that a catalog of considerable bulk is required to encompass it. Many articles for the writing desk and library table are gems of art. The great vogue of Art Nouveau during the past decade is responsible for much of the really beautiful that we possess in the way of enamel and metal ware. It is in the designs of these small articles such as hand seals, paper knives, ink wells, paper racks, etc., that the sinewy and sensous quality of this decoration appear to such good advantage.

This particular style has lent itself to the embellishment of calendars and paper boxes, in fact, to any subject requiring a decoration, whether of figure, landscape, or ornament.

However, there has of late been a call for the works of modern illustrations portraying the sentimental incidents of every-day life; and progressive stationers, mindful of the popular demand, find it profitable to issue the all-absorbing "He and She" in various phases of tender progression. An attractive box cover is most insinuating. When the imagination is properly appealed to, the sale is easy.

The illustrated post card is another husky new-

comer. It is an admixture of riot and beauty. We cannot lay claim to any exclusiveness in producing the better kind—they are mostly a European product. To the lazy correspondent it is indeed a boon, and therefore universally popular.

But modern innovations have left our private stationery entirely unaffected. This condition is mainly attributable to heraldry. Although many coats of arms are very elaborate and ornate, they are very decorative, and what is more, they represent something. There is not a more pleasing device than family escutcheon suitably embossed.

The science is an old one, dating from the Crusades. It was originally military, borne on banners to distinguish one army from another. And as it expanded, devices were drawn up and given for distinguished service as they are given now to men who attain eminence in their professions, under monarchical governments. Besides the family coat of arms there are state, city, ecclesiastical, collegiate, and so on. The national flags are also heraldic. State papers and charters are never without their great seals. An interesting document for one who wishes to gain a little knowledge of this subject is to study a copy of the Magna Charta.

A fully emblazoned coat of arms, suitably framed, is a distinctive decoration for the home. The stanch republican takes offense at the general use of crests and mottoes in this democratic country of ours, arguing that it is at variance with the accepted condition of things. But Washington and many signers of the Declaration of Independence and other distinguished Americans, whose patriotism and good sense puts them beyond suspicion, displayed coats of arms on their book plates and stationery.

The book plate has shown a decided advancement, because the designer is unhampered by any conventionality; it is a favorite and popular subject for artists.

It is safe to say that we are attaining a general excellence both in the attractive way goods are presented and quality of the workmanship.

HUNTS SPOOKS WITH CAMERA.

German Artist Pushes a Button When His Medium Does Things.

Baron von Erhardt, a German painter, who resides at Rome, occasionally holds spiritualistic seances in his studies. They have one unusual feature.

The experiments are not made in darkness, but two ruby electric lights sufficient to show clearly every object in the room are used. A photographic apparatus is placed in front of the medium with an exposed plate, which naturally the ruby light does not affect. A tin dish containing magnesium is placed near the camera and connected by means of wires with an electric battery.

Thus when the Baron wants to make sure that the medium isn't cheating or to make a record of some particularly interesting feat he has only to push a button and establish an electric circuit which ignites the magnesium and a photograph by flashlight is taken. The plate is developed there and then it serves as a document of the particular phenomenon which has taken place.

A recent photograph showing a fiddle suspended in the air without apparent support was taken in this manner. At another sitting an object was seen floating about in the air, a photograph was taken and it revealed that it was the medium's coat, which in some way he had removed while his hands were clasped in his neighbor's. Once the camera caught a table floating through the air, at least it seemed to.

THE LIMIT ACCORDING TO MAUD.

Maud Muller on an autumn day
Was raking the fallen leaves away.

The judge meandered down the walk,
And stopped to make a little talk.

"Maud," said he, and his bosom heaves,
"What are you doing—raking leaves?"

"No, sir," said Maud, in accents low,
"Just at present I'm shoveling snow."

Whereupon the judge moved his feet
And meandered onward down the street.

Then Maud winked at the cat, did she,
And said with forced solemnity:

"Of all fool things from tongue to pen
The limit is the fool remarks of men."

PLAIN STATEMENT OF FACT.

Dust and dirt are plentiful, but feather dusters, brooms and cheesecloth are cheap. Get them together.

It takes a live fish to swim up stream. Any old lobster can float down.

THE BENEFITS OF PROFIT SHARING.

Not a Philanthropy but a Distinct Asset—Increases the Efficiency of Employes and Ensures Undivided Loyalty.

Profit-sharing has become one of the serious questions of the day. A few years ago, when some of the larger industrial concerns adopted the principle of distributing a certain amount of the net profits among the employes this move was regarded to a certain extent as a philanthropic fad—a whim of benevolence—which, while interesting because of its novelty, was altogether too radical for adoption generally.

The conservative business mind shrank from the principle of sharing profits with employes as it instinctively shrinks from any theory which encroaches upon the imperialism of private property. Naturally, it was argued that a division of profits, continued year after year, would constitute another fixed expense of doing business and would have to be regarded as an addition to the expense column. In some way or other this extra cost would have to be offset or it would result in the narrowing of profits which went to the owners. As a rule, owners are reluctant to reduce their own individual profits.

But the principle of sharing profits with employes has spread rapidly through the industrial world and has obtained the indorsement of some of the leading captains of industry, among them Andrew Carnegie, who has spoken in unqualified approval of the principle as going far in equalizing the relations between capital and labor and stimulating interest in a mutual undertaking.

Not only the large industrial concerns, but the smaller types of business enterprise, such as the retail store, are awake to the importance of profit-sharing.

The merit of this system is that it is simple and definite, the feature being the appropriation of 1 per cent. of the gross sales to the profit-sharing fund. Certainly, the amount that the different clerks receive at the close of the six months' period is sufficiently large to excite both gratitude for the gift and increased personal interest in the business.

The day of the small business enterprise seems to be on the wane for the present, at least, says the Dry Goods Reporter. The individual without abundant capital has less hope of founding an independent business than he formerly had. But where employes become shareholders and participate in profits there is a new spirit instilled into the life of those who work for others.

Allied with profit-sharing are the provisions which insure the employes against disability from accident and old age. When the day comes that the employe is assured that a long period of faithful service will give him the status, to a greater or less degree, or a part owner of a successful business, the attractions of the employe's life will multiply greatly and will approach those of the independent proprietor.

REASONS WHY YOU SHOULDN'T "KNOCK."

When you knock a competitor the customer thinks there must be some reason and goes over to see him.

The VIASCOPE SPECIAL
NOW READY

¶ After years of study we have perfected a moving picture machine void of all vibration and absolutely flickerless. All working parts of mechanism encased in a highly polished nickel-plated steel case. Its construction is so simple that it can withstand the hardest usage without getting out of order.

This Will Interest You

A word to Talking Machine Men.

Presumably you are desirous of increasing your income.

That is quite a laudable ambition, and we can start you along the right path.

It is conceded that there is no line which will blend better with talking machines than pianos.

But the great essential is the *right* pianos.

Now we have the *right* pianos at the *right* price.

The Cable-Nelson instruments are built along attractive lines.

Architecturally they are perfect, and when placed in warerooms they are bound to attract attention.

They can't help doing so.

They are cased in beautiful veneers and they are decidedly attractive in their appearance.

Then too, their tone is surprisingly rich. In the upper registers it is clear and sparkling, the bass rich and sonorous.

And the price. Ah! there is the attractive point. The price is entirely consistent with the values offered.

It has been through the production of large values that the Cable-Nelson business has steadily grown year by year.

STYLE F CABLE-NELSON

We have a special proposition for talking machine dealers, one that will interest, and it will pay you to take up this subject at once with us.

We can put you on the road to new business and the pathway will be lined, of course, with dollars for you.

Is this statement interesting? Then write us.

Cable-Nelson Piano Co.

Republic Building, CHICAGO, ILL.

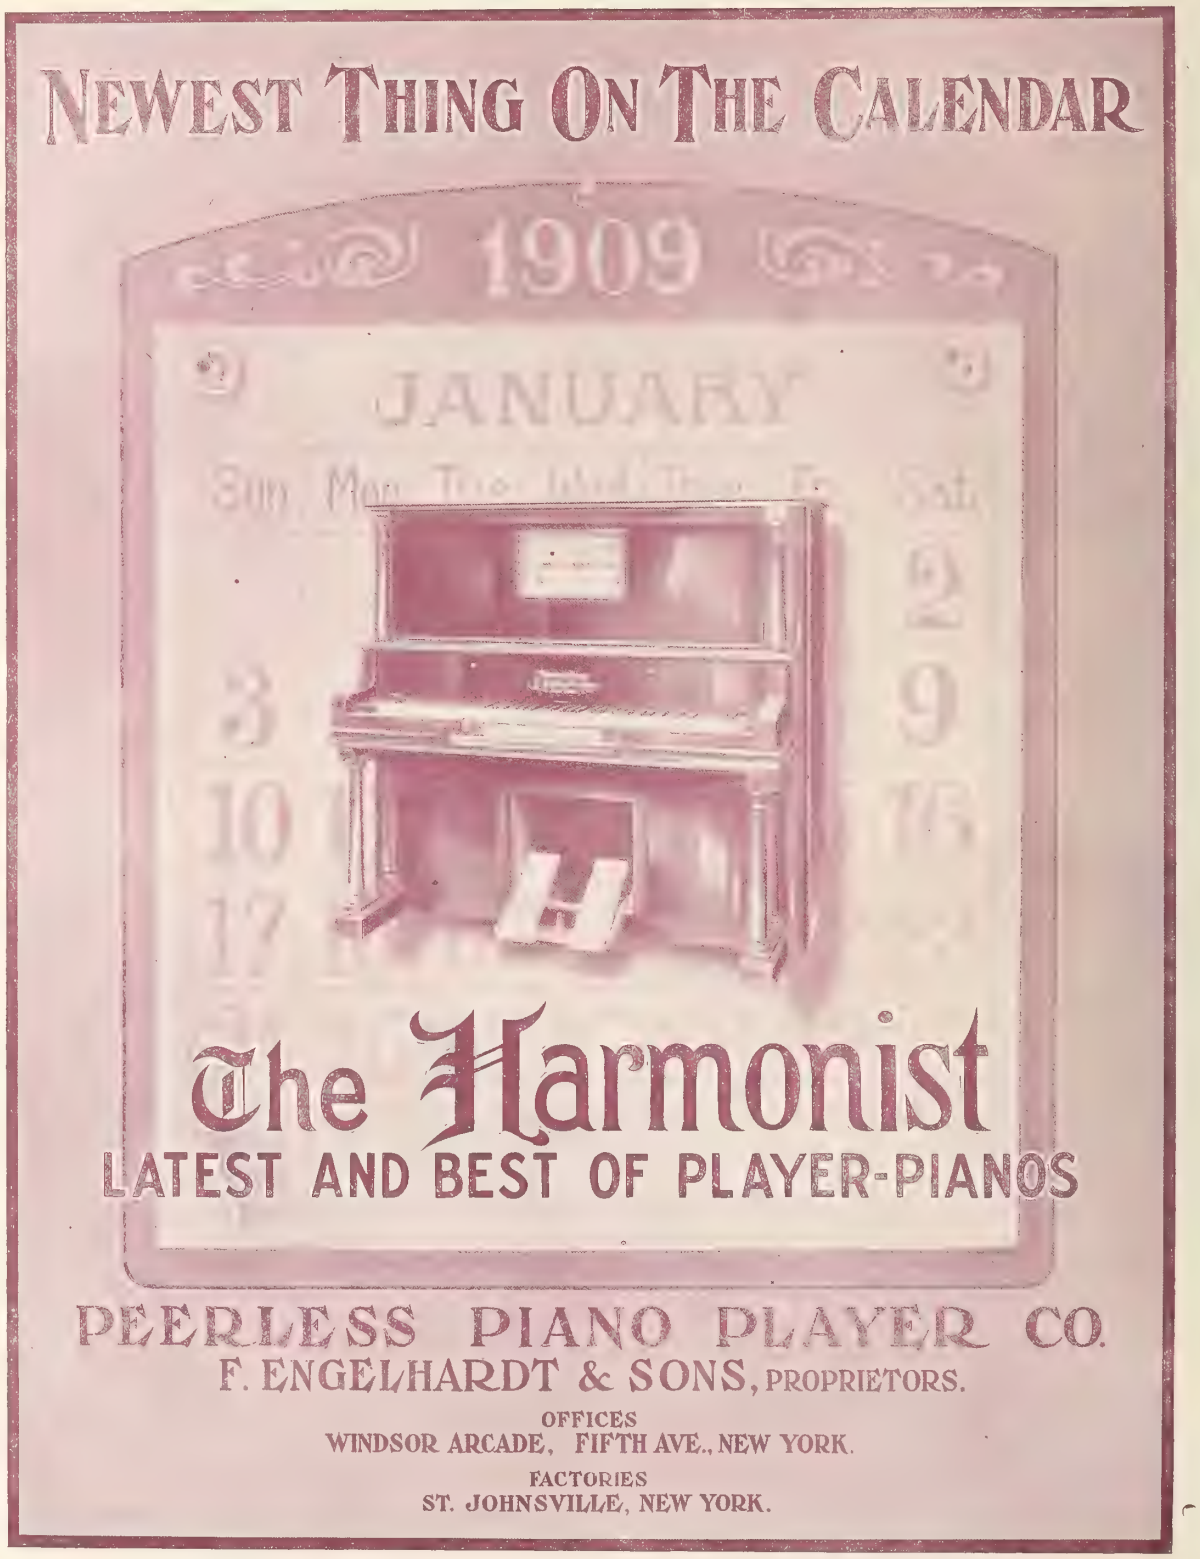
Did you know there was money in the piano player business?

Have you any idea of the profits that you can make out of the Peerless or Harmonist Agency?

We can give you some live suggestions which will cause you to wonder why you have not investigated the money-making powers of the Peerless Player product before.

Note the illustration shown on this page, and figure on getting in line with the manufacturers as quickly as possible; the quicker, the greater chance you will stand of increasing your income during the New Year.

Be up-to-date and ever watchful of your own interests.



The Talking Machine World

Vol. 5. No. 2. New York, February 15, 1909. Price Ten Cents

ROTHWELL PRAISES THE "TALKER."

The Noted Conductor Agrees With Walter Damrosch That Music in the Home Is the Great Pacifier and in This Connection the Talking Machine Fills an Especial Place—Says Its Possibilities Are Unlimited.

(Special to The Talking Machine World.)

St. Paul, Minn., February 6, 1909.

When the soup is cold and the meat burned and hubby is growling out a series of uncomplimentary remarks concerning the general management of the household, let wifie slip into the parlor and wind up the talking machine. Immediately Caruso or Calve will begin to warble sweet notes and hubby, delighted, will have forgotten all about his grouch. Thus will numerous family quarrels be eliminated and the divorce evil robbed of half its strength. This at least is what Walter Rothwell, conductor of the St. Paul Symphony Orchestra, believes.

He is heartily in sympathy with the statement made by Walter Damrosch that a mutual knowledge or fondness for higher music by husband and wife would do much to smooth away the numerous little differences which arise.

For a family not skilled in the production of higher music, Mr. Rothwell advocates the talking machine as a peace restorer. Can you picture a fond husband returning at 3 a. m. and gazing up at the head of the stairs, where wifie, her sweet countenance distorted by an awful frown, is holding forth, producing a "talker" from his overcoat pocket and starting "The Toreador"?

"I think that idea very clever and very true," said Mr. Rothwell, in speaking of Damrosch's idea.

"There is no doubt in my mind that a knowledge and appreciation of the higher class of music would go far to bring about a happy home life among all classes of people. It appeals to the soul and lifts a man out of the temporary environment which may bore him and make him seek the diversion of a quarrel with his family or friends.

"If the husband and wife can find a common interest in the appreciation of good music it will relieve the strain, as Damrosch says, which results from a perusal on the part of one of the day's doings in the kitchen or a resume on the part of the other of some deal with Jones or Smith."

Then turning to his young wife he remarked: "There are often hours at a time when we speak of nothing else but music. Our art is so close to us that we can find full expression of our hearts in the simple rendition of some symphony which lifts the clouds of a dreary day or passes away the monotony of an hour which might otherwise prove oppressing.

"Yes," was the reply of Mrs. Rothwell. "There are often days when we think of nothing else. We are both musicians and have interests in common which would certainly prove of value in smoothing over any monotony which might impend."

"For a family which is not skilled in the production of the higher class of music the talking machine is one of the finest things in the world for producing a diversion and keeping peace in the household," continued Mr. Rothwell. "It is vastly abused by the production of the nonsensical popular ragtime with which the ordinary machine is commonly stocked, but those who own first-class talking machines are no longer purchasing only the lighter music but are well supplied with the finest selections which our great artists produce.

"The talking machine has given to the world much that the world would not otherwise have been able to obtain or to appreciate. There are many classes of music which the talking machine produces almost perfectly, and one of these is the symphony orchestra. Vocal solos are also well reproduced, especially those sung by men's voices. Women's voices have not the strength nor resonance to produce the best records.

"It is wonderful what has already been done, and there seems to be no limit to the possibilities of the 'talker' idea. Yes, as Mr. Damrosch says, the value of music as the food of love is as yet unestimated."

THE PRESIDENT'S RECORDS.

Dealers Will Have a Valuable Asset in the Records of the Voice of President Taft Who Takes Office March 4.

With the inauguration of Wm. H. Taft, as President, early next month, dealers will find the Taft records which were issued during the last campaign, very valuable assets. For the first time they will be able to supply the public with a record of the voice of the President of the United States, and we greatly mistake if these Taft records will not prove tremendous sellers, not only in this country, but all over the world.

It seems to us that both manufacturers, jobbers and dealers should lay especial emphasis on the fact briefly outlined above and inaugurate a new campaign of activity. Every loyal American, who possesses a talking machine, will be proud of having in his home one of the addresses made by Mr. Taft, and it only needs the proper publicity, correct emphasis and enterprise on the part of all concerned to secure the desired results.

THE "TALKER" TO CURE DISEASE.

Where Such Cure Is to be Accomplished by Mental Suggestion—By Having Machine Repeat Patient's Own Words Complete Harmony Is Possible—Details of the Theory.

(Special to The Talking Machine World.)

Cincinnati, O., February 2, 1909.

To cure disease by talking into a machine and then listening repeatedly to the reproduction of your own voice. This may sound strange and foolish, but Walter Maxwell, manager of the Palace Hotel, declares that it can be done and is demonstrating it to his friends. Mr. Maxwell is a firm believer in the efficacy of faith and suggestion in the cure of disease. His belief is similar to that of the advocates of the Emmanuel movement and other faith healers, except that he denies that any religious belief is necessary. Belief in what one wishes to accomplish and faith in one's ability to accomplish it is all that is needed, he asserts. Auto-suggestion or suggestion from another will do the rest.

"But my trouble has been," said Mr. Maxwell, "to get anyone to make suggestions to me which were entirely in harmony with my own belief. Thus a single thought in which I did not have faith, destroyed all of the power of suggestion. I tried a talking machine on which with my own voice I recorded the suggestions I wished to impress upon my mind by reproducing them a number of times, but the "talker" records, made of soft wax, soon became scratchy and indistinct and were very unsatisfactory. I heard three years ago of a new machine called a telegraphone which overcame this difficulty. The machine has just been perfected, and by browbeating the manufacturers I secured the first one sent out from the factory. It has not yet been placed on the market, and the one I have is only loaned to me. It answers my purpose wonderfully.

"But most important of all is the efficacy of machine suggestion, for this has none of the objections of personal suggestion. The latter has always caused people to fear that they might come under the domination of another personality. The machine obviates that worry."

Mr. Maxwell has the telegraphone in his office in the Palace Hotel. It is really a wonderful machine in its simplicity of construction and operation, accuracy and distinctiveness of voice reproduction, and absence of all noises except those recorded by the operator. The voice record is made on a hard steel disc by electricity, which records the sound waves. By merely pushing a button an old record may be erased while a new one is being recorded on the same disc. The machine is designed for commercial use, as in receiving of dictation and its subsequent transcription by a typewriter, and the manufacturers probably would be much surprised to learn the use which Mr. Maxwell proposes to make of it.

"The influence of suggestion upon the physical body is easily demonstrated," said Mr. Maxwell. "If while you were sitting quietly in your home, a neighbor should rush in and tell you that your child had been run over by a car, you would believe him. You would have faith in the truth of his statement. The physical effect would be to cause you to pale and flush, the temperature of your body would rise and your pulse would beat more rapidly. If, however, you could look through the door and see your child standing there unhurt, while your neighbor was talking, you would have no faith in his statement and his suggestion of disaster would have not the slightest physical effect upon you. This is a homely way of showing the power of mental suggestion upon the physical being and it also shows that it is necessary to have faith for it to be effective. This being so, why should not the power of suggestion be used for good in the healing of bodily disorders, especially maladies of the nerves which most easily respond to suggestion?"

SAPPHIRE FOR DISC RECORDS.

Important Patent Granted to H. Schroder, of New York, Covering the Above.

H. Schroder, of the H. Schroder Hornless Phonograph Mfg. Co., Inc., 387 East 158th street, New York, has recently been granted a patent on a new form of disc record to be played with a sapphire jewel instead of a steel needle, the record being softer than the present styles of disc records. However, records with a harder surface to stand the wear of the steel needles, will be provided under the patent, for those who prefer to retain the present styles of reproducers and the steel needles.

The Schroder Co. have also perfected their new and improved style of hornless phonograph to be sold at a popular price. It has mechanical features and tonal qualities that should interest those of the trade looking for new creations.

MUSIC TO PRODUCE COLORS.

Important Patent Granted to H. Schroder, of New York, Covering the Above.

Loie Fuller introduced a new invention to the Berlin public on the evening of Feb. 5, when she showed her so-called system of "light orchestration in colors."

She has discovered that the sounds produced by different instruments represent various hues. There are persons, says "La Loie," who are especially sensitive in this respect, and who invariably feel this imaginative play of color when listening to orchestral music.

She has constructed an apparatus calculated to make the colors actually visible and to display clearly for the benefit of any audience, sensitive or non-sensitive, the melting of shade into shade in accordance with the changing of the instrumental melodies.

Miss Fuller's new device was shown before an invited audience of musicians and critics, and she essayed to react to the music of the Bluthner orchestra, one of Berlin's permanent symphony organizations.

THE TALKER AS A VOCAL TEACHER.

David C. Taylor in His Work on the Voice Says That Imitation Furnishes the Only Means of Acquiring the Correct Vocal Action—What Better Voice to Imitate Than the Great Voices Heard Through the Medium of the Talking Machine?—These Give Instruction of the est—Opens Up a New Vista for the Talking Machine as an Instructor.

Since the talking machine has been so greatly perfected we are enabled to hear, in the most perfect manner, the voices of the greatest artists of the world. It is a well-known fact that pupils in the leading vocal schools use these machines as a means not only of inspiring them to greater accomplishments, but of getting a proper idea of phrasing and of voice production—of copying or imitating the voice recorded so faithfully on the record.

The talking machine nowadays is not only used in the home of the prospective operatic singer, but all the leading teachers use it as a means of stimulating pupils and pointing out wherein Caruso, or Melba, or Scotti, or Farrar, or Eames, or others of the great galaxy of stars excel, and their various methods are analyzed and commented on with most helpful results.

It is noteworthy that in a recent volume issued by David C. Taylor he maintains that "Imitation furnishes the only means of acquiring the correct vocal action." That "Imitation supplies the only practical means for training voices."

These are the bombs which have just been cast into the camp of the singing teachers. They are designed to shatter tradition in their explosion—the tradition which rests on an anatomical conception of throat and chest muscles and has expressed itself from time to time in vague commands to "Sing in the breath." "Open the throat." "Sing the tone forward." "Support the tone."

David C. Taylor is the insurgent and the man of the bombs. Only the other day the teachers had never heard of him. They are talking about him now. He has written a book, of course—that's the way he starts his explosives—and he calls it, inoffensively enough, "The Psychology of Singing" (Macmillans). It is when you get a good way beyond the title and beyond the analysis of various modern methods of voice culture that you strike the new idea.

"Having ascertained the futility of the attempt to teach singing mechanically," says Mr. Taylor, "it is in order to determine the truth or falsity of the statement that the exercise of the imitative faculty alone does not suffice for the training of the voice."

The imitative instinct is of early recognition. In childhood we learn to speak our mother tongue by imitating the speech of those about us. So Mr. Taylor gets his starting point for argument. But vocal imitation would be impossible without the ability of the voice to produce sounds in obedience to the commands of the ear, and this ability the voice normally possesses. It can imitate a wide range of sounds. Otherwise spoken language could not exist.

"If the perfect vocal tone can be shown to be included in this range of sounds, then the voice can be trained by imitation."

Mr. Taylor refers to the performances of vaudeville performers who imitate the notes of many instruments, the oboe, the clarionet, the muted trumpet, also the songs of various birds. This gift indicates the possession of some special structure of the vocal organs. Given the natural vocal ability, the power to produce the tone quality is developed by repeated attempts at imitation. "The possessor of the natural gift perfects this gift by practice." And essential for the guiding of practice is a close listening to and comparison of the original tones and the voice in imitations.

Now this power of vocal imitation does not come of normal faculties; the tones of the oboe and trumpet do not lie within the range of qualities normal to the normal voice. On the other hand, "the quality of the perfect vocal tone is unquestionably within the range of every voice so constituted as to be capable of artistic singing. A fine natural voice normally produces beautiful tones. It is only with this type of voice that voice culture is concerned. Such a voice must be capable of producing the perfect vocal tone."

We have the fact that the faulty tones of one voice can be readily imitated by another voice. Mr. Taylor takes up the case of a vocal teacher who is trying to correct a gifted pupil by imitating his faults and showing him the right tone productions. "Suppose this master begins the instruction by singing for the pupil tones of exaggerated throaty quality and bidding the pupil to imitate these tones. At the next lesson the master would very slightly improve the quality of the tones sung as a model for the pupil's imitation. The student would listen and model his daily practice accordingly. . . . The master would again set a slightly improved model." Mr. Taylor asks pointedly:

"Could any point be reached at which the student would be unable to imitate the teacher's voice?"

Supposing the teacher to have perfect command of his own voice, when the last trace of faulty production in the student's voice had been eliminated, he would be singing perfect tones.

"No limit," Mr. Taylor holds, "can be set to the ability of the voice to improve its manner of tone-production by imitation. It must therefore be concluded that the perfect vocal action can be acquired by imitation." And here is where the talking machine comes in. If the method must be imitative, why not copy or imitate the voices of the greatest singers in the world?

This bomb-thrower would leave to the doctors the technicalities of throat structure and muscular vocalism. The combination of mechanical vocal training and instruction by imitation impresses him as an absurdity. "Reliance on the imitative faculty involves the utter rejection of the mechanical idea. Any attempt consciously to direct the muscular workings of the vocal organs is an interference with the normal action of the voice."

To such attempts at muscular regulation Mr. Taylor attributes the frequent disaster of throat stiffness. Imitation, as a means of vocal culture, this author insists, is even now often of use, but unconsciously so. It happens that "the student pays little attention to the mechanical rule and simply imitates the teacher's voice. There being then nothing to interfere, the student's voice naturally responds."

Once the possibility of training the voice by imitation is established, Mr. Taylor holds, the old Italian method of teaching, regarded by many in these days as a lost art, is readily understood. From Tosi he quotes the admonition to "Let the master attend with great care to the voice of the scholar, which should always come forth neat and clear, without passing through the nose or being choked in the throat." To sing in tune and to produce tones of good quality—this summed up for the old master the whole matter of tone-production.

A beautiful tone conception—that is what the singer should be after first and last, according to Mr. Taylor's view. He sets the quest down as psychological, possibly, because it calls for qualities of acute perception, sympathy and comprehension. As he looks at the issue, no sweeping reform is called for in modern methods of teaching. Truly Mr. Taylor's ideas are highly interesting to all who have watched the progress of the talking machine and its influence in the musical world.

OPERA ON THE AUTOMOBILE HORN.

Grand opera with an automobile horn and an air bottle is the newest discovery in the motor world. Necessity mothered the invention, like in all other cases, for when the Gabriel Horn Co. were asked by the show committee of the recent exhibit at the Grand Central Palace, New York, to favor the audience with a selection from "Lohengrin" on its chimes, the company were in a quandary for the necessary power to carry out the program.

The Gabriel horn is operated by the exhaust gases of the automobile engine, but as no automobiles were permitted to operate at the show, some other means had to be devised or discovered. A happy thought struck the chimes player, and he immediately got in touch with the Goodyear Tire & Rubber Co. and arranged for the use of a Goodyear air bottle to replace the exhaust gas of the automobile engine.

"How many 'Lohengrins' are in an air bottle?" asked the operator of the horn. The bottle man knew how many tires the bottle would inflate, but on musical questions he was not an authority, and he said so. But the arrangements were made, and for the remainder of the show daily concerts of grand operas and popular songs were given by the horn and the bottle.

T. S. Garrett & Co. have opened a talking machine store at 7-11 Exchange Place, Raleigh, N. C.

OUR

VICTOR RECORDS

Guaranteed Perfect

We have arranged for two entirely distinct and separate stocks of **VICTOR RECORDS** ONE RETAIL, ONE WHOLESALE. By this system we are enabled to guarantee our Wholesale Trade that they will receive from us **VICTOR RECORDS** in absolutely the same condition they are supplied us by the factory.

NOT RECORDS THAT HAVE BEEN USED FOR DEMONSTRATING MACHINES; NOT RECORDS THAT HAVE BEEN PLAYED FOR RETAIL PROSPECTS

But—

Absolutely New Unplayed Records

We don't need to enlarge upon the advantages of this system. You will appreciate it. We originated the system of supplying the high-grade

RED SEAL RECORDS IN SEALED ENVELOPES

This is appreciated by dealers in Victor Records, and we are sure the new method of filling wholesale orders from a stock which is in no way connected with our retail stock will be even more appreciated by them.

If You Want New Records, Send Us Your Orders

SEEKING NORTH POLE BY WIRELESS.

Frank L. Dyer, President of the National Phonograph Co. Writes an Interesting Communication Regarding the Possibilities of Successful Exploration by Wireless.

Frank L. Dyer, president of the National Phonograph Co., and a man of wide learning not only in the legal domain, but in practically every scientific field, recently contributed the following communication to the editor of the New York Sun upon the subject of exploration by wireless. He said:

"Your article outlining the plans by which Amundsen in the gallant old Fram hopes to carry out to a successful conclusion Nansen's original scheme was very interesting. Amundsen expects by entering the pack further to the eastward of Nansen's point of entrance to be carried in the very near neighborhood of the pole. Let me offer a suggestion that I think will make success an absolute certainty, provided the Fram is still able to resist the ice pressure during her long enforced voyage.

"When Nansen discovered to his chagrin that the drift was carrying him far to the south of the pole it will be remembered that with one companion and a number of sledges he left his comfortable quarters and struck out over the ice pack on his memorable dash. Knowing to a certainty that he would never regain his ship, but must make his retreat to Franz Josef Land, he was compelled to turn back after achieving the then highest record, and reaching Franz Josef Land in the early summer, encountered rotten ice and open water, so that it was only with the greatest difficulty that a landing was effected. Surely in the annals of adventure there was never a more brilliant exploit than this.

"Since Nansen's time the world has moved on and many scientific improvements have been made. The development of wireless telegraphy would enable Amundsen, should he find that the drift was carrying him out of the desired direction, to leave the ship, fully equipped for a dash of two or three hundred miles and return, and at the same time remain always in communication with his companions. He would not have to figure on a quick dash northward and a long southern retreat, but being always in communication with the ship, his northward march could safely be extended to a month or more if necessary. Furthermore, it could reasonably be predicted that the ice encountered would be fairly coherent, unless, of course, unknown lands were

FRANK L. DYER.

met. It would not be advisable for the sledging party to equip themselves with transmitting apparatus, owing to the weight, but it would only be necessary to employ a very light aerial, by which hourly or at least daily messages could be received from the ship specifying her location. The sledging party, knowing at all times the geographical position of the ship, in this way could reach her with as much certainty as they could a permanent land. Equipped in this way I would predict for Amundsen absolute success. When we remember that with the Gjoa, a very small auxiliary yawl, built in 1862, he achieved the seemingly impossible, with a comparatively modern vessel like the Fram, built for this special work and thoroughly tried out, and with a scientifically perfect campaign ahead of him, I feel assured, barring accidents, that he will reach the goal.

"Bearing on this suggestion it is interesting to recall that the Jeannette expedition was fitted out by Mr. Edison with a special telephone outfit employing ten miles or so of insulated wire so that the explorers could leave the ship for that radius and readily find their way back. The Jeannette was also equipped with one of the earliest isolated Edison electric light plants. DeLong's scheme was identical with Nansen's, involving the entering of the pack so as to be carried across the polar sea with the drift. Unfortunately, however, the Jeannette was too weak structurally to resist the ice pressure. Nansen's very obvious suggestion that a vessel suitable for polar work should be so strongly built that when ice pressure is encountered the ice and not the vessel should yield was unfortunately not perceived by DeLong."

PRECURSER OF THE PHONOGRAPH.

W. W. Warner of Madison, Wis., Displaying an Early Example of Talking Machine.

Perhaps in the monotony of up-to-date progress nothing can be more interesting and fascinating to men and women of to-day than some relic or contrivance of the past which takes the imagination back to days of yore. Just such a contrivance, namely, a microphone, or, what in the days of its origin, was referred to as an Edison speaking phonograph, has been displayed in the window of W. W. Warner's Music store, 27 West Main street, Madison, Wis.

This microphone weighs a hundred pounds—the latest phonograph weighs from 10 to 25 pounds—and is made of iron. Its general size can be limited into dimensions of 30 inches in length, 9 inches wide and 8 inches high. The mechanism for the reproduction of sound consists of a large cylinder and adjacently attached movable piece with a needle similar to the present day cylinder phonographs. All this rests on a large solid iron base about 2 inches in thickness. The cylinder, 8 inches in diameter, is attached about a shaft, one and one-fourth inches in diameter. The power is applied by hand, by means of a wheel and knob, the wheel being about three and one-half feet in circumference.

The machine is a type of initial effort in the designing and manufacture of a mechanism to reproduce the human voice and other sound effects. Berliner of Germany was the originator of the idea and it remained for America's, and now the world's inventor, Thomas A. Edison, then in the youth of his keen intellect and inventive powers, to speedily make the dream a bigger dream and a reality. This occurred 30 years ago, 1878.

As evidence of Edison's success in developing the phonograph, it may be interesting to note in this connection that the rude machine exhibited is No. 177, while among the latest figures obtainable in Madison of only one type of Edison machine is No. 357,562.

The microphone now in Madison was years ago exhibited at world's expositions. In 1878, W. W. Warner states, a similar machine was exhibited in his city, adding: "It may have been this same identical speaking phonograph which in 1878 or '79 was displayed here. An admission of 10 cents was charged for people to see and hear the quaint curiosity. As I remember, the show was in a building on East Main street. The cylinder of the phonograph was covered with tinfoil. Words were talked or sung into the mechanism while it was in motion and then literally unrolled and the words reproduced in a thin piping voice, but with unmistakable distinctness."

THE JOBBERS' ASSOCIATION.

Executive Committee Was to Meet March 1st in Washington—Postponement Due to the Illness of J. N. Blackman—Recent Concessions Secured.

A special meeting of the executive committee of the National Association of Talking Machine Jobbers for March 1, in Washington, D. C., is now under consideration. Owing to the illness of J. Newcomb Blackman, President Bowers has postponed the meeting until a later date.

Another concession granted the committee, and which will benefit the distributers, is the extra discount accorded them by the Victor Talking Machine Co., Camden, N. J., that went into effect January 25. Rather the discount rate in question was made uniform to all Victor distributers.

How about your Victor display?

Is your salesroom attractive, and in keeping with the greatest musical instrument in the world?

Do you give the *Victor* the front of your store?

Do you often show a whole windowful of *Victor* and *Victor Records?*

Have you always a complete assortment of *Victor Records* on hand?

Are you always ready and willing to play any *Victor Record* for your customers when they request?

Do you give occasional informal recitals, and invite prospective buyers?

It's to your best interest to do all this. These things are necessary if you expect to do a big *Victor* business. And there *is* plenty of *Victor* business just waiting for you to take it.

Display *Victor*. Talk *Victor*. Advertise *Victor*. Bring people in to hear *Victor*. Get enthused over *Victor*, and the people in your town will soon catch your spirit.

And they're bound to buy *Victor*.

We're saying all this for *your* benefit. You *know* what big profits the *Victor* gives you, and these suggestions will help you to increase your *Victor* business.

NEW YORK, FEBRUARY 15, 1909.

THE trade for the first month of the New Year has been somewhat fitful. But every January trade is dull for that matter. In some sections of the country there has been a lively demand for talking machines and accessories; in other sections a business stagnancy has been in evidence. On the whole, however, it might be safely asserted that trade has been rather dull and somewhat disappointing. The demand has not been lively. However, there has been an unusual demand for records. The sale of machines has been curtailed, but the record business has been surprisingly good. There, too, has been a recrudescence of the horn trade. There has been a continuous demand for high-priced talking machine outfits. It is in a way surprising how the demand for high-priced products has kept continually on the increase. Many dealers have been exploiting the high-priced products in their local papers with the result that they have kept up their sales record to a satisfactory point.

IT is believed that there will be a constant betterment in business as the months pass, and people have it fixed in their minds that business is going to be better, and that in a degree will be a helpful force in making it so. There is nothing like having confidence in business, or anything for that matter to succeed. A man who has no confidence in the product which he puts forth, or in his ability to secure trade, usually fails. He doesn't comprehend the possibilities of business life, and his listlessness and lack of ambition will surely contribute to his defeat. General trade conditions of the country are steadily improving. There are fewer idle cars on the sidings than last month, and never before in the history of this country has an after panic liquidation been accomplished so successfully as during 1908. This was due in the main to the fact that all vital parts of the business organization, integrity, capital, good management and credit, were shown to be on a sound basis. In the background are the wonderful material resources of the great West during the last ten years, and in addition the great reduction or almost total elimination of mortgages on farms of the Mississippi Valley and throughout the West. It has been the farmers throughout that specially favored country who have been large purchasers of high priced talking machines. The result of this splendid condition has been surprising even to students of finance and to many business men. As a consequence stocks of machines in the hands of mills, wholesale distributors and retailers were probably never as low, proportionately to business or as well assorted for the interests of business as they are to-day.

LAST year at this time we had before us large stocks and small credit opening, and to-day we have small stocks and wide credit opening for all enterprises which are sound and conservative. As we review the situation for the first six months, the progressive man can transact good trade along legitimate lines, and then if crops turn out good look out for extraordinary large business in the fall. We are not looking for booms and we are better off without them, but it is almost sure that there will be continued activity in the trade field. The discussion of the tariff may have a conservative effect on the minds of most merchants, but we do not anticipate any revision which will be detrimental to general business. We have started on an upgrade which will probably continue for a number of years, and we believe that every talking machine man should push his business so as to make the most of the prosperity which is not only surely coming, but has already reached a number of points throughout the country.

TALKING machine men, in order to succeed, must have confidence in their business, its present and its future, and it is well when studying trade conditions to heed the example of some of the great houses of the industry. Take for instance, Lyon & Healy, of Chicago. To go through the talking machine display rooms of this great concern it at once an inspiration and a joy. When business was dull last year this house did not manifest the slightest fear as to the business outcome—in fact the directors went steadily ahead with store betterments which cost a modest fortune. They had confidence in the business future, and in the talking machine future in particular. There would have been no depression if all business houses had manifested the same confidence evidenced by this great house. We would suggest that dealers visiting Chicago look over this establishment. As far as we know it exceeds in character and originality any other talking machine establishment in the country, or in the world, for that matter. These rooms have been described in detail in earlier issues of The World, but a mere verbal description cannot treat the subject adequately. A personal inspection of the arrangement of the rooms, and whole floor plan, will be of obvious value to talking machine men everywhere. The example of this house in going ahead with such determination in the face of dull times and depression should interest many others who feel weak hearted concerning the talking machine business. It is just such kind of effort as this that should give heart to men who are depressed, and to such men a visit to the Lyon & Healy establishment will be an inspiration and incentive to go ahead and do business. Just keep things going. A little more ginger, if you please, and, of course, plenty of confidence.

IT is surprising how many high priced talking machines are used in the hotels throughout the country, and the drawing power of these instruments is beginnning to be appreciated by the hotel proprietors. We have seen a number of leading hotels throughout the West where the dining rooms and restaurants have been well patronized by people who have come in to listen to some famous artist during their meals. When these splendid talking machine creations are accompanied by other musical instruments they at once add greatly to the charm of the orchestra, and these special forms of entertainment may be maintained at very reasonable figures. The hotel and restaurant field is certainly a live one in which progressive talking machine men may operate with sure results ahead. There are possibilities here for business broadening which should not be overlooked. It is interesting to note some of the comments of people who have heard these wonderful creations for the first time. They have expressed intense surprise and admiration at the marvelous development which has taken place in this industry during the past few years. People who have not kept pace with the development of the talking machine and who listened to one of the larger creations for the first time are interested to such an extent that they are at once live trade possibilities for the local representatives. When a machine which is attractive and has marvelous powers of entertainment is placed in a suitable environment, it at once becomes a business incubator of no mean proportions.

A NUMBER of leading papers through the country, in commenting upon the marvelous changes which have occurred during the Lincoln centennial which we have just celebrated, have referred to the talking machine as one of the most wonderful creations. In doing so the foremost papers have placed the talking machine in line with the most striking inventions of modern times. Well, why is it not true, and is not such credit fairly due this wonderful creation? What other invention of man's reproduces sound with such faithful accuracy? The talking machine is indeed one of the most marvelous creations of the Lincoln centenary. With it it is possible to preserve the voices of leading men for future ages. It is entertaining and educational in the truest sense. Indeed, the merit paid to the talking machine is honestly due. A marvelous creation of the genius of man. That fact alone should act as an inspiration to men when showing up the qualities of particular machines. It certainly makes a pleasant business background to know that you are offering one of the marvels of a century of marvels in inventive creations.

A SUBSCRIBER asks what is the legal status of O. K. It has been officially declared that the letters "O. K." written on the back of an order for money and followed by a signature mean "all right," and are equivalent to an indorsement. This decision was passed by Judge Heaton, of the Superior Court in Fort Wayne, Ind.

AN EDUCATIONAL CAMPAIGN.

Of High Character Is Being Carried on by the Victor Talking Machine Co.—The Wonderful Machine Expatiated on Most Interestingly—Technical Pointers Explained.

Some recent advertising of the Victor Talking Machine Co. is worthy of more than passing consideration for its originality and effectiveness. It is not merely publicity, but an educational campaign that is doing much to dignify the talking machine and make it more respected and esteemed. For instance, here is an extract from some recent Victor publicity which is unquestionably of a high character. It appeared under the caption, "The Wonder of It," and reads as follows:

"Many common things become wonders if we know how to look at them, and many wonders become common things just because we do not keep the wonder of them alive.

"Let us look at the Victor talking machine a while from this point of view—the wonder of it. The Victor is wonderful from any point of view, whether we consider it from the scientific side, based as it is on an ingenious application of nature's most marvelous laws, or from the musically artistic side, with its limitless scope and variety; but let us look at it first merely as a machine, a little instrument which you can lift from place to place with ease, yet which can reproduce for you the music of an orchestra of a hundred pieces or the voice of a prima donna who may be at the other side of the world.

"The needle, the sound box and the record—these are the greatest wonders of the Victor. Simple as simple can be, and entirely mechanical in every detail, yet hardly less wonderful in their united powers than the human mind and ear and voice.

"See the little needle chasing the materialized sound wave on the surface of the record! Like a keen-scented, eager hunting dog it searches out every element of sound in a complex chord, struck, we will say, by Sousa's great orchestra. Every sound of every instrument is found accurately, and transferred to the sound box for translation into music through the horn. Does daily experience yield anything more wonderful than this? Yet how seldom you think of it when you hear the Victor playing a record.

"Still more wonderful in some respects is the sound box, a sort of mechanical ear, which "hears" the vibrations of the needle on the record and transmits them to those parts of the machine which are to translate them into music. How precisely its diaphragm repeats every vibration which thrilled the diaphragm of the sound box on the recording machine, making the music of the Victor a faithful echo of the original song.

"The Victor record you buy is not, of course, the one over which the recording needle traveled on its journey that traced the notes of the original music. The delicate original disc is first used as a matrix, the mother of hundreds of records so exactly alike that no expert can tell the difference between them, and then carefully protected and put away in the vault of sound writings, a precious masterpiece from which new metal plates may be made at any time. In this way a Victor song is recorded—written down in imperishable form so that generations hence young musicians may hear the voices which charm the world to-day, making the fame of the singer, hitherto the most perishable of earthly honors, as enduring as that of the poet or the painter.

"But how is the song reproduced? By what mysterious process is the sound writing, the disc, whose making we have briefly followed, made again into music; for recording the sound is only half of "the wonder of it?"

"When you place a Victor record on your machine, and set the little needle following the groove, its motion is transferred in the form of vibrations to the mica diaphragm of the sound box. If the diaphragm vibrates a certain number of times a second it will transmit to the horn a certain note. Increase this number of vibrations and the result will be a higher note. Sound, in short, is vibration, and each note of our musical scale represents a certain rapidity of vibrations in the air which carries it to our ears.

"Very simple, but at the same time wonderful, especially when we reflect that the quality as well as the pitch of each tone is exactly reproduced, so that we can distinguish readily between a note on one instrument and the same note on another.

"Think of the exact correspondence of sound vibrations which makes it possible for Mme. Melba to sing at one time in five thousand places all the world over the self-same song, in the self-same way, with the identical trills and the same irresistible style. Think of this vast stream of pleasure flowing from the point of a needle so small that you can scarcely see it. 'A camel through a needle's eye' has long been accepted as a strong expression of absolute impossibility. The Victor puts a whole brass band through a needle's point without making the slightest difficulty about it.

"'Only the simple subject of sound waves,' you say. Ah, yes, that's easily said, but do you understand it? And is there not great satisfaction in the ability to reflect upon the wonder of it; to ask yourself how it is possible that such a concord of sweet sounds as is rendered by at least one hundred instruments in a band can be written in a space on a record almost infinitely small?

"Ask how that chord can be found and struck by a little needle; how it can be passed on and interpreted into music by that little sound box. Ask yourself how it is all done, and if you cannot tell, why, just sit down and wonder over it. It will be well worth while to wonder over these things which have become so common to you that you have ceased to care anything at all about them."

MICA FOR DIAPHRAGMS.

Producers of Domestic Mica Want a Strong Duty Incorporated on the New Tariff Bill.

(Special to The Talking Machine World.)

Washington, D. C., February 6, 1909.

Mica is largely used for diaphragms in sound boxes, and therefore manufacturers are interested in the duty on this article. The grade of mica employed for this purpose is imported from India. In the sound boxes made by the Victor Talking Machine Co., Camden, N. J., and the Columbia Phonograph Co., General, New York, the mica diaphragm is used exclusively. The National Phonograph Co., Orange, N. J., have substituted copper for mica in the Edison sound boxes. The domestic and Canadian mica is totally unfit for diaphragms, and therefore cuts no figure so far as the trade are generally concerned.

Producers or miners of domestic mica—the most important deposits being found in North Carolina—are opposed to the importers as to the rate that should be embodied in the framing of the new tariff bill. The domestic miners avow the importers are trying to have mica placed on the free list, or the duty materially reduced. The importers, however, in a letter of December 18, addressed to the Ways and Means Committee of the House, say:

"We desire to go on record as follows in the matter of proposed tariff revision as applied to paragraph 184, act of 1897, which relates to mica: 1. We favor the removal of ad valorem duty of 20 per cent. 2. We favor the retention of the present specific rates, namely, 6 cents per pound on uncut mica and 12 cents per pound on cut mica. Specific duties of 6 cents per pound and 12 cents per pound, as stated above, return to the government a fair revenue and an equitable one to the importer, and fulfills the purpose of a specific duty. Protection is not required as far as mica is concerned in this country. Costs of production, etc., need no comment here. Domestic mica has not been bettered by the ad valorem duty in the present tariff, and, furthermore, consumers will continue to demand and to use foreign mica on account of quality and quantity and dependable supply thereof, as the past proves." The suggestions of the Ways and Means Committee will be awaited with interest.

"B. & H."

FIBRE NEEDLES

For Disc Records

Refined—Delicate and Sweet in Tone—True, Correct and Natural Reproduction—Preserve the Records *Forever*

"B. & H." FIBRE MANUFACTURING CO.

208 E. Kinzie Street CHICAGO, ILLINOIS

The Edison Phonograph isn't the only Sound Reproducing Instrument, But—

it is the instrument that has been developed by Thomas A. Edison, who made the reproduction of words and music possible.

It is manufactured under Mr. Edison's personal supervision and received the benefit of every improvement he can devise.

It is so thoroughly well made that it will last a lifetime with proper care.

It has a powerful spring motor that runs with the smoothness and evenness of an electric device, a feature most essential to good work.

It plays the Edison wax cylinder Records, famous for their sweetness of tone.

It has a specially made horn which gives volume to the music without affecting its richness.

It has an indestructible reproducing point which never needs to be changed.

And it plays the new Amberol Records, giving twice the entertainment of regular Edison Records, without Record changing.

In view of all this isn't it to your advantage to—

(Continued on next page)

Put In Edison Phonographs and Records and Put Your Selling Energy Back of Them?

The advantages set forth on the opposite page not only exist in Edison Phonographs, but are well known by the Phonograph buying public.

Our advertising is making the Edison Phonograph the best known of all sound reproducing instruments. The Phonographs themselves are daily demonstrating that our claims for them are justified.

It is easier to work along the line of least resistance and that line is the Edison.

When you present an Edison Phonograph you have nothing to conceal or apologize for. There is nothing lacking. Its work is beyond criticism.

There are certain localities where Edison goods are not adequately represented. We want dealers in such places. But what we want most is that dealers who now have Edison goods should appreciate their selling possibilities and give them the consideration which their superiority warrants.

If you have Edison goods, push them; if your stock is low, order from your jobber. If you do not handle them, put them in. There is a nearby jobber who can supply you. Write us for his address.

National Phonograph Company

59 Lakeside Avenue, Orange, N. J.

AN IMPORTANT MOVE.

Orchestra Parts for Accompanying Victor Records—Twenty-four Complete Orchestrations May be Obtained from the Victor Co.

The orchestra (sheet music) parts for accompanying Victor records have so increased the demand for Auxetophones that the Victor Co. are unable to ship Auxetophones as rapidly as dealers would like. However, every effort is being made to rush all back orders, and arrangements are almost complete for taking care of future orders for this instrument. The popularity of this innovation is evidenced by the big increase in the number of first-class hotels in New York, Philadelphia, Boston, Pittsburg, Buffalo, Milwaukee, Cincinnati, Louisville, Denver and almost every other big city which have added the Auxetophone to their orchestras. "The Voice of the Victor," commenting on this, says: "The directors of these orchestras are the most enthusiastic advocates of this wonderful instrument, and letters from hotel managers express entire satisfaction with the increase the Auxetophone brings to their restaurant receipts. One of them, Mr. Wright, president of the Adams Hotel Co., Denver, writes: 'The Auxetophone has increased our restaurant business on an average $50 a day, which is very satisfactory, considering the size of our hotel.' These orchestrations are perfectly arranged, and they open up to Victor dealers an almost unlimited avenue of trade. Particularly should the piano and violin parts appeal to students of these instruments.

"A good accompanist on either the piano or violin is a rarity, and the experience and practice gained through accompanying Victor records is invaluable. Remember, Victor records are identical at each playing. There are no skips, no false tempo; they teach the pupil exactness; they never tire, and they will add confidence and finish to the execution of any musician, no matter how complete his or her musical education.

"Musicians who had not or would not listen to a Victor were the severest and most unfair critics, but the great development of the past few years has reversed this condition, and the Victor now numbers among its most ardent advocates almost every musician who has ever become fully acquainted with Victor records.

"Every dealer should send for the piano and violin parts of every one of the orchestrations now ready, and also for parts of other records which will be added from time to time. You should invite musicians to try these accompaniments to the records of Caruso, Melba and other famous artists—do so in a way that will impress them with your recognition of their musical ability.

"This method, tactfully done, will make many musicians Victor enthusiasts who will by word of mouth do more to advertise you and the Victor than will some other and far more expensive method of advertising.

"Remember, also, that in every home where there is a Victor and a piano or a violin there is room for splendid work. No matter how great their Victor enthusiasm, these accompaniments will add a greater appreciation of their Victor, and where interest has lagged it will rekindle the desire to add to their collection of Victor records."

The list of orchestrations for accompanying Victor records is as follows:

81026 or 87017 Rigoletto—La donna e mobile, Caruso; 81025 or 87018 Rigoletto—Questo o quello, Caruso; 88001 Martha—M'appari, Caruso and orch.; 96000 Rigoletto—Quartet—Bella figlia dell' amore, Caruso, Abott, Homer, Scotti and orch.; 96200 Lucia Sextet Act II—Chi mi frena, Sembrich, Caruso, Scotti, Journet, Severina, Daddi and orch.; 88059 Stabat Mater—Inflammatus, Gadski and orch.; 88078 Rigoletto—Caro nome, Melba and orch.; 85096 Lucrezia Borgia—Brindisi, Schumann-Heink and orch.; 85109 Faust—Le parlate d'amor, Homer and orch.; 88004 Favorita—Spirito gentil, Caruso and orch.; 88127 Aida—Celeste Aida, Caruso and orch.; 88052 Annie Laurie, Farrar and orch.; 74110 Rigoletto—Monologo "Pari siamo," De Gogorza and orch.; 88054 L'Africana—O Paridiso, Caruso and orch.; 88006 Faust—Air des Bijoux, Eames and orch.; 74039 La Marseillaise, Journet and orch.; 85024 Le Deux Grendadiers, Plancon and orch.; 88085 Carmen—Habanera, Calve and orch.; 74046 Carmen—Toreador Song, De Gogorza and orch.; 85020 Les Rameaux, Plancon and orch.; 31496 I Cannot Sing the Old Songs, Jose and orch.; 64077 Ernani—Infelice e tu credevi, Journet and orch.; 5350 Venetian Song, Turner and orch.; 4796 Sweet and Low, Lyric Quartet.

The complete orchestrations are $1. per set; 1st violin part, 25 cents; piano accompaniment, 25 cents; other parts separately, 15 cents each.

THE NEW BACIGALUPI STORE

Now Complete—One of the Finest Talking Machine Stores in West—Retail Department on Market Street, Wholesale on Stevenson Street—Handsomely Fitted Up.

(Special to The Talking Machine World.)

San Francisco, Cal., Feb. 5, 1909.

The new store of Peter Bacigalupi & Sons, at 941 Market street, has been occupied for nearly a month, but its incomplete condition at the first of the year made it impossible to gain any adequate idea of its final appearance. As it now stands, it is pronounced one of the finest, if not the finest, talking machine store in the entire country. The store extends through from Market to Stevenson street, about 260 feet, the market street side being used as a retail store, while the frontage of 100 feet on Stevenson street does duty as a wholesale department. Both departments are well lighted, the Market street entrance having a broad expanse of plate glass, both in front and at the right-hand side of the entrance. The retail store is finished in white, with woodwork in dark-stained pine in Mission style, and ornamental brass electric light fixtures. The left side at the front of the store is occupied by a record rack, extending 75 feet toward the rear, for both cylinder and disc records. In the front is also a fine display of Edison machines and cabinets.

The ten large record demonstration rooms are along the sides toward the rear of the retail department, and form about the handsomest feature of the store. The side and rear walls are elegantly finished in handsome paper and lincrusta, each room having an individual color scheme. The front partitions are of leaded glass, with plate glass doors. The furniture is of attractive mission design, upholstered with leather, and the rooms are illuminated by brass electroliers of varied patterns. These rooms are equipped for the demonstration of both Edison and Victor records. The retail department also contains a well-lighted room, 15 by 20 feet, for the display of automatic pianos and a room of the same size for the Edison business phonograph.

The entire Stevenson street front of the wholesale department is faced with glass, affording an abundance of sunlight to both the shipping rooms and the offices. This department occupies not only the store directly in the rear of the retail department, but also a large ell behind two other stores which face on Market street, affording ample room for wholesale business and the storage of stock. The frontage on Stevenson street also gives fine shipping facilities and prevents any interference between the wholesale and retail departments. About half of the frontage on the rear street is taken up by the general offices, which, however, are separated from the stock room by glass partitions, allowing the latter plenty of light.

The wholesale record racks are in the rear of the ell section, and have a capacity for about 200,000 cylinder records. A large stock of horns is disposed of on top of the record racks. This section is specially lighted by two large skylights. The balance of the store on the ground floor is taken up by a large wholesale display room for automatic pianos, talking machines, etc., and by the shipping room.

The large space in the basement is largely devoted to the storage of unopened stock, but is also occupied by a general repair shop and a packing room, fully equipped with benches, etc., to facilitate the work of getting out goods for shipment.

The Original House

We were the FIRST JOBBER of the Edison Phonograph and Victor Talking Machines in Philadelphia and have ever since maintained our position of "FIRST." We are FIRST in securing anything new, FIRST in making prompt and satisfactory shipments, and FIRST in caring for your interests.

WE INTEND TO CONTINUE FIRST AND IF YOU ARE NOT DEALING WITH US "GET NEXT."

PENN PHONOGRAPH CO.

17 South 9th Street Opposite Post Office PHILADELPHIA

TYPEWRITER-PHONOGRAPH.

Latest of Wonder-Working Devices Hails from Chicago, the City of Progress.

"Yes," said a Chicago business man with a wonderful imagination to the hard-working reporter, "yes, we think we have hit upon one great invention, and when the busy world is introduced to our phono-typograph it will stop a moment in amazement and admiration. That may sound to you like a clause out of a circus bill, or a chapter from a Chicago novelist's novel, but it is a true bill, nevertheless. You are aware that for a long time there have been efforts to combine in some way the present style of typewriter and the phonograph, but until now these efforts have invariably failed.

"A year ago we discovered in Chicago a young mechanic who had solved the problem, as we believed, and we put money back of our belief, as Chicago people are always ready to do, and told him to go ahead with his machine until he had it where he thought it ought to be ready to be offered in the world. It is hardly that yet, for the best machine is susceptible to improvement, but we think we have a good thing.

"Of course, I cannot give you all the details, but I think I can make clear to you the general working principle of the phono-typograph. As its name indicates, it is a typewriting of sound. That has been the idea in all other attempts, but it was not found practicable, because the sounds were words, and there were too many words to

reduce to machinery, as it were. The phonograph and the telephone principle got the sounds all right, but each sound was a word, and that could not be put in type. Our man, however, hit upon a separation of the words into letters, and that brought his field of operation into the limit of twenty-six sounds.

"For punctuating marks we use spaces, as yet we have no capitals. The machine, of course, is electric, and the operator talks into it as into a telephone, except that he spells out each word, and as the sound of the letter strikes upon the disc it is reproduced on the corresponding letter, which in turn is printed exactly as the ordinary typewriter would print it.

"At first blush the spelling out of each word would seem to entail more time and labor than the old style of typewriting, but a very few hours will show any person that our phono-typograph will do the work of two people in half the time they will consume by the existing methods. We are willing to admit that our machine is not perfect in all its details, but as far as it goes, and it goes a good long way, it is a world beater.

"A newspaper friend of mine has one on trial on which he has written 100 words a minute, and averages 75 right along. He doesn't know anything about typewriting of the old kind, either, and doesn't have to, as glibness of tongue takes the place of nimbleness of fingers. We hope to have them on the market at an early date, but are in no especial hurry, as there are some small details we want perfected before coming up for judgment. No," concluded the gentleman, in response to a query, "there is no stock for sale. We know a good thing when we see it."

G. H. Schubert, of Reno, Nevada, has sold out his Edison store in that city to the Menardi Stationery Co., of that city, and is now located in Chicago, from where he is advertising his extensible record rack, which has proven a great success. Mr. Schubert found that being located so far West was somewhat of a disadvantage in properly placing his rack on the market.

COMBINED PHONOGRAPH AND SIREN.

New German Invention Described by Consul T. H. Norton—Friction and Consequent Buzzing Eliminated by Use of Air Current in Place of Needle—A Description of This Interesting Contribution.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 5, 1909.

Consul Thomas H. Norton, in the following report from Chemnitz to the Bureau of Commerce and Labor, describes a new German invention which combines the phonograph and the siren:

"The methods for recording sound have reached a higher stage of perfection than those employed for its reproduction. The chief difficulty encountered in the present systems of reproducing conversation, and especially music, from phonographic and similar records, is caused by the friction of the needle resting upon the surface of the rapidly revolving disc or cylinder. This introduces a more or less noticeable buzzing or rumbling sound, which interferes materially with the clearness of musical notes or spoken words. Numerous attempts have been made to overcome this unpleasant accompaniment. In none of the devices hitherto brought forward has complete success been attained, since all involved the factor of friction as the fundamental means of transmission.

"In a recent number of the Deutsche Musikwerk-Industrie, a German inventor describes a newly patented instrument, in which friction is completely avoided. It combines the leading elements of the phonograph and the siren. The novel and essential feature is the substitution of a current of compressed air for the needle or stylus of Edison's invention.

"In a siren, openings of various sizes allow the production of all musical notes with any desired degree of intensity or length. In the new instrument, perforations in the disc of a siren are replaced by tangential incisions on the surface of a large record cylinder. A second perfectly smooth cylinder rests close upon the surface of the first cylinder and revolves in unison with it as the two cylinders are set in movement. A constantly varying succession of minute openings between their surfaces is presented, due to the incisions on the record cylinder. When a powerful blast of compressed air is directed upon the line of contact between the two cylinders, at such an angle as to be an exact tangent to the surfaces of both, sounds are evoked identically as in the case of an ordinary siren. It is possible to communicate signals and even words which can be readily heard miles away.

"It is already evident that a field of usefulness is open to this new invention as an adjunct to the equipment of seagoing vessels. Its availability for musical purposes has not yet been tested sufficiently to determine whether it can successfully vie with the gramophone, phonograph, etc., or even replace them.

"The cylinders thus far employed are about ten times as large as ordinary phonographic cylinders, and this fact renders the instrument necessarily somewhat clumsy. The requirement of a current of compressed air may also militate against a widespread domestic use, although such a current can be supplied by a comparatively inexpensive attachment to a water tap where the water supply is under considerable pressure."

* * * * *

The application of compressed air to talking machines as a means of augmenting sound is not new; Parsons in the Auxetophone applies compressed air most successfully. The novelty of the German invention above referred to, however, centers in its application to phonographs or cylinder machines.

Businesses, like people, fall into bad habits. The principal function of a good executive is to spot bad habits as soon as they begin to form.

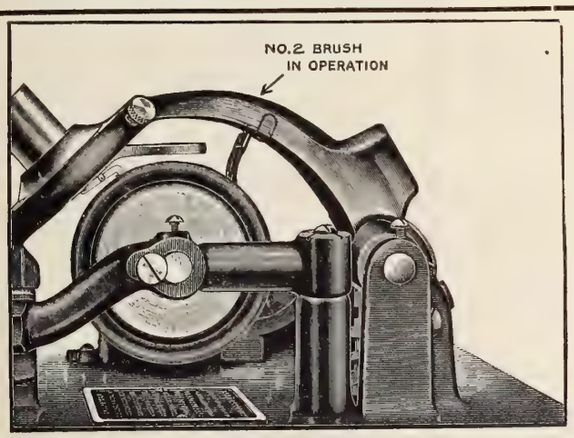
Lots of firms could get along better with less system and more gumption.

SAVE THE LIFE OF YOUR RECORDS

BY USING THE PLACE AUTOMATIC RECORD BRUSH

FOR EDISON PHONOGRAPHS AND VICTOR TALKING MACHINES.

PATENTED { September 25 and October 2, 1906 and September 10, 1907.



PRICE, 15 CENTS

CAN BE USED ON ALL PHONOGRAPHS

Removes lint and dust from record automatically. Saves Sapphire from wearing flat and prevents rasping sound. Insures a perfect playing record. It is equally as efficient when recording. It is too cheap to be without.

MANUFACTURED BY BLACKMAN TALKING MACHINE CO.

97 CHAMBERS STREET, NEW YORK

J. NEWCOMB BLACKMAN President

"The White Blackman"

TRADE NEWS FROM THE PACIFIC.

Stocks Arriving Rapidly to Fill the Void Occasioned by Big Holiday Sales—Columbia Co. Occupy Ground Floor of Mauzy's New Store With W. E. Scott in Charge—Madison Furniture Co., of San Jose, to Handle the Columbia—Brown Buys the Talking Machine Department of Kohler & Chase at Seattle—A. B. McCarty Honored—Victrolas and Red Seals in Demand at Sherman, Clay & Co.'s.

(Special to The Talking Machine World.)

San Francisco, Cal., Feb. 5, 1909.

The first of the year found most of the talking machine dealers on the coast pretty well cleaned out of stock of all kinds, and since then goods have been coming in rapidly to the main distributing centers, to go out to the various retailers throughout the country almost as rapidly. Wholesale business with nearly all the local firms has been much larger than was to be expected this early in the season, and the wholesale departments are only now beginning to get straightened out. Retail business, as is natural, has been rather quiet, though there has been a very good run of business here and in the larger towns on the few days when the weather has been favorable.

The most important development in the local trade is the announcement that a branch of the Columbia Phonograph Co. will occupy a part of the ground floor of Byron Mauzy's new store on Stockton street near Post. In view of the fact that Mr. Mauzy is distributing agent for Zonophone goods, this comes as rather a surprise. His talking machine business, both wholesale and retail, will be conducted in the small goods department on the third floor. On the first and mezzanine floors the Columbia Co. will have an office, a stock room and four demonstration rooms, and will carry a complete stock as soon as the goods can be moved in. W. E. Scott, who will have charge of the new branch, is already on the ground, and has started business. This announcement has just been made, but the branch has started off very nicely, and promises to beat the main store for retail business unless it is moved downtown very shortly. Mr. Beck, the local manager, however, states that such a move will probably be made in the near future, though the location is not yet ascertained. Francis W. Downe, coast manager for the Dictophone Co. of America, is moving into new offices in the Phelan building, and will hereafter have no connection with the Columbia store. Mr. Beck states that the company's January business has been quite active, showing up almost as well as December. W. S. Gray, the coast manager, has been in Portland and the Northwest most of the month, but has just returned. Mr. Beck will make a visit to the interior of the State next month. O. W. Cyrus, the traveling representative, has been in the city most of the month, but is now on his southern trip. The company have closed a deal with the Madison Furniture Co., of San Jose, Cal., by which that house will have the exclusive agency for Columbia goods in that city. The company are now running half-page advertisements of their new line in the San Jose papers.

Another important announcement is that Chas. E. Brown has sprung the surprise he was preparing. In connection with Mr. Bruce, a well-known talking machine man on the coast, and at one time manager for Kohler & Chase's Oakland department, he has bought out the talking machine department of Kohler & Chase in Seattle, Wash. Mr. Brown has always had great faith in the Northwest, and believes that with the present arrangement he will be able to build up a very profitable business. To close the deal Geo. Q. Chase and C. M. Jones, now manager of his talking machine business, went to Seattle early in the month, but both are now back in the city. Mr. Jones states that the local trade has fallen off very little, if at all, since the holidays.

A. G. McCarthy, who has charge of the small goods and talking machine department of Sherman, Clay & Co., has been elected president of the Permanent Downtown Association. He is now very busy with stock-taking at the main store, but this work will be completed in a few days. He states that the supply of Victrolas has again given out, and he has been waiting for a new lot for about a week. Sales of these machines continue to increase, as Sherman, Clay & Co. are pushing them out all the time, and they are handled by enthusiastic agents all over the coast. One of their greatest advantages is the increased demand they create for Red Seal records, which are now selling off rapidly. Sherman, Clay & Co. report the biggest sale on the new list of Victor records, which was received a few days ago, that they have had during a similar length of time in the last six months. The traveling salesmen are now out, and have sent in fairly good orders all month, with considerable improvement this week.

The Wiley B. Allen Co. have done little in the talking machine line at Los Angeles since the fire last month, as the entire stock of records was destroyed. The new store will open with a complete new stock, however, on February 1.

The Southern California Music Co.'s branch at Oxnard, Cal., are installing some demonstration rooms, and will hereafter carry a large stock of high-grade Victor records.

BLOOM'S PALATIAL STORE.

The New Establishment at 366 Fifth Avenue Will be Opened in About Two Weeks.

The new store—the second in New York—that Sol Bloom is to open at 366 Fifth avenue, spoken of in The World recently as being decorated and furnished in a unique and original way for a talking machine establishment, will undergo a transformation in this respect, that will delay its formal start in business for about two weeks. The fittings above referred to were removed entirely, and the interior of the store will be finished throughout in silvered bird's-eye maple, with furniture to match. The basement—a commodious place—will be fitted up in like manner. A unique feature will be a good-size stage in front for demonstrating purposes, and along the sides various rooms and a grotto will be provided, each decorated after an originally striking scheme in designing. Mr. Bloom is certain his new place will be the handsomest of its kind in the world, and surpassed only by the one he will later create and open in Chicago, where he first started years ago in the music publishing business.

Besides Sol Bloom, who will have charge in person, he will be assisted on the floor by Baron Traner, Pauline Teschner and a full corps of clerks. At 40 West 34th street, Harry Stein will be the floor manager, assisted by John C. Van Horne and other salesmen, numbering ten in all. The Atlantic City, N. J., store will be in charge of Harry A. Ellis, and is to be opened February 15.

ROBERT C. ROGERS OPENS UP.

Robt. C. Rogers, for the past twenty-six years associated with John F. Ellis & Co., has organized the Robt. C. Rogers Co., with headquarters at 1313 F street, Washington, D. C., where a full line of Victor and Edison talking machines and records are handled, as well as cabinets and other accessories.

ECKHARDT IS GENERAL MANAGER.

Walter L. Eckhardt, of the Manufacturers' Outlet Co., has become identified with the Leeds & Catlin Co. as general manager. A part of his time will be devoted to both enterprises, but the selling development of the "Peerless" double disc record will engage his special attention. A suite of offices has been fitted up for his use at the recording plant of the L. & C. Co., at 53 East 11th street.

On February 1 Louis Silverman, in the wholesale talking machine department of the Regina Co., terminated his connection by virtue of the expiration of his contract. He has several business propositions in view.

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

TRADE HAPPENINGS IN LONDON.

Business Not Marked by Any Special Activity but a Feeling of Hopefulness Prevails in the Commercial World—Better Reports from Industrial Centers—Wooden Horn in Favor—Amberol Record Fame—Beka Co.'s Well Equipped Premises—Price Cutting on the Increase—Gramophone Co.'s Affairs—The 200 Thread Clarion Record—Sig. Tamini's Gramophone Records—G. W. Lyle a Welcome Visitor—Brown Bros.' Clever Plan of Racking Records—Circulating King's Proclamation by Means of Records in India—"Dubbing" Suit in France—Interesting News Budget from the Leading Provincial Centers.

(Special to The Talking Machine World.)

London, E. C., Feb. 5, 1909.

January business was not marked by any special activity, and as the dealer usually finds, holidays in general and Christmas in particular leave the great buying public enthralled in the problem of general economy. But let us go into the prospects for the future. The president of the Board of Trade prophesies that this will be a year of industrial recovery, and he thinks that we may keep our spirits up to a reasonable level and take stock without undue optimism. This view, however, is not indorsed by leading commercial men to any great extent, yet the general consensus of opinion inclines to the belief that each one of us, however humble our sphere in commercial life, can do a little to bring about a great trade boom around next autumn. Signs are not wanting in some quarters to show that the tide has already turned. In Belfast things are much more active in the linen trade, and several of the largest mills have commenced to work full time. The shipbuilding slump is gradually easing off, while in many other industries the outlook is brighter. These conditions must necessarily react to the benefit of shopkeepers, and they should take the fullest advantage of it by showing a little more activity themselves. Every talking machine dealer worthy of the name should advertise in the local paper, and occasionally circularize; the results are sometimes pleasantly surprising.

As I mentioned last month, a feature of this year's trade will undoubtedly be the wooden horn, and it is a remarkable fact that for some time past the public tendency has inclined toward the better class goods, particularly in regard to disc machines. A visit to the showrooms of the leading factors gives ample evidence of this, since the display of cheap goods is scarcely noticeable. The interior horn cabinet models seem to be gaining in popularity and are now featured pretty generally throughout the trade. Many question the advisability of employing wood in the construction of interior trumpets, as they tend to somewhat muffle sound. The best material in this case is undoubtedly metal, and we should advise a series of tests on such an important point before making up any large quantities of this particular make of machine.

The "Amberol" record has attained such quick popularity with the buying public as to induce other cylinder record makers to investigate the possibilities of the 200-thread. The Clarion and Edison Bell both promise an issue of this new style in the near future, which we shall await with interest.

Gramophone Records for February.

The February issues of Gramophone records comprise a list of exceptional merit both as regards tonal quality and artistes—two characteristics always inseparable with the Gramophone Co. The records to hand are: 10-inch "Love Me and the World is Mine," a splendid concertina record by Alexander Prince; "Carnival of Venice" is played by Mose Tapiero on the Ocarina with brilliant execution; "O, That We Two Were Maying," a fine duet by Mme. Jones-Hudson and Ernest Pike; "Two Dirty Little Hands," sympathetically rendered by Maurice Farkoa; "Fairest of the Fair," march (Sousa), by the Black Diamonds Band; "A Tiny Seed of Love," sung by Harry Carlton, a pantomime favorite; "I Love You and You Alone," charmingly rendered by Ernest Pike. On the 12-inch records we have "Haddon Hall" (Sullivan), by the band of H. M. Coldstream Guards; and "The Sailor's Grave" (Sullivan), a record in which Mr. Harrison is at his best.

Beka Record Co.'s Premises.

This month I am enabled to give an illustration of the Beka Record Co.'s premises in City Road, London, a picture, one might say, that hardly does credit to the size and spaciousness of the building from an interior view. In order, therefore, to give our readers some idea of the enormous requirements of a large company in the matter of floor space, and the innumerable departments which necessarily exist for adequately conducting such a large commercial undertaking as exemplified in the Beka business, our representative took the opportunity recently of acquiring some details from Otto Ruhl, the Beka record agent in England. Starting from the basement, which is allocated for storing and packing, we ascend to the ground floor. This is divided up into the general offices, Mr. Ruhl's private sanctum; at the rear of which is a spacious department for the racking of thousands of records and despatch of orders. And that, perhaps is the most interesting department of all. Here,

BEKA CO.'S LONDON HEADQUARTERS.

men were running about from one rack to another, hard pushed to make up the day's orders for evening despatch to all parts of the kingdom. It gave one a little instruction of the popularity and demand for the Beka record (January issues) which, before the sun had again set, would have penetrated all over and to the uttermost corners of merry old England. The next floors are mostly devoted to show rooms, where we find a most comprehensive display of Lindstrom machines, with a further stock of records and accessories. A combination most convenient for the dealer. Up above on the top floor is a large recording room replete with instruments known and unknown. It would surprise many record enthusiasts to know that there are not a few—what shall I say—concocted instruments,

Favorite Records

are gaining a strong hold in the States. Trial orders have grown into big stock orders. Those enterprising firms who have made a trial with *Favorites* have found out that it pays them to stock

FAVORITE RECORDS

and they are doing well.

Nothing Venture—Nothing Have!! There is still room for you to take a share in the profits *Favorite Records* bring.

THE INTERNATIONAL FAVORITE RECORD CO., Ltd. (of Great Britain)

45 CITY ROAD, LONDON, E. C. **213 DEANSGATE, MANCHESTER**

FROM OUR LONDON HEADQUARTERS—(Continued.)

used in record making which never figure in the retail shop. The recording room itself is closely matchboard lined, and throughout made thoroughly soundproof by a patent system of scientific construction, which is a very necessary consideration for the successful making of master records. The room is even fitted with double soundproof windows in order to exclude the roar of passing carts and trams, and I may say it is this careful exclusion of all outside noises which has largely been the means of making the name of "Beka" on a record stand for "real music."

Anent Price Cutting!

All said and done, it's on the increase. It paralyzes trade; upsets and undermines the legitimate trader's business; cuts him right out of it, in fact. What are you doing in his interest, Mr. Manufacturer—not much, eh? Here are a few instances which occur in a certain provincial town. Only retail or price to the public is given: Edison-Bell cylinders, 2½d. each; Sterling records, 5d. each; Zonophone records, 1s. 9d. less 6d. allowance for old record, 1s. 3d. net. Apart from this many other records (of extinct companies in the most part) are being sold everywhere at the price of old wax. It presents a poor outlook this summer for the honest dealer. Is he to join the ranks of the unemployed? Why won't manufacturers join together in a common scheme to protect not only their own interests but those of the man who is the means of their existence? From time to time I shall give instances—even the names and addresses—of price cutters, in the hope that makers will take steps to protect their honest customers.

Phonographs and Accordeons.

Phonographs and accordeons seem to be the craze just now with the Esquimaux, says a polar expedition leader; which, by the way, suggests an opportunity of good business for those manufacturers or traders enterprising enough to seek this market.

Fast Boats for New York.

In the early spring the Hamburg-American line will run four of their fast boats on the New York service from Southampton instead of Plymouth.

Music Rolls and Copyright.

Do perforated rolls which are used for playing mechanical pianos infringe the copyright in the music? The court of appeal in a recent case decided that they do not; the learned judges stating that reproduction under the musical copyright act must be something in the nature of a copy in graphic form.

Gramophone Co.'s Generosity.

The Gramophone Co. have very generously contributed 100 guineas to the Mansion House fund—which, by the way, now amounts to over £130,000—in aid of the sufferers in that unparalleled disaster in Italy.

Daws Clarke's "Flex" Diaphragm.

Daws Clarke reports a steady demand for his "Flex" diaphragm, which undoubtedly gives remarkably natural results. The B. & H. fiber needle, for which Mr. Clarke is the agent in this country, is going well and gaining much favor with enthusiasts everywhere.

Twin Record Grows in Favor.

Although only placed on the market in August, 1908, the "Twin" record has gained great popularity with record buyers who appreciate musical excellence. The February list is well up to the mark, both in quality and artists, of which only the leading are listed.

A Strong Pantomime List.

One of the strongest pantomime lists is included in the January impressions of Clarion records. They are all well recorded and are as follows: "From Poverty Street to Golden Square" (F. Miller); "There's No Home Like the Old Home" (A. Franklin); "My Girl's a Yorkshire Girl" (A. Marsh); "What Would the Congregation Say" (A. Marsh); "If I Plant a Tiny Seed of Love" (Hamilton Hill); "Come and Be My Rainbow" (Stanley Kirkby); "I Want to go to Idaho" (S. Kirkby); "Let's Be Friends as We Used To Be" (Frank Miller); "I'm Afraid to Come Home in the Dark" (Harry Fay); "Have You Got Another Girl at Home Like Mary?" (F. Miller); "Solomon, That's Me" (Jordon & Harvey). Other good records issued during the same month are "Liberty Bell March" (Premier Military Band); "Light Cavalry" (overture), "Music Hall Medley," No. 3, and "Coronation Bells," by the Premier Concert Orchestra; "Venus on Earth" (Premier Bijou Orchestra); piccolo solo, "The Comet" (G. Barton); "Bombadier" (Hamilton Hill), and "If the Missus Says It's Black" (Will Terry).

Gramophone Parts and Accessories.

The Gramophone Co. have just issued for the use of dealers a very comprehensive list of parts and accessories, together with the prices thereof.

Current List of Beka Records.

The current list of Beka records is remarkable, more especially in the matter of recording, which in itself is a tribute to the company's painstaking efforts in this direction. In the vocal records enunciation is perfect, while the instrumental impressions are characterized by great detail and pureness of tone. The catchphrase "Beka for real music" is truly applicable

KLINGSOR

THE "WAGNER"
Highly finished solid Oak Cabinet.

THE new season is here and you cannot, to your own advantage, do better than to apply to us for our new colored illustrated catalogue of our celebrated ***Klingsor*** Talking Machines and Sundries. We challenge any machine on the market concerning working, tone-quality, finish, etc. We do not claim cheapness, as you are well aware that a good machine cannot be cheap, but we are still cheaper than any other machine for what we give you for your money.

All machines are of the best and solid wood, either in oak, mahogany or walnut, British made throughout, specially adapted for export to stand any change in temperature.

The machines are fitted with the best motor in the market "the well known and famous Excelsior Motor."

Letters patent No. 899,491 granted in America.

Catalogue Free On Application.

to the following selections, which I have personally tested: "The Thunderer," march (Sousa); "His Majesty the Storm," march, both by the Beka London Orchestra, which also makes three records of the "Spanish Dance" (Moszkowski), and "Valse des Fleurs" (Tschaikowsky). W. Chattaway plays an excellent trombone solo, "The Village Blacksmith," and together with T. Taylor (cornet), "Alice Where Art Thou?" There are four old favorites sung by Phillip Ritte (tenor), which are recorded in a wonderfully natural manner—"Come Into the Garden, Maud," "Thora," "I Hear You Calling Me," and "My Sweetheart When a Boy." Mr. Ritte is superb, and we hope to hear him on the "record" again soon.

New Companies.

F. M. Russell & Co. (merchants, engineers, etc., Willesden), a memorandum of satisfaction in full of debentures, dated February 14 and March 2, 1908, securing £1,250, has been filed.

P. J. Holden & Co., Ltd. Registered December 21, with a capital of £500 in £1 shares. Objects, to acquire the business carried on by P. J. Holden, and to carry on the business of manufacturers of and dealers in phonographs, gramophones, and automatic machines, cabinet makers, etc. Private company. Reg. office 18 Victoria Crescent, Wimbledon.

British Sonogram Co. Inquiry.

A public inquiry into the flotation and failure of the British Sonogram Co., Ltd., which carried on business at 77 City Road, E. C., was opened January 25 before Registrar Hood, at the London Bankruptcy Court. The accounts filed under the liquidation showed liabilities of £4,399, as against assets estimated to produce £8,555, and a deficiency of £13,618 as regarded contributories. The nominal capital of the company was £30,000, divided into 15,000 7 per cent. cumulative preference and 15,000 ordinary shares.

H. Brougham, senior official receiver, called David John Rees, who stated that he was a director, assistant manager and secretary of the company, which was formed in February, 1907, to acquire the letters patent relating to an invention for the manufacture of records for disc talking machines, certain instructions for the manufacture of a composite coating for cardboard records, and "a license to use a new recording machine, the discovery of Hans Knudsen." The purchase price was fixed at £17,000, payable as to £2,000 in cash and £15,000 in ordinary shares.

The prospectus, issued in March, 1907, stated that the directors would proceed to allotment on a subscription of 5,000 shares. J. Dempsey, an employe of the company, underwrote 5,000 shares on a commission of 10 per cent. Witness could not say whether Dempsey ever applied for his 5,000 shares, but he did not pay one penny in respect of them. He knew Mr. Dempsey was not in a position to take up the shares, and it was quite possible that he acted merely as a nominee of the directors, but witness agreed, nevertheless, that a check for £490 was drawn in favor of Mr. Dempsey, on account of the underwriting commission, and subsequently indorsed and handed back to the witness, who repaid £480 to the company's banking account in payment of allotment monies on certain shares, the applications of which were in some instances made under fictitious names. Of the 5,120 shares applied for most of them were by witness, Dempsey and others, and only £1 was paid in respect of them. In the month of May witness made a statutory declaration with the object of obtaining a certificate from the registrar of joint stock companies entitling the company to commence business. That declaration set forth that the directors had all paid the application and allotment monies on their shares, although such was not the case. In July, 1907, the directors borrowed £300, and although it was definitely stated that the money was wanted for the purchase of raw material, only £40 odd was applied to that purpose, the balance being expended on other company liabilities. At the time of the loan they had 2s. in the bank. A check for £390 handed to witness for the company's promotion expenses was only partly used for that purpose; the cost of the registration stamp, £85, not having been paid. The expenditure of this money, however, was for the most part satisfactorily accounted for. The office furniture was obtained on the hire-purchase system. The landlord of the City Road premises distrained for rent on November 1, and three weeks later the effects seized were sold; they realized £22 5s.; the winding up petition was presented on the following day. Paul Mellerio (managing director), and Hans Knudsen (inventor and director), were examined upon much the same lines as Mr. Rees. Another director, George Henry Burt, was stated to be in America, and the inquiry was adjourned in consequence.

Russell Hunting Record Co. Affairs.

At the last creditors' meeting of the Russell Hunting Record Co., it was announced that Messrs. Ogden and Hunting had bought the business, consisting of all the remaining assets—machinery, factory plant, office furniture, etc.—for the sum of £800, and that of the Linguaphone Co. for £80. The stock of records, nearly half a million, were sold to Bowron & Holmes for £4,000, only a portion of which had been paid. It was resolved to go into compulsory liquidation, and this was granted by the courts on January 26.

A Record for the Suffragettes.

A few hours after her release from gaol, Mrs. C. Pankhurst made a gramophone record which relates in a vivid manner her arguments for the cause. Another novel record is the "Apache Dance," which is all the rage in London just now.

Amusing Story of the Unemployed.

In search of laborers, an Australian farmer rode eight miles to engage some men who were out of work. He found one of the group lying on his back sound asleep. Pinned to his chest was a card on which was written "Please don't wake me—under 10s. a day!"

Lawrence Gets 15 Months.

James Lawrence, the originator of the Quintuple Phonic frauds, has been sentenced to fifteen months' imprisonment.

200 Thread Clarion Cylinder Record.

Further samples of the 200-thread Clarion cylinders are even better than the first. The latest present, if anything, a greater volume of tone than any other record of its class. As to quality of tone they are superb, being characterized by a sweetness and purity beyond all expectations. This new record will be on the market shortly. Other innovations the Premier Mfg. Co. have in view comprise a cylinder machine to run 200-thread records, and according to Mr. Forse—who is quite a young wizard in the realms of invention—the startling feature of this machine is the fact that the diaphragm, without changing, will play both the 100 and 200-thread. We shall certainly await the advent of this with interest not unmixed with curiosity.

Sig. Tamini Will Sing for Gramophone Co.

Signor Tamini, who created such a stir in musical circles just recently at the Albert Hall, has been secured by the Gramophone Co., and his records will figure in their lists this month. Judging from the enthusiastic reception he receives wherever he sings, Signor Tamini is a tenor of great powers, and we expect his records will reach an unprecedented sale among talking machine lovers.

Attractive Amberol Show Card.

A most attractive show card, in colors, has just been issued by the National Phonograph Co. It is to advertise "Amberol records"; which stand out in letters with the appearance of having been carved out of a rock. This is a most effective hanger, which will adorn the window of any dealer's shop.

In trade information for Edison agents, the company give notice that the attachments differ very considerably for "Home" and "Triumph" machines. You should have the full particulars at your finger ends, Mr. Dealer, and in order to save confusion, apply to the company at once if you are not yet quite familiar with all the details thereof. Owing to the fact that some dealers have been in the habit of misusing Mr. Edison's photograph in their advertisements, with the intention of making it appear that Mr. Edison was doing the advertising personally, the National Co. have notified all traders that in future Mr. Edison's picture must not be used in any publicity whatever; sanction is given to use only the trade-mark signature. The extraordinary demand for "Amberols" still continues unabated, and the only apparent rift in the lute is the company's inability to keep supplies ahead of demand. This is in a way both fortunate and unfortunate, but the company give notice that this subject of complaint will soon be a thing of the past, as deliveries are becoming more regular.

Pathephone for Primrose League Dance.

In connection with the "Primrose League's" annual dance at the Holborn Town Hall, a most successful concert was given by means of the Pathéphone, which evoked abundance of applause.

George W. Lyle's London Visit.

Geo. W. Lyle, vice-president and general manager of the Columbia Phonograph Co., recently visited this city, mainly in the interests of business. He spent a week at the company's London headquarters and about ten days on the Continent, apportioned to the branches at Paris, Berlin, Amsterdam, etc., where, as in London, he reports finding things working satisfactorily. Of America, Mr. Lyle brings good news of booming trade in general and of Columbia products in particular, which bids fair to continue. Mr. Lyle sailed for New York February 1.

Problem in Racking Records Solved.

One of the difficulties talking machine traders have to contend with on this side of the pond is the adequate racking of the hundreds of new records which the makers issue month by month. It involves not a little space, as may be imagined, besides the adoption of a system which will enable any particular record to be picked upon at once. Such a system is not lacking with the London factors, who are really very much up-to-date in this respect, which especially applies to Brown Bros., of Great Eastern street, who have to stock thousands upon thousands of titles. In Edison records alone they rack over 50,000, and little short of this in Zonophone goods. It requires a fine organization to tabulate such a quantity, which provides the means to supply 99 per cent. and despatch any order within three hours of receipt. A remarkable performance, and one deserving of hearty congratulation.

Disc of 20-Inch Diameter.

A large company, of French origin, is shortly bringing out a disc record of twenty inches diameter.

A Splendid Trade Report.

Judging from the December report, the Gramophone Co.'s trade this year is going to be exceptionally good, for it only emphasizes the fact that gramophones, in spite of competition, are more popular than ever. I have been told that December was the finest month in the whole history of the company, sales being remarkable in all lines. Such a report in these times is good reading, and we feel more sure now that the new year will justify itself.

Telewriter Device for Telephone.

Anyone in London having a telephone can now have what is called a "telewriter" attached, so that in ringing up another person similarly equipped, he can transmit a written message, draw a sketch, or write figures while speaking, which would all be instantaneously reproduced by an electric pen at the other end. If the subscriber when rung up happens to be out, a message can be written automatically on his telewriter pad by writing it with the special pen on the pad of the instrument from which the call is made.

Contracts Over 'Phone Not Legal.

A recent case in the courts is of interest. A contract was made over the 'phone and not afterward confirmed by letter. Such a contract, the judge decided, was not binding. As a wag puts it, the decision is expected to result in a greatly increased use of the telephone for proposals of marriage.

Gramophone to the Rescue!

The government of India have recognized that the only sure means of disseminating the King's recent proclamation to the princes and peoples of India is through the medium of records. To this end, therefore, the government have entered into an arrangement with the Gramophone Co. for Alec Marsh (late of the Carl Rosa Opera Co.) to dictate the proclamation for the records. Native gentlemen will also make the speech in the ver-

British Zonophone Co. Removing.

The British Zonophone Co. are removing from City Road to Tabernacle street, where all business will be conducted in future. Trade is reported to be on the increase in every department; machine and record sales are in the ascendancy, and great things are expected this year.

Interesting "Dubbing" Suit in France.

An action in the French courts recently comes at a particularly appropriate time just now in view of a repetition in England of a somewhat similar instance, which may be termed "dubbing." The case in point devolves on whether or not an artist has a right to his voice. A leading singer made records for a German concern under exclusive contract. His impressions were copied or reproduced by a French firm, against whom an action was brought in consequence. The decision was in favor of the French company, but was reversed on appeal, the court's finding being that the singer's voice was in his own right to dispose of when and how he liked.

The Rena Double Record.

The Rena double record has attained such widespread demand that the company have been compelled to open up premises in Manchester at 93 Market street.

The Sterling Special Record.

The Russell Hunting Co. this month draw attention to their freshly-molded Sterling special records, which every colonial and foreign dealer should stock. The quality is right and only the best artists are engaged, while a generous profit is allowed to traders handling a record that is an easy seller. Current lists are right up-to-date and contain some beautifully recorded selections of old favorites. Full particulars will be posted on application to the company at Bishops Road, Cambridge Heath, London, N. E.

TRADE REPORTS FROM THE PROVINCES

LIVERPOOL NOTES.

Liverpool, Feb. 4, 1909.

The traders in Liverpool and district are not doing so well as should be the case, and although a couple of months' fairly good business was reported in November and December, trade has been very flat since the opening of the new year, and in some cases the complaints are very serious.

Both the wholesale and the retail traders have, during the past season, been compelled to hold bigger stocks than hitherto, and the labor troubles at the latter part of last year, combined with the tightness of money, have reduced sales to a large extent. The middle class and working man, not possessing or earning sufficient money to indulge in such luxuries as talking machines and records, the buyers are restricted to the best class of monied people, who only consider the higher quality of goods throughout in purchasing. The vicissitudes of the market and ever-changing aspects of the trade are seriously interfering with the outlook in the sales for the near future.

The number of records upon the market, each competitor against one another, the slackness of trade generally, and the low prices, with exceptional terms offered by some firms, all help to unsettle business generally, and the feeling exists to-day that traders hardly know what to expect one day from another. In some houses, it is true, business is reported as very satisfactory, but we are sorry to say, in the majority of cases, this is not so.

There is no question whatever that the conditions to-day are entirely different to what they have been. The novelty of the talking machine business has worn off, and the trade is settling down into what we soon hope will be legitimate lines. Instead, however, of customers purchasing half a dozen or one dozen records at a time, they now step into the store, hear perhaps half a dozen records, and at the finish purchase one, and this resolves into a somewhat concentrated position, whereby only the most perfect records can be sold. Customers now border on the fastidious. They are, it is true, prepared to purchase the records they require, but these must be the very latest, without any blemishes and mistakes in recording, of high finish, and good value for money. Taking into consideration the enormous number of disc records upon the market, it is a very remote question whether many of them can survive the above tests of excellence for very long. There are rumors of impending changes during the next few months, and it is, unfortunately, this feeling of insecurity hanging over the trade that, to a large extent, handicaps the prospects of the business. The days of fancy prices are over; the public now demands a good article at a reasonable price.

As far as the cylinder trade is concerned, there has been an enormous quantity of cylinder records recently put upon the market, liquidated stocks, through closing down depots, etc., at prices ranging from 2s. to 3s. per dozen. In some cases there are thousands and thousands of cylinders in stock, for which any price will practically be accepted to clear. This alone will keep the cylinder trade very low for some time to come, and before this branch of the business will resume its normal capacity this will all have to be cleared, and we do not think it possible that the clearance can be effected before the middle of this year at the earliest.

Business is reported moderate with Thompson, Helsby & Co., of Liverpool, Pathé goods principally being their leading line.

We understand from Mr. Turner, the manag-

ing director of the Melograph Disc Record Co., that this firm is to increase their repertoire considerably with all the latest and best music, and each month issue a supplementary list of everything right up-to-date. They have, it appears, very excellent prospects as regards the export trade, and one order which they have in view will be sufficient to keep them busily engaged for the next three or four months. The multiplicity of disc records upon the market has, of course, affected their sales, but with care and attention and a thorough study of the requirements of their customers in various countries, they hope in the near future to do very well.

At Archer & Sons a fairly moderate business was reported. At Messrs. Richardson's and Messrs. Johnson, the well-known wholesale houses, returns are still keeping up very well. In the former house the Amberol records and Edison phonographs are still having good sales, and at the latter house both disc machines, records and novelties, which Messrs. Johnson's specially cater for, are holding their own in a very satisfactory manner. January business was reported exceptionally good at Messrs. Cramer's, especially in the higher price machines and records. Messrs. Van Gruissen's, in Bold street, are very pleased with the results up to date. Concentrating upon gramophone goods alone, they have had some nice sales recently.

At Jake Graham's, Renshaw street, the sales have been exceptionally large for the past few months. Keeping everything that is required in the talking machine trade, both in machines, records and accessories, Mr. Graham has a large clientele.

At the Gramophone Stores, in Lime street, Mr. Parr stated that under the new reorganization scheme the business had turned out very fair indeed.

We understand from various sources that negotiations are now proceeding with several Liverpool financiers to place upon the market a new type of disc machine and records. The inventions in question have taken several years to perfect, and the inventors claim that approximately ordinary 10-inch discs can be manufactured that will last for 15 minutes in playing. If this is so it will place quite a different aspect upon the trade generally, and it will not only considerably affect the sales of the present 10-inch disc records, which now last from two to four minutes, but it will also considerably affect the mechanical position of the disc machines of the future. We hope to report on this more fully in our next issue, and in the meantime we shall probably see some alterations taking place in the North of England before the next issue of The Talking Machine World is published.

MANCHESTER NOTES.

Manchester Feb. 5, 1909.

In Manchester and district business has not been nearly so good as anticipated. Price cutting has been very considerable, and as manufacturers are in some cases unable to prevent it, it seems probable that smaller profits than hitherto will be the rule. In the surrounding district trade has been reported as only moderate. In Altrincham, although Messrs. Noble do the cream of the trade here, the sales have not been so large as anticipated. In Stockport, Nield & Son, the well-known piano and musical instrument warehouse, state that they have done a nice business during the past few months. Concentrating principally upon gramophone goods, they are very pleased with some of the recent sales.

The Disc Record Co., of Wellington Road, Stockport, have recently been very busy with their export trade. Their shipments to India have been very large, and for the Indian territory alone they have sufficient orders in hand to keep them fully occupied for a considerable time to come. The Scandinavian trade has also been good with them, and these orders, combined with the French and Italian, have been very satisfactory.

In Manchester, Messrs. Duwe, of High street, had a fairly busy time up to Christmas, but now, like other houses, business has fallen off a little. Recently, Messrs. Duwe have taken over the sole wholesale agency for the "Discometer," which was reported on in The Talking Machine World a short time ago. They are anticipating large sales for this little instrument, and trade customers who desire to handle this most important adjunct should communicate with Messrs. Duwe without delay.

Business was reported fairly good at The Filamentine Co., who are doing very well with their "Filamentine" diaphragm, added to which their trade has considerably increased in machines. They are also putting upon the market an innovation in the form of a new machine, called the "Mentophone." The advantages claimed for this machine are considerable. Fitted with one sound box, it has a double parallel tone arm with two separate connections, thereby utilizing two tones instead of one. As Mr. Earl pointed out, if a machine of this type is placed in the corner of a concert room, for example, the sounds are much better distributed by the aid of two horns than one, each horn giving a distinct result independently of the other. From what we heard, the "Mentophone" appears to be a machine worth the careful consideration of all the dealers. This firm is also making a special push with the "Mentophone Needles," extra loud tone, and extra soft. We have tried these needles personally, and find very good results from them.

The Edison-Bell Co. closed down their depot at 22 Dantzic street at the end of December. They sold a large portion of their stock by auction January 5, and the result of this is that Edison-Bell cylinders are now being offered by jobbers at 2½d. (5 cents) each retail at a good many retail stores. This kind of business has a most disquieting effect upon the market generally, and dealers scarcely know where they are when such things occur.

Messrs. Richardson, of Shudehill, have opened a new store in Blackburn (wholesale only). They have a very large connection around this district, and the past results have been so good that they decided to open up on the spot for the benefit of their numerous customers.

BRADFORD AND DISTRICT.

Bradford, Feb. 3, 1909.

Trade in Bradford and district was very good up to Christmas, but since the new year a decided lull has taken place. Machines and records, especially disc goods, are selling principally, as we foretold in The Talking Machine World many months ago. Such an enormous quantity, however, of cylinder machines have been sold during the past few years that there is still a large demand for cylinder records. Previous purchasers, who have already bought a cylinder machine, in many cases not caring to change for a disc machine. Amberol records have been selling very freely, but in many instances the dealers are complaining of the scarcity of suitable titles for the English market.

The disc trade in England has got to such a pitch of perfection that unless the makers of cylinders keep right to the front and place upon the market goods suitable for the district in which they are sold, they will certainly have no chance of holding their own for long; and taking into consideration the enormous expansion of the disc business generally throughout the country, it will pay manufacturers abroad to produce what can be sold here in this country, otherwise the trade will be lost and never regained.

R. J. Appleton & Co. have removed from Bradford to their new depot at 15 Aire street, Leeds. We mentioned in a previous issue that this firm had taken commodious premises in Leeds, and we are now given to understand that Leeds will be their principal depot in the future. They will not, however, neglect the trade in Bradford and district, but orders obtained by their travelers for goods will be despatched from Leeds direct, instead of being distributed from the Bradford center as in the past.

J. Marshall & Co., Banks street, report having done very nicely indeed in gramophone goods, for which they are the sole agents, the higher price productions selling very freely.

At the Parker Phone Co., in Queensgate, business was stated by Mr. Stoddart, the managing director, as very good up till Christmas. Since then, however, like others, they have experienced somewhat of a lull.

Messrs. Dyson's, Ltd., of Manchester Road, have done exceptionally well during the past fall and winter season with Edison goods, of which they make a leading line. They have recently taken up the factorship of Zonophone records, and it is their intention to make a special push with these goods, Mr. Tidswell, the manager, having the utmost confidence that the sales in Zonophones will be exceptionally large in the near future.

Taking, however, Bradford and district gener-

ally, the trade might have been considerably better, but owing to the fluctuations between capital and labor and the short time the mill hands have been working, the spending powers have been somewhat reduced. Hence the trade being not quite so good as was generally anticipated.

FOREIGNERS MUST PAY SAME FEE

As Is Exacted by Their Respective Countries from Americans—House Committee on Patents Now Considering Measure Introduced by Representative Stephens.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 8, 1909.

The House Committee on Patents is now considering a bill recently introduced by Representative Stephens, providing that any citizen of a foreign country desiring to secure a copyright or patent in the United States must pay to this country in the shape of fees, etc., an amount equal to that demanded by his respective country from citizens of the United States for similar service. The bill is rather wide in its scope, the full text being as follows:

"That whenever any letters patent is issued by the United States on any article, commodity, device, mechanical appliance, or machine protected by patent, or any copyright issued by the United States on any article, musical composition, musical instrument, or device for reproducing music or musical composition, to any citizen of any foreign country, then such patentee or copyright grantee shall pay to the United States the same amount of fees and subject himself to the identical laws, restrictions, rules and regulations as such foreign country imposes upon a citizen of the United States for patenting or manufacturing and selling the patented article therein; and the failure on the part of the foreign patentee to comply with this law shall operate as a forfeiture and cancellation of such letters patent or copyright in the manner hereinafter provided.

"Section 2. That the Secretary of the Interior is hereby authorized and empowered to make and carry into effect all such rules and regulations as he may deem necessary to enforce the provisions of this act.

"Section 3. That (a) whenever any letters patent issued by the United States on any article, commodity, compound, device, mechanical appliance, or machine protected by patent, or (b) any copyright issued by the United States on any article, musical composition, musical instrument, or device for reproducing music or musical composition, or any picture book, pamphlet, or any other work of literature or art protected by copyright is purchased from the patentee or owned, leased, used, or controlled by any individual, firm, association, syndicate, corporation, or combination which is engaged in any vocation, business, or enterprise in violation of any law of Congress or of any State prohibiting, restraining, or regulating trusts, monopolies, or combinations which operate in restraint of trade or commerce among the several States or with foreign nations, the right to any protection under the patent or copyright laws of the United States shall cease and terminate and shall subject such patent or copyright to cancellation in the manner hereinafter provided.

"Section 4. That any citizen of the United States, or any United States district attorney for any district of the United States, may institute or cause to be instituted suits in law or in equity for the cancellation of any copyright or letters patent mentioned in this act, when the facts shall warrant such suit or suits as provided in this act, in any circuit court of the United States where the foreign patentee may reside or transact business, or where the patent or copyright referred to in Section 1 of this act is owned, leased, used or controlled, or the articles or products referred to in Section 3 are manufactured, used, produced, or sold in violation of this act; and said court is hereby given full jurisdiction to try and render judgment in all such cases under this act."

Action on the measure will be eagerly awaited.

SUIT BROUGHT AGAINST BRADLEY

By the Fonotipia, Ltd., of London and Milan and the Columbia Phonograph Co.—Perpetual Injunction Asked Against "Dubbing" or Duplicating Their Records.

On February 1 suit was filed by the Fonotipia, Ltd., of London, Eng., and Milan, Italy, and the Columbia Phonograph Co., General, New York, against W. V. P. Bradley, Brooklyn, N. Y., "sales agent" for the Continental Record Co., in the United States Circuit Court, eastern district of New York, for "dubbing" Fonotipia operatic records. The bill charges the defendant "and others conspiring and confederating with him" with "preparing and threatening to injure and destroy" the complainants' "exclusive rights * * * by placing on the market in this country counterfeits or spurious imitations from sound records * * * and offering the same for sale at prices greatly below the prices now being paid for genuine 'Columbia records, Fonotipia series.'"

The complaints further aver that "such counterfeits can be obtained by merely electroplating, at a trifling cost, a commercial disc record, and then using such electroplate or stamping matrix * * * for stamping out counterfeit records by the thousand, * * * and that the foregoing is the method by which said defendant * * * produces his so-called 'Continental Grand Opera Disc Records.'" The defendant is also charged with "distributing catalogs and circulars addressed to the talking machine trade relating to these records which are alleged to be 'made in this country from mother records imported from foreign countries,' * * * and that they 'are equal to the originals in all respects.'"

In view of this recital and other statements submitted in detail, the Columbia Phonograph Co. General, ask for a perpetual injunction against Mr. Bradley, his associates, etc., likewise a preliminary injunction and a temporary restraining order of the same tenor. Besides the defendant to deliver up to the court in advance of the hearing * * * any and all such counterfeit records, catalogs, circulars, etc., to be destroyed after the hearing. An accounting is also prayed for. Argument on the motion was set down to be heard by Judge Chatfield February 13.

OSBORNE'S AMBEROL PUBLICITY.

Thomas Edens Osborne, the talking machine jobber of Belfast, Ireland, is a great believer in publicity, and the daily papers of that city bear ample testimony to this. He has been paying particular attention recently in his advertising to the Amberol records made by the National Phonograph Co. One of his most original conceptions—an excellent and clever one, mark you—is the following which we clip from one of the Belfast papers:

BIRTH.

Amberol.—Autumn, 1908, at the laboratory of Thomas Alva Edison, Orange, New Jersey, U. S. A., from the fertile brain of the great inventor—the "Amberol" phonograph record. N. B.—All information concerning the "new arrival" on application to Thos. Edens Osborne, 4 Donegal Square West, Belfast.

BIG MONEY FOR SCHUMANN-HEINK.

According to Madame Schumann-Heink, the grand opera contralto, the Victor Talking Machine Co., Camden, N. J., paid her $30,000 for 100 songs.

You must remember that sometimes your tact may persuade a customer to buy, without convincing him to buy from you.

A phonographic attachment for the telephone has been arranged to tell when and, if desired, why the doctor or the lawyer is out. Probably it will be adapted early to the work of mentioning domestic excuses when hubby's regular voice is lost in a fog.

A TRADE FIELD THAT DEMANDS FINE WORK.

Why Expert Talking Machine Salesmen Are Rare—Improved Methods Suggested—Actual Experiences of a Veteran Which Will Interest the Student of Salesmanship.

BY L. K. CAMERON, OF RUDOLPH WURLITZER CO., IN "SALESMANSHIP."

There is a great demand for first-class salesmen who thoroughly understand the retail talking machine business in all its phases. The demand far exceeds the supply, and I believe I am safe in saying that in this big country of ours there are not one hundred first-class A1 talking machine salesmen, when there should be ten, yes, twenty times that number.

What is the reason for this? Of course the business is in its infancy and some will say that they "have not had the time to look up the fine points," and they "must not be compared with salesmen of leather or dry goods, etc., who have had the benefit of years of experience of others before them in their lines, for advice and direction." This may be true to a slight degree, but I think that most salesmen new to the talking machine business merely seek the path of the least resistance and try to gradually absorb a slight working knowledge instead of digging down into the depths and learning everything of importance and value on the subject. It is like learning a new language. If you go among Frenchmen you will acquire a superficial conversational knowledge of the language in a couple of years, but, if one buckles down to his French grammar, lexicon, etc., putting his mind upon it with determination to learn, he will speak the language grammatically correct in half the time.

Take the ordinary person who starts in a talking machine department of any of our large music houses. He learns the prices of the different machines and records, and after a time is able to distinguish styles of machines and horns from each other, sometimes. He has a dim idea, sometimes, that different sizes of machines have a different tone, sometimes. He can tell you, sometimes, why this difference exists, and, sometimes, he can't. And he can't more times than he can. You see this "sometimes" business is a big thing, and managers of talking machine departments and houses should take pains to eradicate this uncertainty among their salesmen.

Now, I do not wish to be understood as being pessimistic, but these views are merely the result of a tour of observation to the different talking machine departments and establishments in New York and Chicago, where I think one should get some idea of present conditions. I am glad to say, though, that these conditions are being gradually bettered, thanks to the labor and forethought of certain large manufacturers of talking machines and phonographs, who have mailed to all dealers and salesmen of their goods, lessons in machine salesmanship, which have done a great deal to alleviate these conditions, by giving to all who took the pains to conscientiously study them a better appreciation of the value of knowing their goods.

The department manager should every two or three weeks call his salesmen together and go carefully over the selling features of each style of machine, explaining to the salesmen the difference in tone between certain styles, and the cause of the difference; also the effects produced by horns of different sizes and materials and the effects of different needles on the life of a record and on the tone production. He should endeavor to make clear in the minds of his salesmen the principles upon which the tone is reproduced by the soundbox or reproducer, and give them an idea of the process of manufacture of the records, for many a time does the customer ask, "Well, how are these records made?" and "What is the difference between the cylinder and the disc records?" The usual answer I have found to this is, "Oh, one is round and made out of wax and the other is flat and is not made of wax." So the customer knows about as much as he did before he asked. Let the department manager explain and make clear all these points to the salesman. The best methods of selling should be discussed unreservedly, and in this manner will a great many of the cloudy points be cleared.

The salesman personally should endeavor to post himself thoroughly concerning the stock. Don't stop at merely learning the prices and to distinguish the different machines and records, but go deeper into it. Experiment with the machines. Observe the effect of the different size horns and the horns of different materials. Familiarize yourself with the names of all the parts of the motor and the work each does. If convenient, take a machine apart and put it together again and learn to diagnose a case when a machine does not run properly. Have your sample machines in perfect condition, running smoothly; and above all things don't let your reproducer or soundboxes blast and rattle, for nothing will kill your sale quicker than a poor reproduction. Do not use for exhibition purposes old, worn-out, scratchy records, and also do not try to dispose of records you have been using in your rooms to some E. Z. Mark. He may be easy, but when he observes that his records are not as smooth as some he has heard, he will go to that place where they were smooth and you lose a good customer. Remember that you must impress your prospective customer with the quality of the tone reproduction of your machine as well as the quality of your selling talk.

It is very important that you have a selling talk. Don't merely talk at random on all styles and sizes of machines, but have a plan of campaign. In my own case I have very successfully used the following method:

I have composed a selling talk embracing, as it were, an introduction to the machines, a general statement as to their quality and respective strong points, and a few indirect questions to get an idea of the amount willing to be paid and the style of the machine desired, whether disc or cylinder. This will give you the opportunity to dwell upon the merits of one particular machine which it is evident he can afford. Do not make the mistake of trying to sell him too expensive an outfit, as the idea of such a large amount involved may discourage him and he may refuse to buy altogether. And yet, if he can afford it, impress upon him the advisability of owning a machine with which he will be perfectly satisfied, a machine of perfect tone, quality, strong motor, etc., here entering into a description of the machine suitable to his needs.

I have written and rewritten my selling talk, polishing here and revising there, until it embraces the strongest arguments at my command. This I committed to memory, and no matter when or how interrupted, will manage to pick up the thread at the right place and continue until the psychological moment arrives. Then stop talking. Now it is just as important to know when to stop as it is to know what to say. Many sales are talked to death and others meet the same fate at the mouth of the horn, for salesmen often make the mistake of playing too many records. The talk must be memorized so well that certain parts can be changed at a moment's notice as demanded by the difference in customers, for no two men are alike and therefore your talk must be adapted to all sorts and conditions. Make your selling talk such a part of yourself that it flows as easily and gracefully as impromptu conversation. This method I have found very successful, as it enables one to bring his strongest and most brilliant arguments to bear, where otherwise his talk would start nowhere and end about half a mile this side of the same spot.

There are two things I have discovered you cannot select for another man: One is his necktie, the other his talking machine music. So don't try his patience by playing things you are fond of. Find out how his tastes run and put these records on the machine. Try to get at ease, but not familiar with your customer, for then the battle is partly won. Get him to talk and express his opinion on the machine and the result is easier. The hardest man of all to do business with is the man who sits in his chair like a wooden image and never opens his mouth or cracks a smile. Try different styles of music until something thaws him out. You cannot tell what the result will be. Once you make the right impression things begin to happen. This was illustrated forcibly just a few days ago. A gentleman and his wife walked into the store the other day, and in answer to my question asked to be shown the different styles of machines. I went through my regular formula, had them seated in one of our private salesrooms and was playing a record or two to get a line on his tastes. After a couple of good quartettes and some orchestra music, he seemed to fancy a $60 outfit, but could not make up his mind. I saw immediately that there was something lacking in my endeavor to make an impression, but I had one more card up my sleeve, so to speak. So, placing a duet by two of the great operatic stars on a $200 machine which he had not noticed, I started it going. The effect was magical. He was entranced. "Now," he said, "that is something like it. Why don't you know that to me the first place? It is simply marvelous."

Now, I had led him up to that and by degrees put him in a mental condition to fully appreciate the beauty of the best machine by comparing it with others of the same make, only smaller. This man had to be treated in this manner, otherwise I would have lost the sale entirely, or at the most sold him merely a $60 outfit when he was capable of paying more and willing to do so.

Study your customers and remember that all men cannot be treated alike. What impresses one

tires another, and vice versa. Always try to meet a man on his own ground. If he is easy going, good natured and wants to talk and enjoy himself while he is looking at the machine, be thou likewise. If, however, he is taciturn and cold, don't attempt gayety with him or he may think you frivolous and your arguments will have no weight whatever. Endeavor to gradually thaw him out by your studied politeness and tact, and when you see him interested in some certain records or machine, attempt to draw him out on that article. Find his peculiar hobby in the musical line and notice at the end of half an hour or so the change in him. Study your customer's taste in music and remember the kinds of things he likes. Make a list of your important customers for your own use, and by each name a memoranda as to the class of records he buys. Write him a personal letter each month and tell him you have something of especial interest which will be sure to strike his fancy. You will be surprised when you figure the results of these special efforts and realize that you have made sales amounting to two or three hundred dollars which otherwise would have been lost. Besides your customers will appreciate the interest you have taken in them and will stick to you, and keeping old customers is just as good and important as making new ones. Don t let a prospective customer bluff you. I am sure there are some who will try it. They will go so far as to intimate that they know as much or more about business than you do yourself. The best and only way to avoid this is not to give him the opportunity. Know your goods from beginning to end, and no matter how hot and heavy the cross-examination some people put you through you will come out victorious in the end.

There are times when we must be firm, especially with the fair sex. The other day an elderly lady and her granddaughter came into our department, having been attracted by the window display. She wished to send a machine to her country home and was taking a general survey of all styles and makes. In giving her the prices of the different machines I had a dim idea she was not really hearing all I said, merely for the reason that she did not listen. However, she decided on a certain machine with a special horn amounting to $51. The next morning she telephoned in and changed her order to a larger outfit, which I had priced to her the day before at $68, saying she would be down to the store in a copule of hours, as she could not understand the price I made her on the 'phone. After she arrived I happened to again mention the price of the outfit.

"Sixty-eight dollars!" she really yelled. "Why you told me yesterday it would be only sixty, and here you are trying to raise prices on me, taking advantage of my ignorance of the machines and by misrepresenting things, trying to steal my money. I just won't have it. You may cancel my order." And she stewed and fumed, ranting and marching up and down the room.

I let her rant for a while. Maybe I was a little mad, but it was righteous anger, but with no show of temper, said:

"Madam, you are very unjust and decidedly mistaken, but under the circumstances I think it is the best thing you could do. For really, if you think that it is the policy of our establishment to treat people in the manner you suggest you would naturally not wish to take a machine from us. In fact, under such conditions I prefer not to sell you the machine, so we will call the matter off. I am very sorry, but really I couuld not conscientiously allow you to purchase a machine under that impression." When her daughter, who was with her this time, saw the turn affairs had taken, she interrupted with "Mother, I don't think you should let a matter of merely $8 stand in your way." So at that I knew I had won the day. With that kind of character to deal with, firmness was my best weapon. Had I tried to humor her she would have only been more positive that I had intended taking advantage of her and would have left the store in a rage. But seeing that I was firm and unyielding, she, after a short time, acknowledged she must have misunderstood me, and when she left, after paying half down on a $75 outfit, she was in the best of spirits. And so it goes. One must keep his wits about him and his eyes open.

Cultivate an easy flow of language, not necessarily brilliant, but each sentence full of meat and to the point. Be interested in the wants of your customer whether he is going to buy a thirty-five cent record or a $200 machine. If a record customer does not know exactly what he wants, suggest some little gem of a piece to him, and if you do happen to strike something he likes he will usually be so pleased with the discovery that he will invariably call for more like it on the spot. In a tactful way suggest to him that you would appreciate any mention he might make of the establishment to his friends. I am sure I have sold over three thousand dollars worth during the last year on that little suggestion alone. Oh, there are hundreds of little things to do to boost the sales. Use your brains. Be original, even if you fail now and then. You are bound to win in the end if you only have the determination backed by brains. With the determination to succeed engraved on his mind and planted deep in his soul a man will stick to the roads which lead to success. Great success is more a mental than a physical problem, and though the fools may laugh at the idea of one becoming successful merely because he made up his mind to do so, it is still a deep truth and will become more widely acknowledged as the results are shown. Make up your minds, brother salesmen, to be the best talking machine salesmen in the country. Realize the broadness of the salesman's position and his importance and prepare yourself accordingly. Stick to your determination and watch the results in your sales reports. You will be more than repaid. For I thoroughly believe we are not what we think we are, but what we think—we are.

Paul H. Cromelin, vice-president of the Columbia Co., left for Washington, D. C., last Friday. Watch the latest developments in the copyright situation.

TIMELY TALKS ON TIMELY TOPICS

Since Judge Lacombe, United States Circuit Court, southern district of New York, on October 4, 1904, rendered his decision on a "dubbing" case, no further effort to restrain the opprobrious practice by judicial decree has been made. Recently a concern have deliberately entered this questionable field of activity, placing a comparatively large line of "dubbed" records on the market, and of which doubtless many sales have been made. The Victor Talking Machine Co., Camden, N. J., warned buyers against what they described as spurious goods. The Columbia Phonograph Co., General, in conjunction with the Fonotipia Co., Milan, Italy, for whose records they have the exclusive manufacturing and selling rights in the United States and Canada, have gone one step further, and have applied for an order to restrain one, W. V. P. Bradley, of Brooklyn, N. Y., from making and selling these so-called "dubbed" records.

The hearing on the motion for an injunction was to have come on in the United States Circuit Court, eastern district of New York, Judge Chatfield sitting, Saturday last, and the second decision on this very vital dispute will be awaited with much interest. A notion prevails among not a few very intelligent members in the trade that "dubbing" is legitimate and cannot be stopped, providing the seller informs the buyer that the record in question is an "imitation" of the original. The World begs to differ with this peculiar conception of business integrity, to say the least, leaving the legal definition entirely to the courts. Moreover, there is no necessity to argue the case in these columns, as Judge Chatfield will apply the law; but it is just as well to remind the "dubbers" and those who aid, abet and probably defend them, that Judge Lacombe pointedly remarked, in the Armstrong suit, that "the law of unfair competition may fairly be invoked." Furthermore, as the court also observed, the very fact that the same sound waves or lines on the original are reproduced on the "dub" is clear proof of their being spurious. The question before the court is, can the manufacture and sale of such goods be prevented either in common or statutory law? The attorneys for the prosecution, whose bill of complaint is lengthy and elaborate, are sure the court will say, after hearing the defense and considering their brief, "we have examined the citations, which contain no argument and which we find unpersuasive."

Amusing stories are told bearing on the defective hearing of Thomas A. Edison; one of the latest caused no end of quiet laughter in the experimental laboratories at Orange, N. J. Mr. Edison had been interviewing a party who is known as an inventor of improvements in talking machine devices, and whose services he was about to engage. In the preliminary talk the "old man," who was in one of the "labs" surrounded by the "muckers," was asking the gentleman a number of rapid-fire questions on technical matters pertaining to the reproduction of sound, record composition and cognate things, the answers revealing knowledge that few of the curious auditors were familiar with, but nevertheless eager to absorb—coming "right off the reel," as it were. Then the "Wizard," apparently oblivious of his surroundings, suddenly admonished the interrogated inventor not to say a word to anyone of what they had been talking about. The discreet listeners smothered grins as they resumed their research work and experimental investigations, wiser for certain coveted information that came from an authoritative source. The incident was supposed to be suppressed, but the story was too good to keep, and therefore it leaked out.

With scarcely three weeks remaining of the final session, Congress will find it impossible to pass a copyright bill. The Washington correspondent of The World, on another page, reviews the situation up to the present moment, and supplies the text of the Washburn bill dealing with the music section, the bone of contention. This measure provides a royalty fee arranged on a basis of 5 per cent. as between the copyright owner and those to whom the privilege of reproduction is accorded, and the right shall be free to all under certain conditions. Another bill, for which Mr. Currier, chairman of the House Patents Committee, is sponsor, allows a flat royalty of two cents on each record sold of the composition used. The committee are divided which of these bills should be recommended for passage. This controversy has now been going on for at least four years, and the outlook is that another two years may elapse before any copyright legislation is effected, if then.

So far as the musical sections of the bills are concerned, they will not be retroactive, hence the works of deceased composers will be barred the benefits of the act when reproduced on records. A case of this kind that is attracting wide attention is that of Mrs. Ethelbert Nevin, widow of one of the best-known composers in the country. Mr. Nevin was the author of many songs, the best known of which are "Narcissus," "The Rosary" and "Sweet Venezia." Under the proposed copyright bill there will be no protection for songs and other music that have already been used without payment. Consequently, for Mrs. Nevin there is no protection. Her husband is dead and can compose no more songs. Her copyrights are rendered almost worthless and she loses thousands of dollars because of the use of the records. She intends to ask the committee to make some provision for the payment of royalties to owners of copyrights. This is a particularly sad case, to be sure; but if the retroactive door is opened once, how will it be closed again? The Patents Committee will doubtless adhere to their original intention in this respect regarding the provision of whatever bill they may favorably report to the House.

Now the manufacturers of perforated music are arranging and cutting rolls to accompany records. The first firm displaying this commendable enterprise are the Chase & Baker Co., Buffalo, N. Y., who in their February list of selections have included "Ah, So Pure!" from "Martha," which is arranged as an accompaniment for Victor record No. 88,001, and the sextet from "Lucia di Lammermoor," as an accompaniment for Victor record No. 96,200. This is a suggestion that other roll manufacturers might follow to advantage.

In the revision of the tariff the talking machine trade appear to be rather indifferent. But one company seemed to be sufficiently interested to have a representative before the House Ways and Means Committee, and that in a left-handed sort of way. The attorney in question candidly admitted he was not familiar with products of the trade, or how much they suffered—if any—from foreign competition; therefore he was in no position to speak. There has been no petition placed on file with the committee to reduce duties; and European makers of machines, records, etc., avow the only obstacle they encounter in sending these goods to the United States are the patent restrictions. The tariff would not prevent them from flooding this market with a cheap product, as the high grade lines known to the American public are beyond their reach.

The trade have frequently and justly claimed that too many records of the same selection are catalogued. The same song will be placed on ten and twelve-inch records, and sometimes as many as three and four artists will be employed, not to mention the instrumentals quartets, etc. This is also true of the cylinders. An expert, to whom this subject was broached, said the duplication and triplication of records is often the fault of the recording laboratory in their engagements with the "talent." Of course, the company charged with listing so many duplicates of the same number, in one form or another, could rectify the evil, this authority claimed, but it is seldom if ever done. Naturally, this leads to "loading up," against which much bitter complaint is heard, and to prevent it no practical solution has yet been offered. Well, the upshot of the conversation was a lot of criticism freely offered, in which the expert aforesaid defended the manufacturers, but when one mentioned that the multiplication in divers forms of "Love Me and the World is Mine," as an example, everybody threw up their hands and declared that was the limit, and for which no acceptable defense could be offered in "extenuation of the crime."

DEVINEAU MAY RESIDE ABROAD.

Resigns His Position as Secretary of the City Sinking Fund Commission of Cleveland—Federal Mfg. Co. With Which He Was Connected Financially Embarrassed.

(Special to The Talking Machine World.)

Cleveland, O., Feb. 5, 1909.

Louis Devineau, a friend of Mayor Johnson, of this city and secretary of the City Sinking Fund Commission, has sent a letter from Brussels, Belgium, resigning his position, and it is believed that he will henceforth reside abroad. Several months ago, by the death of a relative in France, Devineau's two young daughters were left a large sum of money, $30,000, it is said. With Mrs. Devineau they sailed at once to claim the bequest. After the holidays Mr. Devineau found that his wife was unable to prove satisfactorily her daughters' claims to the inheritance, and it was necessary for him to go to France. He was given a leave of absence and immediately left to join his family.

Mr. Devineau was manager of the Devineau Biophone Co. and the Federal Manufacturing Co., two concerns which manufacture patented phonograph devices. As a result of Mr. Devineau's leaving, the companies with which he was connected have been financially embarrassed, and three attachments have been issued against the Federal Manufacturing Co. on claims made by Columbia Phonograph Co.

GREAT LIST OF HEBREW RECORDS.

The Hebrew record list of the Universal Talking Machine Mfg. Co., Newark, N. J., is reported as being the largest and best selected in the country, and on which their sales almost equal those of the American numbers. The special bulletin, issued last week, has 14 numbers, the five duets being reproduced from the voices of the greatest Jewish artists in New York City, and that is saying a great deal. Their soprano solos are also equally high class. The duets were sung by Mme, Prager and Mr. K. Jurelier, and the solos by Mme. Prager. Other magnificent voices, the possession of these peculiarly gifted musical people—talents usually inaccessible—will be placed on the Zonophone records at an early date. Their regular Hebrew catalog contains 50 other numbers. Manager Macnabb is earning well deserved praise for his tireless efforts to have his record catalog equal to the best in the market in point of quality, finish and selling value.

WASHBURN COPYRIGHT BILL REPORTED.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 13, 1909.

The House Committee on Patents will report back the Washburn copyright bill early next week and recommend its immediate passage. This bill provides for a 5 per cent. royalty basis for reproduction rights on records, and where such allowance is withheld music writers are authorized to sue for damages in amounts not to exceed $5,000 in cash. This penalty is a new feature. (The test of the bill appears on pages 69 and 70 of The World.)

The Columbia Exclusive Dealer Owns

The Disc Half of It:

The exclusive agency for Columbia products to-day gives the dealer far more than any other manufacturer is in a position to offer.

It gives you an absolutely complete money-making line, with no soft spots in it from one end to the other. Machines ranging in price from $20 to $200—several distinct styles of both disc and cylinder types; Double-Disc Records to sell at 65c. to every owner of a disc machine in your territory and to the new owners you create yourself; a magnificent line of Indestructible Records to sell to every owner of a cylinder machine in your territory and to the new owners you create in your own store, and a clean-cut, well-established policy of square-deal and protection behind it all, eliminating unfair competition and insuring you increasing profits from every month of time and every dollar of money you put into your business.

You can hardly name a line of business to-day which offers its local representatives a surer or safer market. The prestige of the company's product is mounting higher every day. No need to tell you, though—every reader of all or any of the leading magazines already knows all about it. Don't deceive yourself—times have changed rapidly during the last few months, and we have had a lot to do with the changing of them.

The responses to our general advertising of Double-Disc Records make it clear enough to us that every town is full of disc machine owners who only want to know where Columbia Double-Discs are sold. They seem to have gotten very rapidly beyond the point of argument, and the huge files of re-orders for Double-Disc Records which we have been filling more and more promptly during the last two months are proof enough here at headquarters, that any dealer who lets the Columbia Double-Disc exclusive agency get by him, is going to ask himself a little later on why he allowed himself to go to sleep at the switch in broad daylight.

Columbia Graphoph***

COLUMBIA PHONOGRAPH CO., Gen'l, -

Both Halves of the Record Business!

The Cylinder Half of It:

Just so you don't get hold of the Indestructible idea wrong side up, we want to remind you that the Columbia Indestructible Record is this minute selling circles around any other cylinder record on the market—and not merely because of its indestructibility, either.

There are plenty of people who own cylinder machines, and who will soon own cylinder machines, who will buy Indestructible Cylinder records now and hereafter because of the indestructible feature alone—that's true enough. It doesn't take them long to see that the records are truly indestructible. It is a fact that neither use nor abuse injures them in the slightest degree, and a record which can be knocked about without injury and which can be played every day for years without showing the slightest deterioration of tone, is bound to take hold and take hold hard. But the one thing that really best holds the Indestructible Record customer, is the clarity and brilliance of the tone of the record.

This is true when the record is played on *any* machine, with any ordinary reproducer—and the sapphire point in any reproducer will play Indestructible Records all day, year in and year out, without showing the slightest wear under the microscope. *This we guarantee.*

But with the new Extra-Tension Reproducer, which we provide at $3 retail for application to every make and type of standard cylinder machine, their tone is simply incomparable. Gravity weight alone in a reproducer cannot act quickly enough to bring out all the sound waves that are in the record. The extra spring tension on the new Columbia Indestructible Reproducer carries the reproducer point down into every finest indentation of the record and brings out every finest gradation of tone—and that record can be played with that reproducer, day in and day out, year in and year out, and without producing the slightest damage to either the Indestructible Record or to the reproducer point.

people, for so long a time, at so little cost, as a $20.00 to $200.00"

- - TRIBUNE BUILDING, NEW YORK

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 10, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

JANUARY 16-23.

Berlin, 31 pkgs., $199; 34 pkgs., $221; Bombay, 9 pkgs., $500; 27 pkgs., $1,100; Brussels, 12 pkgs., $346; Buenos Ayres, 31 pkgs., $4,626; Callao, 4 pkgs., $256; Dublin, 3 pkgs., $171; Guayaquil, 2 pkgs., $102; Havana, 16 pkgs., $964; 2 pkgs., $750; Havre, 105 pkgs., $576; Huelva, 4 pkgs., $138; London, 7 pkgs., $533; 360 pkgs., $6,188; 10 pkgs., $579; Para, 5 pkgs., $156; Port Madryn, 2 pkgs., $151; Progreso, 125 pkgs., $2,127; Puerto Barrios, 2 pkgs., $151; Rio de Janeiro, 15 pkgs., $340; 24 pkgs., $772; Santiago, 4 pkgs., $180; Singapore, 5 pkgs., $180; St. Petersburg, 3 pkgs., $262; 24 pkgs., $735; Valparaiso, 12 pkgs., $1,215; Vera Cruz, 76 pkgs., $3,009; Vienna, 7 pkgs., $515.

JANUARY 30.

Bergen, 9 pkgs., $460; Berlin, 2 pkgs., $110; Callao, 2 pkgs., $100; 2 pkgs., $337; Havana, 8 pkgs., $275; Kobe, 101 pkgs., $5,616; London, 17 pkgs., $276; 564 pkgs., $6,582; Para, 124 pkgs., $315; Rio de Janeiro, 6 pkgs., $397; Savanilla, 6 pkgs., $607; Shanghai, 176 pkgs., $6,151; Singapore, 10 pkgs., $503; Trinidad, 13 pkgs., $703; Vera Cruz, 68 pkgs., $1,411.

FEBRUARY 7.

Ambala, 3 pkgs., $157; Berlin, 32 pkgs., $216; 31 pkgs., $200; Buenos Ayres, 57 pkgs., $800; Callao, 7 pkgs., $180; Colon, 15 pkgs., $301; Hamburg, 4 pkgs., $192; Kingston, 7 pkgs., $530; La-Liberto, 6 pkgs., $422; London, 19 pkgs., $686; Montevideo, 50 pkgs., $976; Porto Plato, 4 pkgs., $119; Reval, 2 pkgs., $161; Rio de Janeiro, 4 pkgs., $269; Vera Cruz, 79 pkgs., $1,840; Wellington, 392 pkgs., $3,654.

TRADE IS OPTIMISTIC

So General Sales Manager Dolbeer Reports After a Trip to Edison Dealers in Canada and Points Throughout New York State.

F. K. Dolbeer, general sales manager of the National Phonograph Co., Orange, N. J., got back to New York on Friday last from a short run into Canada. At Toronto the R. S. Williams & Sons Co., Ltd., told him they had the best business in three years. Returning, Mr. Dolbeer stopped at Buffalo, Rochester, Syracuse, Utica, Schenectady and Albany, N. Y., and all along the line he encountered a most optimistic feeling. To be sure, trade was not heavy, but the spirit prevailing among the Edison jobbers was a decided improvement over last year or even in November.

The factory, Mr. Dolbeer said, had caught up with orders, and night work had been discontinued. Their fiscal year ended February 28, and probably the plant might be closed down for a couple of days to take stock. General Manager Wilson remarked that this would be the first time in years they had been able to stop at all for this purpose, as the inventory had usually been completed between Saturday night and the succeeding Monday morning.

PHILLIPS WILL REPRESENT COMPANY.

E. H. Phillips, manager of salesmen of the National Phonograph Co., Orange, N. J., left last week for Ohio, on special business, dropping off at several places en route to see the jobbers. At the suggestion of President Dyer, Mr. Phillips will attend the convention of the National Manufacturers' Association, at Indianapolis, Ind., February 16 and 17. He will represent the company, which are members, and report on the discussion of the tariff that is to take place.

MOVING PICTURE SITUATION.

Considerable Trust Talk the Past Week—Rival Organization in the Field—Situation Reviewed.

Notwithstanding the balderdash and sensational stories appearing in the New York daily newspapers recently regarding the moving picture situation, there is no cause for worriment on the part of any one engaged in the business. The "trust" howl raised by these papers, combined with the publication of rumors in no wise affects real conditions. The Motion Picture Patents Co., organized to remedy trade evils and make and furnish better finished goods and of greater variety, incidentially figuring on enlarged profits, are evidently satisfied with the outlook. The aim and purpose of the company were efficiently detailed in last month's World. The formation of an opposing or competing company was to be expected and has happened.

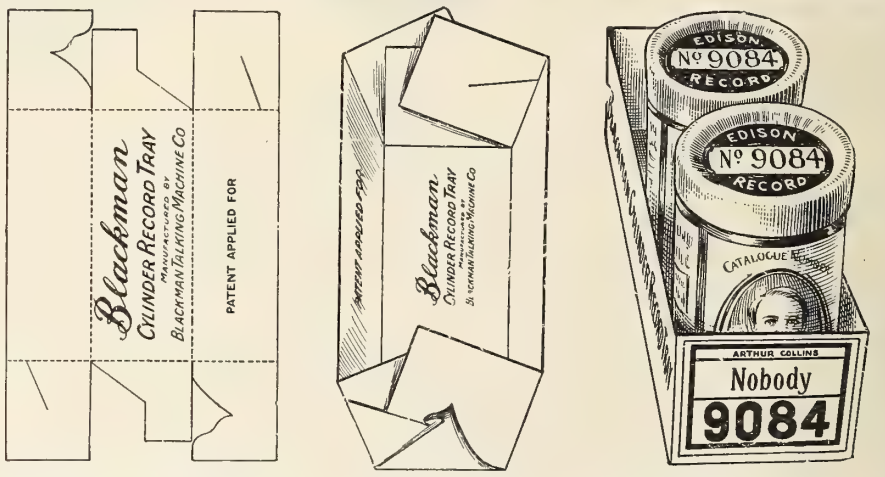
In fact, on the same day and at the same place, that the Film Service Association held their convention on January 9 at the Hotel Imperial, New York, the Independent Film Protective Association was organized there also. Headquarters were established at 143 E. 23d street, and a statement was subsequently issued to film renters and exhibitors, in which issue was taken with the methods of the Motion Picture Patents Co., whose agreement with operators went into effect February 13 instead of on the first. February 6 the United Theater Managers Moving Picture Co. was formed to oppose this same company. This concern will look after matters East, while the I. F. P. A. will take care of the West.

On January 29 a meeting of the independent element was held in the office of the Columbia Phonograph Co., General, New York, who are reported to be the "power behind the throne" in this movement. The company is said to have secured control of the Bianchi patents, which are spoken of as the only non-conflicting patents on camera and projecting machines outside of those controlled by the M. P. P. Co. The Cameraphone Co., New York, who use the Columbia Co.'s Twentieth Century talking machine exclusively, and who claim to own valuable picture projection patents likewise, are also reported as interested.

When the Columbia Phonograph Co., General, was asked if they desired to make any comment or statement regarding the foregoing they said: "We have given no information regarding this matter to any one for publication, and we are not prepared to say anything at the present time, as it would be premature."

The Watkin Music House, of Dallas, Tex., is carrying on a great campaign for the Columbia phonograph in the papers throughout the State of Texas.

IMPROVE YOUR SYSTEM
AND
INCREASE YOUR RECORD SALES
BY USING
THE BLACKMAN CYLINDER RECORD TRAY
(Patent Applied for)
A Record Tray With Record Label for Less Than One Cent



The BLACKMAN Folding Trays for Cylinder Records are shipped FLAT and can be FOLDED into STRONG TRAYS in a few seconds, as shown above. This tray, with Rapke Label, makes a handsome looking record stock and a system you can't beat. The labels act as Silent Record Salesman and the customer can point to the record he wants to hear. Adopt this system and your sales will not only increase but it will never take more than a few minutes to make up a Record order.

THE BLACKMAN FOLDING TRAY USED IN THE SYRACUSE WIRE RACKS
enables you to carry a large stock in a small space, and also use the Rapke Label. We furnish wire racks at regular prices, either wall or revolving style, with opening to accommodate Blackman Trays. See illustration in advertisement of Syracuse Wire Works on page 15 of this issue. Write for prices.

NET PRICES TRAYS ONLY
(Subject to Change.)

Above prices are RESTRICTED and quoted f. o. b. New York. Dealers are requested to buy through their jobber if he will supply them. If not we will sell direct.

Manufactured by
BLACKMAN TALKING MACHINE CO.
J. NEWCOMB BLACKMAN, Pres. "THE WHITE BLACKMAN" 97 CHAMBERS STREET, NEW YORK

WHERE THE EDISON BUSINESS PHONOGRAPH IS USED.

Under the energetic direction and management of N. C. Durand, the Edison business phonograph is being introduced in a great number of the leading mercantile and manufacturing concerns of the country as an essential requisite of the office equipment. One of the model offices, so far as regards the employment of up-to-date appliances, is that of the Success Magazine. They have not only installed the Edison business phonograph, but are ardent advocates of its use, both as a matter of economy and convenience in the dictation and transcribing of correspondence, etc. The cut, which appears in a very effective booklet issued by Success Magazine, presenting their very complete plant in pictorial form only, shows the private office of R. C. Peacock, the circulation manager, as furnished with the Edison business phonograph.

Speaking of the trade handling this specialty recently, Mr. Durand said: "More than half of my best and most effective agents are among the regular Edison phonograph dealers and jobbers. Where they have taken hold of the proposition properly the returns have been adequate."

SYMPHONY GRAND SUPPLIED MUSIC.

(Special to The Talking Machine World)

Louisville, Ky., Feb. 6, 1909.

A Symphony Grand Graphophone furnished the music for the opening of the new Elks' Home in this city, and after the regular meeting and initiation ceremonies, the three hundred members in attendance were regaled with selections from grand opera rendered by Bonci, Destinn, Zenatello and other prominent stars. The entertainment was arranged by M. Silverstein, local manager for the Columbia Phonograph Co., and those present were loud in their praise of the music.

NEW PATENT OFFICE RULING.

The Patent Office has issued a ruling to the effect that as the use of the names of ex-Presidents of the United States as trade-marks tends to detract from the high office which they have held, and is believed to be against public policy, the Patent Office will not encourage the use of such names by allowing them to be registered as trade-marks.

PEERLESS TWIN RECORDS—MARCH LIST.

188 Sullivan. Baritone solo. Arthur Collins, orch. accomp.
Golden Gate March. Northern Military Band.
189 Good Evening, Caroline (Von Tilzer). Duet by Stevenson and Stanley, orch. accomp.
Railbow Two-step. (Wenrich.) Northern Military Band.
190 Rainbow (Wenrich.). Duet by Stanley & Burr, orch. accomp.
American Jockey March (Descriptive) Northern Military Band.
191 There's No Moon Like the Honeymoon (Gumble). Duet by Wheeler & Wheeler, orch accomp.
A Frangesa March (Costa)). Northern Military Band.
192 Honey Lou (Lemonier). Duet by Collins and Harlan.
"Dixie Rube" Two-step. Northern Military Band.

Yankiana Rag. Baritone solo by Arthur Collins, orch. accomp.
208 I'll Remember You ("Girls of Gottenberg"). Peerless Quartet, orch. accomp.
Bambazoo. Duet by Collins and Harlan, orch. accomp.
209 School Mates. Tenor solo by Byron G. Harlan, orch. accomp.
Algeria. Northern Military Band.
210 Red Wing—Intermezzo. Northern Military Band.
Uncle Josh and the Sailor. Humorous story by Cal. Stewart.

EDISON PASSES 62D MILESTONE.

At the special request of Thomas A. Edison there was no celebration of his sixty-second birthday Thursday. For two years the company's department chiefs and officials have entertained Mr. Edison at a banquet in Newark, N. J., which was followed by an entertainment contributed by the artists of the recording laboratory and a general jollification ensued. Mr. Edison, who expects to leave for his plantation near Fort Meyers, Fla., with his family next week, to remain away until May, pleaded his time would be taken up so that he could not attend, though he expressed his appreciation of the invitation.

IMPORTANT VICTOR ANNOUNCEMENT.

In a special letter to the trade on February 5 the Victor Talking Machine Co., Camden, N. J., say they are "convinced that its original conclusions" regarding double disc records "is correct, and that a final adjustment of the question will prove that both styles of records will be used." On the same date they issued an exchange proposition covering 10 and 12-inch single-faced records which have been remade or relisted in double-faced, running from February 15 to 20.

Competent Manager Wanted

Wanted—A competent, hustling manager for a retail talking machine store in large Canadian city. Only those who are thoroughly acquainted with the Victor line need apply. A good opportunity for a man with brains and ambition. Address, giving age, experience, reference and salary expected. Box 402, care of The Talking Machine World, 1 Madison avenue, New York.

How to Repair Talking Machines and Phonographs

A practical treatise on the "causes and remedies," with explicit instructions for repairing same. Trouble instantly located, easily repaired. Sent post paid on receipt of price, $1.50; to dealers, six copies, $6. Frank E. Drake, 4245 Tracy Ave., Kansas City, Mo.

CHANCE FOR DEALERS!

1,300 Edison Records, 1 Triumph and 7 Horns to sell; all new; have permission from company to sell to any dealer. Dealers make me your best cash offer or trade. H. M. Dayton, Alma, Neb.

UNUSED RECORDS WANTED.

Wanted—Job lots of unused Columbia and Edison XP records; must be cheap. Box 675, care of The Talking Machine World, 1 Madison Ave., New York.

A Card to Jobbers and Dealers

The Channell Studio will dispose of their entire stock of photographs of the Talking Machine Artists, including the rights to make and publish the same and all their original negatives, stock, etc., at a price considerably less than inventory. This line is a money maker and can be taken up by any jobber or dealer; a knowledge of photography is not necessary. For particulars write

THE CHANNELL STUDIO

30 HARRISON ST. EAST ORANGE

FOR SALE

Victor Talking Machine Business

Owing to ill-health, I will sell my Victor Talking Machine Business. I have one of the largest and best equipped stores in the East. I carry a full line of machines, cabinets, records, etc. Here is a splendid opportunity for the right party. Call or address Chas. M. Tuttle, Atlantic City, N. J., care of Hotel Dennis.

WORLD TABLOIDS.

Once again is heard the fitful story that a company to make records and of such size and importance as must be reckoned with, is now in the process of formation. A half million dollars is the capitalization, and the people the highest grade and of eminent standing in the commercial world. The disc proposition is their's, and possibly in the next issue of The World more particulars will be at hand.

The Johnson patent, issued August 11, 1903, in relation to the improved reproduction of sound, is said to be an imitation of such basic importance that the pending litigation will cut little figure, no matter how the courts may decide. It is perhaps needless to say that Eldridge R. Johnson, president of the Victor Talking Machine Co., Camden, N. J., is the inventor designated in the letters patent issued.

Tom Murray, of the Wooden Phonograph Horn Co., Syracuse, N. Y., was in New York last week seeing the trade and calling on old friends. He made a couple of deals of magnitude for his product so that he will not be called upon to sacrifice any more blocks of stock. Tom's intimate friends expressed surprise that he was called upon to "work;" but he was a very busy man nevertheless while in the metropolis.

Walter L. Eckhardt, president of the Manufacturers' Outlet Co., has been elected a director of the Leeds & Catlin Co., machine and record manufacturers, New York, and is in charge. The M. O. Co., will act as sales agent for product of the company.

On February 3 J. H. Hollenbeck, a director of the Manufacturers' Outlet Co., and president of the J. H. Hollenbeck Advertising Co., New York, died suddenly after an illness of four days. He was a strong personal friend of Walter L. Eckhardt, and his unexpected death was greatly regretted by a large circle of social and business admirers.

Fred C. MacLean, a well known talking machine traveler at one time, is a qualified Victor dealer at Mattewan, N. J., where he is also a "gentleman farmer."

Instead of several thousand applying for licenses to sell second-hand or discontinued Edison machines only about 500 were issued by the National Phonograph Co. This was a surprise all around.

A HANDSOME WINDOW DISPLAY

Of Victor Records Which Show How They May be Utilized by Dealers.

In Watertown, S. D., one of the handsomest and most effective store window displays is made by L. W. Cooke, Victor dealer. The exhibit, as shown in the accompanying cut, is in the best of taste—machines, horns, records, etc., being arranged to attract the eye and rivet attention. Here is what he says: "The Victor leads—ask inside. We have made a record." Then, in imitation of a Victor record, an immense cardboard circle with this forceful wording: "Plain talk. 200 machines and 2,000 records in one year. L. W. Cooke."

Mr. Cooke has been a very successful Victor dealer and his methods are worthy of serious thought by others throughout the country.

PHILLIPS & BUTTORFF CO. EXPANSION.

The Phillips & Buttorff Manufacturing Co., Nashville, Tenn., have greatly increased their wholesale and retail facilities for handling the Columbia lines. The expansion was made under the supervision of T. K. Henderson, the star traveler for the wholesale department in New York.

SILLIMAN'S WESTERN TRIP.

Dealers should not overlook the Pardell specialties advertised on page 57 of this issue. They are reliable, satisfaction-giving goods which will add to one's reputation and bank balance. Mr. Silliman, representative of the Pardee-Ellenberger Co., New Haven, Conn., makers of the Pardell goods, is about to make an extended trip covering the leading jobbers through the Middle West.

JOINS LYON & HEALY FORCES.

E. C. Laury, who formerly traveled for the Chicago office of the Regina Co., has joined the wholesale talking machine sales forces of Lyon & Healy, and is on his initial trip for them in Illinois.

ATTRACTIVE LINE OF EASTER CARDS.

The F. & H. Levy Manufacturing Co., 111 East 14th street, New York, have just brought out a most attractive line of embossed and gold-decorated Easter post cards. These cards are fully up to the Levy standard of excellence, and should appeal strongly to the trade. The special offer made by this firm in last month's Talking Machine World of a special ball-bearing rack and 3,000 high-class cards, a complete stock for $25, attracted much attention in the trade, and they advise early orders that prompt attention may be received.

COWAN OPENS IN RICHMOND, VA.

James K. Cowan has opened a new store at 207 North Fifth street, Richmond, Va., with Columbia goods only in stock.

PHONOGRAPHICAL CO. ORGANIZED.

The Phonographical Co., of Portland, was incorporated with the Secretary of the State of Maine last week, with a capital of $10,000. President, E. P. Clark; treasurer and clerk, W. B. Clark, both of Portland.

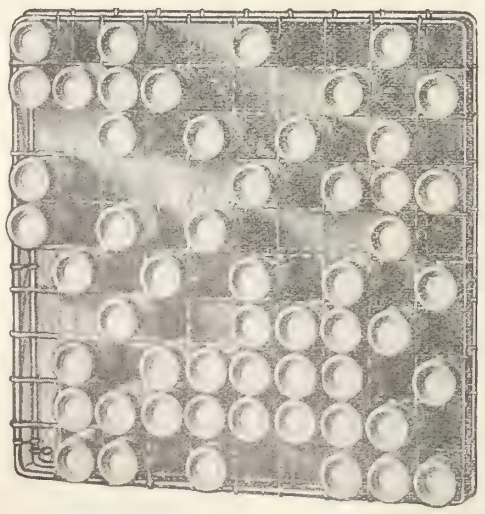
Peter Doltzman, a salesman in the talking machine department of C. J. Heppe & Son, Philadelphia, Pa., has been arrested on a charge of appropriating some money belonging to the firm.

The show windows of the Columbia Co.'s 23d street store attracted much attention during the week owing to their appropriate decorations in honor of the Lincoln Centenary and the annual festival of St. Valentine.

Louis Beuhn, of Beuhn Bros., Philadelphia, Pa., was a visitor in New York recently.

Sell Wire Racks to the Record Buyer

The "Heise System" 100 and 150 Space Racks—Immensely Popular



These small size racks for home use have been selling big. Are you getting your share of this business? The display of them in your salesroom will materially assist you in selling.

These racks are made in the same style as our store racks, which are in use everywhere. Their convenience immediately appeals to record owners. There's a good profit in them and you ought to get busy right away.

Dealers' Printed Matter is Ready

The 100 Space Racks like cut **in half doz. lots, $15**
The 150 Space Racks crated **" " " $20**

Send to your jobber or us for complete catalog of racks for store use.

TRADE NEWS FROM CINCINNATI.

Excellent Trade Expected for Coming Months—A Summary of Present Conditions—Good Columbia Co. Report—New Records Win Popularity—Milner Musical Co. Have Good Record Trade—Activity at Wurlitzer's—Place Patent Album on the Market—Dealers' Meeting Postponed to February 17.

(Special to The Talking Machine World.)

Cincinnati, O., Feb. 6, 1909.

The dealers in this city give out the impression that trade is gathering its strength for better things during the approaching months. That it has been rather quiet generally in the talking machine business goes without saying. The record trade has, however, been up to expectations, and in some cases has actually shown improvement over the month of December. January shows fine headway over the same month of last year. This is taken to indicate that industrial conditions are improving and that the working man is slowly and surely regaining lost ground. That the coming fall trade will be somewhat of the old order of good times seems at this time certain. Toward this goal the dealers are working by placing new agencies on their lists and preparing generally for a better condition of business. All in all, the outlook for the present month and the month of March is good.

The manager of the Columbia Phonograph Co., S. H. Nichols, says that the January trade was most satisfactory to his company, and characterized the results of the month by saying that: "We are 'way up in the tree-tops." In short, his force of salesmen have been lifting local trade out of the mediocre state that has characterized it for the past few months. He added: "The past month of January made a splendid record for good business. We have done double the volume of business of a year ago. We confidently believe that this improvement will continue throughout the entire year. Both the wholesale and retail trade show this state of new life. We attribute our increase to the product that we are placing before the dealers and the consumer—the Columbia double disc and the Columbia indestructible cylinder record; they are both splendid sales getters. The January trade in machines shows like improvement, or to be exact, is 80 per cent. ahead of the same month of a year ago. The higher-class machines are having the call. The cheaper grades will have their inning as the year progresses, or as conditions more nearly right themselves. Collections and cash business show a decided improvement for January. February looks equally as promising."

Marion Dorian, formerly assistant general manager of the European business of the Columbia Phonograph Co., but now attached to the New York executive offices, was a caller during the past month.

The Milner Musical Co. say the record trade made a better showing than did the machine business during the past month. In other respects the company were busy in the sheet music department, in which a special attraction was offered in the form of four pieces of music wrapped up in one bundle for 10 cents the package. The titles of the pieces were unknown to the buyer. This proved a good trade catcher.

Walt Langley, of the Herzog Art Furniture Co., was a caller at the Wurlitzer house last month.

B. Feinberg, of the Universal Talking Machine Co., was a Wurlitzer visitor this week, and made a visit also with his wife's folks here, the Michelsons, in Avondale.

Manager Dittrich, of the Wurlitzer Co.'s talking machine department, expressed his view of local trade as follows: "The trade conditions in Cincinnati have changed but very little as compared with the latter two months of 1908. The talking machine at present seems to be limited to the same narrow circles to which it was confined before Christmas, with a big demand for high-class machines and records. The sales of records have been stimulated very materially and are increasing day by day. The Rudolph Wurlitzer Co. have had very little occasion for complaint. The dealers show by their orders that business is reviving very generally, only the machine sales on the wholesale basis do not show the same favorable report in proportion as they did a year ago. The record sales, however, are splendid. This, of course, can be accounted for by the splendid service that the Rudolph Wurlitzer Co. have been giving in a wholesale way, from the fact that they have been filling orders extremely satisfactorily, that this has been all the more appreciated owing to the great changes that the manufacturers have recently made in their product, which has made stock keeping a little more complicated than usual."

The Wurlitzer Co. have just placed their patented record album on the market. This album, in their opinion, is a satisfactory way of taking care of high-class Red Seal records, and they anticipate an immense demand for same, especially among the larger dealers.

A meeting of dealers which was scheduled for February 3 has been delayed until February 17, on account of the 3d inst. being an inconvenient day because of the activity in the talking machine business around the first of the month. On February 17, however, the meeting of the Ohio dealers will take place at the Hotel Sinton in Cincinnati. There is every indication of a very large attendance, and it is an assured fact that there will be a great deal of enthusiasm shown on the part of the dealers, as much important business will be taken up at this meeting that will interest the trade.

GEO. W. LYLE ARRIVES FROM EUROPE.

Geo. W. Lyle, general manager of the Columbia Co., who has been abroad since early in January, sailed from New York for Southampton, Eng., February 6, and arrived here on Saturday. He was accompanied by his daughter, Miss Florence Lyle. He had a highly enjoyable trip abroad.

PARDELL SPECIALTIES

ANY article bearing the Pardell brand is recognized by Talking Machine dealers throughout the country as standing for the very best of its kind. In fact the name Pardell is synonymous with quality.

Pardell Folding Boxes

No. 3, holding 3 cylinder records, $1.00 per 100
No. 6, holding 6 cylinder records, 1.50 "
No. 12, holding 12 cylinder records, 2.25 "

Most convenient form of package and helps to sell more records.

Pardell Lubricant No. 96

Best Flake Graphite attractively put up in handy sifting can.

Pardell Moulded Horn Connections

Pardell Linenoid Recording Horn

Made of pure linen, moulded in one piece, without seam or joint, insuring best results for record making. Size 25 x 6. Retail price, $2.00.

Pardell Oiler

Long curved spout. Well made and will not leak.

Pardell Chip Brushes

Pardell Machine Belts

¶ Leading Jobbers throughout the country handle these goods. Order from your own or write us for the name of one in your vicinity who can supply you.

THE PARDEE-ELLENBERGER CO.

96-104 STATE STREET NEW HAVEN, CONN.

THE TRADE IN BOSTON.

New Managers at Columbia Co. Store—George P. Metzger a Visitor—Improvements at Eastern Talking Machine Co.'s Store—Hallet & Davis Piano Co. to Open Victor Department—Year Opens Up Well With Oliver Ditson Co.—Iver Johnson Co.'s Fine Window Display—Other News of the Month.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 10, 1909.

There are a trio of new faces at the Columbia Phonograph Co. warerooms this month. A. E. Erisman, who was manager of the Toledo store, has become New England manager here, and his brother, F. R. Erisman, will look after the wholesale trade, while Fred V. Baker, who was with the other two gentlemen at the Toledo store, assumes charge of the retail branch of the business. The advent of this trio of young hustlers will do much toward brightening things up along the Row. Oscar T. Junge, who has been the New England manager here for some time, has gone into the wholesale grocery business in the West.

George P. Metzger, of the Columbia executive offices, was a caller at the Boston store this week. Business there is reported brisk.

H. L. Royer, representing the Victor, and Ambassador Scott, of the Edison forces, were vieing with each other here this week as to which should get the larger order.

At the Eastern Talking Machine Co., General Manager Taft has just completed the refitting of the ladies' parlor, putting in new furnishings, etc., and he now has one of the best reception rooms of this kind in this part of the country. Mr. Taft says that January of this year was considerably ahead of last January and that he is well pleased with the outlook. He has put in a new line of Music Master horns, and the Victor concerts now running are so popular that the standing room only sign is in constant service.

It was announced on the Row this week that the Hallet & Davis Piano Co. are to open a Victor talking machine department as soon as the alterations on the lower floor are completed. They will cater only to the retail trade.

Manager Cornell, of the M. Steinert & Sons Co. talking machine department, has put in some fine rugs and made his store very attractive. He has now one of the largest retail establishments in New England.

Manager Winkelman, at the Oliver Ditson Co. store, states that January of this year, and so far into February, have been far ahead of the corresponding dates of last year, and that the demand for the higher grades is increasing in much larger proportion than that for the lower-priced goods. Victrolas are in good demand.

There is a very fine window display in the store of the Iver Johnson Co. of talking machine goods. This department has increased very materially since the firm got into the new building.

The Pike Talking Machine Co. reports a good sale on Columbia Indestructible records, and on all Edison goods.

LAUDER VISITS EDISON.

The "Wizard" Enjoyed the Scotch Humorist's Stories After Which He Sprung a Few Himself—Meeting Mutually Satisfying.

Harry Lauder, the Scotch vaudeville entertainer, who has contributed a number of his best selections to the Edison record catalog, was a visitor at the Orange works on February 6, and regaled Mr. Edison with a choice lot of his best stories. The "Wizard" enjoyed them immensely, and "came back" with a lot of his own until he got at the end of his string, when he asked Lauder to step over to the "lab.," where he kept memoranda of a bunch more, which kept the little comedian in a state of hilarity for another hour. There is no one in the world who enjoys a good story more than Mr. Edison, and his favorite theatrical enjoyment is vaudeville, which he attends frequently at the theaters in Newark, N. J., with Mrs. Edison and the family.

THE TALKING MACHINE IN PANAMA.

Salesrooms Opened Opposite the President's Palace and Official Interviews Are Punctuated With Talker Music—Another Indication of the Americanizing of the Isthmus.

According to reports from Panama the Isthmus is rapidly becoming Americanized, baseball having been successfully introduced and a talking machine store having been opened directly opposite President Obaldia's palace. Panama's chief executive received several visiting correspondents during the visit of President-elect Taft to the Isthmus in a gilded reception room, with lemon-colored trimmings. The phonograph was on the job.

"Gentlemen, I am pleased to——" but that is as far as Obaldia got.

"Grrrrrrrr—umpf—grrrrr—S-ssssure his nayture was his fayture," went the machine, with the trumpet turned right up at the President's open balcony.

Now and then the visitors caught a word of what the President of the Republic was saying, but the conversation consisted chiefly of gestures. Finally one of the correspondents, who thought he had caught the word "prohibition," ventured this remark:

"Yes, but that doesn't prevent the sale of it in the States; they get all they want in spite of the law."

A lull had come in the phonograph flow and the correspondent's words rang clear. President Obaldia smiled wisely and said:

"Yes, as I was saying, you have a prohibition in your country that prevents your President from serving more than two terms."

Naturally, the conversation turned then to the phonograph, and Obaldia admitted that he had thought seriously two or three times under similar circumstances of asking the phonograph man to turn the horn some other way.

A VISITOR FROM THE SOUTH.

Ernesto Tosi, of San Paulo, Brazil, S. A., who has been traveling in Mexico for the Columbia Phonograph Co., General, with headquarters at their office in the City of Mexico, arrived in New York last week. He will join the staff of the export department while here, and after receiving instructions from E. N. Burns, the manager, will take his departure for Buenos Ayres, A. R., where he will establish quarters and then travel the entire South American continent for the company.

ANOTHER HEARING IN FAMOUS SUIT.

The case of the New York Phonograph Co., New York, against the National Phonograph Co. and others, Orange, N. J., was argued in the United States Circuit Court of Appeals, New York City, before Judges Coxe, Noyes and Martin, on Tuesday of last week. This suit has been in the Federal courts for over nine years, and the present hearing was on reviewing Judge Hazel's opinion in the lower court, which fined the National Phonograph Co. for contempt of court, though the decision as a whole favored them in many essentials. Decision was reserved.

JONES BROS. OPEN CHAIN OF STORES.

Seven new Columbia stores have been started in Virginia by Jones Bros., of Richmond, who have canceled their jobbing arrangements to become dealers. The stores which will handle the Columbia lines exclusively are located in Petersburg, Roanoke, Lynchburg, Danville, Clifton Forge, Warrenton and South Boston.

LOU C. WILBER TO TRAVEL.

Lou C. Wilber, recently manager of the Regina Co.'s New York business, who made a shining record for efficiency, has been relieved of the duties of this position by the conversion of the store at Broadway and 17th street into wholesale headquarters, and started on the road for the company February 14, going to Pittsburg, Pa., for his first stop and with the Middle West as his territory. Mr. Wilber will travel out of Detroit, Mich., his old home, to where his family has removed from New York. Mr. Wilber is well known in that section of the country, having sold goods there for the Regina Co. in years past, and therefore he will greet a host of old friends and be welcomed in turn. His line will be the Regina music boxes, the Sublima piano, and the Reginaphone, showing the new models for the first time, as well as their latest specialty in automatic instruments, namely, the Regina Hexaphone.

The burning desire to close the sale "right now" loses many customers. However anxious you may be, don't let your prospect know it or you may have to sacrifice the profit, if not the sale also.

MILWAUKEE'S BUDGET OF NEWS.

Heavy Wholesale Trade Reported—Dealers Stocking for Lively Spring Business—Columbia Records Selling Well—Lawrence McGreal Adds Line of Pianos—Hoeffler Mfg. Co.'s Big Sales of Fiber Needles—Talking Machine Dealers' Association Holds Meeting—Edison Line Being Pushed—Manager Herriman Acts as Collector—What Other Dealers Are Doing.

(Special to The Talking Machine World.)

Milwaukee, Wis., Feb. 9, 1909.

The heavy wholesale trade is the brightest feature of the local market at the present time. Orders are arriving from dealers all over the State, who seem to be stocking up for a heavy spring trade. The Milwaukee retail trade is not quite as brisk at the present time as dealers would like. The general trade for January was far in excess of that for the same period last year, and was larger than was anticipated, considering the extremely heavy holiday trade. Indications are that the better-priced machines and better class of records are to remain in leading demand throughout the present year. This seemed to be the case for the year 1908, and was a situation that surprised dealers, considering the financial disturbance. The new February records are proving to be ready sellers, and indications are that the Columbia double records are to make still further strides this month. Sales of these new records at the Milwaukee establishment of the Columbia reached astonishing proportions. A lively run of advertising has been conducted by all of the leading dealers of the city in the different lines.

Lawrence McGreal has added the retail piano line to his business and is now handling the Strohber, manufactured by the Smith, Barnes & Strohber Piano Co. A shipment of new instruments has already arrived and is now on exhibition on the main floor of the McGreal establishment. The new venture is something of an experiment with Mr. McGreal, and it is not his intention to push the piano lines very strenuously at the present time.

There are few places in Milwaukee that have not been invaded by Lawrence McGreal and some style of his talking machines. The latest "stunt" of the enterprising jobber and retailer was to give two Victor-Victrola concerts at the Milwaukee county jail. The first concert on Sunday afternoon was so much appreciated by the prisoners that County Sheriff H. E. Franke asked Mr. McGreal to repeat the event, and this was done. The program included several hymns, but was made up largely of popular selections. Some of the numbers were "The Star Spangled Banner," Harry Lauder's "The Wedding of Sandy McNab," "If the Man in the Moon Were a Coon," "Tannhauser" overture and "Saviour, When Night Involves the Skies." The result of the good work of Mr. McGreal is that Sheriff Franke now intends to entertain his prisoners every Sunday afternoon with talking machine concerts. "The music is as good as a sermon," said the sheriff.

A big sale of fiber needles is reported by the Hoeffler Manufacturing Co., and the disposal of several machines were made as a direct result of demonstrations of the needles. J. H. Becker, manager of the talking machine department of the company, is using the needles on a Victor machine with great success. Mr. Becker believes that salesmen should devote more time in explaining the use of the needles to customers, and that too little care is usually given to this matter.

A meeting of the members of the Milwaukee Talking Machine Dealers' Association was held recently in this city to talk over the proposed new Wisconsin association. Plans for procedure were gone over, and it was decided to send out invitations to dealers all over the State asking them to join and calling their attention to the value of such an organization. State dealers who have been approached look upon the project with much favor, and it is expected that the organization will start out with a large and enthusiastic membership.

The Edison business phonograph is being pushed with vigor locally by the Hoeffler Manufacturing Co. under the supervision of J. H. Becker, Jr. A trial order has been placed by the Milwaukee Electric Railway and Light Co., and indications are that this will materialize into one of the largest orders yet received. Machines have been sold in a number of the largest law offices of the city during the past fortnight.

"Prospects in the Edison business phonograph line are exceptionally good," said J. H. Becker, Jr. "I predict that all of the up-to-date business houses of the city will be using the machine within the next two years. Several business men have told me that the machine means a saving of at least 30 per cent. in letter-writing, to say nothing of the resulting convenience."

H. A. Gray, of the Rudolph Wurlitzer Co., of Chicago, called upon the Milwaukee trade last week.

Charles H. Iddings, former manager of the talking machine department of the Joseph Flanner Music House, has resigned. His successor has not as yet been chosen. Mr. Flanner expects to push the talking machine end of his business this year.

Lawrence McGreal made a recent business trip to Ashland, Wis., and found that the retail prospects in most of the cities visited were excellent.

William P. Hope, the National Co.'s representative, is visiting various Wisconsin points.

William Schmidt, former wholesale manager for Lawrence McGreal, now represents the Victor Co. throughout Iowa. Mr. Schmidt's position at the McGreal establishment is still open for a successor.

H. Heberlein and William Smith, representatives of the Victor Co., called upon Milwaukee dealers recently.

A recent two days' blizzard, one of the worst in years in Wisconsin territory, found the Columbia establishment in Milwaukee without a collector and the usual number of salesmen. Not to be misled out of some promised payments A. D. Herriman, manager of the Milwaukee branch, took upon himself the rôle of collector, braved the elements, the rebuff of debtors and brought in the biggest bunch of money ever collected in one day by the Milwaukee store.

Business with the Columbia establishment in Milwaukee for the month of January was more than satisfactory, and total sales were more than double those of the corresponding period of a year ago. The new double records and new machines of the Columbia are working something of a revolution in the Milwaukee business.

Miss Gertrude Gannon, head bookkeeper of the McGreal establishment, spent a recent vacation at French Lick Springs.

"We have been flooded with orders for the new Amberol records," said George G. Huseby, manager of the Huseby Co. "The large number of orders received by us shows clearly that people want a record that will play longer than two minutes. I believe that the Edison phonograph will now be in even greater demand than it has in the past."

A Business "Because"

¶ To the Dealers of Michigan, Northern Ohio, and Northern Indiana, we send a solicitation for business on the plain business basis of giving the best possible service.

¶ We are safe in the statement that we can fill your orders immediately on receipt; that we can ship goods to you the same day in which we receive your order. We know we carry the most complete lines known to the jobbing trade. It is an exceedingly rare occasion when we are "out" of anything.

¶ You may send your orders to us by mail, or wire, or give them over the Long Distance Telephone, at our expense, and you will find us just as prompt in attending to your wants as we claim to be.

¶ Another thing; in every line our goods are new. We are abreast of our business every minute. As soon as anything new presents itself, we have it.

¶ 1909 is going to be, we believe, a good year and so every dealer should stock up well—not only be prepared for trade that comes but go after it and come to us to supply the goods.

American Phonograph Co.

106 Woodward Avenue, Detroit, Mich.

COLLIER'S PAYS TRIBUTE TO TALKER.

In Recent Issue Well-Known Weekly Dwells Upon Grand Opera and the Talking Machine in Its Editorial Columns.

We are so used to having the daily press and the magazines treat the talking machine as a subject for jest that it is quite a relief to find at least one general publication which fully realizes the really great musical value of that instrument. Collier's Weekly, a decidedly critical publication, in the issue of January 9, 1909, had the following to say in its editorial columns anent the grand opera and the talking machine:

"Grand Opera finds each year a more assured home in the United States. Those who imagine this to be mere fashion fail to account for the amount of superior instrumental music that is constantly increasing. In truth, led by the German element in the population, and by a few enterprising citizens, like Major Higginson, the average well-to-do American in many towns is now fond of music. In the Metropolitan and Manhattan Opera Houses the genuine love of the art is by no means confined to the upper galleries. Jeers at the plutocracy are tempting, because so certain of applause. The open-mindedness of American plutocracy, however, is in no small degree responsible for the flourishing of architecture and music in this country, as both of those arts have drawn their material support in large measure from the rich. In no other land is architecture in a sounder state. In music, of course, Germany outbalances the world, but we are coming so to love the art that we may fairly hope one day to produce some of it ourselves. Our fathers and mothers, who read 'Festus,' found there the statement that:

'Music tells no truths.'

It does better. It liberates the emotions. It enlarges the imagination. It puts color into feeling. It gives wings to daily life. A grand opera or a symphony calls for the richest re-

sponse that human nature knows. Not without reason was it called the angels' speech.

"Canned music is a phrase which, not casting discredit on the article produced, rather reflects praise upon the canning industry. The intricate mechanical devices which reproduce Paderewski and give us Melba or Caruso carry to the remotest hamlet the most exquisite messages of sound. In a neighboring room a fair ear may actually believe some wonderful voice has burst upon the air, and each year brings the illusion nearer to perfection. Prospero could summon enslaved spirits to his will, but did the music which Ariel furnished surpass what, under natural law, thousands can purchase in our day? Modern science has made real what ancient magic dreamed. Seven-league boots were imaginery, but the twentieth century express is in action and the airship is at hand. What have fairy stories ever conceived more dramatic than to carry the voice for a thousand miles? Did it occur to them to throw into the air a message on one continent and deliver it, instantly and in safety, at an appointed spot across the ocean? In the field of industry and convenience, science is shown as the modern necromancer by the locomotive, the telephone, the wireless telegram. Among the arts, music is the first in which the same mystic sorcerer puts forth marvels not less brilliant and surprising."

AUXETOPHONES FOR HOTELS.

Both the Ten Eyck and Keeler's hotels in Albany, N. Y., have used Auxetophones for some time past, and the guests of these hostelries have declared themselves decidedly pleased at the innovation, it being not unusual to have vocal or instrumental soloists to accompany the machines on occasions. It is now announced that another Albany hotel has planned to install an Auxetophone to supersede the orchestra. In fact, hotels everywhere are installing Auxetophones.

NEW RECORD CO. INCORPORATED.

Among the incorporations filed with the Secretary of State of Illinois during the past few weeks was that of the "D. & R." Record Co., of Chicago, with a capital stock of $20,000, for the purpose of manufacturing and dealing in musical instruments, phonographs, etc.; Sigmund L. Straus, Henry V. Donaldson, Louis E. Keil.

MEETING OF BOSTON ASSOCIATION.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 8, 1909.

On Thursday, February 4, a large and enthusiastic meeting of the members of the American Talking Machine Dealers' Association was held at the Revere House, in this city, many dealers being present for the first time. Plans were outlined for the further development of the association. It was decided to have a banquet in Boston in the near future so as to bring the members into closer communion and to devise ways and means for the further improvement of relations with jobbers and manufacturers. The mutual benefit and encouragement derived from the meeting was spoken of by nearly every member present.

J. N. BLACKMAN UNDERGOES OPERATION.

Wednesday, February 3, J. Newcomb Blackman, president and general manager of the Blackman Talking Machine Co., New York, was operated upon for appendicitis at the St. James Hospital, Newark, N. J. He survived the trying ordeal, and is doing as well as could be expected. Mr. Blackman was taken suddenly ill February 1.

N. C. Durand, manager of the Edison business phonograph department, who has scored an eminent success in pushing his commercial system, says that more than half of his best and most effective agents are among the regular Edison phonograph dealers and jobbers. Where they have taken hold of the proposition properly the returns have been adequate.

TRADE IN SAINTLY CITY.

Constant Improvement Noted in Trade—Good Report from St. Louis Talking Machine Co.—Theodore Pelton Ill—Travelers Have Successful Trips—Thiebes-Stierlin Music Co. Rearranging Building—Leading Dealers Are Optimistic Over the Trade Outlook—Other Items of Timely Interest.

(Special to The Talking Machine World.)

St. Louis, Mo., Feb. 7, 1909.

Decidedly more life to trade has prevailed during the past three weeks, when compared with the same period a year ago. An improving activity is noted all through the territory, and it is expected to increase from now on.

O. A. Gressing, manager of the St. Louis Talking Machine Co., states that the month of January showed a very considerable increase over last year. Mr. Gressing recently returned from a trip to Memphis, Little Rock and other points in the South and reports conditions in that part of the country as being the best they have been in years. This company occupied a booth at the Missouri State Retail Hardware Dealers' Association Exhibition held here recently, and a number of very gratifying orders were booked. The exhibit was in charge of Mr. Cummins, ably assisted by Mr. Bird. L. A. Cummins, traveler for this concern, is on a trip through central Missouri, and H. F. Harrison, also traveler, is on a trip through Tennessee and Arkansas.

Theodore Pelton, a repair man and Auxetophone expert of the St. Louis Talking Machine Co., was taken suddenly ill recently with an attack of cerebro-spinal meningitis. He was removed to a hospital, and now after several operations his condition is considered very serious.

E. B. Walthall, manager of the Columbia Phonograph Co., reports trade active. He states that the St. Louis business for January was about double that of the same month a year ago. Mr. Walthall spent the last week of January in calling on the company's local dealers in central Illinois. They reported trade good, and he found the dealers enthusiastic over the new double disc and indestructible cylinder records. W. C. Fuhri, district manager of this company at Chicago, spent a day here recently and left the same night for Memphis. W. C. Byrd, traveler for this concern, returned recently from a very profitable trip to many adjacent points and is now on a trip through southern Missouri. This company are just out with their latest grand opera catalog of the Fonotipia and Symphony series. Like the previous ones, it is very fine.

Edward P. Waterhouse has been appointed manager of the local Dictaphone Co., vice Geo. S. Murray. This concern moved to 801, 802 and 803 Wainwright building on February 1 from their former quarters in the Pierce building.

The Thiebes-Stierlin Music Co. are making alterations on the fourth floor of their building, which will be used extensively for the sale of talking machines. Eight salesrooms will be made on this floor, and they will be partitioned off in a very artistic manner, heavy plate glass being used in each. Each salesroom will be 18 by 13. On the first floor eight rooms will be established for the sale of records exclusively. Each room will be 14 by 16. Mr. Thiebes states that when completed they will be as fine, if not finer, as any talking machine department in the city. This firm reports their talking machine business is improving every day.

D. K. Myers, the well-known Zonophone jobber, reports a nice volume of activity for January, and that his record trade for that period had been very good.

P. E. Conroy, president of the Conroy Piano Co., states that their talking machine business for January shows an improving tendency.

The Silverstone Talking Machine Co. note an improvement, and think it will continue.

The Koerber-Brenner Music Co. report that their January talking machine business was better than that of a year ago. They look for a steady betterment.

Reg. U. S. Pat. Off.

WE'RE HERE because WE'RE HERE

BECAUSE
We sell the greatest Talking Machine in the World.

BECAUSE
We are specialists and expert Distributors and devote all our time, talents and energies to the Victor line.

BECAUSE
We have been able to give you WHAT you WANT WHEN you WANT it. Fresh and clean when you get it.

BECAUSE
Of our ability to fill your orders in the past twelve months from 95 to 100 per cent. perfection.

BECAUSE
We have won the confidence of the most exacting and discriminating Dealers in the country.

BECAUSE
They are satisfied that by hitching their wagon to a "live wire" their "business wheels" went 'round faster and smoother than ever before.

BECAUSE
We are anxious for the opportunity to prove all of this to YOU.

(Special to The Talking Machine World.)

Chicago, Ill., Feb. 8, 1909.

The underlying tone of the trade at the present time is one of decided strength. Trade with the jobbers after the holidays and up until about the 15th of January was inactive, but since then there has been a good, normal buying movement, and as a rule orders from country dealers are reported as of good volume in the aggregate and of an individual character calculated to show that dealers' stocks are low, that they are doing business, and have confidence in the future. February has opened up in a strong way, both as to record and machine orders.

George N. Nisbett returned from the East on the 17th of last month, where he had been posting up at the foreign department of the National Phonograph Co., preparatory to accepting the position of manager of the Mexican National Phonograph Co., of Mexico City, which controls the Edison business in Mexico. For a week he was feted by his friends both in and out of the trade, and left on the 23d for his new field of labor. He went via Kansas City, where he spent several days with relatives, and also expected making other stops, so that he is probably only arrived in the city of the Aztecs this week. There are few men in the trade that have a better all-around equipment than Mr. Nisbett, and he has elements of personal popularity which are bound to win him friends anywhere. He is an Edison man from the word go. For six years he was with the Chicago office of the National Phonograph Co., first as assistant manager and afterward as manager up to the time of the discontinuance of the office in 1906, when he went with Babson Bros., inaugurating their wholesale Edison department, and resigning in December last. His return to the National Co. in so important a capacity is certainly a tribute to his worth, and he is followed by many and sincere congratulations.

It is just three years ago this week since Arthur D. Geissler assumed the management of the Talking Machine Co., of this city. Those who have followed the young man's career realize that he has made good in a big way. The discontinuance of the retail and mail order business, which he effected upon assuming the reins, proved a stroke of wisdom, and the wholesale business has increased by leaps and bounds. He has proved a man of courage and initiative and in every way a worthy son of his distinguished father. He has just returned from a several days' trip to St. Louis, where he found the St. Louis Talking Machine Co. doing a steadily increasing business.

Harry Berger, who has been floor salesman for the Talking Machine Co. for the past three years, has been put on the road by Mr. Geissler and is now on his initial trip. He certainly has the right equipment. He went with the Talking Machine Co. fifteen years ago under Mr. Douglass; afterward went to Camden, and on returning to Chicago, after some experience in other lines, returned to his old love, when Mr. Geissler assumed the management.

At the Chicago branch of the Rudolph Wurlitzer Co., Manager E. H. Uhl's capable assistant, Fred H. Siemon, was found up to his neck in work in connection with the removal of the wholesale talking machine stock from 338 Wabash avenue to the third floor of the Wurlitzer building, 266 Wabash avenue. This is made possible by the occupancy by the Wurlitzers of practically the entire building upon the expiration of leases of tenants. It not only gives greatly increased space to the wholesale stock, but also adds to the convenience in filling orders in every way, especially in combining shipments with those of small goods, which occupy increased quarters on the fourth floor. Downstairs in the retail department a new system of record shelving for the Victor stock has been installed, which enables the records to be placed flat instead of vertically as heretofore. Hereafter all records will not only be handled in envelopes but will be sealed with the exception of one record of each number used for demonstration only. This insures fresh records for the customers. Mr. Siemon says that January trade was ahead of a year ago, and that he considers the outlook decidedly better.

"Our business has given us some surprises since the first of the year," said C. E. Goodwin, manager of the talking machine department of Lyon & Healy. "Early in January trade was somewhat quiet, but it increased in volume, and the month wound up with the biggest city business we have ever had in the first month of the year. Country orders are coming in in substantial volume, and the outlook I consider very bright. During the panic the talking machine business was hit badly, largely because it was the first thing that the dealer could curtail his efforts on. Those who held on maintained their faith in the stability of the trade, did not relax their efforts, but advertised and pushed energetically, did a remarkably good business. They infected the public with their own confidence, and where people had money the aggressive talking machine dealer got it, and he is getting it to-day in increased volume as conditions improve. We know that the outward evidence of our faith in the business, as shown by the expenditure in fitting up our new talking machine department, has had a material effect on our customers. An eastern music dealer came in here the other day and said that he thought that the talking machine business was on its decline. After he had seen our department and our numerous record rooms full of customers, he decided that he was suffering from a condition of mind and that the business was there to the man who saw it."

E. B. Sues, of the Victor traveling staff, was a Chicago visitor the other day.

F. A. Scheuber, of the Scheuber Drug Co., of Livingston, Mont., who commenced jobbing Columbia goods a year ago, was in Chicago the other day and signed an exceptionally large contract with western wholesale manager E. C. Plume. The company are now the exclusive jobbers for Montana, Wyoming and the two Dakotas. Mr. Scheuber was accompanied by his brother-in-law, A. J. Kunde, who recently opened an exclusive Columbia store in Milwaukee. Mr. Plume returned to-day from a flying trip to Ottumwa, Ia., to see the Arnold Jewelry & Music Co., the Columbia jobbers. He found things moving in fine shape and the double disc records in splendid demand.

Mr. Rudderow, one of the Victor factory experts, is visiting the local jobbers.

The presentation of new ideas in a forceful and very artistic manner is found in the new wrinkles advertisement of the Talking Machine Co. in this issue. The "cabinet that matches" is a modern price "edition de luxe" that has come to stay. The idea of providing a cabinet to exactly match every type of Victor machines and make machine and cabinet seem a harmonious whole, is a good one, and the dealer is finding it so. The company's new combination order book and catalog is certainly appreciated by the trade, and eight out of every ten of orders now being received are made out in the duplicate order blanks supplied with the catalog.

C. F. Baer, manager of the Chicago office of the Columbia Phonograph Co., says that January was not only ahead of January of a year ago but actually showed an increase over last November, although, of course, falling behind the December holiday business. "The double-faced and indestructible record is a combination that people can't get away from," said Mr. Baer, "and the way Columbia dealers are increasing in this territory is remarkable. An encouraging fact is the manner in which collections have improved. Our wholesale collections equaled our sales in January."

B. J. Deusler, formerly manager of the Fort Wayne branch of the Columbia Phonograph Co.,

The Economy Racks

A NOTABLE INNOVATION

The Economy Disc Record Rack—Convenient, Portable. One record to a compartment. No handling of several to find the one you wish. Made in highly polished Mahogany or oak or oak mission. Attractive Billiard cloth cover. Retail prices—Rack for 10-inch records, $3.50; 12-inch, $3.75; Rack for insertion in cabinet, $1.50.

The Perfection Disc Record Racks—This is a rack similar to the Economy but less ornamental and therefore cheaper. Price, $1.50 for 10-inch records; $1.75 for 12-inch.

The Ideal Negative Rack—for photographers—Amateur rack, holds anything from a postal card to an 8x10 negative. Price, $1.25 retail. Professional rack, adjustable, holding anything from 8x10 to 14x17. Retail price, $1.75.

We can now make prompt shipment in Jobbing Quantities.

COMING—*The most unique talking machine cabinet ever introduced to the trade. It will embrace the "Economy" principle and will create a sensation.*

R. H. JONES, Patentee and Sole Manufacturer **1-17 Bryan Place, Chicago, Ill.**

A SPLENDID SIDE LINE FOR YOU!

STRINGS

W R I T E T O U S

OUR "PURETONE" VIOLIN STRINGS

Dealers desiring a thoroughly reliable Popular-Priced Violin String will find it distinctly to their advantage to keep their stock well supplied with our "PURETONE" Strings. This String is especially prepared and intended to satisfy a class of trade who desire a thoroughly reliable medium-grade string at a low price.

Our "Puretone" Strings are attractively put up, each in a separate envelope, 30 in a box. The package is particularly attractive, and never fails to impress the customer. E's 4 Full Length. A's and D's 2½ Length.

		List Price. Per Bundle of 30 Strings.
24.	E, 4 Lengths, Transparent and Polished, Fine Quality	$4.25
24.	A, 2½ Lengths, Transparent and Polished, Fine Quality	4.25
24.	D, 2½ Lengths, Transparent and Polished, Fine Quality	5.25

LYON & HEALY'S CELEBRATED "CREMONATONE" STRINGS

These Strings have been the favorite of the public for nearly forty years. Hundreds of thousands of bundles have been sold and from all sides the verdict has been, "There is nothing to approach them at the price in the market." The name "Cremona" is derived from the little village of Cremona, which was the home of the great masters of the art of Violin making. Dealers will find that "Cremonatone" strings make a splendid leader.

	IN PAPER BOXES	List Price. Per Bundle of 30 Strings.

99.	D, 2½ Lengths, Transparent and Polished, Fine Quality, Extra Durable	11.88

Liberal Trade Discount from Above Prices

Lyon & Healy

CHICAGO

has bought the business and is running it as an exclusive Columbia store.

The Record Sweeper Co., of Highland Park, Ill., have put on the market a very handy little device for automatically cleaning the disc records. It attaches instantly to the needle arm of the Victor machines and cleans the record while it is playing. The claim is made that it not only polishes the surface of the record, but digs the dirt out of the grooves.

The Salter Mfg. Co., of Chicago, are having an excellent demand on their new disc record cabinets, which have been fully described in this paper. The idea of providing a compartment for each record and lining each shelf with soft green felt, thus preventing the records, whether single or double-faced, from being scratched, has appealed very strongly to the trade. The company issue a catalog describing fully both these cabinets and their new type of cylinder cabinets.

D. M. Ravenskilde, of Caberry, Ill., has just issued a new circular descriptive of the Ravenskilde talking machine starter, a distinctive novelty of Mr. Ravenskilde's own invention which is meeting with gratifying demand.

F. D. Hall, president of the B. & H. Fibre Mfg. Co., has a pretty substantial geographical knowledge, but he received inquiries the other day on sizable jobbing quantities of the fiber needle from points in New Zealand which he had never heard of before. The wooden needle is meeting with an excellent demand in Europe and other quarters of the globe, as well as in these United States, where it is making encouraging headway.

R. H. Jones, patentee and sole manufacturer of the Economy disc record rack, reports an increasing demand for his simple and inexpensive device. They are particularly adapted for the new double-faced records.

In the "Golden Girl," a new musical comedy which is shortly to make its appearance at the La Salle Theater, a pivotal situation occurs when two bands, supposed to be approaching each other, one playing "Dixie" and the other "Marching Through Georgia," give the cue to a couple of bellicose colonels for a disastrous mix-up. Two Twentieth Century graphophones, located in opposite wings, will be depended upon for the band effects. In this connection it is especially interesting to learn that Winona Winter, a star of the "Golden Girl," is a distant relative of E. C. Plume, of the Columbia Co.

Theodore F. Bentel, secretary and treasurer of the Hawthorne & Sheble Mfg. Co., spent several days in Chicago recently and visited the trade with the company's local representative, Harry K. Tilt. It is understood that some very desirable new western jobbers for Star machines and records have recently been established.

W. C. Fuhri, district manager of the Columbia Phonograph Co., is expected home Monday from a trip which included St. Louis, Kansas City, Memphis and New Orleans.

The Western Talking Machine & Supply Co., Frank Dilbahner, proprietor, has moved from 6 Madison street to larger quarters at 124 East Ohio street.

Among the visitors at the Talking Machine Co. the past two weeks were William J. Voss, of the Voss Phonograph Co., Appleton, Wis.; Mr. Griggs, Jr., manager of the talking machine department of the Knight-Locke Music Co., Denver, Col.; G. L. Ware, Barry, Ill., and G. E. Trilling, of the Trilling Hardware Co., Menasha, Wis.

Marion Dorian, of the executive office of the Columbia Phonograph Co., was a visitor at the Chicago headquarters this week. He is on a general trip to the Columbia offices, which will probably take him to the Coast.

Lorin Leeds, of Leeds & Catlin, and W. L. Eckhardt, of the Outlet Co., New York, made a flying trip to Chicago a week ago.

The D. & R. Record Co., of Chicago, was incorporated last month with a capital stock of $10,000, "for the purpose of manufacturing and dealing in musical instruments, phonographs, etc." The item which appeared in the list of incorporations in the dailies aroused considerable curiosity for a time and caused those who noticed it to wonder whether Chicago was to have a factory at last, although the capital did seem somewhat inadequate. The incorporators seemed inclined to throw an air of mystery about it, referring inquiries to an attorney who was equally mum. It was finally discovered, however, that the company simply intend to operate along premium lines, putting out a special label record and disc machines made in the East.

A. V. Chandler, the Chicago Edison representative, who recently had the State of Illinois added to his territory, has just returned from a three weeks' trip through the State. When he reached East St. Louis he ran over to the Missouri metropolis, and in company with August H. Kloehr, the National's Missouri representative, called socially on the Conroy Piano Co., Silverstone Talking Machine Co., and the Korber-Brenner Music Co., all of whom express themselves as well satisfied with present business. He speaks enthusiastically regarding the Korber-Brenner's fine new quarters on Washington avenue. "The Illinois dealers whom I visited are, on the whole, pretty well satisfied with business," said Mr. Chandler. "Reports varying from fair to good. The real aggressive dealers have absolutely no complaint to make and find themselves fully occupied in taking care of the demand they create. At Arcola, Ill., Edward W. Hall, an Edison dealer, has sold over 50 'Triumph' phonographs in the three years since he qualified, besides an excellent trade on the other types. This is rather an exceptional record in a town the size of Arcola. Mr. Hall's combination of lines is somewhat unusual, as he has been in the agricultural implement business in Arcola for 38 years. Beginning with the 18th, he gives his annual reception to the farmers from the surrounding country, ending up with a banquet." Mr. Chandler says that the dealers all are now getting Amberol goods as they need them, and that they also speak highly of the recent issues of two-minute Edison records, characterized as better than ever.

B. Feinberg spent several days in Chicago this week, his first trip west since his return to the Universal Talking Machine Co. He is calling on the principal jobbers throughout the country.

W. H. Prestinary, who for the past year has presided over the phonographic language course and Edison retail department at Lyon & Healy's, has resigned and will leave next week for the City of Mexico, where he expects to locate with a view of representing United States manufacturers in different lines in the sister republic. Mr. Prestinary is a native Spaniard and a man of distinguished accomplishments, and will unquestionably make good in his new field. A. R. Simpson, who has been one of Joe Vasey's assistants, is Mr. Prestinary's successor.

Davidson Bros., proprietors of the Talking Machine Shop, at 169 Michigan avenue, have reason to be pleased with the way business is developing with them. "Of course we have no standard by which to make comparisons," said George Davidson, "but the amount of high-grade business we are getting here is certainly encouraging." Four Victrolas were sold last week. A handsome display of various styles of the "cabinet that matches" attracts a great deal of attention.

Max Landay, of the Talking Machine Supply Co., of New York, called on the local jobbers this week. From here he went to Milwaukee and Minneapolis, from whence he intended proceeding to Kansas City, and home via St. Louis, Cincinnati, and other points.

VALUE OF INSTALMENT SALES.

Article in Edison Phonograph Monthly Points Out How Time Sales Mean Larger Business and Profits With Comparatively Small Actual Investment—Uncertainty of Credit Eliminated by Careful Investigation—Some Interesting Figures Back Up Statements.

This very excellent article on how business may be developed by instalment sales is taken from The Edison Phonograph Monthly, and is worthy of the very careful consideration of those dealers who have not studied this phase of the situation:

"I cannot afford to sell goods on instalments," or "instalment sales take so much capital that I cannot do business that way," are remarks that dealers are often heard to make. And with such remarks they dismiss the subject as if there was nothing more to be said about it. They realize that much additional business might be had if they could sell on instalments, but it never occurs to them to investigate further. It has never been the policy of the National Phonograph Co. to strenuously urge dealers to sell goods in this way, and it is not our intention to do so in this article. What is said here is more for information than otherwise.

When instalment sales are made in accordance with a few simple rules it is a better way of selling Edison phonographs and records than for spot cash, and it is a better way of doing business in small places than in large cities. Both of these statements may sound ridiculous to dealers in small places, but they are reasonable and practicable.

It is a better plan, because the more times a phonograph customer can be induced to enter a dealer's store, the more records he can be induced to buy, and if he has bought his phonograph on instalments he will be required by the terms of his lease to pay a visit once a week until the payments are completed. It is easier and safer to do an instalment business in small places than in large cities, because in the former everyone is known to the dealer, or his standing can be easily ascertained, something quite difficult in cities.

There is nothing unbusinesslike and little uncertainty about instalment sales. Properly conducted the losses from them are smaller than from the ordinary credit sales. Those who make a success of the business do not sell on instalments to Tom, Dick and Harry, as many suppose who have not looked into the plan. They make a careful investigation into the standing of the prospective purchaser, and unless his record is good he does not get a machine. If he is regularly employed, is well spoken of by his employers and neighbors and has good habits, he is a good risk, for not one out of every hundred such men will fail to meet his obligations.

TWO MISSING LINKS

This is SUPPOSED to be the Missing Link between Man and Monkey.

This New All-Metal Ball-Joint Horn Connection is **BEYOND A DOUBT** the Missing Link between the Phonograph and Horn.

IT'S ALL IN THE BALL

"TIZ-IT"

Kreiling & Company

Inventors and Sole Manufacturers

North 40th Ave. and Le Moyne St.

CHICAGO, U. S. A.

Think how much easier it is in small places to get all the essential facts about instalment purchasers. Remember, too, that the dealer retains ownership of the machine sold on instalments until all the payments have been made.

Let us suppose that a dealer in a small town wants to try out the plan of selling on instalments and in a limited way. He needs first a blank form of lease. This should be one drawn in conformity with the laws of his State. If such a form cannot be had in his own town, his jobber will get supply for him. He next wants a simple system for keeping track of the weekly payments. Since he is only going to try out the plan in a small way, he needs only the simplest system. A leaf in a blank book, with a column marked for each payment and having the date at the top is all that is necessary. He has found a customer whom he is satisfied is all right, and he is ready for the try-out. The customer intends buying a standard machine at $30. This costs the dealer $18. It is customary to require the purchaser to make a first payment of at least $3, so that when the deal has been made the dealer has $15 capital invested. It is also customary to expect a purchaser to buy a half-dozen records or more and pay cash for them. If the weekly payments are $1 the dealer will get his capital back in fifteen weeks, and the payments thereafter are profit. For twenty-seven weeks the purchaser calls at least once a week, and it is not difficult to sell him one or more records each time he comes in. It is a safe guess that in twenty-seven weeks he will buy at least four dozen records, representing a profit of $7.20 to the dealer. In this way the total purchases will reach $46.80—more than they would on a cash sale—netting the dealer a profit of $19.20.

But no enterprising dealer would stop with one such sale. The following table has been prepared to show that a sale of this kind can be made once every two weeks on a total investment of $64, and it will not reach even that sum until seven sales have been made. For convenience this table has been based upon the sale of Standard phonographs only, and it is being supposed that the first sale was made on February 6:

Feb.	6.	Cost of 1st machine.....$18.00
		Less 1st payment..... 3.00
		Capital invested.....$15.00
	20.	Cost of 2d machine, less 1st payment. 15.00
		$30.00
		Less 2 weeks' payment on 1st machine 2.00
		Capital invested.....$28.00
Mar.	6.	Cost of 3d machine, less first payment 15.00
		$43.00
		Less 2 weeks' paym'ts on 2 machs. out 4.00
		Capital invested.....$39.00
	20.	Cost of 4th machine, less first paymt. 15.00
		$54.00
		Less 2 weeks' paym'ts on 3 machs. out 6.00
		Capital invested.....$48.00
Apr.	3.	Cost of 5th machine less first paym'nt 15.00
		$63.00
		Less 2 weeks' paym'ts on 4 machs. out 8.00
		Capital invested.....$55.00
	17.	Cost of 6th machine, less first paym't. 15.00
		$70.00
		Less 2 weeks' paym'ts on 5 machs. out 10.00
		Capital invested.....$60.00
May.	1.	Cost of 7th machine, less first paym't 15.00
		$75.00
		Less 2 weeks' paym'ts on 6 machs. out 12.00
		Capital invested.....$63.00
	15.	Cost of 8th machine, less first paym't. 15.00
		$78.00
		Less 2 weeks' pay'mts on 7 machs. out 14.00
		Capital invested.....$64.00
	29.	Cost of 9th machine, less first paym't. 15.00
		$79.00
		Less 2 weeks' paym'ts on 8 machs. out 16.00
		Capital invested.....$63.00
June	12.	Cost of 10th machine, less first paym't 15.00
		$78.00
		Less 2 weeks' paym'ts on 9 machs. out 18.00
		Capital invested.....$60.00
	26.	Cost of 11th machine, less first paym't 15.00
		$75.00
		Less 2 weeks' paymt's on 10 machs. out 20.00
		Capital invested.....$55.00
July	10.	Cost of 12th machine, less first paym't 15.00
		$70.00
		Less 2 weeks' paym'ts on 11 machs. out 22.00
		Capital invested.....$48.00
	24.	Cost of 13th mach., less first paym't. 15.00
		$63.00
		Less 2 weeks' paym'ts on 12 machs. out 24.00
		Capital invested.....$39.00
Aug.	7.	Cost of 14th machine, less first paym't 15.00
		$54.00
		Less 2 weeks' paym'ts on 13 machs. out 26.00
		Capital invested.....$28.00
	21.	Cost of 15th machine, less first paym't 15.00
		$43.00
		Less 2 weeks' paym'ts on 14 machs. out 28.00
		Capital invested.....$15.00
Sept.	4.	Cost of 16th mach., less first paym't. 15.00
		$30.00
		Less 2 weeks' paym'ts on 15 machs. out 30.00
		Capital invested.....$00.00
	18.	Two weeks' paym'ts on 15 machs. out. 30.00
		Cost of 17th mach., less first paym't. 15.00
		Profit $15.00
Oct.	2.	Two weeks' paym'ts on 15 machs. out. 30.00
		$45.00
		Cost of 18th mach., less first paym't. 15.00
		Profit $20.00

This table shows that when fifteen machines have been sold the dealer has had his entire capital returned to him, and thereafter has a constantly increasing income as long as he continues the plan. Then think of the record business to be had from the weekly calls of fifteen instalment customers. With double the capital one Standard machine could be sold every week. The dealer of limited capital and skeptical about instalment sales should limit his instalment sales to one in two weeks, until he is convinced and has the capital necessary to swing a larger number. Even if a dealer has no capital of his own, but has a good reputation, he will have no difficulty in getting his bank to advance the money and take the leases as security.

The foregoing has been presented for the benefit of the dealer who has not believed in instalment sales. To him, therefore, such sales will be in addition to his usual cash business and consequently just so much additional profit.

THE ROTHSCHILD WAY.

A New Orleans man said the other day of the great house of the Rothschilds:

"The Rothschilds push their strictness to the point of eccentricity. They once had for agent in New Orleans a fine fellow. They telegraphed to this agent at a certain season to sell their cotton holdings, but he knew the price would go higher, and, therefore, he didn't sell till four days later. In consequence, he netted an extra profit of $40,000 to his firm.

"When he sent to Rothschilds the money and told them joyously what he had done they returned the whole amount, with a cold note, that

"The $40,000 you made by disobeying our instructions is not ours, but yours. Take it. Mr. Blank, your successor, sails for New Orleans to-

HOW HEINDL SUCCEEDED.

Grit and Pluck Backed by Acquired Ability Lands Mr. Heindl in High Places—Manager of Porch Bros. Graphophone Department.

That the graphophone business is full of men conspicuous for their grit and pluck in overcoming business obstacles is proverbial. In illustration of this a brief sketch of the career of Anton Heindl, of Johnstown, Pa., should prove inspiring to every man connected with the industry.

It was about fifteen years ago that Mr. Heindl

ANTON HEINDL.

landed, one blustry winter morning, at the railway station in Portage, Pa. He had not one cent to rub against another, but that did not dismay him. He had other things just as good—courage and an unlimited capacity for hard work. And so, at the age of sixteen, he took up the arduous duties and dangers of a coal miner's existence. An accident, that almost cost him his life, after five years of work in the mines, decided him upon entering some other occupation, and he left Portage, as poor financially as when he came, to look for work in Pittsburg. After considerable casting around from pillar to post he finally obtained a position as salesman in the talking machine department of a sporting goods store, from which two years later, he entered the local Columbia organization at Johnstown, Pa. That step gained, it was a matter of a comparatively short time before he was manager of the store.

Mr. Heindl's entry into the talking machine field proved to be the starting point of his success, and his efforts mark the development of the Columbia graphophone and record business in Johnstown. He has enjoyed continuous and universal popularity among his trade, and the progressive spirit so conspicuous in his career so far renders certain a continuance of the esteem in which his patrons hold him.

His connection with the Columbia Phonograph Co., however, proved to be merely another stepping stone, as Mr. Heindl has just been made manager of the graphophone department of all the four stores owned and operated by Porch Bros., exclusive Columbia dealers in Johnstown. With such a hustler as Mr. Heindl in charge, it is certain that the sale of Columbia graphophones and records will assume proportions not seen before in that vicinity.

THE TRADE IN CLEVELAND.

Trade Continues Good—Strong Demand for Higher Priced Machines and Records—Max Landay a Visitor—An Educated Dog—How Various Dealers Find Conditions—Moving Picture Combination Formed With Headquarters in Cleveland—Plans to Systemize Distribution of Films—Didn't Want "Second-Hand" Records—Other Trade Happenings of Interest During the Month.

(Special to The Talking Machine World.)
Cleveland, O., Feb. 8, 1909.

Indications of improvement in trade conditions are noted all along the line, as well as in talking machines as in most other kinds of business. Trade during the past month in Cleveland and vicinity has continued good. To a large extent the talking machine business at present is strengthened by the higher-priced and more dependable trade of the wealthier class of buyers, but is not entirely confined to the Euclid avenue and Euclid Heights denizens. The tradesmen and mechanics are again buying and daily enlarging their repertoire of records and exchanging for the better grade of machines. There are rumors of changes and consolidations soon to take place, but nothing definite has been made public.

Max Landay, manager of the Talking Machine Supply Co., 400 Fifth avenue, New York, was in the city January 29 visiting the talking machine dealers. He said he found business very satisfactory in the territory he had visited.

An effort on the part of some of the city officials to prohibit the operation of moving picture shows on Sunday resulted in the reference of the ordinance to the council committee on judiciary, who have pigeon-holed it.

The familiar little Camden dog "listening to the voice of his master" now has a chum in Brownie, a pet dog belonging to Mrs. George Davis, of Zanesville, "listening to the voice of her mistress." Mrs. Davis has a sister who lives several blocks from the Davis home, and the dog is in the habit, like her mistress, of visiting between the two homes. A few days ago Mrs. Davis called up the home of her sister and asked her to send the dog home.

"Why, Maud, how in the world can I?" came the reply.

"Just hold the receiver to her ear," said Mrs. Davis.

When Brownie's ear came in contact with the receiver she heard the words of her mistress, "Come home, Brownie, I've got a nice piece of cake for you." With a yelp of delight Brownie dashed for the street and was soon barking for admittance at the door of her own home.

T. H. Towell, president of the Eclipse Musical Co., stated that business during January was fine, especially the latter half of the month. The jobbing trade, he said, was expanding right along and conditions generally very satisfactory. The company do an exclusive jobbing business.

Thorton & Bros., located on Broadway, are enjoying a good trade in Edison and Victor machines and records.

Since the purchase of the business of the Columbia Co. by G. J. Probeck & Co. trade has been very satisfactory. "We are, however, doing quite a volume of business in both machines and records," said Mr. Probeck. "The demand for double disc records is increasing, and customers all express themselves well pleased with the innovation. We are looking forward to a very successful year's business."

"We had an excellent trade in January," said Mr. Audrey V. Biesinger, manager of the Roberts store, and it has continued right along to date. The demand for machines is fairly good, and records are selling well. The new Amberols are becoming great favorites, vieing with Red Seals in popularity. Prospects are decidedly encouraging."

Since their removal to their present quarters W. H. Buescher & Sons state their trade has greatly increased. The locality is in the business center, and the company occupy a beautiful store in the twelve-story Schofield building. The company have installed a piano and are demonstrating the new system of music teaching just copyrighted by the Anylitic Music Co., of this city.

C. S. Bourgeois, manager of the new International Talking Machine Co., said: "Business is very good indeed, both in machines and records. The Columbia indestructible cylinder records commend themselves to patrons, and the demand for these, and also the double disc records, is daily increasing. We have done exceptionally well since starting in business two months ago. We have secured a number of permanent customers and our business is daily increasing. Included in a number of sales of various priced machines in January were two Symphony grands, with a complement of grand opera discs."

Mr. Robbins, of B. L. Robbins & Co., The Arcade Talking Machine Store, said that since their removal to the new store there had been a decided increase in business. "Having more space and separate demonstrating rooms," said Mr. Robbins, "for the accommodation of Victor and Edison customers proves to be of great advantage. Our January sales of the higher grade machines, including several Victrolas, was fine. There is an excellent demand for records, including the Amberol and Red Seal."

Edna A. Rankin, manager of the Victor and Edison Talking Machine Co., 27 The Taylor Arcade, is doing nicely. She has made sales of many high-priced machines, including Victrolas—one a Louis XV. Victor Victrola—to an old acquaintance in New York City, Mr. A. S. White.

Luretta Byrnes, manager of the talking machine department of Brown Bros., said business was very good. "Our trade in January," she said, "was fine. We sold a number of the BI Columbia machines, as well as a number of the cheaper grades." The company handle the Columbia machines and double disc records exclusively.

H. E. McMillen has a large clientage, covering the entire field of musical instruments. "Our December business in the talking machine department," said Mr. McMillen, "was more than double that of December, 1907, the increase coming almost entirely from larger sales of Victrolas. Our January business was good in Victrolas and records, but rather quiet in other machines. Prospects are unquestionably good for a prosperous year's business."

The Hacter Jewelry Co., 5372 St. Clair avenue, are operating a talking machine department, and are doing a fine business in this line. They report excellent sales of the Victor January records.

Business is moving along prosperously at the May Co. Mr. McNulty, manager, said trade had been very satisfactory throughout January, having made sales of a large number of machines and scores of records. He stated there was a gradual improvement in business generally, manifest by the increasing calls and larger number of records selected. He thinks this will be one of the most prosperous periods in the history of the talking machine business.

The rebuilding and remodeling of the Bailey Co.'s building is inconveniencing the quarters of the talking machine department, but the business, though transferred, is moving along successfully. Mr. Friedlander, manager, said business was very good in January, as it also is at the present time. He said sales of records was fine, and that the Amberols were proving great sellers. The company gave an Auxetophone entertainment recently at the Chamber of Commerce on the occasion of a banquet.

For the alleged purpose of manufacturing and systematizing the handling of films throughout the country a combination of independent moving picture exchange men, capitalized at half a million, with headquarters in Cleveland, has been launched. The new company incorporated as the Kinemetograph Educational Film Co. has established its main office here, with allied branches in New York, Chicago and St. Louis. Its territory contemplates covering hundreds of moving picture shows throughout the country.

Robert E. McKisson, ex-Mayor of Cleveland, is counsel for the new corporation. In discussing some of its plans, he said: "The moving picture business, so far as the exchange of films is concerned, has been in chaotic condition. Of course, the business is a new one, unorganized and growing with great strides. Each exchange has been placing all the films it could, regardless of any general plan. This new corporation plans to have each city grouped, so that the shows it supplies will get the newest films and possess them exclusively. They will not have to use the films that another house is using contemporaneously, or that were used a week before. Their films, after being used, will be sent to other cities on the circuit.

"Plans for the organization of the new concern have been under way for some time. It has now been incorporated at $500,000 and established offices here. It includes some of the present film exchanges now operating, and will produce some of its own films of improved fireproof construction, and will also buy, rent and import others."

queer episodes. A woman entered a store a few days ago and, after she had listened to the demonstration of twelve records, said: "I'll take that last one." The attendant proceeded to wrap it up for her. She stopped him. "I don't want that one. I want one that hasn't been played. You don't sell those that have been played, do you?" Informed that he did. "Well," said she, "this is the last record I'll ever buy here. I don't propose to have any second-hand goods worked off on me." The attendant said he tried to explain, but she choked him off by asserting he was an "unregenerated swindler," and that he had better try two weeks of Christlike life.

THE GROWTH OF AN INDUSTRY.

Remarkable Progress Made by the Hawthorne & Sheble Mfg. Co.—Considered the Matter Carefully Before Entering Field and Were Well Prepared—Success of "Star" Machines and Records at Home and Abroad.

(Special to The Talking Machine World.)

Philadelphia, Pa., Feb. 6, 1909.

Several years ago the Hawthorne & Sheble Manufacturing Co. started in to manufacture a disc talking machine. They had been for years identified with the supply end of the industry, and their entrance into the field of machine manufacturers was looked on by the trade in general in the nature of an experiment, and possibly by the other machine manufacturers in the light of a usurper. Such an impression was hardly conducive of a favorable reception by the trade in general, and tended to place an additional handicap on the introduction of their machine product to the public.

The Hawthorne & Sheble Manufacturing Co. had not, however, entered this end of the business without giving the matter serious consideration, as it appears they had been preparing for this move for several years previous, had acquired many patents to cover their product and had associated with them a number of the brightest minds connected with the inception and development of the talking machine industry. Their first bow to the public was naturally a modest one, when compared to the variety of models placed on the market by other manufacturers, and for quite a period of time they confined their efforts to manufacturing machines for premium purposes. They quite realized the importance of adding to their line, and, assuming a different position before the trade, so gradually different models were added, new customers were secured, and new fields developed, until the year 1909 sees this company in a position where they are prepared to meet any and all conditions arising, and to-day their product has won a big measure of favor and their business has grown and expanded to such an extent that they are certainly recognized as big factors in the trade.

To-day the Hawthorne & Sheble Manufacturing Co. have four distinct factories, wherein they employ hundreds of people. Their plant is self-contained, even to operating their own iron foundry, and each intricate part entering into their product is made in their own factories under their supervision and direction. They are at present marketing fifteen distinct types of Star talking machines, retailing for $10 to $250, so as to meet the requirements of all intending purchasers. Their two new cabinet machines—namely, the Starola, listing at $175, and the Starola grand, listing at $250—appeal to the highest class of trade.

In their line of Star records they have aimed to make popular selections, and their list shows a very careful discrimination. The price of their 10-inch records—namely, 50 cents—is a popular figure, which is bound to impress the buying public favorably.

From a small beginning, starting with a large amount of trade prejudice to overcome, this company has made remarkable progress, until to-day they are numbering among their active customers some of the largest and best-known houses in the United States.

A poor business man will rest self-contented and not investigate a new proposition. A good one will always carefully look into the advantages offered by a growing enterprise. It is an old saying that "a straw shows which way the wind is blowing," and the straw in this case has shown the direction of the wind for some time past, and connections formed now may prove valuable assets for the lucky holders in the years to come.

TALKER NEWS FROM LOS ANGELES.

Heavy Rains Hurt Business Temporarily—Increased Demand Noted for All Lines—Birkel Co. Pushing Fibre Needles—New Columbia Disc Machine Received—Several Dealers Expanding and Taking on New Lines.

(Special to The Talking Machine World.)

Los Angeles, Cal., Jan. 30, 1909.

All southern California and surrounding country has, and is, enjoying a splendid fall of rain, which is a prosperous sign, and will help business in the future. While the downpour has done considerable damage in some parts, it is not regretted.

Stockton (Cal.) is probably the heaviest sufferer, as a result of the floods caused by the rains, which were the heaviest witnessed for some years. It has been necessary to use boats for transportation, and the talking machine dealer of Venice would have learned a thing or two in selling goods had he chanced to see the dealers of Stockton at their daily tasks. Regardless of the weather conditions, business has been good, and in all of the excitement a new store has been opened by Marin & Co., which is a handsome addition to the many stores of which Stockton boasts.

Santa Barbara has also had some trouble during the rainy days, being cut off from Los Angeles by washouts on the railroad it was crippled for a short while. Other towns throughout the State met with similar experiences, some of which were quite serious for a time.

Sherman, Clay & Co. have had good reports from their dealers and are receiving some large shipments of Victor records, which will replenish their stock which was thinned out during the holidays. The February Victor records have sold very well.

The Southern California Music Co. have had an increase in their Edison Amberol business. Edison dealers are becoming more interested in this line, and the new lists of records are made up of the best class of selections. Amberol attachments are in great demand, as a result of the National Co.'s magazine advertising.

The fiber needle has been widely advertised by the Geo. J. Birkel Co. and has created an interest among their customers. Juan de la Fuente, of the foreign department, is visiting his father in Mexico.

Wiley B. Allen Co. have been caring for their talking machine trade as best they can in their temporary quarters and expect to be back in the old store in a very short time.

The Columbia Co. have received a new type disc machine, with changeable motor, which they expect to make a special feature of in their future advertising. Their repair department, in charge of E. B. Sparks, is receiving a great deal of work from out-of-town customers.

The J. B. Brown Music Co. have completely remodeled and enlarged their talking machine department and added the Edison line. Pease & Foote are expanding and will add to their store as soon as they can secure more space. Fiske & Co. have originated some very attractive window display cards, which are different than any ever seen in the city. Hamberger's talking machine department distinguished itself during the holidays and has been moved from the basement to better quarters on one of the upper floors. Brent's furniture store, which has handled the talker lines for some time past, has made an attractive window display of the Victor. Max Schirsohn has had a fine business during the rainy days in both disc and cylinder records.

The Pasadena dealers are all very pleased with trade in their city, especially to see the generous rain. The Waterhouse Music Co. have built an addition to accommodate the Amberol goods. The Pasadena Music Co. are doing a good Victor business in Red Seal records.

C. S. Reige, Fresno, has lately become an Edison dealer, and is fitting his store to accommodate the line.

W. M. Gottschalk, of the Herzog Art Furniture Co.'s local branch, has gone to Chicago to attend the Manufacturers' Exposition. On his return he will display several new styles of record cabinets at their warerooms.

The Exton Music Co., under the management of Robert Larkins, are making many improvements in the handling of their trade.

The Fitzgerald Music Co. have announced to the public that they are to move from the old store on Spring street to a new location recently secured on Broadway between Fifth and Sixth streets.

The death of Geo. Macnabb, brother of Jas Macnabb, of the Zonophone Co., which occurred in this city, is lamented in the trade circles.

The Washburn Copyright Bill Introduced in the House Allows the Composer a Five Per Cent. Royalty—Currier Bill Which Allows a Flat Rate of Two Cents a Record May be Re-introduced Before the Present Session of Congress Adjourns—Neither of These Bills Is Retroactive—Music Section of the Washburn Bill Worth Reading—Now Certain That no Definite Action Will be Taken on the Copyright During Present Session of Congress.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 6, 1909.

During the past month Chairman Currier and his colleagues on the sub-committee of the House Patents Committee have continued their conferences and while they have not accomplished enough to bring about positive legislation they feel that they are on the verge of a compromise that will result in action early during the next Congress. This sub-committee consists of Messrs. Currier, of New Hampshire, chairman; Hinshaw, of Nebraska; Chaney, of Indiana; McGavin, of Illinois; Washburn, of Massachusetts; Sulzer, of New York, and Legare, of South Carolina.

The question before the committee is, whether the composers shall be allowed a five per cent. royalty, in accordance with the Washburn idea, or a flat rate of two cents a roll or record as advocated by Chairman Currier. These ideas are set forth in the new Washburn bill which was introduced last Thursday, January 28 (House Bill No. 27,310), and in the Currier Bill (No. 22,183), which was introduced on May 26, 1908, but which will be re-introduced in modified form.

Both bills concede to the composer, or owner of the copyright, the exclusive right to the public reproduction by mechanical means of his copyrighted work if he chooses to exercise that right, but each measure provides that if he himself reproduces or permits anybody else to reproduce the copyrighted work mechanically that *all others* who desire to mechanically reproduce the same work may do so upon the payment of the legal royalty to the owner of the copyright. Those who advocate the Currier idea regard it as the better of the two because they believe it would be simpler to enforce the payment of a flat rate than a percentage one.

This alleged difficulty of computation is one of the objections urged against the Washburn percentage principle, viz.: Would the retail or the wholesale selling price be made the basis of the computation of the royalties to be paid, and what would be the method of calculation where there are different wholesale selling prices if the latter is to be the basis?

The chief objection raised against the Currier idea is that two cents a music roll or record is not sufficient compensation in the way of royalty. Chairman Currier and some of his colleagues regard a two-cent flat rate as a good return to the owner of the copyrighted composition for its use. Another objection against the Currier idea is that if a flat rate of two cents is allowed as royalty on a record selling at 50 cents that a music roll retailing for $1 should bring in a larger royalty to the composer. Some of the composers say their royalty should be greater on a record retailing for $5 than one selling for 50 cents. The reply which manufacturers make to this objection is that records selling for $5 are sold at that price, not so much on account of the talent of the composer as that of the singer.

The Washburn idea is set forth succinctly in the bill introduced last Thursday, in which the music section provides that—

Any person entitled thereto, upon complying with the provisions of this Act, shall have the exclusive right:

"(e) To perform the copyrighted work publicly for profit if it be a musical composition, and for the purpose of public performance for profit, and for the purposes set forth in subsection (a) hereof; to MAKE ANY ARRANGEMENT OR SETTING OF IT OR OF THE MELODY OF IT IN ANY SYSTEM OF NOTATION OR ANY FORM OF RECORD IN WHICH THE THOUGHT OF AN AUTHOR MAY BE RECORDED AND FROM WHICH IT MAY BE READ OR REPRODUCED; Provided, That the provisions of this act, so far as they secure copyright covering the parts of instruments serving to reproduce mechanically the musical work, shall include ONLY compositions published and copyrighted after this Act goes into effect: AND PROVIDED, FURTHER, AND AS A CONDITION OF EXTENDING THE COPYRIGHT TO SUCH MECHANICAL REPRODUCTIONS, That whenever the owner of a musical copyright has used or permitted or knowingly acquiesced in the use of the copyright work upon the parts of instruments serving to reproduce mechanically the musical work, then ANY OTHER PERSON may make similar use of the copyrighted work upon the payment to the copyright proprietor of a royalty equal to five per centum of the sum derived BONA FIDE BY THE MANUFACTURER THEREOF from the manufacture, use, sale, or lease of such parts. The payment of the royalty provided for by this section SHALL FREE THE ARTICLES OR DEVICES FOR WHICH ROYALTY HAS BEEN PAID FROM FURTHER CONTRIBUTION TO THE COPYRIGHT EXCEPT IN THE CASE OF PUBLIC PERFORMANCE FOR PROFIT: And provide further, That it shall be the duty of the copyright owner, if he uses the musical composition himself for the manufacture of parts of instruments serving to reproduce mechanically the musical work, or licenses others to do so, to file notice thereof, accompanied by a recording fee, in the Copyright Office, and any failure to file such notice shall be a complete defense to any suit or action for any infringement of such copyright.

"In case of the refusal of such manufacturer to pay the copyright proprietor within thirty days after demand in writing the full sum of royalties due at said rate at the date of such demand the court may award taxable costs to the plaintiff and a reasonable counsel fee, and the court may, in its discretion, enter judgment therein for any sum in addition over the amount found not exceeding three times such amount.

"The reproduction or rendition of a musical composition by or upon coin-operated machines shall not be deemed a public performance for profit unless a fee is charged for admission to the place where such reproduction or rendition occurs."

Unable to agree among themselves as between the percentage and the flat-rate royalty principles the members of the sub-committee are willing to hear from the country before voting upon which of the two ideas they will support. There will, of course, be no more hearings, but the sub-committee is anxious to learn just which of the two plans is preferable to the majority of those

SALTER MFG. CO., 102 to 108 N. Oakley Avenue CHICAGO, ILL.

Goods shipped the same day order is received

This sort of service may be new to you, but it is no more than a dealer ought to expect from his jobber.

It's our way of doing business; and you can be sure that a concern that handles orders promptly is up-to-date and does things right in other ways.

Doesn't matter what you want in Victors, Victor Records, record cabinets, horns, fibre cases, English needles and other Victor accessories, we have it in stock and send it to you without delay. You can tell when the goods will reach you and be sure of living up to your promises to your customers if you had to keep them waiting.

That kind of dealing gives the greatest satisfaction all around. It makes your business run along more smoothly, you always know just where you are, and have no trouble in holding your customers.

Give us a trial order and see how quickly and satisfactorily we handle it. We'll be very much surprised if it doesn't make you long for our kind of service all the time.

Write for our catalogue, pick out what you want and put it up to us to make good.

With our catalogue, we'll also send our booklet, "The Cabinet That Matches," which tells about our record cabinets that match perfectly each style Victor in design and finish.

New York Talking Machine Co.

Successors to
The Victor Distributing and
Export Company

83 Chambers St., New York

interested in the music section of the intended legislation. This contest has now been in progress for more than four years. It is manifestly certain that even if the Patents Committee should immediately report either the Washburn or the Currier bills, that neither can get beyond the floor of the House.

The appropriation bills are all in backward state at the present time. A change of national administrations is occupying the anticipations of Congress, and of the twenty-eight days remaining before the inauguration, four Sundays, a holiday, a third day for the Allison memorial exercises, and a fourth to be occupied exclusively with the counting of the electoral vote, will eliminate eight, leaving, at the most, but twenty working days in which the Sixtieth Congress may legislate. In that time all of the appropriation bills must be passed and there are items in all of those thus far reported that occupy still further time with the consideration of conference reports on the disagreeing differences between the two ends of the Capitol.

What the House Committee hopes to be able to do is to reach an agreement on either the Washburn or the Currier idea so that a bill may be reported to the House before March 4. There is no likelihood of this being done before the last fortnight of the session. With the end of the session the bill would die. The only parliamentary advantage would be that the bill could be immediately introduced and given early position on the calendar of the Sixty-first Congress, but this will undoubtedly not be until next winter, unless subjects other than the tariff, which is improbable, are to be taken up during the special session, to be called for March 10 by President-elect Taft.

If the event of the reporting of a bill which will prove acceptable to the composers, automatic instrument and talking machine record manufacturers, music publishers and others interested—acceptable as the best possible compromise that could be obtained—there will probably be little difficulty in securing a favorable report of the same bill early in the Sixty-first Congress. But the development of any wide divergence of opinion as to what ought to be in the bill, the creation of another bitter contest, there would probably be another fight within the committee and in that event copyright legislation would undoubtedly go by the board for another two years. If another contest should develop, and everybody in Congress interested in the matter prays that this may be spared, the upshot of the whole matter will be merely the enactment of a measure dealing with changes in present administrative features of the law already on the books without altering the status of musical copyrights at all.

Both the Currier and the Washburn bills provide that neither if enacted into law shall be retroactive so far as the musical clauses are concerned. Every day that the enactment of the legislation is delayed means an increased number of copyrighted musical compositions upon which royalties will not be payable under the proposed legislation. This is an important phase of this whole subject which seems to have been lost sight of by those most deeply interested in the payment of royalties.

ENJOYS PAINTING EDISON.

A. A. Anderson a Well-Known Artist Chats Interestingly of Edison Personality—The Impressions Conveyed to the Artist—Edison Brain a Relay Machine.

A. A. Anderson, the well-known artist, who some time ago finished a striking portrait of the inventor of the phonograph, a picture, by the way, that is now familiar, showing Mr. Edison in the attitude of thought at a table on which is a phonograph, parts of which he is holding in his hands, talked in a most interesting way about Edison the other day, when he said:

"I enjoy painting Edison, though he is no easy subject. He is restless until he gets his thoughts concentrated upon some scientific problem, and then he becomes quiet and the expression upon his face one that an artist loves to catch and transmit to the world. But it was not so easy to get him thinking, for his brain works best in a noise. He likes to be in his factory or workshop, with the hum and clatter of his machinery about him. But I know something of electricity, and am deeply interested in it, so I was able by conversation to lead him into a train of thought that would get him into the proper condition for sitting as a subject."

"And what impression did you form of him as a thinker?" was asked.

"I learned that he has the mind, not of the deductive reasoner, but of the man inspired, you might almost say. He arrives at his conclusions by intuition and not by mathematical reasoning. To illustrate: When he invented the ordinary pear-shaped glass bulb for incandescent electric lights he wanted to ascertain its precise cubic contents. He gave the problem to several eminent mathematicians, and they figured on it. When they brought their answers he told them that all of them were wrong. He could not tell exactly how he reached his own conclusion, but he knew what it was, and wanted to prove it. His method of proving it illustrates the practicality of his ways: He had made a series of tin cubes, forming a nest, each one a minute quantity smaller than the one enclosing it. He filled a bulb with water and poured it from one cube to another until he found which of them the contents filled exactly.

"Another illustration of this practicality was when he invented the wax cylinder of his phonograph. He had a brush with which to clean these cylinders, and each of these brushes cost him a dollar. He wanted a cheaper brush, of hair that would clean the wax without scratching it and thus spoiling the record. He collected specimens of the hair of every animal he could think of, and what do you suppose was the result? He found the hair of the red deer the finest in existence, so fine that you almost need a microscope to see its tips, and of it he made a brush that cost only five cents.

"Some English capitalists came over here to organize the typewriter trust. They took all their papers to Mr. Edison and asked him to pass upon their plans. He knew nothing about typewriters, so he asked them for the books that would inform him. He turned the leaves of a book over rapidly, and when he had reached the end he surprised all the experts by his knowledge of the subject, a knowledge obtained by the most cursory reading, if reading it can be called, for you or I would call it merely glancing over.

"He has a most retentive memory and enough imagination, but not too much for practicality. Imagination in an inventor is a dangerous quality. An inventor must have it, but if he have too much of it he is sure to become a dreamer. That is where Edison is strong; he has just the requisite amount of imagination to make him conceive great things, yet not enough to make him a dreamer. He is essentially practical.

"The human brain is like one of Edison's relay machines. These receive and collect the messages that are sent and then pass them on, each over its proper wire. So the mind receives and stores impressions and gives them forth again. A great mind selects and co-ordinates the facts it has stored up and gives the world the sum of the results in a concrete form. Thus it is with Edison. His splendid mind is not only a storehouse of knowledge, but a wonderful relay machine which combines and compares this knowledge, and from it evolves great ideas which take the form of telephones, electric lights, phonographs and such useful things.

"I remember when Edison was in Paris the city gave him a banquet and the presiding officer said the city of Paris had banqueted many kings and princes, but this was the first time it had entertained a scientist, but Mr. Edison was worthy of a banquet because he was the prince of scientists."

Every employer assumes a certain responsibility in connection with his employes. It is his duty to do everything in his power to keep them honest, to keep temptation away from them.

MUSIC-MASTER Wood Horns (NOT VENEERED)

Any Horn—metal or veneered wood—can intensify the sounds of the record reproduction, but only the

MUSIC MASTER
WOOD HORN

can enhance the tone quality by sympathetic vibrations.

Made for any Style or Make of Machines.

Finished with Beautiful Hand Rubbed Polish.

BECAUSE the MUSIC MASTER is the only horn built of solid wood with vibratory freedom. It is more than a horn—it is a sounding-board.

Ask your jobber to send you a horn on approval.

If your jobber cannot supply you, write us.

TRADE NEWS FROM INDIANAPOLIS.

Post Holiday Trade Quiet—Koehring to Remove—Columbia Co.'s Attractive Window Display—Recent Visitors—Lieber Elected Treasurer of the New National Moving Picture Film Association—State Regulation for Nickelodians—Fake Pictures Condemned—News of the Month Worth Recording.

(Special to The Talking Machine World.)

Indianapolis, Ind., Feb. 6, 1909.

The talking machine trade has been quiet in Indianapolis for the last month. Most of the talking machines were bought during the Christmas month. However, the dealers have been having a nice run on records. Those who bought machines in the previous month have been buying their records for the machines in the last month. The weather, too, has made the business in machines worse than it would have been otherwise.

C. Koehring & Bros., Victor distributers, who have been located in Virginia avenue for some time, will move to a down-town location within the next week or two. The company have rented a storeroom on Virginia avenue, in the business district. They have been doing a nice business for some time, and have been putting a good deal of enterprise into their work.

The Kipp-Link Co., who handle Victors and Edisons, report a fairly good business for the last month, considering circumstances as do the Indiana Phonograph Co. The latter concern handles Victors and Edisons and are doing a nice business out in the State.

Joseph Joiner, of Massachusetts avenue, who handles Victor machines and Columbias, reports a good business. He is well pleased with his location in the new business district in Massachusetts avenue.

The Columbia Co., in Pennsylvania street, have been featuring in their window display for the last week, two styles of their symphony graphophones. The two machines formed an attractive display, and Thomas Devine, the manager, says a number of inquiries have been made at the store as a result of the display, and he is of the opinion that it will result in several sales.

Mr. Devine spent two or three days last week on a business trip to Terre Haute, where the Columbia Co. have a store. He is very well satisfied with the business which is being done at Terre Haute.

Among the out-state talking machine dealers, who have been in the city in the last month, are: Luther Day, Muncie; L. L. Bair, Anderson; S. D. Marcus, Spencer; John Wetz, Sulphur Springs; John H. Whitelock, Rushville.

"Talker" music for dances at the large manual training high school of Indianapolis continue to be popular. A dance was given there last week by one of the Greek letter fraternities and a Columbia Twentieth Century machine supplied the music.

Marion Dorian, of the Columbia executive offices of New York, called at the Columbia store here last week and was in Indianapolis over Sunday. Mr. Dorian is making a tour of all of the Columbia offices of the country.

Robert Lieber brought interesting news to Indianapolis this month from New York, where he had been attending the meeting for the reorganization of the moving picture business of the country. He was elected treasurer of the new national organization of moving picture film agencies. Mr. Lieber says that the organization which has been effected probably will mean that there will be fewer moving picture shows in Indianapolis and over the State than there has been in the past, but that the entire business will be placed on a higher plane. All of the moving picture patent interests he explained have been consolidated into one great company and it will sell film to companies only when certain requirements for the general uplift of the business have been filled. Mr. Lieber says that this will not affect Indianapolis as much as some other cities because in Indianapolis the business is in pretty good condition as compared with other cities. Nearly all of the shows here have fairly adequate fire protection.

William E. Blakeley, State factory inspector, in his annual report, which he has just submitted to the governor, urges legislation for the regulation of five-cent theaters of the State. Mr. Blakeley calls attention to the rapid increase in the last few years to the number of such shows in the State and points out that such shows, especially in the smaller towns, are usually located in abandoned store rooms and sometimes in upstairs rooms, where the fire protection is not good. He directs attention also to the danger from fire as a result of the celluloid film. In spite of Mr. Blakeley's recommendation, the Indiana legislature has now been in session for four weeks, and no bill has been introduced looking to the regulation of such shows.

Thomas Winterrowd, building inspector of Indianapolis, recently made a tour of some of the five-cent shows of the city, and did not find things to his liking. In one place in South Meridian street, he saw the operator in a fireproof box smoking a cigar, with several hundred feet of inflammable film unrolled before him. The operator had no license under the city ordinance, and Mr. Winterrowd told him to throw the cigar away at once, and told him that unless he obtained a license the place would be closed at once. The ordinance requiring licenses for such operators is being rather strictly enforced. Five operators appeared for the examination last month.

Objection has been made in the public press recently to some of the fake pictures which have been shown, and which have been represented as life-like representations of the scenes in Sicily, immediately following the recent earthquake. The newspapers spoke of these scenes as being faked up. They were shown, it was said, before pictures from the scene of the 'quake could have possibly reached America. Referring to the pictures, one newspaper said "A spike is being driven into the coffin of the moving picture show business in Indianapolis."

C. H. Sutherland, who owns four of the seven five-cent theaters in the business district, will open up soon a ten-cent moving picture house in the busiest section of the city. He has already rented a room in the liveliest block in Washington street. This new house will represent a depart-

ure as for the additional five cents he will simply give a longer and more varied moving picture program and will not intersperse any vaudeville numbers, as some of the ten-cent shows have done. Mr. Sutherland believes that the people will stand for more moving pictures without any solos or vaudeville stunts.

WURLITZER'S NEW YORK HOUSE

Fast Getting Things in Shape—Manager Grimes to be Assisted by C. J. C. Clayton and Arthur Pollmann—Farney Wurlitzer Returns to Cincinnati—Rudolph Wurlitzer 78 Years of Age on February 1st.

The Rudolph Wurlitzer Co., at 25-27 W. 32d street, New York, under the management of Fred Grimes, are rapidly getting their warerooms in shape. Of course, business is going along, and their principal instruments in the automatic line have been installed. In about a week or so the entire place will be complete. Besides himself, he will have the assistance of C. J. C. Clayton, formerly connected with Bollman Bros., of St. Louis, Mo., as an outside salesman. Arthur Pollmann, son of August Pollmann, one of the veterans in the small goods business, joined the selling staff Monday. Mr. Pollmann is an expert in automatic instruments, and electrician in that special line of no mean pretensions.

Farney Wurlitzer, of the Rudolph Wurlitzer Co., Cincinnati, O., was in New York January 30, cutting his visit short so as to be at home on the birthday of his father, Rudolph Wurlitzer, the head of the corporation, who was 78 years of age on February 1. Mr. Wurlitzer, despite his age, comes to business every day.

SALES AGENTS FOR LEEDS & CATLIN.

The Manufacturers' Outlet Co. Will Represent This Line—Take Possession of New Quarters—Groshut Off on Western Trip.

The Manufacturers' Outlet Co. took possession of their new offices and factory, on the third floor of 89 Chambers street, New York, Monday. The premises are admirably adapted for their purpose, and the general office, sample room and private quarters of Walter L. Eckhardt and J. Charles Groshut, of the company, are suitably decorated and appropriately furnished for the quick despatch of business.

Mr. Eckhardt returned from a very successful trip last week, with Chicago as the "storm center," where he booked, among other nice orders for their specialties, one for 100,000 records. The company, with other new lines added, have become general sales agents for the entire machine and record output of the Leeds & Catlin Co., New York. This is considered a valuable and logical connection that will redound to the expansion of trade for both concerns.

Monday Mr. Groshut started on a two months' selling trip through the Middle and Central States and the Northwest. His western turning point will be at Kansas City, Mo. He is counting on sales that will total $100,000, and was confident the "trick" can be easily turned. On coming back to New York, Mr. Groshut will go through the South and Southwest.

MR. THWING'S CHOICE COLLECTION

Of Records Has Been Cataloged and Forms a Volume Which Reflects Mr. Thwing's Musical and Artistic Leanings.

J. L. Thwing, president of the Thwing, Stewart Co., the prominent printers and engravers of Duluth, Minn., has one of the largest private collections of talking machine records in the country. He has had these listed in catalog form, alphabetically arranged, and it really looks like a volume put out by one of the big talking machine companies. Mr. Thwing devotes some five pages of small type to his Red Seal and operatic records, which embraces the very best compositions of all the leading artists of the world; two pages to sacred and standard selections; a page to talking records; two pages to concerted vocal pieces; two pages to popular vocal numbers, solos, and four pages to band and orchestra numbers. The latter includes solos for all the leading orchestral instruments.

In the diversity and choice selection of these records Mr. Thwing displays his love for music in its varied forms. He certainly has at his command the greatest works of the masters as sung or played by all noted artists in the vocal and instrumental worlds.

In writing to The World under recent date, Mr. Thwing says: "I take pleasure in handing you herewith, with my compliments, a copy of catalog of my private collection of talking machine records. Thanking you at the same time for the inspiration I have had in watching the growth and interest of your publication, I am, Yours very truly, J. L. THWING."

WHAT TRADES NEED HELP?

New York Schools Don't Know Which Vocations to Teach.

William H. Maxwell, superintendent of schools for New York City, in a letter to Assemblyman Hoey, supporting the latter's bill for an investigation of technical and industrial training in the schools of this and foreign countries, says that accurate information on the subject is absolutely necessary before vocational schools can be properly established and conducted in New York.

"We are trying to work out plans for a trade or vocational school," says Mr. Maxwell, "intended particularly to benefit boys and girls who reach the age of fourteen years without graduating from the elementary schools. We know the necessity of the school, but are in serious doubt as to what we ought to teach these children in the way of preparation for a trade."

The superintendent suggests that the scope of the Hoey bill be extended so as to include an inquiry into the supply of skilled labor in various trades, the methods by which apprentices are instructed in shops, and the opportunities offered by trades unions for admission to workshops.

REPORTS CONDITIONS AS EXCELLENT.

J. C. Roush of Standard Talking Machine Co., Pittsburg, Pa., Enthusiastic Over January Business and General Outlook—Thanks Jobbers for Victor Exchange Deal—Satisfactory Means for Reducing Stock.

(Special to The Talking Machine World.)

Pittsburg, Pa., Feb. 6, 1909.

In a chat with J. C. Roush, of the Standard Talking Machine Co., Inc., of this city, he said: "We find that our January business has come up fully to our expectations, and altogether, we are very much encouraged with the outlook for the coming season. Collections continue good, and we find the dealers very much enthused on the Edison cutout exchange, which enabled them to put in fresh stock without further investment.

"The jobbers who have taken advantage of the Victor exchange deal find that it pans out to their entire satisfaction, and has been the means of their reducing the stock they were very long on, and we would be pleased to have you offer our hearty thanks through your valued paper to the V. D. & E. Co., Musical Echo Co., Blackman Co., Penn Phonograph Co., Wurlitzer Co., Perry B. Whitsit and W. D. Andrews for their co-operation along these lines."

WILL SUE BRITISH AUTHORITIES.

Geo. W. Gibbs, a young American, who went to British Guiana, representing the Columbia Phonograph Co., and who was arrested by mistake for another man, by the authorities of Georgetown, returned to New York last week. He was arrested just as he was ready to leave for home and kept in jail for some time. He intends to bring suit to recover damages for the stupid mistake made by the British authorities, and for the loss he suffered through imprisonment.

WILL THEN GO OUT OF BUSINESS.

When the Columbia Phonograph Co., General, remove from 111 to 89 Chambers street, New York, on or before May 1, now occupied by the Excelsior Phonograph Co. (successors to the Douglas Co.), the latter will cease to exist and will go out of business. John Kaiser, general manager of the Excelsior Co., and C. V. Henkel, former president and general manager of the Douglas Co., have about completed arrangements to enter the motion picture line, and will run a place of amusement of this kind in the Bronx section of the city.

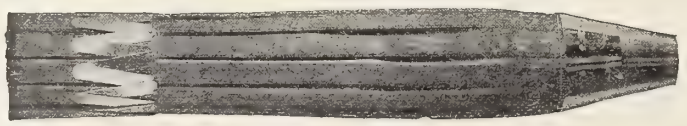
The Minnesota Phonograph Co., retail dealers in talking machines, St. Paul, Minn., suffered some damage by fire last week. They carried an insurance of $4,000, and the fire will only temporarily inconvenience them.

ATTENTION, MR. JOBBER AND DEALER!

THE MUNSON FOLDING HORN

PATENTED

Retails $7.00



Retails $7.00

OFFERS YOU GREATER SALES AND LARGER PROFITS

FOR DISC AND CYLINDER MACHINES is the only one-piece indestructible Folding Horn on the market. Made of the finest quality of selected Leatherette—in plain solid colors—Gold, Black or Red, inside and out.

WHEN FOLDED AND CARTONED it occupies a space only 28 inches long by 3½ inches square—an ideal parcel for carrying or handling and impervious to damage.

We Make Classy Cabinets for Cylinder Records and Disc Records

Write US

NEW device which we are using in some of OUR Cylinder Cabinets. It's the best scheme ever devised for holding the Cylinders in the Original Flannel Lined Cartons. The capacity of these cabinets is the same as the Peg Cabinets and in every way these clamps are superior to the pegs. The prongs are elastic and even though the size of the boxes that the Cylinders come in vary some the clamps will spread enough to take care of all cartons of standard size.

TALKERS FOR THE KIOWA INDIANS.

Chief Lone Wolf, head of the Kiowa Indian tribe, is a lover of the phonograph. Heretofore he has been buying records made for the palefaces, but Thursday he took a new turn and came into town, secured the services of Vern Lovett and an attachment to make records, drove him to his allotment south of town, where a number of red men had gathered. Vern operated the machine while the Indians lectured and sang into the instrument. He then had the machine run off the newly-made records, much to the delight of the Indians, who danced about the machine.—Hobart Republican.

NOW THE NEW YORK PHONOGRAPH CO.

January 15 the New York Phonograph Co. sent out a notification that they have taken over the assets and liabilities of the Victor Distributing & Export Co., New York. This is merely a change of name as the personnel and business policy of the organization remain the same.

S. W. Williams, traveling for the company, wrote from Vermont the other day that it was 16 degrees below there and hard keeping warm.

AMERICAN FAIR IN LONDON.

Industrial Exhibition to be Opened at Earl's Court.

Visitors to London, England, the coming summer will find Earl's Court occupied with American industries. The promoters have announced their expectation of bringing together illustrative examples of American inventive and commercial genius in every department of trade, which will convey such an idea of the magnitude and importance of American industries as will be a revelation even to those who imagine they have a fair conception of the wealth, science, and industry of the United States.

An advisory council is being formed, including the present and prospective Lords Mayor of London, together with men of distinction in official and commercial circles on both sides of the Atlantic.

AN IMPORTANT POINT DISCUSSED

By General Manager Dolbeer and of Exceeding Interest to Jobbers and Dealers in Edison Phonographs.

A point of some interest to jobbers and dealers in Edison phonographs is the following correspondence which passed between a western jobber and F. K. Dolbeer, general manager of sales of the National Phonograph Co., and which we quote from the Edison Phonograph Monthly:

"The Question.—The question has come up with connection with your ruling that dealers shall only handle Edison goods, whether it would be policy where a dealer, who extensively dealt in the cylinder line of other manufacture than yours, to organize another company, carrying on their business in a store separate from the original one, and carrying the other line of goods in that store. Please let us know whether this would be looked upon favorably or unfavorably by your company.

"The Reply.—We would advise that the action of a dealer in opening a branch store, for the handling of other cylinder lines, would not in itself be a violation of the terms of our agreement; that is, provided such dealer did not make an attempt to display or sell Edison phonographs or records from the store in which he was handling the other cylinder lines, or that he did not carry any stock of cylinder phonographs or cylinder records other than those manufactured by us in the store where he was handling our goods. Candidly, we feel that such action would only be a subterfuge, and where our attention was called to a transaction of this nature we would investigate it very carefully, and if we found that there was any attempt made to evade the terms of the addenda to dealers' agreement, we would immediately take such steps as the case might warrant."

NEW COLUMBIA JOBBERS.

Recent Appointments in Widely Separated Sections, Include Many Well-Known Houses.

The appended are the recent jobbers appointed by the Columbia Phonograph Co., General, New York:

G. J. Probeck, the recent manager, has purchased the Columbia Co. store at Cleveland, O., and he has been given the territory formerly controlled by that branch in a wholesale way. The Ludden-Campbell-Smith Co., Jacksonville, Fla., the oldest and largest music house in that city, are jobbers for the State of Florida. Porch Bros., Johnstown, Pa., are jobbers for the territory immediately adjacent to that city; they have sold the Columbia store at Johnstown and Anton Heindl, the former manager, takes charge of the talking machine department. The Scheuber Drug Co., Livingston, Mont., have the State of Montana. The Phillips & Buttorff Mfg. Co., Nashville, Tenn., have central Tennessee, northeast Mississippi and northwest Alabama. The Maine Phonograph Co., Portland, have the State of Maine and northern New Hampshire. The R. C. Smith Co., Burlington, Vt., have the State of Vermont. They are all reported as doing a fine business.

CONDITIONS IN NEW ENGLAND.

Business Somewhat Slow Owing to the Fact That the Industrial Centers Have Not Yet Recovered from the Panic of Last Year—The Talking Machine Trade, However, Equal to Any Other in Activity—An Interesting Chat With Sales Manager Dolbeer.

The situation in New England is not so rosy, according to F. K. Dolbeer, sales manager of the National Phonograph Co., Orange, N. J., who returned from a visit to a few of the large eastern cities of that section recently. He said: "The industrial centers have not recovered as yet from the trouble of last year, consequently general business in Boston, Mass., and Providence, R. I., is quiet. In Maine the pulp mills have been prevented from running by a dearth of water, the rainfall being far below the normal. Consequently business is about in the same condition as in the other two places I visited. The talking machine trade, however, is not one whit behind the other lines, and I look for an early revival along the entire front. Elsewhere prospects are very bright, especially in the West."

H. H. Weymann, of H. A. Weymann & Son, Philadelphia, Pa., and James Fintze, of the Ball-Fintze Co., Newark, O., were callers at the New York office of the National Co.

Manager Stevens, of the export department, reported foreign business as expanding in the various countries coming under his jurisdiction.

To American Dealers:

HERE IS YOUR OPPORTUNITY TO SECURE TRADE WINNERS

If you desire a splendid line of talking machines which challenge any on the American market so far as tone, quality and finish are concerned, investigate THE KLINGSOR MACHINES. They are made in a variety of models and are especially adapted for export trade.

We have just issued a superb catalogue, showing the various styles which we manufacture and this will be mailed free upon application to any name, to any part of the world.

The "KLINGSOR" is an original talking machine, for which patents have been issued in America. The case designs are unique and striking. They will attract attention in any warerooms. The scientific combination of the strings with double sounding board enhances the natural tone. Disc records of any size or make can be used on the "KLINGSOR" machine, some of which are fitted with coin-operating attachments.

This is a marvelous product, original in every way, and American dealers who desire something absolutely striking and in every way a quick seller should lose no time in communicating with us.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., Feb. 8, 1909.

MAGAZINE-GRAPHOPHONE. Henry W. Longfellow, Jr., Allston, Pa. Patent No. 907,826.

This invention relates to record magazines for graphophones which are adapted to be used in connection with existing machines, and among the objects are to provide means whereby the person operating the machine may select the record desired, place the same on the mandrel, play it and transfer it to the magazine and to provide means whereby the magazine is automatically locked in position to permit the free passage of the records to the mandrel.

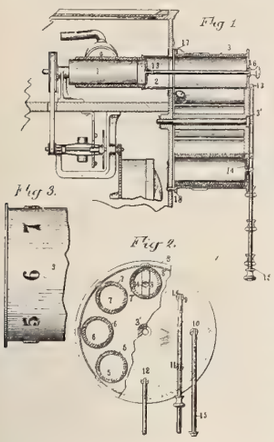

Fig. 1 is a general view, partly in section, of the magazine attached to a graphophone; Fig. 2 a like view of the magazine, and Fig. 3 a fragmentary view showing the outer face of the magazine.

PHONOGRAPH. Morris Keen, Philadelphia, Pa. Patent No. 907,814.

This invention relates to phonographs and consists of an artificial extension of a portion of the sound conveyor between the reproducer and the horn support. It further consists in means for controllably admitting air to the side of the diaphragm opposite to the admission tube.

Fig. 1 represents a side elevation of an attachment to a phonograph, embodying the invention.

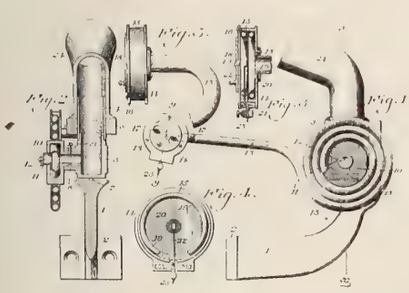

Fig. 2 represents a sectional view on line x—x, Fig. 1. Fig. 3 represents a sectional view on line y—y, Fig. 1. Fig. 4 represents a side elevation of the reproducing portion with one side thereof removed. Fig. 5 represents a plan view of a portion of the device on an enlarged scale.

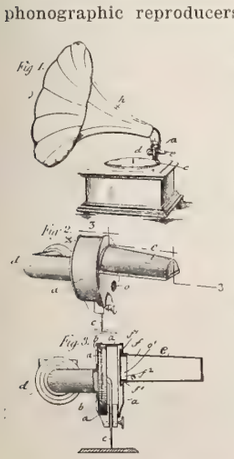
RESONATOR FOR PHONOGRAPHIC REPRODUCERS. Carl Hartmann, New York. Patent No. 907,794.

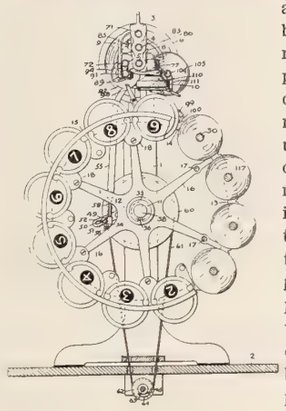
This invention relates to an improvement in phonographic reproducers by which the sounds reproduced by the same are rendered clearer and more distinct than heretofore; and the invention consists in adding to the ordinary reproducer-box containing the diaphragm an extension or resonator, which is closed at the outer end and provided at its inner end with an auxiliary diaphragm, the frame of which is tightly fitted into the inner end of the resonator, and which serves for increasing the sounds reproduced by the main or reproducing diaphragm.

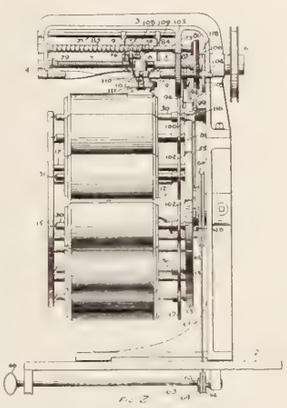


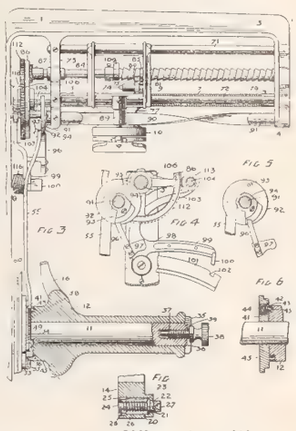
In the accompanying drawings, Fig. 1 represents a perspective view of a phonograph with improved reproducer, Fig. 2 is a perspective view of the reproducer, drawn on a larger scale, and Fig. 3 is a vertical longitudinal section on line 3, 3, Fig. 2.

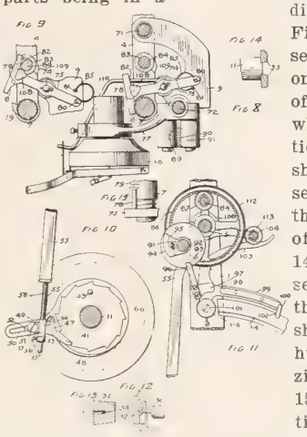
MAGAZINE-PHONOGRAPH. Cornelius Reinhardt, San Francisco, Cal., assignor to the Autophone Co., same place. Patent No. 909,455.

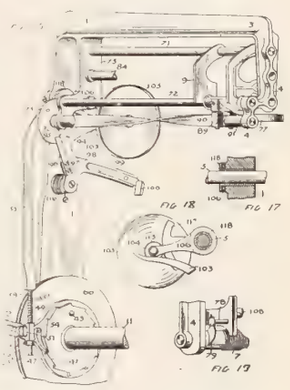
The object of this invention is to provide an apparatus whereby a considerable number of sound-producing cylinders may be arranged in such relation that any one of them may be brought into proper position for co-operation with the reproducer, or, if preferred, by which said cylinders may be so brought into such position in succession automatically. In the accompanying drawing Fig. 1 is a broken front elevation of the machine; Fig. 2 is a side view thereof; Fig. 3 is an enlarged side view of the upper portion of the machine, the hub being shown in section; Fig. 4 is a broken detail side elevation of a lever actuated with the magazine feed; Fig. 5 is a broken view of a portion of said lever and parts co-operating therewith in a different position from that of Fig. 4; Fig. 6 is a detail sectional view showing a socket in the ratchet wheel. Fig. 7 is a detail sectional view showing a socket in a ring of the magazine wheel; Fig. 8 is an enlarged sectional view of the carriage; Fig. 9 is a view in a different position of parts shown in Fig. 2; Fig. 10 is a side view of the ratchet wheel for advancing the magazine and parts co-operating therewith; Fig. 11 is a view similar to Fig. 4, the parts being in a different position; Fig. 12 is a radial sectional view of one of the rings of the magazine wheel and a portion of a cylinder shaft; Fig. 13 is a sectional view on the line of 13—13 of Fig. 12; Fig. 14 is a horizontal section through the end of the shaft carrying the hub of the magazine wheel; Fig. 15 is a detail sectional view of the device for changing the direction of movement of the carriage; Fig. 16 is a perspective view particularly illustrating the spiral ribbon shaft and its operative connection with the magazine wheel; Fig. 17 is a detail sectional view of the driving shaft; Fig. 18 is a cross-sectional view of the same, showing a side view of the friction disc; Fig. 19 is a perspective view showing the











"A PERSON WITH A RECORD CABINET and not enough records to fill it is the best kind of a prospect."

Furnish any customer with a cabinet and you will create a field for the sale of more records. You should be just as anxious to sell your customer a cabinet as you are a machine, because a cabinet is an absolute necessity to a possessor of a stock of records. They must be kept in a cabinet to be preserved, and the cabinet is an ornament in any parlor besides serving as a stand for the machine.

We want to sell you our cabinets and offer you a splendid line at very low prices. Exclusive designs, large variety, substantially made, finish unusually good. Need we say more? Write for prices.

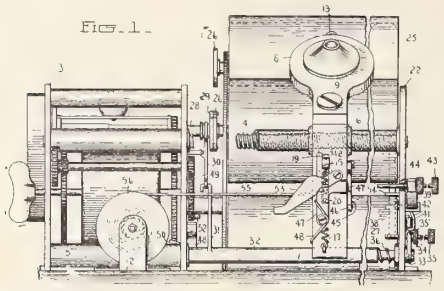
Record Cabinet
No. 697

Rockford Cabinet Co., 1920-30 12th Street, Rockford, Ill.

raising of the lower nut by a cam.

SOUND-REPRODUCING INSTRUMENT. William H. McCurdy, York, Pa., assignor to Edwin W. Loucks. Patent No. 909,645.

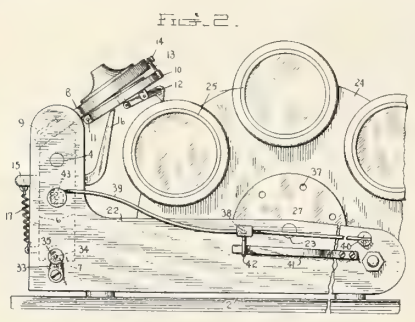
The invention relates to sound-reproducing instruments, and more particularly to the class of phonographs in which the record is formed on



the surface of cylinders of composition or material capable of receiving indentations corresponding to the sound to be reproduced.

A further object of the invention is the provision of novel mechanism for disengaging automatically the reproducer from the cylinder after the said reproducer has traversed the sound reproducing portion of the record cylinder.

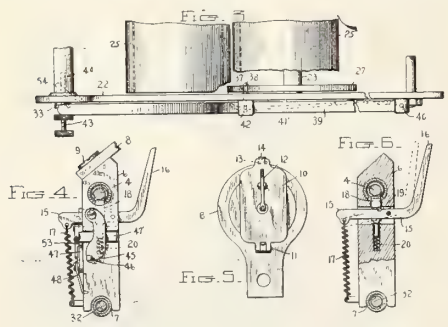
A further object of the invention is the provision of novel mechanism for resetting the reproducer automatically to bring it into operative



position after having been brought to starting position with respect to a record cylinder.

Another object of the invention is the provision of novel means on the reproducer to limit the movement of its style point relative to the record cylinder upon which the same is to operate.

In the drawings Fig. 1 is a rear side view of the machine; Fig. 2 is an elevation looking at the right-hand end of the machine shown in Fig.



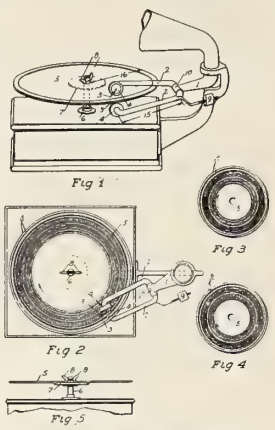
1; Fig. 3 is a fragmental view in plan of the right hand of the machine shown in Fig. 1; Fig. 4 is an end view of the reproducer carriage with the co-operative feed mechanism associated therewith; Fig. 5 is a bottom view of the reproducer detached from its carriage; Fig. 6 is a view of the right-hand end of the reproducer carriage and its co-operative parts therewith.

SOUND-REPRODUCER MACHINE. Charles Ira Lamb, Chattanooga, Tenn. Patent No. 908,778.

This invention relates to improvements in apparatus for recording and reproducing sounds, the improvements being directed to that kind of sound recording and reproducing apparatus, wherein a tablet or disc record is used, with a stylus carried on a lever, moving eccentrically with reference to the center of the record tablet, the purpose of the invention being the permitting of the reproduction of sound with much clearer tone and better volume than is now allowed by apparatus of the kind mentioned.

One feature of the invention relates to the construction of a double sound producing record tablet or disc record, and another feature, to means for adjustment in combination therewith. Each of the two features of improvement is designed to overcome certain difficulties and imperfections which have been heretofore encountered in the operation of sound-reproducing machines, and more particularly to eliminate the harsh tones of some of the machines of the class described, by causing a louder tone of more volume to be reproduced.

In the drawings Fig. 1 is a side elevation of an apparatus for reproducing sound, embodying this invention; Fig. 2 is a plan view of the arrangement of the two sound-boxes; Fig. 3 is a view of the disc showing the direction of the lines indicating the sound indentations; Fig. 4 is a view of the lower side of the disc showing the lines indicating sound indentations, and Fig. 5 is a detail view showing the axis on which the disc rotates, bringing it into contact with the reproducers.

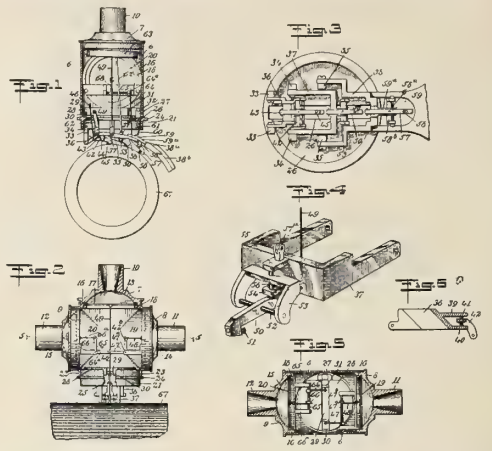


SOUND-REPRODUCER. Richard Bartholomew Smith, New York. Patent No. 908,897.

This invention relates to sound reproducers used upon phonographs and of the general type described in Patent No. 799,418, dated Sept. 12, 1905.

Among the objects sought to be accomplished by the present construction are the following: 1. To keep the stylus levers true in relation to the record grooves; 2, to mount the stylus levers upon universal joints, the axes of which are disposed in different planes crossing each other in a manner favorable for correct movements of the stylus levers; 3, a lessening of the friction of the stylus levers in their respective mountains, and 4, to simplify the construction and improve the general efficiency of the same.

Fig. 1 is a view partly in side elevation and partly in section, showing the reproducer complete, as viewed from a point at the right of Fig. 2; Fig. 2 is a view partly in section and partly in elevation, showing the reproducer complete as seen from a point at the left of Fig. 1; Fig. 3 is an enlarged fragmentary inverted plan of the reproducer, showing the various stylus levers and their respective mountings; Fig. 4 is a perspective showing the middle stylus lever, the universal joint by aid of which the lever is mounted, and the swinging bracket by aid of which the universal joint and the middle lever are connected; Fig. 5 is a horizontal section



upon the line 5—5 of Fig. 2 looking in the direction of the arrows and showing internally the bottom of the casing together with the bottom weight and means for connecting two of the diaphragms with the stylus levers associated respectively with them, and Fig. 6 is a longitudinal section through one of the swinging brackets provided with a fork used as a mounting for each of the stylus levers.

TALKING MACHINE. Thomas Kraemer, Philadelphia, Pa., assignor to Hawthorne & Sheble Manufacturing Co., same place. Patent No. 910,208.

This invention relates to talking machines and has reference, more particularly to the turntables of such machines on which sound records of disc shape are supported during the operation of reproducing the recorded sounds.

In the exploitation of talking machines and sound records therefor, it has been found desirable to so construct the machines or certain of the parts thereof as to preclude the use with such machines of records of other than a particular make, the object in doing this being to insure to the seller of a machine a reasonable profit from the sale of records for use thereon, such as will induce him to sell the machine at a low price. Heretofore it has been sought to accomplish this by providing the turntables of talking machines which support the disc sound records during the reproducing operation, with one or more projections of peculiar shape, so that only records formed to correspond with

Liberal Discounts if you will send your jobber's name

Mr. DEALER:

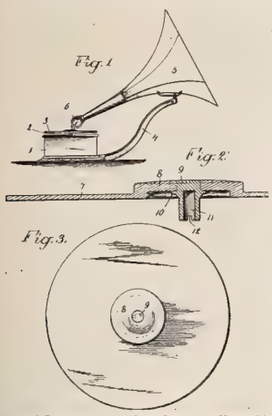
The Schubert Extensible Record Rack

Fills the want for compactness, neatness, simplicity, convenience and cheapness. Nicely made of metal, black enameled. Made into any size rack desired, from 1 to 20 or more shelves. Each shelf holds 12 cylinder records in their original cartons. Put together and taken apart again at will. Folds up like a book. Hangs on the wall, moulding or ceiling. Dealers keep SHELVES in stock and supply customers according to the number of records they have. Teaches customers to take care of their records, which means more sales; note—those who take care of their records are your best patrons.

You have many patrons who cannot afford the more expensive cases or cabinets; 2 or 3 of these shelves will start them, the rest is easy. Include about 3 shelves with your next Phonograph sale and see the results; they having started right will be your continued patrons. Advertising matter is furnished dealers which does the talking for them.

G. H. SCHUBERT, 199 W. Madison Street, Chicago, Ill.

such projections will lie flat upon the turntables in position for reproducing. These turntables as heretofore constructed, however, have not been successful in attaining the desired result. Thus, turntables have been provided with one or more integral projections of small cross-section on the upper faces thereof designed to pass through corresponding openings in the sound records; but as these turntables are made of cast metal a sharp blow with a hammer on the protection will cause it to break off practically flush with the surface of the turntable, and thereafter standard disc records may be used thereon. If projections of larger cross-sectional area were employed, such that they could not be broken off with a hammer, these could still be removed by putting the turntables in a lathe and cutting the projections down to the level of the faces of the turntables.



This invention is directed to the provision of a turntable of an improved construction, such that with it the use of sound records of other than the desired make is effectually prevented.

Fig. 1 is an elevation of a talking machine; Fig. 2 is a central section of the turntable, broken away in part, and Fig. 3 is a top view of the turntable.

Sound-Reproducing Record. Einar Leschbrandt, Philadelphia, Pa. Patent No. 908,683.

This invention relates to an improved sound-reproducing record, and it consists of a strip of paper or other suitable material, provided with an air pervious pattern corresponding in form to the sound wave or waves to be produced.

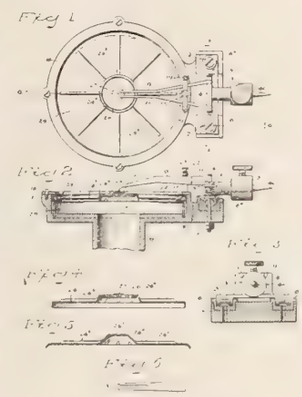
Sound is, or consists of, a series of rarefactions and condensations of the air, and, as is well known, rarefactions and condensations may, by means that are well known and which it will be unnecessary to describe here, be photographed or otherwise graphically represented upon a photograph plate or film or other article. The graphic representation of the sound waves appears as an irregular line. If the plate, film or strip carrying the irregular line representing the sound waves be perforated or otherwise made air pervious to one side of said line, the sounds corresponding to said pattern may be reproduced by passing a current of air through said perforations.

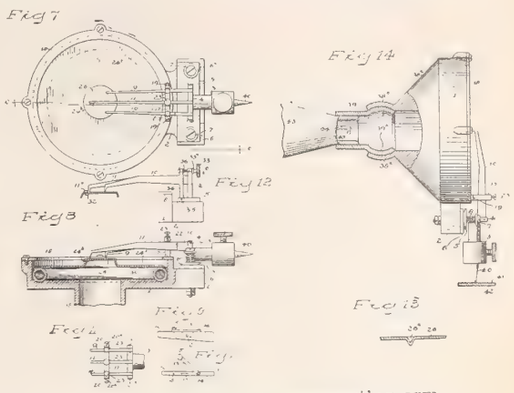
In the accompanying drawings Fig. 1 represents a film or strip of material carrying a graphic representation of a sound wave, and Fig. 2 the same perforated.

Sound-Box. William J. Tanner, Bridgeport, Conn. Patent No. 908,625.

This invention relates to improvements in recording and reproducing sound for sound-boxes for talking machines, and it consists in certain details of construction to be more fully set forth in the following specification:

Fig. 1 is an upper plan view of a sound-box embodying the improvements, among which may be mentioned the double needle arm; Fig. 2 is a broken sectional view on line a a of Fig. 1; Fig. 3 is a sectional view through the case bracket and soft metal seats of the needle arm support on line b b of Fig. 1; Fig. 4 is a central sectional detail view of a diaphragm similar to the one shown at Fig. 2, except that the edges are flanged; Fig. 5 is a detail central sectional view of a diaphragm having a raised solid center; Fig. 6 is a broken detail modification of the needle arm; Fig. 7 is an upper plan view of the sound-box showing a plurality of needle arms; Fig. 8 is a broken detail side elevation of one of the needle arms pointed in the body portion; Fig. 10 is a broken plan view of Fig. 9; Fig. 11 is a broken upper plan view of the needle arm support and broken view of three needle arms mounted therein, two of which are pivotally supported, showing also a modified construction of the muffler standard. Fig. 12 is another view showing an arrangement for moving the whole needle arm; Fig. 13 is a detail broken sectional view of a diaphragm with a depression in the surface to receive the sharp-pointed end of the needle arm; Fig. 14 is a side elevation of a sound-box, broken sectional view of its socket, sectional view of the sleeve, with a ball and socket connection between the sleeve and socket and broken view of a sound-box supporting arm, and also a broken sectional view of a record disc.





Phonograph Record. Hermann Schroder, New York. Patent No. 909,461.

This invention comprehends certain new and useful improvements in record discs for talking machines, and the invention has for its object an improved construction of record disc, which may be cheaply manufactured and which will be light and yet stiff or rigid and capable of resisting hard use without breaking.

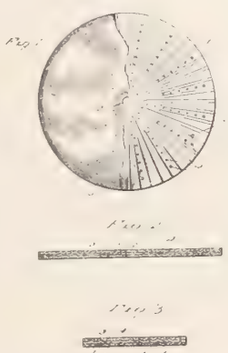


Fig. 1 is a top plan view, partly broken away, of a phonograph record disc embodying the improvements of the invention; Fig. 2 is a transverse sectional view thereof, and Fig. 3 is a sectional view.

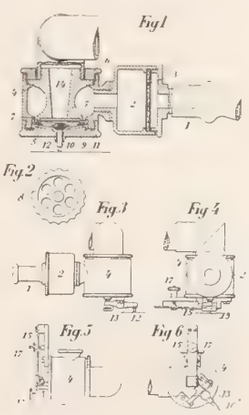
Compressed-Air Talking Machine for Speaking Machine. Henry Joly, Paris, France, assignor to Compagnie Generale de Phonoghaphes, Cinematographs et Appareils de Precision, same place. Patent No. 908,411.

It is known that it is possible to make use of the escape of compressed air to enunciate a phonographic record. In enabling this theorem to be put into practice, and forming the object of the present invention, there is employed a valve having a relatively small surface and of light enough weight for it to be arranged in the passage of a compressed air conductor and which follows exactly the undulations of the phonogram. These parts have as their object to render undulatory the current of air which they allow to pass.



On the drawings attached to the present description, and which are given as examples, Fig. 1 is a vertical section on an enlarged scale of a form of carrying out the invention with a valve applied to a phonographic disc or cylinder. Fig. 2 is a plan of the valve of the above-mentioned apparatus. Figs. 3 and 4 are respectively front and side views of another form of carrying out the invention applied as in Fig. 1. Figs. 5 and 6 are front and side views of the arrangement, Figs. 3 and 4, applied to a disc or plate.

Attachment for Talking Machine. Henry F. Wittig, Baltimore, Md., assignor to John Schellenberger, same place. Patent No. 910,103.

This invention relates to attachments for talking machines, especially of that type employing

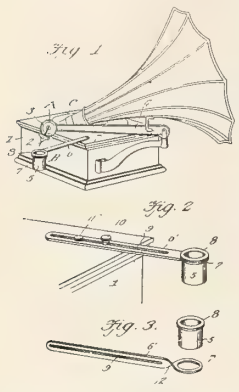
Talking Machine Supply Co., 400 Fifth Ave. NEW YORK

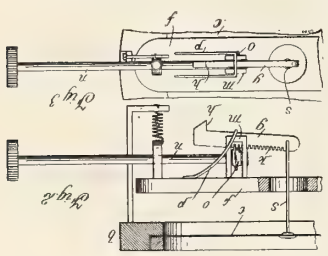
disc records. The invention has for one of its objects to provide an attachment in the nature of a receiver into which the worn and worthless needles can be dropped from time to time. A further object is the provision of a receptacle mounted on an arm that is attached to the stand or cabinet of the talking machine in such position that the sound-box carrying arm can be swung outwardly over the receptacle, so that the needles when loosened can drop into the receptacle and thus prevent them from falling about on the floor.



In the accompanying drawing, which illustrates one of the embodiments of the invention, Fig. 1 is a perspective view of a talking machine with the attachment applied thereto and the sounding-box carrying arm in position to drop the needle into the attachment. Fig. 2 is a perspective view of a modified form of attachment. Fig. 3 is a further modified form.

GRAPHOPHONE. Tomas P. Hall, Vancouver, B. C., Canada. Patent No. 910,529.

This invention relates particularly to the reproducer, and it has for its object to enable the amplitude of vibration of the mica diaphragm to be adjusted and thereby soften or reduce the volume of sound without altering the quality of the tone or amplify such tone, and to this end the adjustment of the level is provided for, upon which the needle or jewel tip is carried for the purpose of varying its fulcrum.



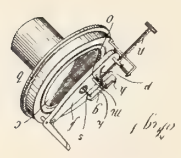


Fig. 1 is a perspective view of a reproducer inverted and drawn to an enlarged scale, with invention applied thereto; Fig. 2 is a side elevation of the immediate parts thereof to which invention applies, and Fig. 3 is a plan view thereof.

Arthur Villard, formerly assistant manager of the Regina Co.'s New York store, and in another line of business for a year or more, may again return to the music trade, in which he was known for 30 years.

A bore is a bore whether in business or in society. No one will give him preference over any kind of competitor. You will not be a bore if you give the other fellow a chance to do his share of the talking.

COLUMBIA CO.'S NEW CONTRACTS

For Dealers Have Just Gone Into Force—Special Qualifications to Become Dealers.

New dealers' contracts, including forms Nos. 1027, 1028, 1029 and 653, were issued to their jobbers by the Columbia Phonograph Co., General, last week. They "supersede all other contract forms formerly authorized by the company, the right to use any other form of contract hereby being withdrawn and the forms discontinued." The new contracts describe the initial order required in order to be qualified as a dealer, the "500 purchase discounts," the "quantity purchase discounts," and the "exclusive dealers' contract."

In transmitting these forms, to be signed in triplicate, the company conclude their circular letter by saying: "We will expect that all conditions imposed by these contracts be rigidly adhered to, and any concessions in discounts or otherwise to dealers, other than those authorized, will be considered a violation of the jobbers' contract."

OLIVER CO. EXPANSION.

Lease Store Adjoining Their Present Establishment at 14 New Street, Newark, N. J.

The Oliver Phonograph Co. have leased the store at 14 New street, Newark, N. J., adjoining their present quarters and have arranged to extend both stores in the rear to the Arcade, that prominent business thoroughfare, upon which they will have an entrance.

The improvements will add over 3,500 feet to the present floor space occupied by the company and a large part of this will be devoted to handling a line of pianos shortly to be installed.

The "All-Tones" attachment, for both disc and cylinder machines, manufactured by the Oliver Co., is, if anything, constantly growing in popularity and orders are coming in for the attachments from all sections of the country.

NO DECISIONS IN IMPORTANT CASES.

(Special to The Talking Machine World.)

Washington, D. C., January 26, 1909.

As the Supreme Court of the United States announced to-day its usual Mid-Winter recess from next Monday until February 28, no decision in the case of the Leeds & Catlin Co., New York, appellant, against the Victor Talking Machine Co., Camden, N. J., appellee, will be handed down until the latter date. The appeal is from the United States Circuit Court of Appeals, Second Circuit, and involves the validity of the Berliner patent and the enforcement of the fine for contempt of court on the part of the Leeds & Catlin Co.

MOODY'S SYSTEM OF KEEPING STOCK.

A new system of keeping Victor record stock, originated and devised by V. W. Moody, with the New York Talking Machine Co., successors to the Victor Talking Machine Co., 83 Chambers street, New York, is to be commended for simplicity and reliability. A dealer can tell at a glance in just what condition any particular record is as to number on hand, and what distributer has a surplus of the selection in case he is hurried to have the deficiency supplied. The system is being introduced by the dealers of the New York Talking Machine Co., and also with those of other Victor distributers.

CATTY PATTI

The excessively good-humored gentleman in the evening clothes and Gibus sat on the third from the bottom of his doorsteps listening rapturously to strains of what he considered the most beautiful singing.

"Wonnerful thingsh, theshe talking machinesh, ain't they?" he remarked to a passing police officer.

"Yes, Mr. Swillhurst, they certainly are," replied the P. O., who was used to the gentleman's 2 a. m. eccentricities. "But what makes you say so?"

"Why, jusht you lishten, conshtable—jusht you lishten! Don't you hear that lovely machine nexsht door? It musht be a record of Patti shinging 'Home, Sweet Home,' conshtable, ishn't it?"

"Patti singing, ''Ome, Sweet 'Ome,' on the talking machine, Mr. Swillhurst!" exclaimed the constable, lifting the gentleman up by his coat collar. "Not it! You're a-sittin' on the cat!"

MISSING HUBBY'S VOICE IN "TALKER."

The rich tenor voice of her husband singing in a phonograph, "Meet Me in the Harvest Moonlight," gave Mrs. Fred G. Rover, who had long been searching for him to have him punished for contempt of court for having failed to pay her $7 a week alimony allowed in a separation suit by Justice Kelley, of the Supreme Court, Brooklyn, an excellent clue to his whereabouts. She visited the phonograph company and was told that Mr. Rover was on the vaudeville stage. He was found at a Brooklyn theater.

She started an action for a divorce last November which was granted yesterday by Justice Maddox. The filing of the papers in the county clerk's office ended the long litigation.

Rover formerly was a tenor soloist in the Clinton Avenue Congregational Church. After leaving church work his excellent voice was in demand for phonographic records.

Mrs. Rover is a graduate of Vassar and is considered a remarkably handsome woman. During the hearing before the referee much care was taken to keep secret the name of the co-respondent, said to be a noted opera singer.

FEATURING THE VICTROLA.

Orme & Son, Ltd., of Ottawa, Can., are making a special feature in their advertising of the Victrola, which is achieving great popularity in that section.

W. M. Ewing, of Champaign, Ill., has moved his stock of musical instruments to new quarters on South Neil street, that city.

THE TALKING MACHINE WORLD

EDWARD LYMAN BILL
EDITOR & PUBLISHER
1 MADISON AVENUE, NEW YORK

Entered as second class matter May 2, 1905, at the post office at New York, N. Y., under the act of Congress of

To Business Men

Business men in every line admit the value of good trade papers.

A trade paper must be original—it must contain a variety of matter including news service—technical information—in fact it must crystallize the entire news of the special business world, and be a helpful adjunct to every department of trade.

Scan the columns of The Talking Machine World closely and after you have completed an analysis of the contents of this publication see if you can duplicate its value in any other trade!

The World is a help to the talking machine business.

It exerts an healthful optimism.

It wields an influence for the good and every man who sells talking machines, no matter in what part of the universe he may be located, should receive this publication as regularly as it is issued. He is missing a vital business point if he fails to do this.

Thousands of dealers not only in the United States but in every country on earth consult the pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant future, and this publication is doing much to enlarge the business horizon of every retail talking machine man in the world.

To receive this paper annually costs but $1.00. All foreign countries $1.25.

Good Humor in the Saddle

ON last Thursday the American people inducted into office a President of this Nation who perhaps is better fitted temperamentally and by a wide range of experience to fill the duties of that high position than any man who has ever occupied the chair of Washington.

If training amounts to anything, and to say that it doesn't is to admit that education is useless, then President Taft's administration will prove a success from every viewpoint.

Business interests may feel secure with a man at the helm who possesses judicial temperament to such a degree as our new President.

Then, too, there is another side to President Taft's nature which has not been amply covered in the various descripitons which have been written concerning him.

The Americans are essentially a humorous people, and for the first time in many years we will have a man in charge of things at Washington who among other things possesses a keen sense of humor.

It is a matter of good omen that Mr. Taft's neighbors in Cincinnati when saying farewell to him recently thought it fit and agreeable to make the occasion one of jollity and joke cracking. Excellent!

There has been a surfeit of uncertainty and of doubt, and the future has been viewed by too many people through indigo-hued glasses.

For some time past the opinion has been advanced that we are afflicted with almost unsolvable problems; that we are menaced by dangers that would overwhelm us if we could not hit upon some great plan of remedy.

Optimism has been throttled to an extent, and now we may as well look up and smile.

W. H. TAFT, PRESIDENT OF THE UNITED STATES.

The spirit of fault finding is a good thing to forget, and thank goodness the country is to have the advantage of possessing a good-humored man in the place of greatest authority.

The country is certainly to be congratulated in having in office a President who has not forgotten how to laugh, particularly when he hears the dire predictions concerning the Nation's future.

The Taft laugh looks good and will become contagious.

The man who sees a joke and enjoys it and the man who is serious when occasion demands is the kind of person who will appeal to the average American.

"Laugh and the world laughs with you."

Good humor is a mighty good asset for a President to possess. Long live the Taft smile.

THE VALUE OF NEW IDEAS

Are the Very Life of Business—The Man Who Can't Keep in Touch With the Latest Developments Must Give Another a Chance.

The man who "never did business like that" is gradually weeding himself from the mercantile field. When confronted with the problems of the present and having suggested to him certain courses to pursue, he puts up the plea that he has never done business that way, has heretofore been successful, and sees no reason why he should modify, change, or add to that which has fetched him where he is. He keeps on for a while in the way he is going, and although he insists that he is doing good business, he knows that something is wrong, somewhere, but he still sees no reason for adopting new-fangled ideas.

If we can't make up our minds to do the things of to-day as the necessities of the day demand and shape our methods according to the particular requirements of the present, we'll sooner or later find that he who has a way of his own of doing things, and persists in doing things that way under any conditions, will get left far behind in the race for business. A man goes to bed with a clear conscience that he has fixed his business properly for the problems he has contended with during the day, but he wakes up to his business the next morning with some new series or sets of trouble confronting him that demand other treatments. Ignoring or passing over won't rid his business of the annoyances, and because he didn't have them to contend with 10 or 20 years ago, he fools himself expensively if he attempts to let them go unnoticed and unconquered. As the Sporting Goods Dealer says: "It doesn't make any difference how we did business some other day, the problems of to-day are the ones that demand our attention to-day, and if we don't know how to handle them, it is up to us to find out immediately."

ROLLER SKATES IN GREAT BRITAIN.

A New Boom Which Has Never Before Been Equalled in England Is Spreading Over the Larger Towns and Cities.

United States Consul Joseph G. Stephens reports from Plymouth that after a lapse of 18 years roller skating has again become popular throughout the United Kingdom and that a boom which has never before been equaled in England is spreading to all of the larger towns and cities. The consul continues: According to one of the leading London dailies, skating is to-day the most popular form of indoor amusement and exercise. Nothing else approaches it. An American company, associated with a firm of roller skate manufacturers in the United States, has opened large rinks in 17 cities of Scotland, England, Ireland and Wales. These rinks accommodate on an average about 5,000 skaters each. It is stated that the company finds it difficult to keep pace with the demand for more rinks, so great is the popular enthusiasm for this pastime. Ten thousand pairs of ball-bearing steel roller skates are provided for the crowds attending the Olympia rink alone. By the middle of January it is estimated that more than 100,000 pairs of skates will be in use on the rinks of this single American company. There is no doubt that the practice will increase and spread, and that the demand for new skates of the finest type and most up-to-date pattern will be in general request in all English cities. The attention of American manufacturers is consequently invited to this market.

SUES THE CAMERA TRUST.

Pittsburg Photographer Asks Damages Under the Sherman Law.

(Special to The Talking Machine World.)

Pittsburg, Pa., March 8, 1909.

The Eastman Kodak Co., incorporated under the laws of New Jersey, but with its main plants at Rochester, N. Y., is made defendant in the first proceedings of the character brought in Pittsburg under the provision of the Sherman anti-trust act.

S. S. Loeb, a photographer, former secretary and manager of the Liberty Photo Supply Co., has filed a suit for $45,505.80 damages against the Eastman Co. in the United States Court.

Loeb asserts that the Eastman and thirteen other concerns, which he names, constitute a trust and that they have driven many other firms out of business. He asserts that the so-called trust has raised the price of films and kodaks 20 per cent. Mr. Loeb's complaint reads in part as follows:

"At divers and various times and from time to time prior to the year 1902 and in the years 1902, 1903, 1904 and 1905 the defendant company entered into various contracts, combinations, in the form of trusts and otherwise and conspired in restraint of interstate trade and commerce with the American Artistitype Co., Nepara Chemical Co., Photo Material Co., Blair Camera Co., American Camera Manufacturing Co., Kirkland Lithium Paper Co., Rochester Optical Co., Century Camera Co., Rochester Panoramic Camera Co., Seed Dryplate Co., Standard Dryplate Co., Stanley Dryplate Co., Tapprell & Loomis Co., and divers and other persons, firms and corporations to the plaintiff unknown.

EFFECTIVE "AD." WRITING

Is the Colloquial or Sentence Paragraph Style Which Has Proven Its Worth.

A colloquial style of "ad." writing comes from the ability to put one's everyday talk on paper just as uttered. This seems one of the easiest things to do, but as a matter of fact it is the very hardest. The reason comes from the attitude the ordinary man assumes when he starts to address the public. He at once becomes formal and has a tendency to use stately words, and wastes much time on introductions.

This is diametrically opposed to the style that produces the best announcements. What is needed is to seek the easiest, best understood words. The next consideration is to cease to wander off into introductions. These two points accomplished, a clear, adaptable style is in sight.

To certain phases of writing, what has been called the "sentence paragraph" readily adapts itself. This consists in making a paragraph when possible of a single sentence. Among the advantages of this style is its simplicity, the amount of white space it leaves open, as well as the inducement to read further when interest has been aroused. This latter feature is most valuable in advertising.

Then, too, this method is easy in itself. One writes as a child talks—says a thing, then ceases, then says another. The procedure eliminates "ifs," "buts" and "ands," and other connecting words so frequently used. Simplicity of diction being the very nucleus of good advertising, nothing can be said against the sentence paragraph.

For ad. writing this style has become deservedly popular, says a writer in the Furniture World. It may in course of time push its way into literature, although at present not much success has been achieved in this direction.

MOVING PICTURES IN CHURCH.

(Special to The Talking Machine World.)

Chicago, Ill., March 6, 1909.

The first moving picture show as a regular attraction for the church was given last night at the Fullerton Avenue Presbyterian Church by the Rev. Hugh T. Kerr.

Dr. Kerr desired to attract children and innocent young women from some of the Halstead street shows, that are believed to have a very baneful influence. He said:

"We are to have music and moving pictures and all the decent fun that can be found in a nickel theater. In fact, I am sure that our entertainment will be much more pleasant. There will be no temptations for young people to go to bad shows, because we are going to pick out stories just especially to entertain them."

WILL NOT GRANT DISCOUNT.

A meeting was held recently in Fuerth, which was attended by 130 post card and toy manufacturers, to consider the steps to be taken in face of the demand made by the Association of Bavarian Exporters for a cash discount of 2 per cent., to be allowed on all goods invoiced. The meeting was unanimous in deciding against this demand, and it was stated that the Nuremburg manufacturers had also refused to accede to this request. The majority of the speakers pointed out that the pressure already brought to bear upon them by the exporters was so great that they could go no further without doing themselves material damage, and then the times were too bad to allow of any extra discounts.

No matter how well arranged a manufactory may be, or how thoroughly organized in regard to business details, if the advertising is neglected or done in a haphazard way, business results must suffer accordingly. A great deal of advertising fails of results aimed at for the reason that the ad. writer is crowded with too many other responsibilities to give that branch of his work careful and serious consideration.

The TALKING MACHINE WORLD AND NOVELTY NEWS

THE SIDE LINE SECTION

is a part of The Talking Machine World, which is published on the 15th of each month by Edward Lyman Bill, 1 Madison Ave., N.Y. Complete copies 10c. each.

NEW YORK, MARCH 15, 1909

To create confidence is just as much the function of advertising as to sell goods, for the greater the public confidence in the goods, the more business will come to the dealer.

Statements made in advertisements, while not lacking force, should nevertheless be conservative to the extent of being readily backed up by facts. To create the impression that you are giving something for nothing makes the thinking readers wonder whether you are a very poor business man or a plain liar, and in either case they are not over-anxious to trust you.

Timeliness is one of the greatest secrets of advertising success. To advertise guns in the early winter is commendable, but to begin advertising them in the spring and keep at it is far more likely to bring results when the shooting season opens in the fall. It's hammering that makes the impression in advertising. If the first advertisement does not bring expected results, keep at it and force the public to read about what you have to offer. Thousands of successful money-making concerns owe their success entirely to intelligent and persistent advertising, but there is yet to be learned of one which won success from a single advertisement. A single drop of water falling on granite spatters off and leaves no impression, but steady dropping on the same spot will soon wear a hole.

Talk quality once in a while; price is not everything. You cannot consistently offer ten dollar gold pieces at nine dollars, but you can show that they are ten dollar gold pieces of full weight and fineness, and impress your readers with the fact that they represent honest value.

Trade that is always looking for bargains and can only be secured by means of sales will not form a permanent foundation for any business. Patrons who appreciate the fact that "the best is the cheapest in the end" are the ones to tie to, and "quality" advertising is the kind that will win them.

When exploiting the good quality of your own line, don't dwell upon the poor quality of your competitor's. Some people may be curious enough to visit him to see how bad his line really is and may stop to buy.

Even if one were not physically susceptible to the steadily increasing warmth of the sun's rays, which heralds the arrival of spring, all one would need to do to learn the fact would be to get within ear-shot of a bunch of boys, or read the sporting columns of the dailies. Everywhere one hears the one topic, which seems to interest not only young America, but a good majority of the old as well—is it necessary to go further and say baseball? The game has grown steadily in popularity by leaps and bounds and dealers who are in the sporting goods business are not only making a good thing out of it, but by publicity on their own hook are giving the thing an extra boost. Now while this national game is perhaps at this time of year heard more about than others, it is not the only fish in the pond by a long shot—tennis, golf, cricket, basket ball, roller skating, fishing and many other sports have their own enthusiastic followers. And if anyone doubts the opportunities open to those entering this field we would respectfully request him to step around to the nearest place of this kind, where if seeing is believing, it won't be long before some manufacturer in this field will receive his order for the line. One of the beauties of this business is that once you win a customer his purchases are very apt to be not only good, but what is equally important, frequent. If he plays golf he will want new sticks, balls, shoes, stockings, etc., and if he plays very much it almost amounts to a standing order. This is also true of nearly all the lines—they needing constant replenishing to keep in first-class condition. We want to lay especial stress on the importance of dealers getting in line early. Now is the time to get orders in, for if you put things off any longer, not only will you lose many of the initial purchasers which are generally the largest, but the manufacturers, once the season is in full swing, will be too rushed to give your order anything like prompt attention.

Improper handling of English, generally through carelessness rather than ignorance, often detracts greatly from the pulling power of the most elaborate advertisement. In fact, it is in the larger advertisements that faulty grammar or rhetoric are most noticeable, and there is scarcely an issue of a newspaper in which the careful reader will not find some peculiar arrangement of words or phrases that are unintentionally humorous and frequently ridiculous.

One can almost invariably pick up a paper and upon looking over the "situations wanted" or "for sale" columns find much to amuse. In a current issue of a leading daily the following appeared: "Wanted—Washing by a colored woman." Not far from this appears another even more ludicrous. "For Sale—A bicycle, by a young lady, with handle bars and tool bag complete."

Now while we laugh at these, yet one can readily offer explanation by way of the fact that the writers of such advertisements probably never got up copy before, and when called upon to do so were impressed with but one point, and that was that newspaper space costs money, hence the necessity for brevity.

If carelessness of this sort stopped in this part of the paper, comment would not be so justified, but frequently display ads. show similar errors. This is not often true in the advertising of large concerns whose publicity is attended to by an advertising man—one who is trained to prepare copy free from such mistakes—but it sometimes appears in the announcements of stores using about five to ten inches per issue.

In English a double meaning is readily conveyed and construed. Also it is true that more liberties are likewise possible for the formation of similies than with most languages; hence it is advisable to be positive of their fitness before putting in print an expression that in reality you do not intend to use.

A not infrequent cause for the misleading ad. is the use of words, the meaning of which is not evident to the person having in hand the preparation of the advertising. This happens mostly when an attempt is made to concoct a "high-falutin" assemblage of words that seldom appear outside of a dictionary.

It's the short, everyday words that carry conviction—they sink in deep. If ads. were written as most people do their thinking the result would be some pretty good ads. The trouble is, however, the average business man wants to bedeck his common, ordinary talk in picnic attire. He wants to hang it over with bunting and decorate it with starry flags. There are a great many advertisers whom it would pay to hark back to the primer and the little red schoolhouse. "See the cat; the cat sees Kate." The modern version would probably be: "Behold the feline—the feline is making an optical observation of Kathryn."

First of all the business man must take it for granted that his proposition does not appeal to his readers as strongly as it does to him. If his copy is to get right straight to the heart of things it must tell something interesting without frills. Let's be commonplace rather than pedantic.

It is an excellent habit after your ad. is couched in all the high-sounding words you delight in using to go over it with the fortitude of a Spartan father, and chop out every high-sounding phrase, substituting plain, blunt Anglo-Saxon. The greatest works of literature are the simplest—the strongest oratorical efforts have been in the plain language. Study style, not for style's sake, but to acquire the art of simplicity—plain, unaffected diction.

CARDS MUST NOT OFFEND

Racial Feelings Must be Respected by Post Card Manufacturers—Some St. Patrick's Day Cards That Are Vulgar and Offensive.

Manufacturers of post cards for special holidays should be most careful not to offend racial sensibilities. While the majority of post cards are of a high character—stimulating, educational and helpful—yet there are some that tend to the vulgar and are so far-fetched in conception as to be somewhat offensive. For instance, some of the cards which are being sold in connection with the St. Patrick's Day celebration have been criticised rather severely by Americans of Irish descent.

While people of every nation have their weaknesses, yet it must be admitted that those of Irish birth have played a part—humble or important, view it as you may—in the history of the United States, and are not to be considered as ignorant, stupid, vulgar or uncivilized, hence the unwisdom of manufacturers putting out souvenirs that have a tendency to cartoon this or any other race. It doesn't help the post card business, and has a tendency to make post cards unpopular with many who are now admirers of these handy mediums of information and communication.

These remarks are superinduced by some letters which appeared in the daily papers from people of Irish birth, and one of which we reproduce herewith sent to the New York World:

"If on the birthday of Washington or Lincoln postal cards were to be displayed in New York stores representing the 'Fathers of the Country' in inglorious attitudes, would the State or Federal authorities permit their sale? The answer must be no. Why, then, should the distribution of cards un-Christian in sentiment, un-Irish in picture and phrase, be allowed here under the guise of 'St. Patrick's Day cards'?

"Patrick—history shows it—brought civilization, not to speak of Christianity, from Central Europe to the western shores of that continent. From there civilization has been wafted here.

"Surely Irishmen have contributed enough to this nation's story to be entitled to make a practical and effective protest against the slanders on their motherland and patron saint."

NEW PLAN OF REDUCING STOCK.

A merchant in a western city was desirous of reducing his stock without delay and was willing to make a liberal sacrifice to do so. He announced a 25 per cent. reduction sale; it was bona fide, but people were used to the usual humdrum announcement and came slowly. Now, after much thought the new idea came in. Next day the ads. announced that every fourth yard of every fourth article of the same price would be sold for nine cents, no matter whether worth 10 cents or $10. A woman came in to buy an article at $5. She bought two others which cost the same; then a fourth, for which she paid only nine cents. The fourth, eighth and twelfth yard or every fourth article of the same price would The store was packed and jammed and the stock cleared up in a hurry. Yet it was practically the same 25 per cent. reduction first advertised so unsuccessfully. The "new idea" did it. Hundreds of just such trade boomers are waiting to be discovered.

First build up your character. That will bring you ability; and ability and character will bring you credit; and do not forget that practically all the great businesses of to-day were begun on the smallest possible scale.

TRADE Gillette MARK
KNOWN THE WORLD OVER

ALL seasons are good for the Gillette Safety Razor. Make your Gillette business a steady source of income. Keep your stock on display. Let your store be known as GILLETTE headquarters.

It is astonishing how many sales can be made by merely suggesting the razor and explaining its qualities. Most men know of the GILLETTE, but many of them are not posted on what the razor will actually do. They don't realize what it would mean to them in comfort and economy.

You will find that it pays to tell customers about the GILLETTE. The only limit to the business is the enthusiasm you and your sales force put into it.

Use the GILLETTE signs and trade helps.

The GILLETTE is a live proposition for any store. It pays to be identified with it.

NO STROPPING NO HONING

THE LOCAL DEALER SHOULD BE ALIVE

If He Does Business Along Up-to-Date Lines He Will Never Have to Complain of Trade Going Away from Home—The Public Favors the Home Merchant.

We are not entitled to and seldom receive anything that we do not pay for. Especially is that true of merchandizing. The man who does business with a personal backing of vim and energy and ginger doesn't expect the people of his locality to come to him with either charitable intent or because they consider it a painful neighborhood duty to patronize him, pay him his prices and profits and do whatever there is to do with him in the business line, simply because they happen to live in the same town.

There ever was and ever will be good cause why the local dealer should be given all possible preference—why people should trade at home in preference to going away from home; but there never was and never will be good reason why people should do business with the home dealer if he is disposed in any one or more of numerous manners and ways that often are the part of the dealer who howls because he is not patronized by everybody. The dealer who is up to snuff with his business—onto his job—has no time to dream over what might have been, and what ought to be, but gets out and kicks his heels and sets his brains to work on the possibilities at his hands. If he doesn't get the trade he ought to have, or things he ought to be getting, he knows there is something wrong with his way of doing business, rather than with the ways of the people about him. He is fully aware that he is asking too much price, is not keeping the right sort of goods, has not the right assortments, or something or other rationally out of the way is the cause of his failure to get the business he is after.

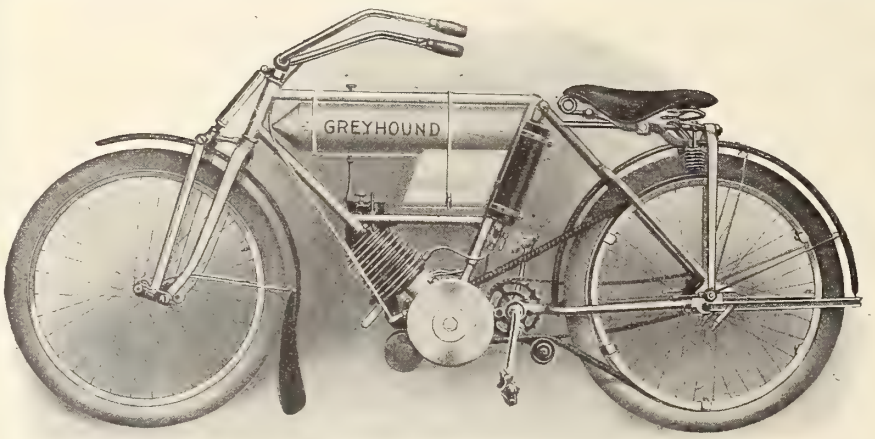
Instead of allowing his dyspepsia—if he has any—to get the best of his intellect, and allow him to rave over the passing away from home of home business, he gets to work to head off that business and know what the cause of it all is. Who is there of us who was not ashamed of and full of condemnation for the "baby" who played with us when kids? If things didn't go his way he immediately began to boo-hoo and refuse to play. That sort of baby is almost invariably the retailer who is making the loudest noise about people buying away from home. We hated the little cuss who was always making trouble for us in our childhood days, and the grown-up children of to-day no less despise the boo-hooers who are finding fault with them because the trade is going away from home.

The public is full of the idea that it is discriminating and always doing shrewd business to its own best advantage, says the Sporting Goods Dealer. It doesn't matter that often the public is mistaken, for we are contending with facts and not with ought-to-bes. When our home people are wandering away from us and buying outside, the trouble is almost completely with us. If our prices and goods are all right, the people are leaving because we make no efforts to convince them we are all right, or if making the effort it is in some manner abortive. It is up to us to find out always just exactly what is the trouble. We are not prepared to give without what we think is an equivalent return; nor is our public otherwise constituted. If the home people do not trade with us, there is something wrong with the way we are doing business. That means the great majority of our own townspeople. A few will invariably trade elsewhere, no matter what their residence, and of them we need not talk. The general run of the public will not go away from home if they are reasonably convinced it is best to trade at home.

To keep these people at home, we are fools to tell them they owe their trade to us because we are a home institution, because we pay taxes here, because we support the church and the town hall and the undertaker and various other local necessities. All that gabble is not business, no matter what its truth. They are buying in what they believe the most advantageous market, and they are not disposed to uphold, patronize, support and prosper the boo-hoo kind of a merchant. If we carry the goods our public wants, have bought them right and price them right and get down to brass tacks in our endeavors to convince people how and how much we are, we'll have little time for wheedlings; we'll need it all for business. If people at home don't buy of the home merchant, there is something wrong with his merchandizing.

That's something to think about.

Greyhound Motorcycles



Here Is A Live Trade Issue

Interest in the motorcycle is great and growing, and dealers with good factory connections are going to find new and increasing profits.

We are the oldest motorcycle makers in America and we have never before built so good a machine as the 1909 Greyhound.

If you take it on as a side line, it will be apt to crowd out some other things.

We will make liberal terms and give exclusive agencies to good people. Write us about it and get the facts.

The Auto-Bi Company

1448 NIAGARA STREET - - - - - - - BUFFALO, N. Y.

BENEDICT CO. ARE PROSPEROUS.

Report Shows Business Is Booming—Officers Elected—The Outlook Satisfactory.

The stockholders of the Benedict Manufacturing Co. met last week at their office in East Syracuse, N. Y. The regular annual dividends of 7 per cent. on both the preferred and common stock was declared, and the following officers and directors elected: H. L. Benedict, president; George N. Crouse, first vice-president; C. C. Graham, second vice-president; Charles Van Wagner, secretary; John Bailey, assistant secretary; R. B. Roantree, treasurer; Newton Owen, assistant treasurer; directors, George N. Crouse, Charles Van Wagner and H. L. Benedict.

The company's prospects, from the present indications, look exceedingly rosy for 1909. A larger force of men is employed at the present time than ever before. Several departments have been working nights for the last month.

The company has recently purchased the patents controlling the United States output of the natural rose hatpins, which have been such a fad for the last few months. These are being turned out at the rate of over 2,000 a day. Notwithstanding this, the orders are coming in faster than the output. The directors voted that more hands be employed, in addition to the present night shift, in this department.

The force of 19 salesmen report all sections of the United States, Canada and Mexico in good condition, the stocks low, and retailers and jobbers in a way to place heavy orders, many of which are for rush shipment, this being especially true in the Far West. The Benedict Manufacturing Co. now has display rooms in New York City, St. Louis, Los Angeles, Toronto and the City of Mexico.

COMPELLED TO WORK OVERTIME.

Manufacturers of baseball and sporting goods generally are quite pleased with the general trade outlook for the Spring, and in many instances they have been compelled to work overtime in all the factories in order to take care of the big demand for goods from dealers in all parts of the country. The new mitts and gloves shown in a great many catalogs this year are said to be experiencing a very good sale, while the advance orders for uniforms thus far are reported as being fully 25 per cent. greater than ever before.

Men are often met with, plain in person, plain in feature, plain in dress, without anything whatever about them calculated to impress the mind, and you are surprised at the information that they are rich and made every dollar of their money. On inquiry, it will be found that all their efforts were concentrated in one pursuit, about which they know everything and outside of which they know nothing; and you feel almost angry that a man of such little information should have been so successful in making so much money; while you, with your superior cultivation and greater intelligence, have made and saved up none; but you forget that the man has paid more for his money than it is worth. It has cost him all his measure of human intelligence. As proof, would you take his sordid mind and his gold, and give him therefor all you have learned?

When you give the dealer an object lesson in good salesmanship you are teaching him the better to distribute the goods you sell him.

GRANTING CREDIT TO FOREIGNERS.

The Importance of Reliable Credit Reports—Rules to be Remembered by Seller—Comments by Archibald J. Wolfe in "American Exporter."

It is the constant cry of agents and buyers in foreign countries that American manufacturers will not accommodate themselves in the question of credit terms to the requirements of foreign customers, and thus through their alleged supineness lose a great deal of business which goes to their shrewder and more reasonable rivals in Germany and Great Britain. On the other hand, there are numerous credit men in the United States who are confronted with bad foreign accounts ranging from small lots trustfully shipped to some importer in Amsterdam, Constantinople or Bogota, to large items in which the transaction is represented by at least four figures on the wrong side of the ledger.

Some manufacturers who are beginners in the export trade appear to be so elated over the receipt of a foreign order that they fill it unquestionably, look for settlement hopefully and frequently have occasion to regard their complaisance mournfully. They overlook the fact that they would have scrutinized an order from a domestic customer very closely before filling it. A few experiences of this description are apt to prejudice the budding exporter. "No more foreign business on credit for us. Henceforth we get cash in New York before we let the goods out of our hands." Now cash in New York is certainly very desirable, but you can get it only when you sell something that the foreigner must get and can get from no one else but you. Otherwise he will buy elsewhere. If you have a patented article of universal use you can make your own terms, of course.

In dealing with foreign customers direct, the granting of some form of accommodation is an absolute necessity, an imperative essential for developing large and permanent business connections. There are a number of things which the foreign credit manager must know before he can intelligently act upon credit applications from abroad. And there are many things to consider, many pitfalls to avoid and fine discriminations to make. The granting of credits abroad is more or less of an exact science with principles easily understood. There is no reason why a credit man should not familiarize himself with them.

Probably the basic principle in foreign credits which is a veritable truism is this: "Give no credit to a firm or concern unknown to you without investigating the credit standing of the intending customer." This is perhaps an application of another important principle which should never be departed from: "Do not grant credit favors to any foreign firm when you would not readily grant a similar accommodation to a similarly situated concern at home."

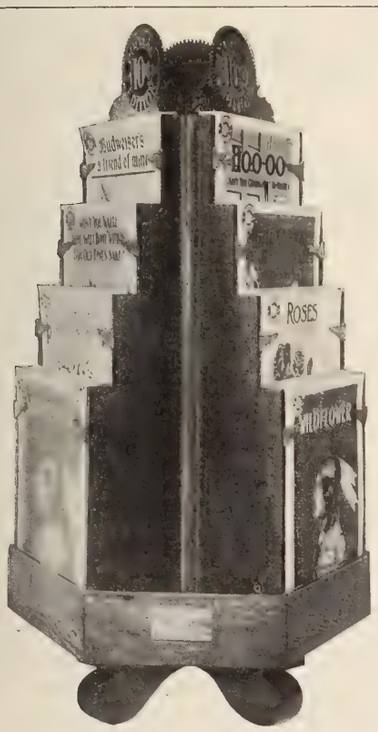
There are now several well-equipped agencies for the obtaining of credit information on firms abroad. These are probably known to the reader and need not be specially mentioned. No foreign customer should be kept on the books without investigating his credit standing. In this connection it may be said that it pays to obtain credit reports from several sources. A well-known domestic rating agency has its own offices in Cuba, Mexico and Argentina, but depends upon allied agencies elsewhere for reports. While these reports are, of course, conscientiously compiled, the credit man must analyze them before he can make proper use of them. These reports are furnished on a blank, typewritten, single-spaced, and contain largely the statement by the risk proposed, the reporter's views and perhaps a bank's estimate of the risk. Such a report must be stripped of unverified and unsupported statements and carefully boiled down.

A much better system in reporting on foreign credit risks is employed by certain organizations which supplement their own correspondent's reports and the risk's own statement by the opinions of bank and trade correspondents. While the reports are sometimes criticised on the score of brevity, they furnish views of several trustworthy parties, and they are not obscured by cumbersome verbiage through which a busy credit man is sometimes expected to wade.

Now a credit report by itself is not always an absolutely reliable guide to the credit man. There are certain sections of the world where an importer buys but litle locally and is in a position to maintain an excellent local standing, yet his rating with foreign manufacturers may denote slowness, fault-finding, intriguing, or he may religiously meet his drafts and neglect his open accounts. A bank located in the city where such a customer resides is, of course, apt to know how he treats foreign drafts, whereas his fellow tradesmen may be unaware of any irregularities.

Perhaps it is most convenient for a credit man to file specific rules regarding credit favors abroad by countries, and I will mention those peculiar to certain countries in due course, but will first state—or in some instances restate—those principles which underlie all foreign credit giving:

1. Obtain reliable credit information on your customer.
2. Carefully analyze your information.
3. Consult American houses from whom your customer may buy, and be always ready to give your experience. The time has passed when a business house was afraid to disclose a customer's standing. To exchange credit information on foreign customers is always helpful, and frequently very instructive.
4. Grant no favors to small, insignificant concerns. These should buy from wholesalers or commission houses.
5. Be very clear and definite regarding agreements, promises, conditions. A large portion of foreign credit disputes is due to lack of definiteness in original agreements.
6. Beware of the expression "sample order." It is very frequently unscrupulously used.
7. Be very cautious with firms supposed to be



This elegant, rotary, sheet music stand contains 12 pockets holding 50 copies each of the 12 numbers of the

Popular 10c. Edition

It is made of hard wood finished in mission color—oxidized trimmings, signs and patent music holders. Extreme height, 2 ft. 7 in.; extreme width, 1 ft. 2 in.; size of base, 14 in. (which is the actual space it requires on any counter).

No Charge for This Stand

Nor can it be purchased. It will be loaned to you if you will buy 1 package each of the 12 numbers in the popular 10c. Edition.

doing business abroad if they have high-sounding English titles—such as U. S. Manufacturers' Agency or American Importing & Exporting Syndicate. Such names in nine cases out of ten are adopted to mislead American manufacturers. As a name to do business with in Russia or Guatemala the title is surely an incumbrance, for it is not understood by the natives.

THE MOTOR CYCLE IN VOGUE.

The Present Year Destined to Mark the Greatest Output of Motorcycles—The 1909 Greyhounds Made by the Auto-Bi Co. Highly Esteemed for Their Many Individual Qualities of Excellence.

With the approach of the spring season it is evident that the general interest in motorcycling is far stronger than ever before, and it requires no stretch of the imagination to foresee that in the near future this "little brother of the automobile" will be seen on the road in enormous numbers.

Few people have realized the possibilities of the sturdy little two-wheeler, which, with its own efficient little power plant, and the many improvements in mechanical detail, is now ready to do whatever the automobile can, except in the matter of carrying capacity.

Wide-awake tradesmen in many lines are now taking up motorcycle agencies, the common and probably the best plan being to select some bright young man, either from present organization or from outside, and put him in charge of the motorcycle department. Almost invariably this young man is or speedily becomes a motorcycle enthusiast, and this in itself is half the battle in a selling campaign.

Among the prominent makers in the market who have devoted themselves to the development and perfection of the motorcycle, mechanically and commercially, is the Auto-Bi Co., of Buffalo, one of the old-time American concerns, whose 1909 Greyhound is a machine to build business.

There is a great big field for motorcycle business among men who used to ride bicycles, but who have got out of the habit. These men take to motorcycles like ducks to water, and when once shown how simple and easy and comfortable a trick it is, they are buyers. Even men who have never ridden the bicycle find no trouble, as the motorcycle is decidedly easier to balance and steer than the bicycle, and "the motor does the work."

The 1909 Greyhounds are substantially of one model only, the greatest essential variation being a special racing seat attachment, which involves no change in the rear frame construction. The motor is of full 3 horse-power, hung very low and in excellent position for cooling and for the comfort of the rider. The cylinder and head are cast in one piece, and the carburetor (Auto-Bi special float feed) is bolted direct to the cylinder head, and serves as a retainer for the inlet valve. The absence of piping between the carburetor and the motor contributing largely to the life and responsiveness of the engine, and also being of value in the way of eliminating weight, complication and joints.

A small but very convenient device, not commonly furnished, is a flusher tube for priming the cylinder, the use of which insures the easy starting of the motor when cold.

Splash lubrication is used, oil being fed from a generous-sized tank direct to the crank case, or into the piston, if preferred. The oil feed may be instantly varied from the saddle.

As in former years, belt drive is employed, and the Auto-Bi people find strong vindication of their consistent position in the matter, in the present general tendency toward this method. The belt consists of a ¼-inch nickel steel chain completely encased in raw hide (the chain for strength and the rawhide as a buffer between the chain and the V pulleys), supported by a ball-bearing spring idler of new and simple design.

Single-grip control is used, as being the simplest and most efficient, the connection between the grip and the control box being established by the use of 1-16-inch piano wire carried through the handle bar tube without a short bend at any point. This makes an ideally simple and clean-cut job, contributing very much to the appearance of the machine.

Ignition is obtained from three No. 6 standard dry cells carried in a convenient box.

The control box is an extremely nice piece, being very simple and quite dust tight with outside adjustment for contact points. The box contains but a single spring, contact being accomplished by a cam revolving with the crank shaft, the latter being a single-piece steel drop forging, carefully hardened and ground. Bushings of extra large size are made of phosphor bronze, as is the connecting rod, this having ample adjustment for wear.

The greatest stress is laid on the solid comfort which is insured to the Greyhound rider by the use of a number of nice features, one of which is particularly remarkable. In the first place 2½-inch tires are regular equipment. A very excellent spring fork takes care of front wheel vibration, and gives two inches range of frame movement for an inch of spring compression.

To crown all, the Greyhound shock absorber carries the saddle and consists of a spring-packed telescope tube attached to the top connection of the frame by a pair of rocking arms, and to the crank hanger connection by a swivel joint, so that the rider is suspended on a spring adapted to his weight, and can negotiate cobblestones or any kind of rough stuff at any speed in positive comfort. One great virtue of this device is that it is supplementary to a strong, rigid frame, which is not cut, and consequently weakened, for the introduction of springs. Naturally this shock absorber is patented and will be used only on the Greyhound.

In consonance with the name of the machine the standard finish is silver-gray enamel, relieved and ornamented with blue. Among other details of equipment are hollow steel rims, rubber pedals, six-quart gasoline tank, Corbin hubs, complete mud guards, strong and convenient stand, and good tool kit. The machine as a

whole shows great care in matters of detail and the refinements which go to make a finished production of the present day. It will be good business on the part of enterprising dealers to correspond with the Auto-Bi Co. and see what can be done to add a profitable line.

THE VACUUM BOTTLE.

Convenience of This New Article Now Being Made in Various Forms by Different Firms—Its Special Value as a Side Line.

During the past year or so several concerns have put in the market vacuum bottles having the properties of keeping their contents either hot or cold for a lengthy period. These bottles have various names and special features, but all are made with the same purpose in view.

Far from being simply a novelty, these bottles have a multitude of uses for the home, the traveler and the vacationist. Once used in the sick room or nursery, they become well-nigh indispensable, for hot liquids can be put in them early in the evening and served at practically the same temperature any time during the night, making it unnecessary for the attendant to spend half an hour or so in heating them. The bottles are equally convenient where cold liquids are required at odd hours.

Sportsmen are particularly interested in vacuum, for in cold days on river or trail a warm draught is essential to comfort, while the exhaustion attendant upon tramping or boating in the hot sun of summer is readily relieved by an ice cold drink at intervals.

These bottles come in various sizes and are attractive in appearance, making a very interesting line for the dealer to handle. Talking machine dealers, whether they handle other lines or not, would do well to investigate vacuum bottles as a business proposition. They are easily handled and sell for prices that allow a good profit and make the effort worth while.

The editor of the side line section will be pleased to put interested dealers in touch with the different manufacturers of vacuum bottles upon request.

FACTS WORTH READING

Concerning America's Solid Foundation.

From the Memphis Commercial Appeal the following figures are taken and show the wonderfully solid foundation upon which the commercial life of this great country is founded. The figures are railway statistics for the past year:

"RAILWAY STATISTICS FOR 1908.

Gross earnings (estimated)	$2,324,499,753
Decrease over 1907	10 per cent.
Miles laid during 1908	3,214
Decrease over 1907	2,409
Cars built during 1908	78,271
Decrease over 1907	169,917
Locomotives built during 1908	2,124
Decrease over 1907	5,238
Total spent for rolling stock and power during 1908	127,000,000
Decrease over 1907	73 per cent."

These figures are very encouraging when the facts are considered. First, 1907 was known to have been an abnormal year; business of every kind went wild; the factories were unable to near meet the demand; merchants bought recklessly, sold out at once and rebought; railroads were taxed to their utmost; hurry orders were given for cars to be built, and every siding was stripped to get enough rolling stock to move the merchandise. Yet, in spite of all this, the demand could not be met. Then it should be remembered that legislative enactments were going on in the National and State legislature affecting railroads at that time.

This wonderful year closed in a panic. From the large business done and the vast amount of rolling stock acquired in 1907, it would seem that the year following this unprecedented boom would call for no new cars, and certainly not a mile of new track would be laid. But we find from these figures that the earnings of the roads fell off only 10 per cent. from the preceding unusual year of prosperity, and that the new cars and rails laid were but little less than that of a normal year, all of which goes to show that the commerce of this country is founded on a solid basis, and not easily moved.

The railroads and the country are both all right. The only cloud now to cast a shadow over the commercial horizon is the position of the railroads with regard to their fellow public servants—the commercial travelers—in harassing and losing them valuable time by a system of collecting mileage, which is undoubtedly in restraint of trade. The railroads should give these salesmen—their partners in building up the industries and developing the resources of the country—a square deal.

NEWS FROM THE WINDY CITY.

Western Talking Machine Dealers Putting in Lines of Pianos—Drysdale Co.'s Fine Post Cards—The Harmony Co.'s Small Goods Line—The President Ink Pencil Popular—Other Side Lines That Should Appeal to the Trade.

(Special to The Talking Machine World.)

Chicago, Ill., March 6, 1909.

Quite a number of western talking machine dealers are expanding their business by adding pianos. It is undoubtedly an excellent proposition, as the quick turnover on talking machines and records enables them to go through without embarrassment the struggle period, that some exclusive piano dealers have had to undergo. Chicago is a great piano manufacturing center, and among the large concerns maintaining their general offices and warerooms here is the Cable-Nelson Piano Co. Their full line is on exhibition at their commodious quarters in the Republic building, and they have a most interesting proposition to make to established and reliable talking machine dealers who desire to get into the piano business and get into it right.

A concern that is rapidly coming to the front in really artistic productions in the post card line is the Drysdale Co., Inc., of this city. They publish an exquisite line of cards and pictures, reproduced by their Aquagravure process, which are remarkably beautiful. A line of hand-colored post cards of exceptional merit and remarkably low price is also featured by them. Mr. Drysdale, the head of the company, was formerly manager of the Western News Co., of this city, and is recognized as one of the post cards authorities of the country.

The Harmony Co., of this city, are offering as a side line for talking machine dealers a line of mandolins, guitars and drums that should make a good investment and build up a business of a gratifying nature to dealers. Prospective purchasers of musical instruments would look for them at the talking machine store, as that place is supposed to be, and reasonably, the musical merchandise rendezvous of the town.

The F. W. McIntosh Co., of Chicago, offer as a counter or show case line the President Ink Pencil, an instrument that they guarantee to be a perfect writing instrument, and one that satisfies its purchasers. Their line of statuettes, consisting of busts of our great Presidents and statesmen, oddities, etc., could with a little salesmanship find their way into the majority of homes.

The Kawin Co., of this city, offer to the trade everything of a desirable nature in the line of fancy plates and dishes. The plate rack that is so much in vogue at the present time should create a demand of no small size on these goods. The company also offer a unique line of post cards in which the individuality of the house is artistically displayed.

These days of progressiveness, with specialists in various lines experimenting and using the results of lifework of others in the furtherance of their object have tended to make things that at one time seemed utterly impossible a matter of ease. Some remarkable developments in all lines may be looked for in the next few years.

The Welty Fountain Pen Co., of Waterloo, Ia., are offering to talking machine dealers a line of fountain pens as a side line. They say that with a fair-sized order a handsome glass display case that will prove an ornament to a counter and a strong auxiliary in presenting the goods to the trade will be given. They state that they unite with their dealers in advancing the latter's interests and do everything in their power to assist the distributers of the Welty pens. The company had remarkable results at their booth at the Business Show in Chicago this week. William A. Welty was in charge.

A LOGICAL SIDE LINE.

Sheet Music Should Appeal to Talking Machine Purchasers—Shapiro's Strong Proposition.

Music, and all that pertains to it, is part of one great family held in the closest of ties, and the makers and sellers of musical instruments fully realize this fact.

When a dealer handling talking machines, therefore, decides to expand by taking on side lines, he naturally looks for what best fits into his already established business, and among the first things to be considered are sheet music and musical instruments of various kinds.

Through a new departure made by Shapiro, the well-known New York music publisher, whose catalogue contains a wonderful galaxy of reigning "hits," the talking machine dealer is given the opportunity of purchasing a dozen different numbers, every one a proven success, at a price that enables them to be sold for ten cents and also receiving free the Silent Salesman revolving stand, holding the twelve numbers in a most convenient and attractive manner.

The fact that the edition sells for ten cents per copy is strongly featured and makes an excellent drawing card.

While at the present time the Shapiro ten-cent edition is confined to twelve numbers, the list will be steadily enlarged until the edition will form a very complete sheet music stock. Dealers should read and digest Mr. Shapiro's announcement on another page of this issue. It is a side line well worthy of consideration.

HOW PERSONALITY COUNTS.

Not Necessarily Confined to Use of Printer's Ink—Much Depends Upon the Personnel and Tone of the Store Itself—How the Interior Arrangement of a Store Influences Trade—The Real Importance of Personnel to the Success of a Store.

Giving publicity to a store does not mean only the use of printer's ink. The newspaper, the letter, card and circular are important items in exploiting a business; no one will contend to the contrary. But many retailers seem to neglect the fundamental basis upon which the effectiveness of all these items rest—this is the personnel, the tone, the character of the store itself.

Although we ofttimes get "chesty" and are prone to loudly boast that we acknowledge no class distinction in this land of the free and the brave, whether conclusively or not, we always "kow-tow," and are duly impressed when brought face to face with wealth, fame or eminence in almost any form. Or, as George Ade cleverly puts it, "When we are at long range we throw bricks at the aristocracy and landed gentry, but when we come close to them, we tremble violently and are much pleased if they differentiate us from the furniture in the room."

With this fact in mind, it seems to me that dealers, in ignoring this bit of psychology, lose much that would be highly beneficial to them in conducting their business.

Not enough attention is given to the exterior and interior appearance of the store, the appearance of the employes and all other factors which give a harmonious dignity to the business and tend to impress its customers. Now as an impressed customer makes the selling transaction a pleasure to all concerned, not a haggling conflict, methinks I hear a chorus of enterprising dealers asking in one voice, "What shall I do to impress my customers?" Look about you, take in all the many external elements that impress you, and as far as possible apply them and thus impress others.

Beginning with a man's domestic and social life—his personal appearance—on to the exterior of the store—its interior—the appearance of its employes—the arrangement of his various stocks and other less important details, we meet the factors which make the personnel of the business—these are the things, if properly carried out, that attract the desirable class of trade, give them the necessary amount of "impression" and make them desirable buyers.

The proprietor of a business is a quasi-public personage; he is dependent upon the public for his success and must therefore cater to the public. In his domestic and social life he is more or less in the limelight, and from his attitude and manner of living, those who know and see or hear of him formulate their ideas of his store.

When a man is above criticism, respected and admired, a certain amount of reflected credit is transmitted to his business. Did you ever see or know an untidy, carelessly dressed man whose business was neat and systematic? Scrutinize the attire and establishments of some business men you may know, and see if I am not justified in this statement.

Now, the prestige given a business by its proprietor's domestic and social actions and his personal appearance, though of importance, are secondary when we consider the exterior attire of his store.

Many men consider that it is incumbent upon them to plaster every available space on the outside of their buildings with gaudy, much-beletered signs—to jam the windows full of their wares, dotted with glaring price announcements—and climax the situation by painting the front of their stores in some hideous color, in order that it may be sufficiently different from other buildings to insure public attention. This kind of publicity gains the same caliber of attention and the same degree of respect that is given a freakishly-attired man who strives for public attention and admiration by adorning himself with strikingly-checked clothes and brilliantly-hued neckwear in which we would probably find conspicuously placed a large "near-diamond."

The exterior of a store is the invitation extended to all those who pass to enter and become its patrons. According to the tone of this invitation, desirable or undesirable customers are attracted. Studying the question of the effect of a store's exterior appearance in this way should forcibly impress upon every dealer why this phase of his business needs his careful consideration. The fact that you are catering to what we call the great middle class—the wage-earner—does not alter the situation in any way; if anything, it necessitates even more attention to the character of the store, as this class of people are much more impressionable than any other.

The greatest care should be taken to differentiate between impressing and awing possible customers. Too much dignity and pretentiousness are liable to awe and frighten away your customers, instead of tempting them to buy.

The interior of a store contributes to the personnel of a business through two main sources—the arrangement of the store and the impression given by its employes.

Store arrangement is, in itself, a subject upon which many pages might be devoted; but I will only treat of it generally, to serve my present purpose. I know of no one thing that helps to give tone to a store more than wide aisles and a general, roomy, spacious appearance. You will find that buyers have a tendency to loiter a while and go around viewing the goods on display whenever there is ample room for this purpose.

Another important factor that influences the customer toward the "impression" state, is the sequence in arrangement of the merchandise.

The smaller, less expensive articles should have position near the entrance of a store; as the merchandise is larger in bulk and costlier, it should have its place in sequence. Just as we are served our dinners, beginning from the dainty appetizers on to the heavier entrees, so should the store be arranged to appeal to our "eye appetite," leading on in easy stages to a sort of a climax.

The appearance and general attitude of employes is the climaxing feature which goes to make up the personnel of a business. Even if all other conditions are favorable, a carelessly attired, indifferent employe will sometimes quickly offset all that has been accomplished.

Too much stress cannot be put upon this point—the appearance and conduct of an employe. Every effort and device that has been put forth to get public favor, to persuade the prospective customer to enter your store, has been done to gain this last result—the actual transaction of buying, for which purpose the employe is a necessary intermediary and upon his attitude the successful termination depends. Neatness in attire, a quiet courtesy, and a willingness to show goods and answer questions embrace the few requirements from an employe that add the last chapter to the tone of a business. As Mr. Williams says in The Sporting Goods Dealer:

"Your goods may be of the highest quality; your prices consistently moderate; the situation of your store may be excellent; in fact, all factors but the personnel may be highly satisfactory for a successful business, but if this most important item has been neglected—if all of your energy and effort is confined to the internal requirements of your business and none is expended upon those many external elements which stamp the character of your store—then you cannot succeed; you are laboring under a very great handicap. If you give no consideration to the personnel of your store, you are trying to win success in spite of adverse conditions which could be modified and overcome."

JAMES B. FISHER DINED.

On Saturday afternoon last James B. Fisher, manager and buyer of the post card department of the Tower Manufacturing Co., was tendered a complimentary dinner by a number of his good friends in New York, the scene of the occasion being the Venetian room of Kalil's restaurant.

The dinner did not mark any anniversary of Mr. Fisher's useful life, but he has been doing so many good things for other people for many years back that a number of his admirers concluded that "it is about time we did something for Jim," hence the dinner.

The guests included men prominent in public life and the professional and commercial world.

A LONG JUMP TO MAKE.

From within a stone's throw of the Battery to Long Acre Square is a long jump to make, but such was recently done by the Garraway Photo Art Co., which concern reproduces photographs by machinery.

Touch all the bases in the game of business and then there'll be no dispute about the pennant of success.

THE BUSINESS OUTLOOK.

Credit and Confidence Have Been Restored and Conditions Are Improving Every Day.

Renewed confidence in the financial situation continues to be demonstrated by large business firms, and in no way is it more discernible than in the demand on all sides for goods. In connection with the renewal of business activities The Tradesman quotes the following forceful editorial review:

"With the beginning of the new year, business in the United States seems to have gathered into its stride. In all lines of trade there is brisk movement; buyers are sending in large orders, and sellers are disposed to offer more liberal credit. The industrial prospect for 1909 promises richly, and no doubt the promise will be fulfilled. In an address to the Albany Chamber of Commerce, recently, Governor Hughes said: 'There are before us evidences of the most abundant prosperity. We have started the new year well, and the business men of the State have never had better reason to look forward to good fortune.'

"Governor Hughes' assurance applies to business men of all the States. In all sections of the country the signs of renewed business activity are manifest. The South is eager to open up new railroads; for the first time in her history the cotton crop of 1908 exceeded the hay crop of the entire country in value, and stood next to corn. She needs more lines of transportation, more factories, more labor to help her turn cotton into coin. In the West there are no hands idle which want work. In the East the ordering of goods for future delivery is being revived. Iron and steel mills are producing at their full capacity again, and dry goods, shoes and wooden structural work are showing well for the season.

"More significant still, perhaps, the railroads report a satisfactory traffic. The farm products of the United States were the greatest in the country's history in 1908, and the railroads are sharing in the prosperity of the farmer. But also from the great markets of the cities comes the official report of trade and industrial conditions for the week, and it says, 'credit and confidence are again established on a firmer basis at the opening of the new year than at any time during the last fifteen months. Progress is steady, and along safe and very satisfactory lines.'

"Herein lies the most optimistic fact about the industrial outlook for 1909. Credit and confidence have been restored. These are the very bases of a market's prosperity. As long as they remain firm business is good. Anything that impairs them undermines business and paralyzes industry."

SHOULD PROVE A BIG SELLER.

The New Style Peerless Automatic Piano Just Introduced by F. Engelhardt is Especially Adapted for Moving Pictures, Summer Pavilions, Amusement Arcades, Dancing Schools—In Fact Anywhere Good Music Is Desired.

F. Engelhardt & Sons, in response to many requests on the part of the trade, have brought out a new style "Peerless" automatic piano, viz.: style D-X, especially adapted for moving picture theaters, summer pavilions, amusement arcades, skating rinks, dancing schools, in fact, any place where good loud music is desired. The instrument is equipped with xylophone, genuine Turkish cymbals, bass and snare drums of the best make. The latter can be adjusted to play loud or soft, in fact, all possible effects in music from the most delicate pianissimo to fortissimo can be produced, i. e., powerful enough to fill a large hall, or adjusted as not to seem loud in a small room. Another important feature—the instrument can be played manually. Another very strong feature—the music rolls for this instrument are cut and especially arranged to give full orchestration. In other words, the xylophone playing the solo part of the composition and the piano, cymbals and drums the right accompaniment. The piano is also fitted with a new magazine slot and is sure to prove a big money-maker wherever introduced.

The driving of the instrument is by electric motor arranged inside the case and can be connected to any ordinary domestic electric light lead. The instrument is truly an artistic conception in every particular, and is sure to meet with popular demand. Although just added to the "Peerless" line, the advance orders would indicate that style D-X will be one of the "topliners" and star sellers.

Talking machine dealers will find the instrument an excellent side line, viz.: to secure orders for the installation of the instruments in places of music. The field is a large one, and as noted in the concern's announcement in this issue, they will be pleased to forward quotations and allot territory.

THE VALUE OF IDEAS.

Ideas are as essential to progress as a hub to a wheel, for they form the center around which all things revolve. Ideas begin great enterprises, and the workers of all lands do their bidding. Ideas govern the governors, rule the rulers, and manage the managers of all nations and industries. Ideas are the motive power which turn the tireless wheels of toil. Ideas raise the plowboy to president, and constitute the primal element of the success of men and nations. Ideas form the fire that lights the torch of progress, leading on the centuries. Ideas are the keys which open the storehouses of possibility. Ideas are the passports to the realms of great achievement. Ideas are the touch-buttons which connect the currents of energy with the wheels of history. Ideas determine the bounds, break the limits, move on the goal, and awaken latent capacity to successive sunrises of better days.

THE BUSINESS SHOW IN CHICAGO.

Fourth Annual Business Show Opens—Much of Interest Exhibited in the Nature of Office Fittings—Business Phonographs—A New Advertising Machine—Other Specialties That Would Make Attractive Side Lines for Talking Machine Dealers.

(Special to The Talking Machine World.)

Chicago, Ill., March 5, 1909.

The doors of the Coliseum were throw open last Saturday evening on the fourth annual business show to be held in this city. Although considerably smaller in the number of exhibitors than that of last year, there is nevertheless much on exhibition to interest both the business man and the general public. The attendance has been very fair, especially in the evenings, the latter part of this week.

The booths for the most part contain appurtenances for office equipment, such as adding, multiplying and billing machines, ledgers and other bookkeeping essentials, desks, filing cabinets, etc. The large typewriting exhibits of last year are conspicuous by their absence.

Two exhibits are of especial interest to talking machine dealers. The business phonograph, as demonstrated by the Commercial Business Phonograph Co. in their booth, which is in charge of Edwin C. Barnes, is referred to in another part of this paper.

The Oral and Motion advertising machine is described as being possessed of both talking and moving features, and is attracting much attention in the southern part of the building, where it is on exhibition. In appearance it is a tall, handsome cabinet of oak, with a circular glass front, with a talking machine horn conspicuously placed near its top. Internally it contains two separate motors. One of these controls the motion of the advertising cards, fifty in number, which move in a semi-circle within the glass front, stopping midway in their course for about 30 seconds to allow the observer to get the details of the advertisement firmly fixed in his mind. The other controls the phonographic apparatus which announces in a loud, distinct voice why so and so's card should not appear unheeded. A double exposure of the card, combined with the talk, occurs every five minutes. Elmer Fletcher, the inventor, together with General Manager Treat, have permanent quarters in this city.

Among the specialty exhibits is that of the Nye-Welty Co., sales agents for the William A. Welty Co., of Waterloo, Ia. An attractive display of the Welty pens "guaranteed" has attracted to their nicely-appointed booth a vast number of purchasers and innumerable curiosity seekers.

The Bal-Klos Mfg. Co., of this city, have an exhibit showing their various specialties, including patent dictionary book holders, the Bal-Klos non-corrosive automatic closing ink well, novel pencil sharpener, etc.

A standing question of the Perfection Razor Strap Co., located in the north end of the building, is "Do you shave?" A device for the sharpening of any style razor is displayed and seems to possess distinct merit.

The entertainment features of the business show are numerous. Band selections are heard at half-hour intervals, while a moving picture show at the extreme north end offers an opportunity for rest. In certain penmanship school exhibits, artists entertained with both pen and pencil and blackboard work, while in the shorthand section the "boy wonder" astonishes with the neatness and rapidity of his work. The show closes on Saturday and a record crowd is expected.

THE VALUE OF CREDIT.

Nothing Will Fill Its Place Unless It be Cash—Pays to Keep Credit at High Notch.

Is there anything under the sun that will fill the place of credit? I believe not. If there is, I have never met with it. Cash is the only available substitute, and even that fails in many instances. There are firms in New York that will refuse to open an account for cash with a man who has no credit; they will have no business transactions with any one who has not a current credit rating in this market. Yet those same firms will not hesitate to open an account with a man whom they find relatively well rated. I have experienced that singular thing, a wholesale firm that refused to sell goods for cash to a merchant who had no credit rating. Reference showed that he always paid cash and neither sought nor received credit. The firm in question refused to sell him; they had no assurance of his soundness, no other testimony of his disposition to play fair other than that he paid as he went, so they positively refused to do business with him. He asked no accommodation at their hands; he wanted goods and would pay on the spot, yet they positively refused to place his name upon their books in any capacity whatever. This only goes to show that "no record" is a bad record. The man who is not rated good is bad. Some men will persist in judging every man a rogue until he is proven honest. Be careful of your credit; you can have no more precious possession than a good name, nor more valuable capital than a good credit rating. The practice of having your check received by your creditor the day it is due instead of sending it on that day is a trifling thing, yet it will not go unnoticed. Trifles like this supplement your rating in dollars and cents and help to stiffen it. Make no promises you cannot keep, and whether prompt or slow be as good as your word.

MORAL FORCE IN SALESMANSHIP.

What It Means and Its Importance—Should be Developed in Order to Combat Successfully Buyers Who Use Underhand Methods to Get Low Prices—The Favorite Tricks of the Crafty Buyer and How They Can be Frustrated by a Salesman With Sufficient Moral Force.

No man has greater need of moral strength than the salesman.

Moral strength means more than the ability to resist temptation to misbehave himself. Anyone of manly caliber has that. It means more than declining invitations to "come out with the boys," more than merely keeping straight, and sticking faithfully to monotonous duties, day after day. A salesman has a severe test of his moral strength to undergo. For he is constantly under pressure from buyers who seek to convince him that he is asking extortionate prices, says Frank H. Hamilton, in the Traveling Man; that his goods are not worth as much as his valuation of them; that they can get more desirable service from his competitors, etc. So clever and insidious are the methods that buyers use to obtain an advantage, that even the most experienced and the wariest salesman is sometimes in danger of being duped by them. It takes moral strength of the highest kind to resist the wiles of the scheming buyers—and unless a salesman is strong in this respect, he will most certainly be victimized, much to his own discomfiture, and to the pecuniary loss of the house he represents.

A buyer likes to pose as a good friend of a salesman from whom he has been purchasing goods for a long time. In confidence, and purely for the salesman's "own good," he gives him a "straight tip"—to the effect that competitors are subtly undermining him—that the house which the salesman represents is losing its prestige, etc. Whatever the nature of the information, it is always preliminary to an attempt on the buyer's part to force some concession from the salesman. He wants an inside price, or a more liberal rate of discount, or privileges of some sort or other. So smooth, so suave and plausible is his argument, that the average salesman is almost certain to be deceived by it. The buyer is his "old friend"—surely his advice is disinterested! He has the art of making it seem so, at any rate.

A salesman in making his rounds will sooner or later be gulled by some crafty buyer, if he is not forewarned. And even if he is forewarned, he will very likely be caught off his guard and "bamboozled" into accepting misrepresentations, if he has not the quality of moral courage to a superlative degree.

A salesman may know that he has the "rock bottom price." What is he to say to the buyer who tells him that his competitor sells the same goods at a lower figure? What is he to do when, after he has expressed his disbelief, the buyer exhibits a bill from that competitor, which apparently bears out his statement? This often happens. The bill may have been "doctored," or, more frequently, the buyer conceals some portion of it from the salesman, letting him see everything but the date, or some conditional phrase at the bottom. Forty times out of forty-five such a piece of evidence is misleading—an out and out misrepresentation of the facts. There is one thing for the salesman to do. That is to let the buyer know very plainly that he is

selling his own goods, and not the competitor's, that he is not governed by his competitor's prices or actions. He will lose nothing by hanging doggedly to the terms which his house has authorized him to make. It takes moral courage to do it, however.

The sales manager of one of the largest packing houses in Chicago told the writer of one common scheme by which buyers attempt to force the packer's salesmen to sell below the market price.

"The buyer keeps a wary eye on the market," he said, "and when a salesman representing Blank & Co. puts in an appearance, the buyer is ready for him. He knows, without having asked the salesman, which particular products Blank & Co. are selling at a lower price than any of their competitors.

"He will begin enumerating the items which are to comprise his order—and among them will be four or five products which he could not have bought from any other house at so low a figure. He gets a good bargain, too, on the various other items. The other is beginning to look fairly large. At this point the buyer asks the price of another product which he knows Blank & Co. are selling at the lowest market price. The salesman will quote it at 12½ cents, perhaps. At this, the buyer pretends to be scandalized. He claims that the market price is 12 cents, and that Blank & Co.'s competitor has offered it to him for that. An argument follows. The salesman believed he had the lowest quotation, at the start, but the buyer's positive assurance to the contrary rather weakens his faith in the instructions he has been given. Perhaps, after all, he thinks, the house did not furnish him with the "bottom" price—or he has mistaken the price which the house did authorize. Still he persists in demanding 12½ cents, until the buyer says:

"'You can make that last item 12 cents, or cancel the entire order. I will buy nothing from you if you propose to hold me up for half a cent on one of the items.'

"This is pure bluff. But frequently it is effective. The loss of the whole order looks so big to the salesman that he 'gives in,' and enters the disputed item at 12 cents. The buyer is happy, for by this ruse he has succeeded in buying all but one of the items at the lowest market price, and that one he has bought below the market. He would not have canceled his order—because it consists of just those items which Blank & Co. are selling at the lowest price, and would cost him more if he purchased them from anyone else. The salesman would have been entirely on the safe side if he had 'hung out' for his extra half cent on the item under dispute."

As soon as buyers learn that a salesman can be made to yield to pressure, it becomes almost impossible for him to get orders without sacrifice. The pressure will be brought to bear from all quarters and in a great variety of ways. One will affect indifference—he will say he doesn't care whether he places the order or not. He "leaves it to the salesman" whether the order which is ready for the signature shall find its way to the waste paper basket or to the factory—only, if it goes to the factory, there must be a slight change in the dating or the rate of discount. Another will have some fictitious fault to find with the last shipment he had from the house. Another holds forth on what the salesman's competitors will do for him. Innumerable other devices are in everyday use by unscrupulous buyers. And they are all so plausible that even the salesman who is on the lookout for some such snare is likely to swerve from suspicion to credulity and become the victim of a "hold-up" game. When such pressure is being brought to bear from all sides, only the salesman of superior moral strength can come through the ordeal with undiminished respect for himself as a business man.

Moral strength means strength of purpose. It is a salesman's purpose to sell the goods at the price which his house chooses to ask. He must stick to that. He must keep his faith in the goods and in the house, no matter what startling revelations buyers may make out of "disinterested friendship" for him. The quality of that friendship is dubious when it is used as a pretext for extortion.

It is seldom wise to contradict a buyer—and to give him the lie direct would make an enemy of him and spoil all prospect of future sales, so far as he is concerned. The best way is for a salesman to be deaf and oblivious to all hints and insinuations, such as are calculated to disturb his confidence in his house or his proposition. The salesman can show by his manner that he knows what the buyer is attempting to do. He should resolutely decline to be drawn into argument concerning any matter that is not directly related to the question of the sale which he came to make. If he is firm, and positively inflexible in his loyal attitude—if he shows that he knows his business and is not to be made a fool of—he will always find himself master of the situation.

A PROFITABLE SIDE LINE.

A line that is easily handled, is a popular seller and profitable withal, should appeal to every progressive talking machine dealer. Such is the Hohner harmonica, which stands at the head of goods of this kind. In fact, for fifty years the name Hohner on harmonicas has conveyed the symbol of superiority, and so to-day this world-known firm can confidently claim that every instrument manufactured by them is as perfect as human knowledge and skill can produce. The particulars of this commendable side line appears on this page, and the offer therein made is entitled to early consideration by the live jobber, who should be prepared to supply the dealers. The Hohner factory in Germany is the largest in the world. Prices and information promptly supplied by M. Hohner, 475 Broadway, New York, or from their Canadian and Mexican branches. Harmonicas are a quick-selling and standard line.

HAVE YOU EVER CONSIDERED
THE EXCELLENT OPPORTUNITY AFFORDED IN HANDLING THE
HOHNER REED INSTRUMENTS?

FOR fifty consecutive years the name Hohner on Harmonicas has conveyed the symbol of superiority, and so to-day, we can honestly claim, as all others concede, that every instrument manufactured by us is as perfect as human knowledge and skill permits.

HERE AND THERE IN THE TRADE

Some very novel ideas in post cards are now in evidence for the Easter trade. There is not only a larger variety this season, but more skill and originality is displayed in the conception of these very welcome and now almost necessary seasonable publications. Many of them are printed in colors and are really works of art. The development of the post card business has assumed tremendous proportions, and while we have not yet equalled England or Germany in certain lines in the matter of output, yet we are fast approaching these countries in the artistic quality of our creations. It is now recognized that the high-class cards are mostly all of great educational value, and all fair-minded people are rapidly estimating them at their true worth. Even in the cheaper grade a higher standard is evident.

Have you the agency for one of the numerous family of "gods" that have sprung up within recent months, including the gods of happiness and luck, the god of things as they ought to be and the god of grouch, and other "just gods" too numerous to mention? If not, it is well to get in line and cater to the public's mood while it is at its height—that's what gets the money.

This is the day of the safety razor, and no man should cut himself with the old style for fear of not being satisfied with the twentieth century article, for over a score of safety razors in a variety of forms are now on the market, ranging from the Gillette at $5 to those made to sell for a dime. Dealers who handle safety razors are well off in several particulars. Owing to strong competition, each line is extensively and persistently advertised, prices are fixed, and the exchange of new blades for used ones opens the way for a permanent income from each sale.

In connection with safety razors, there are numerous sundries for the gentleman's toilet that can be conveniently handled, shaving mirrors, brushes and soaps being among them. It doesn't pay to get the meat and let the gravy pass unnoticed—there's nourishment in that, too.

Are you in a position to profit by the desire of certain of your neighbors to fly along the roads these crisp days on a motorcycle? There will be a heavier demand for such machines in the late spring and summer, and if you are not prepared the other fellow's going to get the money. Motorcycles have been brought to a high state of perfection, are easy to handle, sell for reasonable and attractive prices and offer good profits.

Next month the big leagues begin playing ball, and the enthusiasm of the smaller leagues, the independent clubs, the "fan" and the small boy will then be at its height. A first-class line of baseball goods will make the dealer's store a point of attraction, and the interest pays, for no matter how young or financially weak the baseball enthusiast, nothing but the best will do. League ball is a magic word, and who would attempt to settle a close score in the ninth inning with a bat that couldn't be depended upon? Then, too, there are gloves, masks, chest protectors, base bags, bat bags and a score of other necessities to be considered.

Every once and a while up crops the story of the customer neglected because he looked seedy, but who had a roll of bills in his boot. Then the clerks take to spurting to greet every seedy man entering the store, only to find out that they are panhandlers. 'Tis a cruel world.

The disciples of the great Isaak Walton will soon be swarming in river, stream and sea, and it is wonderful how necessary a new outfit of rods, lines, hooks, flies, etc., are deemed by those who go after honors. The success of the red-headed and scantily clothed farmer's boy with his crooked stick and bent pin is legendary, but a true sportsman wants something he can depend upon, and the dealer who offers the best will get the trade. Are you the man?

Mr. Talking Machine Dealer, have you ever stopped to consider how well typewriters would fit in your line, especially if you handled commercial machines and records? When a man is sufficiently interested in turning out his correspondence with neatness and despatch to consider the purchase of a commercial talking machine for the purpose, he is certainly in a humor to discuss means of improving the last half of the operation, the typewriting—and there's your chance.

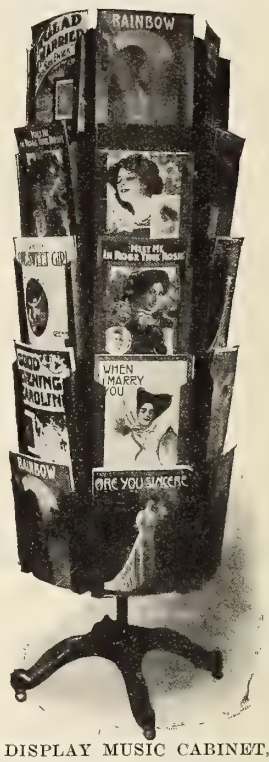
Booze and Business begin with the same letter, and there the harmony ends, they don't mix at all. It's the sober man who gets the best of the horse trade.

CONVENIENT NEW FIXTURES

For Displaying Sheet Music, Magazines, Tablets and Post Cards.

Every retailer realizes the fact that goods of any nature must be displayed to be sold, and the question of how to display them to get the most effective results is one that perplexes every window trimmer and dealer that endeavors to have something a little better and more original than his competitor. The Gier & Dail Mfg. Co., of Lansing, Mich., realizing this need of the retailer, have made a thorough study of his conditions and have put on the market a line of entirely new fixtures that solve two great problems—save space and give a more effective and attractive display.

The cut here shown is one of their revolving cabinets for displaying sheet music. This shows 30 sheets of music on only 25 inches floor space, each pocket holds 25 or 30 sheets. The music is held perfectly, showing the whole cover and making a very attractive appearance. They build three sizes of the revolving cabinets for this line and flat racks of any size desired.



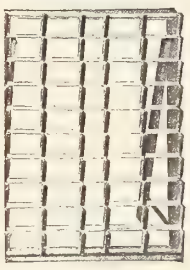
DAIL'S DISPLAY MUSIC CABINET, No. 71.

Their steel pockets are very practical for tacking on side walls and make an inexpensive but attractive way of showing music. These pockets of which a cut is shown are formed from one continuous piece of steel and are very strong

Patent Pending.
Patent Pressed Steel Pocket used on DAIL'S Cabinets and for filling up wall space.

and durable. They also build several sizes and styles of cabinets for displaying magazines, dime novels and are the manufacturers of "Dail's sectional post card cabinets," of which they have sold over 5,000 in less than eight months.

"ROCHESTER"



WE MAKE 17 STYLES OF POST CARD DISPLAY RACKS

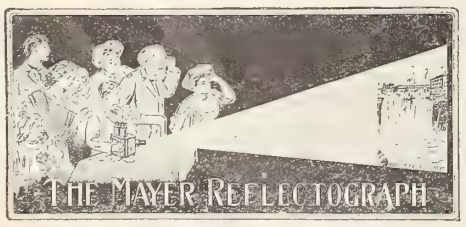
"SENECA"

from the small single units to the large 7-ft. Floor Stands. Increase your sales by properly displaying your postal cards.

Our "Rochester" easel rack displays 50 cards and holds 4,000 cards. The Seneca Revolving rack displays 48 views and holds 1,500 cards.

PRICES AND CIRCULARS SENT ON APPLICATION

BE up-to-date and add the latest home entertainer to your line. The **MAYER REFLECTOGRAPH** reproduces Post Cards, Song Slides, Views and photos on a screen or canvas, in all their natural colors, six feet square.



Price, with either Electric, Gas or Acetylene Fittings, $5.00 each.

Liberal Discount to Jobbers

CHARLES W. MAYER
10-12 Furnace St., ROCHESTER, NEW YORK

These ideas should interest every dealer of these lines, for they can be put to such varied uses that they are adaptable to nearly every store. The Gier & Dail Co. assert their willingness to send, free, cuts and descriptions of their various ideas to any retailer who will send their address to their main office at Lansing, Mich.

AN EXTENSIVE CAMERA PLANT

That of the Seneca Camera Manufacturing Co., Rochester, N. Y.—Success of This Concern —Value of Cameras as a Side Line.

We present herewith a view of the extensive plant of the Seneca Camera Mfg. Co., on South Clinton street, Rochester, N. Y., and large though the factory is, the business of the company is

expanding so rapidly that additional quarters will soon be required to properly meet the demand.

The Seneca Camera Mfg. Co. is an independent concern and have built up an enviable reputation for their products, their line including cameras and supplies to meet every demand of the amateur and the professional photographer.

A number of talking machine dealers have already taken on the Seneca line and have found that, owing to its excellent reputation and liberal advertising, the line is one that sells with a minimum amount of effort. Then, too, the profit is liberal and the demand for supplies makes every camera sale a basis for a continuous business.

THE SPORTSMAN'S SHOW

Held in Madison Square Garden Recently—What's What in Sporting Goods for 1909—Public Displays Great Interest in Exhibition.

The Sportsman's Show, held in Madison Square Garden recently, gave the sportsmen of the East an excellent opportunity to see the latest productions for making life enjoyable on trail, or stream, or, in fact, in any part of the great outdoors. Practically all the leading sporting goods manufacturers had their products on exhibition, and the new things shown were many and varied.

Gunning, fishing, camping and boating outfits were shown and the interest of the public in the various lines was intense, as was evidenced by the crowds in attendance. The show has fully demonstrated that the ranks of the sportsmen are not filled from the wealthier classes, but the greater number come from the masses. Dealers visiting the show had an excellent opportunity to see what's what in sporting goods and gage their orders accordingly.

An Auxetophone furnished by the New York Talking Machine Co. did excellent service in the booth of the Asbury Park Publicity Bureau. The Auxetophone rendered numerous selections as played by Arthur Pryor's band, a leading summer attraction at Asbury Park.

NOTHING GAINED WITHOUT EFFORT.

This Is as True in the Talking Machine Trade as Anywhere Else—How Side Lines Can be Made Profitable to the Enterprising Dealer.

Not since our great ancestor, Adam, bit into the forbidden fruit and was ousted from the Garden of Eden has anything been gained by human beings without effort. And centuries of study and invention have not lightened man's burden, simply providing means for accomplishing more with the same amount of energy. Yet in this enlightened twentieth century there are actually merchants who believe that goods should sell almost automatically, that between the direct effort of the manufacturers and general advertising the dealer should have nothing to do but collect the profits and rest at ease, or rest, anyhow, while waiting for profits, instead of chasing the elusive game.

The average business man, however, fortunately realizes the fact that nothing can be achieved without effort and success comes only to him who hustles energetically.

Take, for instance, those talking machine dealers who have taken up the question of side lines, and have installed a line foreign to talking machine goods. In the majority of cases such lines were added as only occupied space not required by the regular line, and the dealers have simply made use of time and energy formerly wasted. When there is a lull in talking machine sales the salesmen can devote their attention to interesting prospects in other lines, while still keeping the weather eye peeled for talking machine and record buyers. With no idle time to pay for the profits of the business will show a corresponding increase.

It is simply the case of taking advantage of opportunities, it being readily realized that if one line will catch a certain number of customers, two or three lines will capture more, provided that they may be and are properly handled.

It must be considered, however, that no matter how well known or popular a side line is it will not sell itself without effort. There are several prominent brands of safety razors, but the devotee of the old style "colored man's companion" must be shown wherein a safety razor at a higher price than the old style is a most desirable article to possess. Motorcycles may be of a popular make and attractive in appearance, but the purchaser must be convinced that their speed and general durability are fitted to his needs. In short, wherever there is competition, salesmanship is required to a greater or lesser degree.

The remarkable recovery of the talking machine trade after the depression has placed dealers in an excellent position to take on side lines. Larger profits mean more capital to invest, while the increased number of machine and record purchasers visiting the stores offer an excellent field for introducing new lines directly.

With a prospect actually inside the store, the sale is half made, and attention may be attracted to the side lines in a subtle manner without danger of offending and thereby losing a permanent customer.

It will pay the dealer to consider the needs of his trade and cater to those needs even in other lines than talking machines. As one eminent statesman remarked, opportunity knocks once at every man's door, and after that the man knocks opportunity.

There are still many inaccuracies in advertisements. There is still much exaggeration. The frequent use of superlatives is a matter of habit, and it will take some time to get out of it. Each of a half-dozen shops in one town claim to be "the best and cheapest." This is preposterous on the face of it.

It's hard to convince salesmen that "going in mourning" means black raiment, and not black fingernails.

SAFETY RAZOR HERE TO STAY.

Comforts and Savings in Its Use Have Made It Popular.

Thousands of people are now using safety razors who could not be induced to do so a short time ago. When a man shaves himself he uses his own razor, brush, soap, towels, etc., guarantees against skin diseases. As a time saver the safety razor deserves a place in the halls of fame.

As a money saver the facts are: It will cost a man about $15 a year if he shaves twice a week in a barber shop. The loss of time must be figured in the equivalent of money. The one proposition to put before the men of this and other countries is that the cheap safety razor is within the reach of every man and will give the same results as to practical use as the higher priced ones. This is not an appeal to the public to use cheap articles solely, says the New York Sun, but when the article under consideration will give the same service as the higher priced one then the article with the low price but high merit should be selected.

COLONIAL TRADE OF THE UNITED STATES.

Our trade with our dependencies—the Philippines, Hawaii, Porto Rico and Alaska—will approximate no less than $170,000,000 this calendar year, judging by the ten months record of the bureau of statistics, of the Department of Commerce and Labor. The increase during the past ten years has been $110,000,000, or nearly 200 per cent. In the same period our trade with foreign countries has increased about 60 per cent., or less than one-third the percentage of increase in the trade with our dependencies.

Curiously, one of the smallest of these dependencies of ours, both as to population and area, furnishes us the largest amount of trade, namely, Hawaii, as follows:

	Total trade with U. S. 1908.
Hawaii	$65,000,000
Porto Rico	45,000,000
Alaska	40,000,000
Philippines	20,000,000
Total trade	$170,000,000

By imports at American ports and exports therefrom, the round figures are (ten months ended October):

	Imports from	Exports to
Hawaii	$40,500,000	$13,000,000
Porto Rico	23,000,000	18,000,000
Alaska	10,500,000	14,000,000
Philippines	8,000,000	8,500,000
Totals	$82,000,000	$53,500,000

Except in the case of the Philippines, each territory shows, in the ten months, an increase in the total value of its products sent us, while the value of the goods sent to the territories by us shows a slight decrease in each case, due mainly to lower prices of many of the articles exported, especially manufactures.

Porto Rico sends us chiefly sugar, tobacco and fruits; we send Porto Rico chiefly rice, meats, breadstuffs, cotton goods and manufactures of iron and steel.

Hawaii sends us chiefly sugar, in return for breadstuffs, meats, iron and steel goods, cotton cloth, mineral oils, tobacco manufactures and wood manufactures.

In exchange for the large quantity of hemp and small quantity of sugar which we get from the Philippines, we send to those islands chiefly iron and steel manufactures, breadstuffs and mineral oils.

Alaska sends us principally salmon, copper, furs and gold to help pay for our cotton manufactures, woolen goods, iron and steel manufactures, mineral oils, breadstuffs, meats, tobacco manufactures and wines, liquors and spirits.

From $60,000,000 to $200,000,000 in only ten years is but the beginning of the trade we shall eventually have with these valuable dependencies of ours.

REGINA WITH R. WURLITZER CO.

The Rudolph Wurlitzer Co., of Cincinnati, in announcing to the trade that they have been appointed wholesale distributers for Regina music boxes and Reginaphones by the Regina Co., of Rahway, N. J., state: "Apart from the fact that the Regina music box is an old-established proposition and a fine seller everywhere, it is not necessary to put in a large stock to qualify as a dealer.

"It is an easy matter to build up a business gradually from a very conservative start. Customary talking machine discounts are allowed dealers.

"Our observation recently is that the majority of talking machine dealers are eager for a profitable side line or two to boost receipts. We have had many requests for advice on the best line to take on.

"In our judgment the Regina is the 'one best bet.'"

The Regina line is certainly growing in favor.

Dail's Display Music Cabinets

SHEET music must be displayed to be sold, that is why the publisher makes the cover attractive. We build three sizes of revolving cabinets similar to cut herewith. Flat racks to fit any space in your store. We can furnish our steel pockets to cover your wall. They make a cheap and effective display. We build cabinets for magazines, post cards, dime novels and newspapers. We have ideas that will interest you. It only takes a postal to find out. They may be worth dollars.

PIRATED PLEASANTRIES.

At a performance of "Aida" the other night, Caruso, as usual, soared into the highest altitudes of song with such consummate ease and thrilling power that he brought down the house—with the exception of one critical young woman in the family circle.

"Lou," she observed to her companion, "ain't it funny that Caroozer don't seem to gripe your noives the way he does on the record? Queer, ain't it?"

During a certain battle the colonel of an Irish regiment noticed that one of the men was extremely devoted to him, and followed him everywhere. At length he remarked:

"Well, my man, you have stuck to me well to-day."

"Yes, sorr," replied Pat. "Shure it was my mother said to me, says she, 'Just you stick to the colonel, Patrick, me bhoy, and you'll be all roight. Them colonels never get hurted."—Philadelphia Inquirer.

"Lottie," asked Will, "what is that piece of music the orchestra is playing?"

"It's the overture to 'William—Tell!'" she answered, looking at him out of the corner of her eye.

In a tremulous yet ardent whisper William thereupon told her what she had been waiting so long to hear.—Chicago Tribune.

Bank Clerk (scrutinizing check)—Madam, we can't pay this unless you bring some one to identify you.

Old Lady (tartly)—I should like to know why?

Bank Clerk—Because we don't know you.

Old Lady—Now, don't be silly! I don't know you, either.

"Meaning is a thing utterly disregarded by my colored maid when she talks," said a Harlem housewife; "all she goes by is a sense of sound fullness. She was going to a ball the other night and I told her to be sure to get home early if she wanted to keep her place.

"'Well,' she answered, 'you'll have to corrugate me, ma'am, if I am, but I ain't likely to be sebasetuous'—whatever that might mean.

"I asked her next morning if the ball had been a success, and she replied:

"'I suppose so, ma'am, so far as I can certificate; but I can't say for sure, 'cause I retreated just as the fun was gettin' to the top of its apogee.'"

When Barry Sullivan, the Irish tragedian, was playing "Richard III.," one night and the actor came to the lines, "A horse, a horse! My kingdom for a horse!" some merry wag in the pit called out:

"And wouldn't a jackass do as well for you?"

"Sure," answered Sullivan, turning like a flash at the sound of the voice. "Come around to the stage door at once!"

Stella (at the piano)—Now that you have heard me sing, what would you advise me to do with my voice?

Mabel—I wouldn't do anything with it just now. Wait till the man comes around and have it tuned.

Just before Christmas a piano-maker visited a Glasgow dealer, whom he attempted to bribe with a box of cigars, says Music, of London.

"Na, na," said the dealer, shaking his head gravely; "I canna tak' 'em. I dinna dae bus'ness that way."

"Nonsense!" said the piano man; "but if you have any conscientious scruples, you may pay me a shilling for the box."

"Weel, weel," said the honest Scot, "I'll tak' twa boxes."

A man may be blind to his own faults, and be gifted with second sight where the faults of others are concerned.

THE THEATERS OF THE PEOPLE.

The Growth of the One, Five and Ten-Cent Shows in New York Really Phenomenal—How These Can be Controlled and Become a Helpful and Educating Influence—The Effect of These Cheap Amusements on the Regular Theaters Is Being Felt to a Very Large Degree.

An entertaining article appeared recently in the Evening Post from the pen of John D. Barry, bearing upon the tremendous growth of the one, five and ten-cent shows in New York City, which subject, by the way, was treated of at some length in this section last month.

Referring to the campaign carried on by the city authorities for the betterment of these public show places Mr. Barry says:

"The quality of the moving pictures exhibited in New York City has, during the past few weeks, greatly improved. Many of the films are not only eminently proper, but highly educational as well. The frequenters of the cheap theaters are having, for example, a course in plays by Shakespeare, represented through scenes for which actors have posed. The vaudeville performers, too, appearing chiefly in the ten-cent shows, have been forced to be more careful about what they say and sing and about the way they conduct themselves. The combinations, recently formed by the more successful of the managers and controlling small circuits of theaters, are doing everything they can to assuage public sentiment and to hold their following. They carefully supervise the films and strive to make a change of bill each day. Already, a few of the theaters are admirably conducted in every particular. They might be taken as models of what the theaters should be. They have windows on two sides, and they are kept both clean and light. They have proved that, for the proper display of pictures, it is not necessary that the auditorium be kept absolutely dark. What the pictures chiefly require is that light shall be properly focused on them. Here, by the way, is a solution of a problem that has bothered the clergymen, who maintain that the dark auditoriums are a menace to public morality. There is no doubt that they have encouraged a great deal of ill behavior.

"What is most needed in the five and ten-cent shows is systematic and thorough regulation. At present the regulation is chaotic, insufficient, and unfair both to managers and public. When a theater applies for a license, its qualifications should be quickly and carefully followed by each of the departments established to protect public safety. If the qualifications are satisfactory, the application should go in regular course to the license board. At present, any application may be held up by an unscrupulous agent with an itching palm.

Of a far lower grade than the five and ten-cent shows are the one-cent theaters—the penny arcades. But in recent years they seem to have lost much of their hold on the public. In some places, however, they thrive. In the very openness of the other shows there is an element of wholesomeness. It is far better for people to laugh together over a bit of vulgarity than for one person to enjoy it alone with more or less secrecy. The intimation of secrecy in the one-cent theaters contributes to what is left of their popularity. They rely almost wholly on the slot-machine, which, in the comparatively few years since its invention, has created many a millionaire. It is, of course, chiefly by means of small sums made out of the needs of people, including the fundamental need of diversion, that fortunes are originally accumulated. Like the five and ten-cent shows, the one-cent theaters make an effective appeal by means of cheap decoration and floods of electric light. Amusement-seekers casually drift in. The entertainment offered seems extraordinarily cheap. But the average amusement-seeker either has very little money in his pocket or possesses exceptional strength of character if he goes away without spending many times one cent. Not only are there popular songs that he may hear by dropping a penny in the slot and by holding the rubber transmitter to his ears, but there are small pictures, controlled by the turning of a crank, each series telling a diverting story by the most effective of all appeals, the appeal to the eye. The words of the songs are usually harmless; at worst, they are coarse or vulgar. Occasionally, the pictures have a reasonable interest and are perfectly correct. Often, however, they are filled with suggestions of impropriety. In each of these cases they are advertised by means of pictures which are frankly suggestive. The best to be said of the one-cent theaters is that they are physically wholesome, being practically conducted in the open air.

"What has been the effect in New York on the regular theaters of this widespread cheap amusement? Thus far it has tended to injure them. It has been especially harmful to those of the lower class theaters, where melodrama is generally provided. It has also injured the theaters on the East Side where fine performances of high-plays in foreign languages used to be regularly given. Jacob Adler, for example, who formerly played most of the year in New York, now spends a large part of his time on the road. On the other hand, the cheap theaters have helped to develop the habit of theater-going and in many cases they have implanted the desire for public amusement in people who did not have the theater-going habit. In this country the attitude toward public amusement of many thousands of people is changing. The younger generation of families that held the theater in abhorrence are breaking away from the old traditions and are flocking to the amusement centers. Often by way of the cheap theaters they acquire a taste for performances of a higher class.

"Many of the social workers in New York believe that cheap amusements should not merely be controlled, but should be wholesomely and systematically developed. In the growth they see great possibilities of popular education. Some of them also think they detect in it an opportunity to realize the long-hoped-for theater of the people. The People's Institute has been seriously considering a plan for starting a cheap theater of its own. A public spirited citizen of wealth has already been found to put up the money. It looks now as if the plan would really be carried out. The object will be two-fold; to show, by running a theater that shall be a model of cleanliness and good ventilation, with really fine moving pictures, that the public can appreciate properly managed entertainment of the higher class, and to turn competition in the direction of improvement."

TAKES ON PIANOS.

Perry B. Whitsit Co. Add Pianos and Players to Their Present Line.

(Special to The Talking Machine World.)

Columbus, O., March 8, 1909.

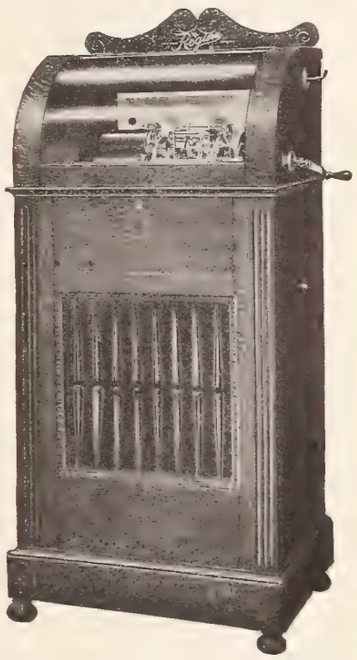
The Perry B. Whitsit Co. have added pianos to their line and have arranged special salesrooms in the city. Separate soundproof booths for the display and demonstration of player pianos are among the innovations. Mr. Whitsit is one of the far-seeing talking machine men who believes in the great future for piano players. The concern carries a full line of Winter & Co.'s pianos and Master player-pianos, also that of the Rudolf pianos and player-pianos.

No statement should be made to a buyer which is not essentially true, and exaggeration is only justifiable as a means of compelling a recognition of the truth in its entirety—like making muslin garments for children, a little large, in the first place, so that when washed they will shrink to a fit.

No matter what you are advertising write the ad. with the women in mind. Ninety-nine times in a hundred the woman controls the household spending. She is the power behind the pocketbook.—Printer's Ink.

Worth Your Consideration

If you desire to handle a money maker—an instrument that will draw trade and enhance your reputation—you should at once get into close communication with us and investigate our new Regina-Hexaphone. There is big money in this agency for live dealers and there is no instrument that will produce better results.



The New Regina-Hexaphone.

The Regina-Hexaphone is artistically designed, has a slot attachment, and, as you will note from the illustration, the unsightly horn is done away with, being concealed within the cabinet.

It requires less room than many of the coin operating machines, but is just as big an earner, and has been built to withstand the hardest kind of use. It makes money while you sleep and brings to your store a class of customers that will help your business.

The New Regina-Hexaphone is a new talking machine holding six different cylinder records. After inserting coin any one of the six records can be selected and played.

It takes standard talking machine cylinder records, which are very inexpensive, easily procured, and offers an endless assortment of all kinds of music. These records can be easily taken out and changed by the operator.

The Regina-Hexaphone is simple, substantial and compact, has an excellent tone and is a big attraction and a winner.

The Regina-Hexaphone is a very popular instrument with slot machine operators; it pays well, is easily handled, weighs but little and a large number can be operated at a very small expense.

The Regina-Hexaphone requires but little manipulation—is always ready—can be played anywhere—will play an unlimited number of airs.

THE REGINA CO.

THE POWER OF SUGGESTION.

A Great Asset in the Make-Up of the Successful Traveling Man—Fred Kaessmann Says That Suggestion Is Certainly an Order Winner of the Greatest Power and a Generally Good Servant at Any Time or at Any Place.

Confucius said, "When you know a thing to hold that you know it, and when you do not know a thing to allow that you do not know it, this is knowledge." Just so, yet, weighed by this standard, many of us tip the scale at a pretty low figure. Take Mr. Salesman, who scoffs at the power of suggestion—there are a goodly number of him—what can you say in defense of his scepticism? Or he? Nothing! For suggestion, says Fred Kaessmann in the Traveling Man, rightly employed, at the right time, is certainly an order-winner of the greatest power and a general good servant at any time or at any place.

To get down to the concrete: Some time ago I left the office of a rather crusty individual accompanied by him. When we arrived at the railroad station, several hundred yards distant, he said:

"Did you close the door after you?"

The question surprised me, but I answered, "Yes." Nevertheless, after he had left doubt assailed me, so I walked down to see if I had really closed it—and as a consequence missed my train. So much for a suggestion in this form.

Not much later, again having occasion to call at the office of the gentleman mentioned in the foregoing paragraph, I found him walking across the floor with a paper in his hand. As I entered, he was saying to a clerk:

"I guess that's all right."

With fond recollections of the train I had missed, also with a keen desire to see how suggestion would affect him, I said, with a smile:

"Are you sure?"

It was his turn to be surprised, but even as he answered, "Yes," yet he had not reckoned on the power of suggestion. A moment later he again walked across the office, nervously fingered the paper in question, then walked back again. This performance he repeated several times, and it was plain to be seen that his mind was in a quandary. Three minutes later he reopened the matter with the clerk—"just to make sure." So much for another simple little suggestion in question form.

Several years ago a mailing card reached my desk bearing the catch-line, "The Power of Suggestion." The paragraph immediately following read: "After the manner of the signs near railroad crossings, I ask you to 'Stop—Look—Listen.' I require your undivided attention. I cannot permit you to forget my name. Once again I command you to repeat—aloud—etc." Further on we find, "By telling you again and again to recollect, you will be able to recall my name, address and profession when the proper occasion arrives. Now—Attention—Once More—all together."

The mailer of this card was pleased to call it a psychological experiment. I call it something else. Children may allow themselves to be experimented upon, knowing that such an experiment is being made, but business men never. They may be amused, or the antagonism inherent in many may come to surface. In either event, it is fatal to effective suggestion. Suggestions, to be of use, must be made or given in such a way as to remain unrecognized as suggestions. They must pass without label as part of the regular selling talk.

At the time the mailing card of which I have just made mention came to hand I was editor of an advertising journal. Wishing to verify my conclusions as already mentioned, I experimented along the lines of the mailing card and must report a complete failure. Perhaps you will find this statement of actual results more interesting than any mere say-so. Perhaps you will also be interested to know that the advertiser in question has returned to the "safe and sane."

Let us now consider the "how" of suggestion. What is it? How given? When? To answer these questions would require volumes. Some useful hints will, however, be found in the following lines: First of all, in the use of suggestion, it is a case of the rapier, not the club, the velvet glove, not the bludgeon. Like every thing else, it requires practice and keen discrimination to become perfect—and adept in its use. But this perfection can be acquired, and when acquired becomes a powerful weapon.

One thing must be borne in mind: a suggestion given to a person whose confidence you have won will be worth a great many times as much as one given to a person whose confidence has not yet been won. Therefore, win a person's confidence before trying to give him a direct suggestion. Some experts on suggestion say this is unnecessary, but my own experience is that no form of suggestion will prove effective to an appreciable extent until such time as the prospect begins to place confidence in the suggester.

For instance, a salesman friend of mine can step into every paint store on his route and say, "Better buy lead to-day," and all will buy. These dealers trust this salesman both as to honesty and judgment. This is a suggestion in a form so common that many salesmen scoff. They say, "That's nothing but plain English." Plain English it is, with nothing mysterious about it—but—can you do it?

The next class of direct suggestion includes all suggestions made by salesmen not yet personally known to the prospect, or at best not very well. Suggestions, under such circumstances, to be effective, must be well supported by personality. That is, by a clean mind in a clean body. In other words, the salesman must have a personality that will quickly win the confidence of the prospect—otherwise his suggestion will be about as effective as seed cast upon frozen ground; some may sprout, but not while the salesman is around to take orders.

The third class of suggestions is best used in the form of questions—questions tending toward raising doubt or fear in the prospect that he may lose a good thing, or subject himself to loss if he does not purchase. Opportunity should always be given to allow such suggestions to sink in. A pause and a questioning look will, in themselves, act as strong suggestions in support—and will do much to help carry the point.

A Persian proverb reads, "One pound of learning requires ten pounds of common sense to apply it." Therefore, gently feel your way until you know how. Remember—the rapier—not the club.

MR. DEALER!

When you add musical instruments to your stock you use excellent judgment as no line fits in more appropriately with talking machines.

NOW

let us give you a little pointer that many dealers have learned in the hard school of experience,

THAT IS

HARMONY INSTRUMENTS

are the quality goods and consequently the line that holds the trade.

MANDOLINS, GUITARS, DRUMS

And all styles Wood Violin Cases. **Send for Catalogue.**

THE HARMONY COMPANY, 947 N. Lawndale Avenue, CHICAGO

BUSINESS.

It is the pulse of Progress, and its beat
Records the nation's movement down the years.
It is the bearer of our hopes and fears,
And, to its steady rhythm, countless feet
Keep step forever. It is music sweet
To them that love it. To the pioneers
It is a beacon. Singers and the seers
Find inspiration in its busy street.
It throbs—and laden ships unfold their wings,
To rest their pinions, in a foreign clime.
It throbs—and 'round the earth the lightning springs
To link a world in brotherhood sublime.
It is the thing that moves all moving things,
The mighty force that keeps in time with Time.
—System.

NEVER TOO LATE TO LEARN.

Cato, at eighty years of age, began to study the Greek language.

Socrates, at an extreme old age, learned to play on musical instruments.

Plutarch, when between seventy and eighty years of age began to learn Latin.

Rameau was beyond fifty when he wrote his first opera, and made a great success.

Dr. Johnson applied himself to the Dutch language but a few years before his death.

Ludovico Mondalesco, at the great age of one hundred and fifteen, wrote the Memoirs of his own times.

Ogilby, the translator of Homer and Virgil, was unacquainted with Greek or Latin until he was past fifty.

Benjamin Franklin did not begin his philosophical studies until he was fifty.

Dryden, in his sixty-eighth year, commenced the translation of Æneid, his most pleasing production.

Clearly there is no limit to the age when a man may achieve success in business or in letters.

We may live without poetry, music and art; we may live without conscience and live without heart; we may live without friends, we may live without fads; but business to-day cannot live without ads.

A genius is a man who would rather acquire fame than make a living.

J. C. PHELPS ON ADVERTISING.

Special Forms of Publicity—Advertising the Lubricant of the Wheels of Business and Necessary to the Success of Every Firm—How to Prepare Copy That Will Pull.

At the recent meeting of the Advertising League of Dallas, Tex., held at the Oriental Hotel, J. C. Phelps, manager of the Jesse French Piano & Organ Co., one of the great retail music trade institutions of the South, with branches in half a dozen cities, was the principal speaker. As his remarks on advertising are the well thought out ideas of a practical man, and not of a theorist, we take pleasure in reproducing them in these columns for the benefit of our readers. Mr. Phelps' address was as follows:

"Under the head of special advertising may be embraced any special article of merchandise or commodity, such as typewriters, phonographs, shoes, pianos, insurance, etc. In this, as in other lines, the same general principles prevail—sincerity and consistency being among the first requirements, if permanent success is to be achieved.

"To give more than a brief outline of any system of advertising in the short time allotted on these occasions would be neither possible nor desirable. We meet here for an interchange of ideas, where mutual benefit may result, and if anything I can say on the topic assigned to suggest a thought or idea, which, when developed, will be of benefit to the advertising plans of another, I count that I will have acquitted myself very well.

"It has been said that it is sales that turn the wheels of business, and it may also be stated as eminently true that it is advertising that lubricates the bearings and makes those wheels easy to turn.

"No concern can succeed in this day without an advertising system of some kind. In fact, the terms 'successful business man' and 'good advertiser' are practically synonymous. This is true, whether the work be done personally, through an expert, manager or agency, and the more the head of the business knows of the principles of advertising the better will he be enabled to determine plans, or to choose his lieutenants, experts or agency for the handling of that highly important branch. The force of this fact is at once apparent when we consider that perhaps no department of the business requires really better judgment or finer discrimination. The field is one of invention, and, as such, invites the deepest research and thought. The rewards are commensurate therewith.

"Whatever the line, advertising should be given the force of individuality, character and originality, in the outset, a policy and system should be mapped out consistent with the business represented, and this policy persistently and steadily followed out by such plans and means as judgment and experience deem expedient. Persistence—constantly hammering away at the proposition, until impressions are driven deeper, and finally made indelible, is one of the most important requisites.

"The time to advertise is all the time, though some seasons are more propitious than others. The line may be advantageously increased and elaborated or diminished, according to the opportunities of the season, from time to time.

A high-class line of advertising is the most effective and, in the end, the most economical. The best in the way of mediums, illustrations and talent is, from one standpoint, expensive, because it represents brain power; yet, that is the one commodity which always pays the best returns.

"In the line of advertising with which I am most familiar, reputation and standing are the most important features, for it is on that that the success of the article is largely based. The method, therefore, must be adapted to a very considerable extent to the best and most forcible establishment of its merits, and toward creating a sentiment in its favor, in preference to some other articles of like nature. I find the best results obtained from devoting a line of advertising to one particular make or style at a time, and by a consecutive and consistent campaign build up interest and desire in that particular article; in other words, by concentrating until it becomes sufficiently well known to make a less active campaign essential.

"In the matter of copy, too, much stress cannot be placed on appropriate illustrations, in my humble opinion. Especially is this true where the medium is an expensive one, and a given amount of space must be utilized to the best possible advantage. The psychological effect of a well-executed drawing or illustration in an advertisement is wonderful, and many a time impresses on the mind a dry fact or detail that otherwise might be lost to oblivion. The successful illustration, however, must be appropriate. There must be proper harmony of the words and illustration. They should picture some clever adaptation of the article in actual and practical use. In other words, should tell a story in themselves. A cut of the article, as a rule, is a very poor and stereotyped form; e. g. all automobiles look alike to the layman. However, a well-executed drawing, illustrating an automobile in service, brings a man cooped up in the city to a contemplation of a delightful outing. His fancy can almost see the beautiful landscapes, and cause him to feel the exhilaration of the open air; the delight of gliding along with the speed of the wind in pleasing company. His mind is made right for a car, and, incidentally, a strong sentiment is created in favor of the particular make, though he may have no other knowledge of its merits.

"To be effective, both copy and illustration should be changed constantly. I regard no advertisement, however forceful, or expensive, really good enough to repeat. It comes to be like a twice-told story, and, if the space is worth having, it is worth the expense and trouble of getting up fresh, crisp and interesting copy. Plenty of time should be given to the compositor and artist so that opportunity may be had for

correction of proof, if the best effect is to be realized. The work is created, and, as such, requires reasonable time for proper results.

"Brevity has been hinted at as a valuable point, on the theory that a single, forceful statement, that is read by 100 people, is better than a lengthy one that is read by less than one-tenth as many, and digested by fewer still. Generally publicity brings the inquiry, and the other may be left to catalogues and literature of the follow-up system. We have noted that some of the best salesmen are not those who talk the most. They seem to lead the customer's mind and give them a chance to talk. Often more is gained by way of indirection than could be accomplished by direction; so, in advertising, we may give a suggestion that will be food for thought, and the more the public can be induced to think in our line the better.

"In the way of mediums, the first in order is naturally the daily papers, because they cover the general field; but there are many good ones, including technical, farm and religious publications. The method best adapted depends very much on the line of business itself, and the patronage to be reached.

"Scarcely second in importance to the general medium; in fact, more so, as far as specialty line is concerned, in some respects, is the following system, because this goes direct to the mark, and deals with the actual prospective buyer. It comprehends a broad field, and would constitute a lengthy subject in itself alone. The opportunities for advantageous use of well adapted novelties, post cards, folders, circulars, booklets and form letters are practically endless. The use of them is more or less familiar to the average business man of to-day. It may, however, be suggested here that the whole plan should be made as personal as possible, and neither pains nor expense spared to bring literature, circulars and stationery up to the highest standard of quality and printing, materials, etc. In other words, make the quality of the matter used create an indirect impression in favor of your business.

"In conclusion, I will say that, while advertising is a magical force, it is not, in the general acceptation of the term, all. We must not expect everything of it. Its most logical office is one of publicity; to make known what we can do, or have for sale; what it will do, and how much better it is, or can do the work, than some other article, or commodity of like nature; to create a sentiment in favor of our wares, so that when the buyer is ready he will think of our goods and of our house. The work does not end there; it must be backed up by the work of good sales organizations, and otherwise, or much of the results of advertising is lost. Every member of a business organization ought to be indirectly a part of the general advertising scheme, and should appreciate his responsibility in that direction."

CAN'T GET ALL THE TRADE.

"What's the use of worrying yourself into nervous prostration over the trade that will buy some of their goods away from home?" observed a dealer from a medium-sized city the other day. "I have passed the stage where the sight of new goods bought in another city excites my angry passions. I take it as one of the inevitable factors in retailing that a certain number of people in every city are going to buy some of their goods in some other town or city."

This retailer was a philosopher. He explained that the trade which went to the larger trading place was more than off-set by the trade he got from the town just a little smaller than his own. The customers who came to his store in A., from the town of B., bought just as much merchandise as the people who went from A. to buy goods in C. And they were much easier and more profitable customers than those he lost to his rivals in C.

This merchant argued that it is a mistake to make too great an effort to sell all the trade in town. Of course, he does not let trade go to another town without making a reasonable effort to keep some of it at home. But to carry the lines of goods necessary to please the chronic out-of-town shopper is, in his opinion, too much of a risk for the profit there is in it. Moreover, he has come to the conclusion that it is not merely buying goods that takes the shopper to another city, but a curious mixture of pride which finds its medicine in the click of car wheels.

To keep this out-of-town trade down to a minimum is what the merchant endeavors to do. To keep it all at home is an impossible task, and one, even if it could be done, that would not be worth the price.

Thousands of professional men, without any special ability, have succeeded in making fortunes by means of a courteous manner. Many a physician owes his reputation and success to the recommendation of his friends and patients, who remember his kindness, gentleness, consideration, and, above all, his politeness. This has been the experience of hundreds of successful lawyers, clergymen, merchants, tradesmen and men of every class and every walk in life. Manner makes the man.

MAKER TO DEALER

NATIONAL COLORTYPE CO. Department 9 **CINCINNATI, OHIO**

INCORPORATIONS OF THE MONTH.

Four moving picture concerns were incorporated under the laws of the State of Maine during the month, namely, the Dressler Graphoview Corporation, with a capital of $1,200,000; The International Projecting & Producing Co., with a capital of $5,000; the McKinney Patent Co., with a capital of $5,000, and the Universal Film & Projecting Co., with a capital of $200,000. C. E. Eaton is president in each case, T. L. Croteau treasurer, and J. E. Manter clerk. The firms are all located in Portland.

The O'Neill-Thompson Manufacturing Co., of New York, has been incorporated under the laws of the State of New York to manufacture and deal in post cards, novelties, mailing devices, advertising devices, etc., with a capital of $10,000. Incorporators: William J. O'Neill, 41 Milford street; Thomas J. Thompson, 78 West 48th street; David Leary, 520 West 175th street, all of New York.

The Boston Specialty Co. has been incorporated under the laws of the State of Massachusetts with a capital of $10,000. The president of the concern is Geo. H. Tuttle, and the treasurer and clerk is Jos. D. Pearson, both of 172 Tremont street, Boston.

The Improved Film Supply Co., of New York, was incorporated recently under the laws of the State of New York with a capital of $10,000 and to operate same. Incorporators: Samuel Marcusson, 197 Stanton street; Morris D. Bohrar, 2 Avenue D; Leon Marcusson, 197 Stanton street, all of New York.

Among the new incorporations in the State of New Jersey is the Philadelphia Projecting Co., of Camden, incorporated to manufacture films and cameras, with a capital of $125,000. Incorporators: Vernon R. Carrick, Harry Bennett, John P. Reiff and William A. Johnson.

The Huguenot Manufacturing Co., of New Rochelle, N. Y., has been incorporated with a capital of $1,000 under the laws of the State of New York to manufacture patented articles and novelties. Incorporators: Henry Schnitzspahn, Frederick F. Whitehead and A. H. Meyer, all of New Rochelle.

The Lucky Spud Co., of Boston, has been incorporated under the laws of the State of Massachusetts to deal in novelties of all kinds with a capital of $20,000. Louis A. Gieger, of 47 Hanover street, Boston, is president of the concern.

The Bamberg Magic & Novelty Co., of New York, has been incorporated under the laws of the State of New York to manufacture and deal in books, notions, articles of magic and legerdemain, with a capital of $1,000. Incorporators: Theodore Bamberg, 323 West 15th street; Joseph A. Klein and Otto Jordan, 144 West 37th street, all of New York.

Among the new incorporations in the State of New York is the Swift Premium Co., of New York City, organized with a capital of $1,000 to manufacture novelties and premium goods. C. P. Bowman, A. J. Bowman and H. P. Masby are the incorporators.

The Tiffany Safety Razor Co., of Edgewater, N. J., has been incorporated under the laws of the State of New Jersey to manufacture safety razors, with a capital of $100,000. Incorporators: H. M. Browne, E. J. Forhan, Ralph Meyer, 154 Nassau street, New York.

Joseph Bergman, of New York City, has been incorporated under the laws of the State of New York to manufacture post cards and novelties, with a capital of $5,000. Incorporators: Joseph Bergman, Behr Bergman, 1431 Fifth avenue; Frederick Vos, 587 Tenth avenue, all of New York.

THIS MARVELOUS AGE.

Evidently We Will Soon be Able to do Without the Telegraph, Stamps and Letter Carriers—How Electricity Is Playing a Star Part in Modern Progress—Sending Drawings or Photographs by Wire—What Will It be Fifty Years from Now?

It begins to look as if we shall soon be able to do without the telegraph, postage stamps, mail boxes and letter carriers.

Imagine how convenient it will be to sit down at the telephone desk in your office or home, call up somebody you want to communicate with and then proceed to write that person a letter which he or she will be able to read in duplicate just as quickly as you can write the words down. And if that particular person does not happen to be in when you call he will find your letter waiting on his telephone desk for him when he returns, no matter how many miles away you were when you wrote it only a few moments before.

More wonderful still, and this by way of example, the police of New York may be asked by the Chicago police to send them the photograph of a murder suspect. The photograph is inserted in a machine somewhat similar in size and shape to a phonograph, there is a buzzing of wheels, the photograph revolves rapidly on a cylinder and in five minutes or less after Chicago asked for the photograph a letter from Chicago is received by the New York department of police reading as follows:

"Photograph received. Excellent picture of man arrested here. Many thanks for your prompt attention."

Three weeks elapsed between the recent earthquake in Southern Italy and the publication of the first photographs of the disaster in the New York newspapers. It may be possible before long to take a photograph in Italy or Australia one day and publish it in New York the next.

These are only a few of the wonderful new things that are being done or may soon be done by wire. Later on they may all be done by wireless, but science and the inventor have not yet advanced quite that far.

Sending photographs by wire is not new. In a crude way this was accomplished several years ago, but recently an apparatus has been completed by means of which it is possible to telegraph a photograph or any kind of a picture.

To telegraph a picture may seem very easy once the process is understood, but to use the telephone as a letter writer and artist for the instantaneous reproduction miles away of your handwriting and sketches seems far more complex.

The telewriter does all this, however, and more, too, for if you wait a few moments at the telephone after sending a letter over the wire you may receive an answer in the handwriting of your correspondent. Writing and sketches made with the pencil of the transmitting instrument are promptly recorded in fac-simile by the pen of the receiving instrument. The complete instrument consists of the transmitter and receiver associated together, so that messages may be sent to or received from either end of the line, and the instruments are connected to the ordinary telephone line without interference with or alteration to the telephone service.

The operation of the telewriter is a very simple matter. The sender simply calls up on the telephone the person to whom he wants to write and then writes his communication in pencil on a roll of paper attached to the transmitter. The machine does all the rest by transmitting over the telephone wire and reproducing at the other end everything the sender puts down on the paper. The movements of the transmitting pencil and the receiving pen being limited in extent, it is necessary that the paper shall be fed over a limited writing space. This is done mechanically at the transmitter and electrically at the receiver. The transmitter has a finger lever connected at its inner end by a rod to a paper shifter. When the lever is moved to and fro between its stops the paper shifter rocks backward and forward and feeds paper over the writing plate at each movement. The pen is dipped in ink automatically at each movement of the paper so that there is little danger of the pen running dry. The receiving pen when not in use is held in the ink well.

In the Korn system of photographic telegraphy the receiving and transmitting stations can be placed any distance apart. Distance is no object, provided, of course, that the stations are connected by wire, and that the electrical sending current is strong enough for transmission purposes. A film containing a portrait to be sent over the wire is mounted on the cylinder of the transmitting apparatus. A pencil of light from a Nernst lamp is focussed through the film on to a prism within the cylinder and retracted to a selenium plate below. The cylinder is slowly revolved, and the light playing on the selenium plate varies in intensity, according to the transparency or opacity of the intercepting portrait on the film. These fluctuations, by varying the conductivity of the selenium plate, according to the well known principle, produce corresponding fluctuations or pulsations in a current going through the plate. This current is flashed over the wire to the receiving station, where it passes through a Giessler tube and produces corresponding fluctuations in a beam of light intercepted by the tube.

The fluctuating beam is focussed on a sensitive photographic film, mounted on a cylinder which revolves at the same speed as the one at the transmitting station. In this way, as the picture at the transmitting station passes through successive points on the transmitting film, the light value of these prints is faithfully reproduced in reverse or negative at the receiving station.

Mr. H. Cartoonelle, a Belgian engineer, has also completed an apparatus which allows drawings or photographs to be transmitted to a distance by telephone wire in an extremely short period of time.

Both Prof. Korn and Mr. Cartoonelle have en-

A SIDE LINE

which may soon become

YOUR MAIN LINE

WINTER & CO.

Manufacturers

220 Southern Boulevard (cor. E. 137th St.) **NEW YORK CITY**

countered considerable difficulty thus far in reproducing photographs transmitted over a telephone wire with sufficient distinctness to insure the most satisfactory results. This problem, however, appears to have been solved by a Frenchman, M. Edward Belin, who recently made some very interesting experiments with his wireless photography apparatus in the laboratory of the Societe Francais de Photographie. The transmitting apparatus of this ingenious inventor is wholly mechanical in all its details. A carbon print of the photograph to be telegraphed is placed on a revolving cylinder, while a stylus traveling over this print imparts to the line conductor, by means of a lever, current differences corresponding with the differences of relief through a rheostat.

In transmitting, the picture is rolled on a horizontal cylinder of metal. The picture consists of a carbon print made on rather thick paper, and presenting a relief proportional to the intensity of the colors of the picture. This difference of level, almost unnoticeable to the touch, is, however, sufficient for a point in guiding over the cylinder to respond to the differences and to transmit them in movements of a corresponding amplitude. In receiving, the apparatus follows the same general principles as that of the Korn apparatus.

THE MAYER REFLECTOGRAPH

Constitutes a Side Line of Merit for Talking Machine Men.

One of the biggest sellers of the year in mechanical contrivances is the Mayer Reflectograph. This remarkable machine projects souvenir post cards, photographs, etc., in all the original colors on a sheet or wall in similar manner to the stereopticon, with the great advantage that one has an inexhaustible supply of subjects at hand and is not restricted to the stilted cut and dried glass slides. No one who has not seen one of these machines can begin to appreciate the immense amount of pleasure to be derived from their use. In nearly every home will be found a more or less complete collection of post cards and magazines profusely illustrated, which offer numberless other attractive pictures. These, even in their natural size, are beautiful, but when thrown on the screen and greatly enlarged by the machine, with all the details brought out by the powerful light, they (even the commonest) become wonderful scintillating works of art. No dealer who handles post cards can afford to be without a good stock on hand, for not only will he find a ready sale for them, but every one sold will act as a most energetic salesman, as it will arouse enthusiasm among his customers, who will be much larger purchasers of cards from that time on. The Reflectograph, which is made and sold by Chas. W. Mayer, of Rochester, N. Y., is a side line that is well worthy the consideration of talking machine men.

SOME EFFECTIVE PUBLICITY.

How an Enterprising Dealer Worked Safety Razor Pointers in a "Dry" State.

In one of the States which recently went "dry" there is an enterprising dealer who understands not only the value of advertising, but of doing it at the right time. In a large advertisement 6½ inches wide and 13 inches deep this dealer announced just previous to the "dry" law taking effect, in bold black letters:

DOWN WITH WHISKErs!

On January 1st commence the new year with this resolution:

"Starting to-day I will save anywhere from $10 to $20 per year by shaving myself."

Now at first you might think I am speaking in a very optimistic vein—but let's figure some.

Suppose we say you get only 3 shaves per week at 10c. each, in the course of a year it amounts to $15.60. Had you ever figured that up? Four shaves per week amount to $20.80 per year.

NOW, ON THE OTHER HAND:

1 Safety Razor	$5.00
1 Good Brush	.50
Soap	.50
Powder	.25
	$6.25

Now compare the two, and add to this the satisfaction in knowing you have had a clean shave, that the brush and the razor you use has been on no one's face but yours.

We are now showing the finest assortment of razors of all kinds we have ever had. Drop in.

Needless to say the advertisement helped to increase the sale of safety razors immensely It was much talked about, and in this way was helpful all round.

A GREAT POST CARD DEPARTMENT.

That of the American News Co. in New York—Wonderful Extent of the Stock Carried—Post Cards to Order—Some of the Latest Styles.

One has but to visit the post card department of the American News Co., under the management of Wm. G. Frazer to realize the tremendous facilities of this concern for meeting the needs of the dealer in that line. Besides handling most of the leading lines of holiday, birthday and cards for special occasions, on the racks will be found views from all the larger cities

of this country and Europe, as well as from some of the smaller places of interest. In addition to their regular stock the American News Co. are prepared to make high-class cards to order bearing such local views or special subjects as the dealer desires, and guarantee satisfactory work, prompt delivery and moderate prices. (See announcement in this issue). This feature is one to be appreciated by the dealer who desires to build up a strong local patronage. Herewith is illustrated one of the latest Easter cards offered to the trade by the American News Co.

A NEW POST CARD PACKAGE.

A new post card package has been adopted by Curt Teich & Co., Inc., of Chicago, Ill., which they assert will prevent many of the complaints about imperfect, badly assorted and damaged cards. It is their intention when sending out each series of assorted view or colored post cards to in future seal each with a band lithographed in three colors and gold with the emblem of the house. This gold band will bear a certificate, showing the packer and inspector, and in this way the purchaser will have direct recourse to the maker. In addition to this being a protection to the purchaser, it will, in a large measure, preserve the colored cards from smoke, dust and indiscriminate exposure to sunlight. The inspection certificate also insures the register of the colors on the cards sent—a matter which has been previously overlooked.

No advertisement writer can do intelligent work without the intelligent co-operation of his client. With this co-operation he can work for anybody, and place, and touch on local conditions just as well, or perhaps a little better, than the man who is on the ground.

Advertising is simply the introduction. It's up to the advertiser to make the following conversation interesting and profitable.

The VIASCOPE SPECIAL
NOW READY

¶ After years of study we have perfected a moving picture machine void of all vibration and absolutely flickerless. All working parts of mechanism encased in a highly polished nickel-plated steel case. Its construction is so simple that it can withstand the hardest usage without getting out of order.

ROAD BUILDING TO MUSIC.

How Major Kennon Got Work Out of Filipinos and Won a Bet.

Major L. W. V. Kennon, now commanding a battalion of the Tenth Infantry at Fort Benjamin Harrison, in building the famous Benguet road through the mountains of northern Luzon, Philippine Islands, accomplished a feat called humanly impossible. It took music, money and a mongrel army of 4,000 men to do it, but Benguet road stands to-day one of the remarkable highways of the world.

Major Kennon's army of 4,000 road builders rested only on Sunday. For ten hours of each day they forged ahead. On Sunday they rested in their quarters, houses built of poles and grass. They amused themselves with dances, cards and games that appealed to the different nationalities. Major Kennon introduced music as one of the attractions along his lonely highway. He is known for his resourcefulness and he does not deny that he used music to get better work out of the pleasure loving Filipinos and other Orientals. They did not like to work, and when they did it was with slow, sluggish movement.

One day Major Kennon decided to try music as an impetus to zeal. He purchased some expensive talking machines, with records of the music of all nations, including many Philipino gems, and ordered those in charge to move quietly and secretly to a place where several hundred Filipinos were engaged in drilling holes in the canon walls. They stole up behind the slow going drillers and suddenly struck up a favorite Oriental air. Instantly the Filipinos caught the spirit of the music and began to beat their drills against the rock in rhythm.

The result was more than a surprise to the resourceful Kennon. He kept the "talkers" busy after that. They followed the Filipinos along the way and played wherever they worked. From laborers worth about 10 cents a day he developed them into musical machines that worked to drum beats. Major Kennon insists that the talking machines saved the Philippine Government thousands of dollars.

A bet had been made between Major Kennon and his foreman on one side and the members of the Philippine Commission on the other side that the road would not be open by January 31, 1905. The story of the bet was borne from tongue to tongue along the road. Major Kennon promised each man a cigar if they won the bet. The effect was good. The army of 4,000 bent to their work, there being a man to every seven feet of the road on the last lap into Baguio. On January 29, two days before the expiration of the wager, Major Kennon rode into Baguio in a carriage. He was received there as a prince returned. There was a great celebration and all the men in the Kennon army smoked a good cigar marked "The Kennon Special," each with a label bearing the major's picture.

A man is one whose body has been trained to be the ready servant of his mind; whose passions are trained to be the servants of his will; who enjoys the beautiful, loves truth, hates wrong, loves to do good and respects others as himself.

C. B. HAYNES & CO.'S HEADQUARTERS

In Richmond, Va., Afford Pleasing Proof of the Progress Made by Mr. Haynes Since His Settling in That Section.

(Special to The Talking Machine World.)

Richmond, Va., March 6, 1909.

A talk with C. B. Haynes is always beneficial to one who has any misgivings as to the future of the talking machine trade.

When Mr. Haynes opened up in this city he had a splendid knowledge of the requirements of the trade throughout this section, and he had

C. B. HAYNES & CO.'S NEW BUILDING.

confidence as well in the future of the phonograph business.

Look at what he has accomplished!

The building illustrated herewith is the property of C. B. Haynes & Co., and lately purchased by them. The five stories and basement will be entirely devoted to the talking machine trade.

It is equipped with all modern conveniences, and this splendid structure will be devoted exclusively to the wholesale trade of Edison phonographs, records and supplies.

Chatting with The World, Mr. Haynes says: "Our business for February exceeded any previous month since we have been established, both in machines and records. The Amberol records are a grand success and we are now selling as many of them as we did of the two-minute records.

"I can state right now, as soon as we are located in our new building we will be equipped to handle the Edison business equal to any jobber in the United States, and I do not know of one who has the building we have devoted exclusively to phonographs. Our facilities for filling orders are second to none."

THE TALKING MACHINE IN SCHOOLS.

Children Are Now Being Entertained With All the Great Compositions in Some Public Schools in This City.

Uptown school children are getting their first lessons in grand opera by means of a talking machine. Mrs. W. E. Wilkinson told the West End Woman's Republican Club about it last week in a talk about the Parents' Association of Public school 10, 117th street and St. Nicholas avenue, the first association of the kind to be started in this city. The association does many practical things for the children of the school, but the talking machine is a line of work which is considered one of the best.

One of the teachers conceived the idea, as many of the children of the school were particularly fond of music and never able to hear and of the best. So the talking machine was purchased, and now grand opera is administered to the children in five-minute doses at their morning gatherings in the bis assembly hall, to their great delight. The machine will start up a melodious tenor solo to which the children will listen with close attention, and as the last note dies away the principal will say:

"Children, that is the voice of Caruso, the greatest Italian tenor of his day. People will travel miles and pay large sums of money to hear him sing."

The Italian children are delighted at this, but no more so than are the little Polish children of the school when the golden-voiced Sembrich's vocal jewels are cast before them and the principal continues:

"And this is Mme. Sembrich, the wonderful Polish soprano, who is the heydey of her success, with a record of twenty-five years in grand opera, has left it, and the thousands of people who have listened to her are disconsolate."

Then the eyes of the little German children shine as a deep, rich voice sings a Wagnerian air and the principal goes on:

"And this, children, is Mme. Schumann-Heink, the famous German contralto, who with many little children like you has still given the world much beautiful music."

The result of the talking machine is said to be excellent, and the children of No. 10 are being weaned away from moving picture evils to all good music.

THE NEW "PHONO-EDUCATOR."

On January 11 M. Carpenter showed before the Paris Academy of Sciences, Dr. de Pezzer's new "phono-educator," an apparatus which gives a graphic representation of a phonographic vocal record, and permits of a plain analysis of defects in singing, pronunciation of foreign languages, or in articulation.

BAD ACTING AND MR. EDISON.

Attempt to Saddle Blame Upon the Inventor—Decline of the Art of Impersonation Laid at Door of Electric Lighting—The Theory Disproved and the Inventor Is Acquitted and Discharged.

Is Thomas A. Edison to blame for a very considerable deal of the bad acting now visible upon the stage in this country? Of course the inventor did not deliberately set about the work of filling the theater with incompetent players. In fact, there is every reason to believe that he hadn't the faintest gleam of what he was doing in this direction at the time he did it, for one must believe him to be sufficiently humane to have been anxious to sacrifice even the very greatest of all his inventions if by that sacrifice he could dam the flood of inefficient actors which now one can only damn.

But why saddle it off on Mr. Edison, even if he is to blame? Well, the one sufficient answer to that inquiry is that these are the days for blaming things off on somebody else, so why should Mr. Edison escape? That there is a very lamentable number of incompetent players habitually put forward in a prominent manner nobody who frequents the theater will dispute. Even those who go to the playhouse with no other purpose than an evening's entertainment and with no thought of analyzing either acting or play must recall very frequently experiencing at sight of the doings of many players that sensation of embarrassment which every generous person feels at the sight of a fellow human being making himself solemnly absurd by trying to do something pitably beyond his ability; and the circumstance that the maximum of self-confidence is often closely wedded to the minimum of skill makes the spectacle little less painful.

To get back to Mr. Edison and his grievous responsibility. There is at present among producing managers a rage for what they call "types." By a "type" is meant some character which by certain class peculiarities, real or fictitious, stands out as a visible, audible representative of its category. Such "types" have not been uncommon on the stage heretofore, but of late managers have taken to laying violent hands upon a "type," dragging it from its proper associate place in the general stage picture, leading it to the footlights in the glare of the hallowed spotlight and making everything within sight or sound background for this basrelief. Such a character is seen in "The Man From Home," in "The Chorus Lady" and in "The Traveling Salesman."

Actors to play such parts are chosen not as a rule for their ability in impersonation but because they look like a certain type, and naturally have the mannerisms of that type. From the chief types to the lesser types is a short step. Consequently actors of smaller parts are chosen as a general thing for the same reasons. If the manuscript of a play calls for a man with gray hair, the manager who casts the play is almost sure to choose a man whose locks are actually gray, while a better actor whose hair is black might seek the part in vain. If the manuscript calls for a "hobo," the manager will come as near getting a real hobo as the list of applicants for the part allows him.

If you ask him his reasons for doing this—ask him why he makes so little allowance for the possession by actors of skill in impersonation—he will tell you that the lighting of the stage does not permit of such successful illusions in make up as it did in the old days. Now do you begin to see where Edison comes in? He will tell you that the mellow light of the old time gas lamps was a great help to the actor who was trying to look like something very different from himself. He will tell you, on the other hand, that the fierce uncompromising glare of the modern electric light shows crayon lines to be crayon lines and not the marks of age or sickness or dissipation.

It is the rarest of things to see in these days an actor wearing a wig, except in romantic costume plays. Electric lighting is responsible for this too. Most actors who have to play for any length of time, say a part of Colonial date, grow their hair as long as they can and eke out the ends with false hair. Women's wigs more successfully defy electricity, but it isn't often that a manager will allow any but an actress of star calibre to wear a wig. The fierce light that beats upon the stage has much to answer for—and for that fierce light who so responsible as Thomas A. Edison?

The theory here expounded, at all events, is the theory upon which managers lay the responsibility for the type play type policy; and yet it was not very long ago, years after electricity came to search out the dark corners of the actor's face, that a famous Dutch player, Henri de Vries, came to America and in a single play impersonated a well-nigh incredible number of characters, each differing totally from every other and each involving a most elaborate disguise, just the sort of disguise supposed by these managers to be easily susceptible of exposure under electric lights. Nor can one easily forget the picturesque and highly complicated makeup that Mr. Sothern wore as Don Quixote no longer ago than last winter and there are many other instances that might be cited against the managerial contention.

Granted, however, the correctness of the theory that electricity is inimical to character makeup and simply forces stage managers to choose players who resemble closely the types they are to impersonate, it follows that this process of selection results in steadily deteriorating acting. Players who no longer have experience in enacting widely different characters for that very reason lose more and more the power of impersonation, so that, followed to the logical end, we shall soon have stages full of actors playing—themselves.

On the whole and despite the pleasure it would naturally give us in this muck-raking age to blame it on Mr. Edison, he must stand acquitted. Electric lights are not brand new and there is probably more bad acting to-day than at any time in the last quarter of a century. On whom or what, then, is it to be blamed? On the actors? Hardly. There is no reason to suppose that as a class they are by temperament any less skillful than they were a quarter or half century ago. Some influence, some system, is constricting their skill and choking their intelligence. Is it the absence of the old time stock company? Hardly; for there are probably at the present time as many, if not more, stock companies than in the old days, though it is true that the system upon which they operate is not the same. Is it that the intellectual quality of the managers is at fault? Is it that the star system is to blame?

Well, it is not proposed here to answer either of those questions, complicated as they are. The object of this article was simply to inquire into the serious charges against Thomas A. Edison. These do not appear to have been sustained, and the defendant is discharged on his own recognizance.—New York Sun.

ENTERTAINED SCHOOL WITH CONCERT.

Isidore Abelowitz, son of A. Abelowitz, talking machine dealer of 510 East 138th street, New York, writes The World an interesting letter in which he tells of a concert which he recently gave at Public School 25, from which he just graduated. He used the Victor Auxetophone in the large assembly room, and adds: "The program consisted chiefly of operatic selections by Caruso, Melba, Tetrazzini and Tamagno, also several popular songs and some band records by Sousa and Pryor. During the concert I played 'The Star Spangled Banner,' by Stanley, and suggested that the entire school accompany the song. This was carried out successfully. I cannot express how the teachers and pupils enjoyed it. This concert lasted from 9.30 a. m. till noon. I am sure this will help the Victor business, as we have already sold a Victor machine through this demonstration."

BRUCE & BROWN CO.'S NEW QUARTERS.

(Special to The Talking Machine World.)

Seattle, Wash., March 1, 1909.

The Bruce & Brown Co., successors to Kohler & Chase, Inc., have moved into large quarters at 1407 Fifth avenue (the Grary Building), where they are carrying a large and complete line of Edison records. After this week the establishment will be open day and night, thus they will be able to fill every order complete within an hour after receiving it. The Bruce & Brown Co. do a strictly wholesale business, and have no connection with any retail house whatsoever.

In a chat with C. E. Brown, vice-president of the company, he extended a hearty welcome to talking machine men to make their headquarters with them during the visit of the members of the trade from the East to the Alaska-Yukon-Pacific Exposition.

NOT IN THE RIGHT BUSINESS.

If a man's business has not the first mortgage on his attention he is not in the right business.

OUR

VICTOR RECORDS

Guaranteed Perfect

We have arranged for two entirely distinct and separate stocks of **VICTOR RECORDS** ONE RETAIL, ONE WHOLESALE. By this system we are enabled to guarantee our Wholesale Trade that they will receive from us **VICTOR RECORDS** in absolutely the same condition they are supplied us by the factory.

NOT RECORDS THAT HAVE BEEN USED FOR DEMONSTRATING MACHINES; NOT RECORDS THAT HAVE BEEN PLAYED FOR RETAIL PROSPECTS

But—

Absolutely New Unplayed Records

We don't need to enlarge upon the advantages of this system. You will appreciate it. We originated the system of supplying the high-grade

RED SEAL RECORDS IN SEALED ENVELOPES

This is appreciated by dealers in Victor Records, and we are sure the new method of filling wholesale orders from a stock which is in no way connected with our retail stock will be even more appreciated by them.

If You Want New Records, Send Us Your Orders

We've got the people into the habit of looking in the leading magazines each month for our double-page advertisement, which contains a list of the new *Victor Records*. They not only look for the list—they buy the records!

In addition to the complete list in the April magazines, our advertisement in the principal daily newspapers throughout America on March 27 will announce that the new *Victor Records* for April are just out, and tell the people to hear them at the nearest Victor dealer's.

Get the people into the habit of coming to your store to hear the new records. Have the records they want, play as many as they want to hear, cultivate their trade, and you'll soon have them as regular customers.

Victor Records are good sellers because they are records of quality—every *Victor Record* is a work of art. It pays to have such records. It pays *best* to have the complete list.

Place your order now with your distributor, so you'll be ready on March 27—the simultaneous opening day for the sale of April *Victor Records*.

THE TRADE IN PHILADELPHIA.

Business Not of Satisfactory Volume but Improvement Looked For—Record Sales Keep Up Average—Is Monthly Record List of National Co. Too Long?—Some Jobbers and Dealers Think So—Jobbers Take Advantage of Victor Co.'s Exchange—What Various Houses Have to Report Anent Present Conditions.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 4, 1909.

According to local jobbers, while the business in many instances exceeds that of corresponding months of a year ago, especially during the holiday season, conditions generally are nothing to brag about. However, everyone seems to be decidedly optimistic, and a steady improvement is looked for that will bring the talking machine trade into its own.

Machine sales, as a rule, average only a small percentage of that business a year or so ago, and at that, the higher-priced outfits have the call. The record trade, however, has kept up well and has proved encouraging to both jobbers and dealers.

There is considerable discussion at present over the number of records at present being listed each month by the National Co. Many dealers have complained to their jobbers that forty records per month, twenty Standard and an equal number of the Amberol, are more than the average dealer can consistently handle with conditions as they are at present. Some dealers have solved the question by dividing their orders equally between the two styles of records, i. e., where they formerly ordered 100 Standard records, they still confine their orders to 100 records divided between the Standard and the Amberol, letting the jobber carry the extra stock. Several jobbers suggested that the solution of the problem lay in the company listing only twenty or twenty-five records monthly, fifteen or eighteen of them, or the majority, being Amberol. However, the jobbers feel sure that the matter will adjust itself in time, experience will show just how the list can best be revised, and all will again be serene. The Amberol records are selling strongly, and each month shows a decided improvement in them that is very pleasing. Some believe that in a comparatively short time they will entirely succeed the two-minute or Standard record.

The various local jobbers took quick advantage of the Victor Talking Machine Co.'s exchange proposition, running from February 15 to 20, inclusive, and covering 10 and 12-inch disc records which have been remade or relisted in double-faced records. They have taken up the double-faced record in energetic style, but are inclined to agree with the Victor Co. that the single-sided record will still hold its own, and are not pushing it to the rear in the least.

Louis Buehn & Bro. report business somewhat in excess of last year at this time, but could handle some more without undue strain. As it is, the increase is in record sales, the machine sales lagging considerably, though what call there is is for high-priced machines. The salesmen sent out by this firm, however, are turning in encouraging reports and the outlook is excellent.

The Western Talking Machine Co. also report a fair record business, both wholesale and retail, and believe that improvement in the talking machine after the post-holiday dulness will be sure and rapid.

The Penn Phonograph Co., Inc., report a fairly active trade in both Victor and Edison lines, especially records. Those dealers who were forced to cut down their orders some months ago are increasing them again, and a return of the really prosperous days is looked for by fall at the latest.

"Trade is good, but not quite what it might be," was the answer at H. A. Weymann & Son's. It was also stated that the Amberol record had secured a strong hold on their trade, and was crowding the two-minute style quite closely.

The Musical Echo Co., as a result of the season of grand opera and concerts, have done a wonderful business in Red Seal records, some of the single orders totaling three figures. The sale of higher-priced outfits has also been influenced by the wave of good music which struck the city during the winter.

RIO DE JANEIRO IS INVADED.

We clip the following from our enterprising contemporary, L'Etoile du Sud, of Rio de Janeiro: "The Phono-Cinematograph is the name of the new attraction which was inaugurated on the 12th inst. in the Central Avenue. Furnished with modern comfort, this establishment is called to minister for a long time to the delights of our city. The Cinema-Phono exhibits bits of operas, songs, national airs of all the countries of the world. Seated in a comfortable chair, you slip into an opening a disc bought on entering, and immediately you hear delicious music, a melodious song or a devilish cakewalk. We extend our felicitations to the organizers of this attraction."

TRADE NEWS FROM INDIANAPOLIS.

Business Quiet but Dealers Optimistic—Dealers Plan Innovation to Boom Sales—Extensive Series of Recitals to be Held—Musical Echo Co. Move to New Quarters—Retired With Fortune Made in Talking Machine Business.

(Special to The Talking Machine World.)

Indianapolis, Ind., March 7, 1909.

The talking machines business is quiet in Indiana, and has been for the last month. Dealers, however, do not feel greatly discouraged because they believe the whole year will be one of average businss.

In order to gain business, a number of Indianapolis dealers have arranged an innovation which they believe will become a popular monthly musical event to music lovers. Each of the dealers who has entered into the arrangement will give a popular recital of new records one day out of each month, and the recital will also extend into the evening. The first recital was given this month to demonstrate the March records. The local dealers go on the theory that the talking machine has become the great medium for classical as well as popular music, and they believe the new plan will be exceedingly popular. The following firms have entered into the new scheme: Kipp-Link, handling Edison machines; Joseph Joiner, handling Columbias and Victors; Frank Lesley and E. E. Hill, handling all kinds; George Maze, handling Edisons, and William J. Burns and Joseph F. Pfliger. The companies got a good news notice in all of the big dailies on account of their innovation.

Thomas Devine, of the Columbia Co., says he is having a great call for the Columbia indestructible and the ten-inch double disc records. The demand is so great that he has doubled his space for such records. Mr. Devine is utilizing his display windows to good effect in showing these records.

The Musical Echo Co., who have been known as the C. Koehring Co., and located on Virginia avenue, have moved into new rooms in North Pennsylvania street, and are already enjoying a nice business. They are having an especially nice business on Victrolas and the regular Victor styles. The room occupied by the company is fitted up in mahogany and is most attractive.

Carlin & Lennox report a fairly good Victor business.

Charles Craig, who retired from the talking machine business some time ago, and who is able to live off his income, says there is money in this field if it is properly managed. He was in the business two years and cleaned up $15,000, which he has invested in apartment houses. He declares that while he was in the talking machine business he never netted less than $300 a month, and sometimes much more than that, and says he only lost $300 on bad debts. Mr. Craig was the owner of what is known as the Indiana Phonograph Co., who are jobbers. He quit the business, he declares, purely on account of his health. His success he attributed wholly to the fact that he gave his personal attention to the business. "I knew the selling qualities of each record," he declared, "and I knew them myself. I did not trust this to somebody else. I also had personal knowledge of the position of every man to whom I made a sale."

Moving picture shows are still on the boom. The building which is to be used for a show room by E. S. Sutherland in East Washington street is nearng completion. It was formerly occupied by the Krauss Clothing Co., but it is being completely remodeled and will be used as a 10-cent moving picture show house. It will be all moving pictures, without vaudeville, and will be an unusually long program for each show. This makes the fifth moving picture show which Mr. Sutherland has started in Indianapolis.

Close times do not affect the moving picture business. It keeps up to its usual good standard just the same, and all of the places, it is said, are making money.

Victor success means success for the dealer

The volume of Victor business is increasing by leaps and bounds.

Our tremendous advertising, the unequaled prestige of the Victor and Victor Records, and the co-operation of Victor dealers are making this great business.

You are just as vitally interested in Victor success as we are. Every extra dollar of sales means more money for Victor dealers.

Let's all work together for still greater business—"In union there is strength." We will do our part by constantly improving Victor products, and by continual wide-spread publicity. Will you boost from your end?

Catch the Victor enthusiasm. Get a vision of the possibilities for the future. Realize what a mighty tide of Victor sentiment is rising. Push Victor publicity in your neighborhood. But above all—get people in to hear the Victor.

This will be the biggest Victor year. The Victor is more popular than ever before. There are prospective buyers all around you. Now is the time to get this business. We know you'll go after it!

NEW YORK, MARCH 15, 1909.

THERE is no denying the fact that the talking machine trade has been dull.

We may as well all recognize that fact and admit it. But let us ask, is there any trade wherein business stagnancy has not prevailed for the last year and a half?

Now why should the talking machine trade be different than any other line?

It its not and it is affected by similar conditions, and quite naturally we could not expect fine business and an exuberant condition when all other lines were dull. That is beyond reason and we may as well use a dash of reason in considering the business situation.

It sounds good to say trade is fine, but we cannot expect to be uninfluenced by the depression which has been round about us for eighteen months past. When hundreds of thousands of men have been out of employment it is not reasonable to suppose that these men, whose revenues have ceased, would be large purchasers of talking machines and records.

They have been more interested in the bread market than in the record market, even the two-faced records, and we cannot reasonably suppose that these conditions will materially change until general trade gets in good form and the signs on the horizon portend a steady trend towards better conditions.

PESSIMISTS have no reason to think, however, that simply because business has been dull that the talking machine trade has gone to the demnition bow-wows. The man who figures along that line is in a dangerous mood.

He had better get out and take a little exercise, then come back and survey the situation anew after his blood circulates more freely.

His mind is in an unhealthy state and ten to one he could not distinguish sunlight from gloom if bright rays were striking all about him.

Now, the talking machine trade has not gone to pieces, nor will it.

It has suffered in a like proportion to other industries, and the real facts are that there are some lines of trade that have suffered even more keenly than the talking machine business.

You could not expect men to buy talking machines when they were busy looking for bread.

But they will not always be that way.

There is a dawn of better days, showing even now on the horizon, and depend upon it when the wheels of industry are well in motion over this country, the talking machine trade will resume its activity of yore.

Don't figure wrongly and do not fool yourself with the idea that this industry has seen its best days and that it is disintegrating.

That is a mistake.

THE basic principles of the trade are all right and the people of the world have not lost their interest in talking machines, but thousands of them have been compelled to employ their money for other purposes and as a result trade has in a degree stagnated.

It is just as reasonable to say that because there is a dearth of visitors at Palm Beach and other Floridian resorts that Florida has gone by as a popular winter camping ground.

The records of the railroads show a very slight passenger traffic and some of the hotels are not making expenses. Looks bad, doesn't it?

But you would not find the hotel men in that country willing to sell out their investment for a song. Oh, no!

They know that the people have been hard hit, they are not spending the money. Atlantic City is good enough for the majority, but the Palm Beach days will come again and the recrudescence of the talking machine will be in order. Do not forget that.

THE talking machine business is far from being a "dead one."

It's a business of evolution—it's a business of laboratory life—it's a business of education—it's a business of entertainment. It's a business of scientific development.

And do you think for a moment that such work can be killed or even more than halted temporarily?

A temporary halt does not mean extermination by any means, and we say to pessimists: Brace up!

Get the point well fixed in your mind that the talking machine business is all right; that its future is undimmed; that it has possibilities; in other words, have confidence in the business and you will do better as the months roll by.

There is no question that the quicker you get your eye confidentally fixed on the talking machine banners that wave over the distant heights to be attained the better it will be.

Look over some of the successful establishments in the country and see whether it pays to have confidence in the future of the talking machine business.

Of course it does. There is no doubt of it. You can bet your boots, or anything else, that is handy, that the future of the talking machine is encouraging.

You can't stop an industry when there is the power behind it that the talking machine trade possesses.

AND, so much to the surprise of many, the copyright bill was rushed through during the closing hours of the last Congress.

It seems that the National legislators were desirous of disposing of this matter, which had been really a vexatious question to handle, and had consumed much time.

Of course, all are not satisfied with the law as it now stands. It would be too much to expect that a copyright law would be enacted that would be pleasing to all.

But the new law gives the composer rights which he never possessed before and makes an open market for all, so far as compositions are concerned.

The minimum rate which the manufacturers of music rolls and talking machine records must pay is two cents per roll or record manufactured. And right here is done a great injustice to manufacturers of music rolls and discs, for thousands of discs and rolls are produced which are never sold.

There has been much talk, and everything has been well threshed out in these columns, which have reflected the true conditions at all times. Now the battle is over for the present only, and all know that relations will be changed when the new law becomes operative in July. The composer will receive compensation for the reproduction of his work for use on piano players and talking machines.

In our opinion there is at least one vital defect in the present bill which must be remedied in order that injustice may not be done to manufacturers of rolls and records. The royalties should be paid on records and perforated music rolls sold, not merely manufactured, because there are thousands upon thousands of records which are turned out from various factories which are not sold to purchasers, and to compel a manufacturer to pay two cents royalty on every one of these records becomes at once a hardship and an injustice.

The royalty should be paid only when the products are actually sold to the retail customer. There are a number of defects in the new bill, and these must be remedied in order that the American copyright law be just and fair to all. But anyway we have made a start, and no doubt at the next sessions of Congress petitions will be made for various necessary amendments to the present bill.

GENERAL business conditions have improved somewhat since the last appearance of the World and there is every indication that there will be marked betterments as the year grows older.

President Taft will work for an early adjustment of the new tariff bill and it is believed that by June 1st, Congress will have agreed upon the new tariff schedule.

It is to be hoped that this prediction will come true for there is certain to be some unrest as long as Congress is in session, for a readjustment of the tariff.

This country has prospered under a form of protective tariff and while there is no reason to believe that there will be a radical departure from the present schedules in the new law, yet, as long as there is agitation there is also doubt as to the outcome of national legislation.

The quicker this matter is settled the better it will be for all industries and it will be an excellent thing for business men in every section of the country, to urge upon their representatives in Washington the necessity of an early arrangement, and that no filibustering should be permitted.

IT is probable from the sentiment that is manifested in all parts of the country that a tariff commission will be appointed whose duty it will be to secure information and make suggestions to Congress as to changes desired in the tariff schedule. A commission of this kind to be appointed without change in our Constitution, in other words, would be a committee without power save to recommend, but if it become an unwritten law that Congress should accept the recommendations made by this committee, then the full purpose of the people would have been accomplished, and that is to take the tariff wholly out of politics.

In that way there could be no radical changes, and great disturbances of business conditions would be avoided in the future.

It must be admitted broadly that the people favor some move of this kind and a tariff commission simply as a board to investigate and recommend, is gaining in favor daily.

HAS SIGHT RESTORED.

Wife of Popular Member of the Trade Has Had Successful Operation Upon Her Eyes.

The many friends of A. O. Petit, president and treasurer of the Edisonia Co., Newark, N. J., will be pleased to learn of the successful operation which has been performed on Mrs. Petit's eyes, whereby sight has been completely restored to her.

There are many members of the trade who were present at the convention at Atlantic City who will recall meeting Mrs. Petit. She is a lady who maintained at all times a sweet resignation, notwithstanding she was visited by that terrible affliction—blindness.

During the jobbers' convention a great many members of the trade met her, and all were impressed with her charming womanliness.

Mr. Petit has been in receipt of many letters of congratulation from his friends throughout the trade who have learned of the restoration of sight to Mrs. Petit.

Mr. and Mrs. Petit will visit Atlantic City about Easter time, and it well may be imagined that their sojourn at that popular resort will be infinitely more pleasant than the last one, when Mrs. Petit was unable to enjoy the charming views which were apparent to others.

THE "TALKER" IN THE CHURCH.

Through Its Use a Full Choral Service Is Possible—Will Not Displace the Popular Young Curate—He Is Indispensable.

The London correspondent of the New York Sun, in his breezy letter of Sunday last, said:

"If for our amusement the gramophone brings the concert platform to the domestic hearth, why should it not serve equally well for devotional purposes and bring the pulpit to the home? This bright thought has been acted upon by a firm of gramophone makers, with the result that it is now possible to purchase records of the whole of the morning or the evening prayer service, intoned in the best church method, for $10.

"Instead of having to go abroad in all sorts of weather and sit in a draught in an uncomfortable pew, it is thus possible to hold a service at home and enjoy it in comfort at one's own convenience. The Church Times, which is by no means addicted to flippancy, points out the inently winds up the machine, and without further expense of curate, choir or organist a full choral service can be beautifully rendered in thirty-two minutes.

"Those curates who in their alarm see this mechanical parson snatching the bread out of their mouths can comfort themselves with the reflection that they will always have on their side those church-goers who form a considerable part of their congregation. There is no man who appeals more to the average impressionable young woman than a nice young curate—unless it is a soldier in uniform."

FAVOR A PATENT COURT.

House Committee Reports Bill Providing for a New Tribunal.

(Special to The Talking Machine World.)

Washington, March 3, 1909.

A bill to establish a United States Court of Patent Appeals was favorably reported from the House Judiciary Committee to-day by Representative Tirrell (Mass.).

It provides for a court of five members, to sit in Washington, the Chief Justice to be appointed by the President and the four Associate Justices to be designated from among the Judges of the Circuit and District Federal Courts by the Chief Justice of the Supreme Court of the United States. Two of the Associate Judges will sit for three years and the other two for six years, after which they may be redesignated for six years.

This measure has been urged by the American Bar Association, Boards of Trade, and manufacturing associations for ten years, and is the result of the most careful investigation of all conditions by many of the ablest minds of the country.

TWIN CITY TRADE HAPPENINGS.

Trade in Talking Machine Circles as Good as Any Other Industry in the Northwest—Dyer's Splendid Business—Other Concerns Making Favorable Reports—Much Sympathy for T. C. Hough Who Has Retired.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, March 7, 1909.

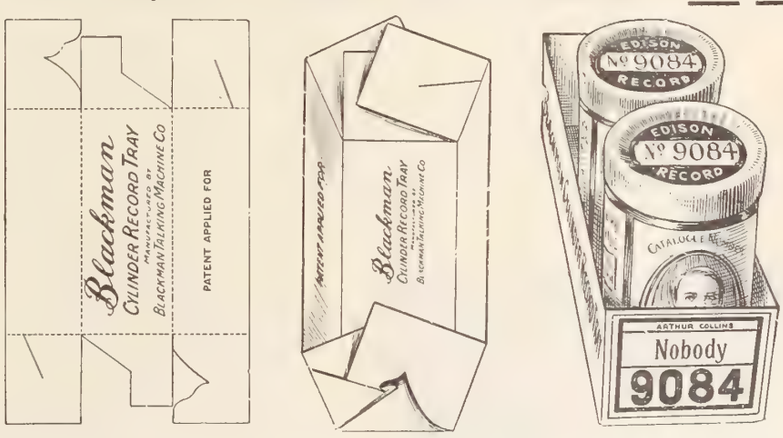
Talking machine trade in Minneapolis and St. Paul is one that displays as much life as any commercial line represented in the Northwest. The large house of W. J. Dyer & Co., in St. Paul, which distributes generally over the West, has been doing and is doing splendid business, both in the city and in the country.

Over in the other twin, where the big houses are the Minnesota Phonograph Co. and the talking machine department of the New England Furniture Co., trade has been good. It is reported much better than for the corresponding period of 1908, with all the standard lines represented in the volume of sales.

T. C. Hough, the pioneer dealer in Minneapolis, has retired and unless plans ar changed, will ask for relief from financial burdens through the courts. He claims discrimination against him on the part of certain manufacturers. Mr. Hough has been in the trade for more than fifteen years, and there is much sympathy for him in the music trades.

IMPROVE YOUR SYSTEM
AND
INCREASE YOUR RECORD SALES
BY USING
THE BLACKMAN CYLINDER RECORD TRAY
(Patent Applied for)

A Record Tray With Record Label for Less Than One Cent



The BLACKMAN Folding Trays for Cylinder Records are shipped FLAT and can be FOLDED into STRONG TRAYS in a few seconds, as shown above. This tray, with Rapke Label, makes a handsome looking record stock and a system you can't beat. The labels act as Silent Record Salesman and the customer can point to the record he wants to hear. Adopt this system and your sales will not only increase but it will never take more than a few minutes to make up a Record order.

THE BLACKMAN FOLDING TRAY USED IN THE SYRACUSE WIRE RACKS
enables you to carry a large stock in a small space, and also use the Rapke Label. We furnish wire racks at regular prices, either wall or revolving style, with opening to accommodate Blackman Trays. See illustration in advertisement of Syracuse Wire Works on page 15 of this issue. Write for prices.

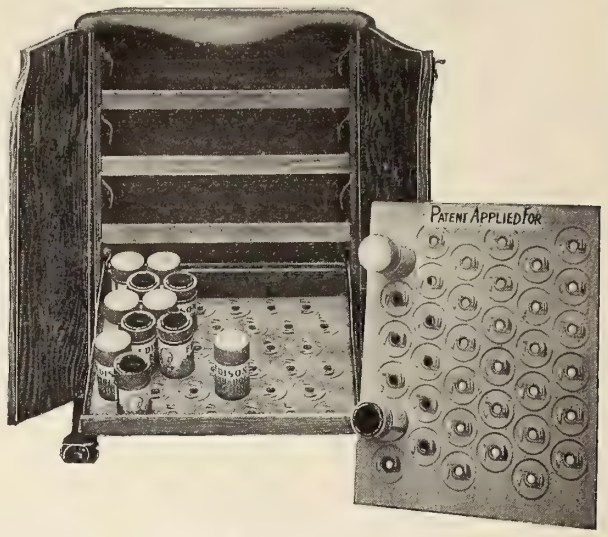
BLACKMAN TALKING MACHINE CO.
J. NEWCOMB BLACKMAN, Pres. "THE WHITE BLACKMAN" 97 CHAMBERS STREET, NEW YORK

Are You Cabinet Wise?



No. 725. Showing the Amberol

In every trade there are certain names which stand as representative of all that is best in that industry.

It is the same in the cabinet line, and whenever the name of Herzog is mentioned in cabinet circles it at once means the hall mark of cabinet merit.

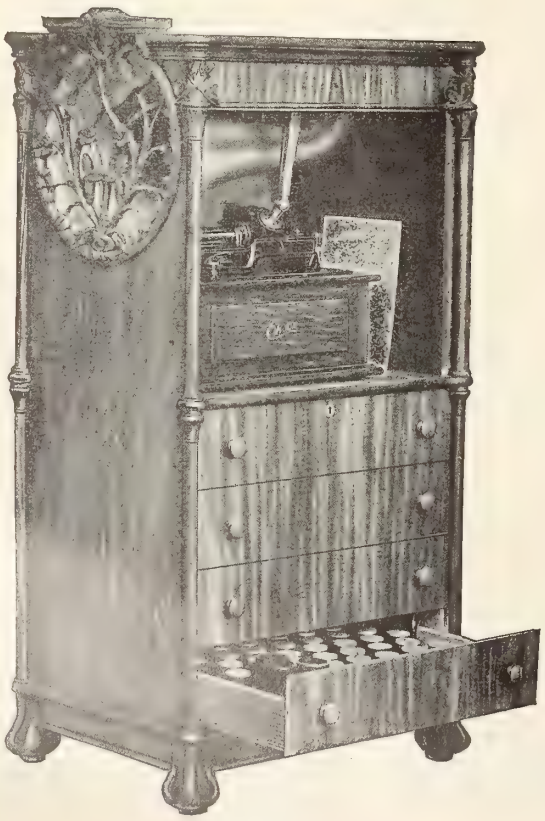
The originality of design, the excellence of finish, the perfection of detail work, has won for the Herzog cabinets a splendid position.

With the Herzog line you can cater to every line of trade.

If you have a customer who desires a cabinet to match furniture of a particular art period, you can meet his wishes with the Herzog line.

Talking machine men understand full well the advantage of buying from originators, not from copyists.

Our line of cabinets match any and all makes of machines.



No. 742

We say to the dealer and to the jobber: If you have the Herzog line in stock you can not only meet any competition successfully, but you can meet the demands of the retail purchasers in such a way that you annihilate competition.

Now, these are points worthy of consideration.

Get the best of the Spring trade, and get the best trade for all seasons, for that matter. You can if you carry the Herzog line.

HERZOG ART FURNITURE COMPANY

SAGINAW, MICHIGAN

WITH THE CLEVELAND TRADE.

Business of a Seasonable Nature—High Grade Outfits in Great Demand—Devineau Affairs—Denslow Buys the Rankin Store—Amberol Records in Good Demand—Tinker Succeeds McNulty at the May Co.'s—Piano Dealer Miltner Takes on the Columbia Line—To Manufacture the Ideal Horn.

(Special to The Talking Machine World.)

Cleveland, O., March 8, 1909.

The fraternity of talking machine dealers in this city are doing a seasonable business, although the members express themselves anxious for more prosperity activity. In the aggregate a large number of the higher-grade outfits, with Victrolas, Graphophones, and the new Edison Amberol machines were disposed of during the past month. A considerable livening up of trade is under way this month, and a fine spring business is anticipated.

The self-expatriation of Louis Devineau has resulted in closing up the International Talking Machine Co.'s store in the Taylor Arcade, on a claim of $299 held by G. J. Probeck & Co., when it became known he was not to return from France. Devineau's stock in the company was attached and the stock of goods and fixtures taken possession of by the court, on complaint of the Probeck Co. The furniture in his apartments was sold to pay rent.

A. F. Peebles, president of the Akron Graphophone Co., commemorated his own and Washington's birthday with friends in the city. He said they were doing a very nice business for a new concern—quite as good as had been anticipated. He said: "We are gradually getting the record business of Akron and making new friends and patrons every day. The people of Akron are well-to-do, cultured and liberal patrons of our trade."

Mr. Fintze, of the Ball-Fintze Co., Newark, O., was an attendant at the Automobile Exhibit here during the week of February 22-27. A. R. Schade, representative of the company, was with Mr. Fintze.

Mr. Goldsmith, representative of the Victor talking machine, was in the city February 25. He reports the talking machine business improving in all the towns he visited.

Geo. J. Probeck, of the G. J. Probeck Co., is confined to his home with a serious case of erysipelas.

A talking machine store is advertising machines "to be given away, the recipient to pay only the import duty." The advertiser says, "only one to a person." One would probably be all they would ever want.

C. J. Ross, formerly manager of the Federal Mfg. Co., is negotiating for the manufacture and sale of the Ideal horn. The concern has been closed since the departure of Mr. Devineau, president of the company.

"Business has continued very good for some time," said W. J. Roberts, Jr., "but has slowed down a little in the last week or two. We are making sales of moderate-priced machines and a number of the higher-priced, including Victrolas. The call for records—with an increasing demand for Amberols and Red Seals—is excellent."

C. H. Denslow has purchased the talking machine store, 27 Taylor Arcade, formerly conducted by Miss Edna Rankin, and is continuing the business at the old stand. Mr. Denslow is an energetic young man, who has had considerable experience covering the talking machine field, both on the road for W. C. DeForest, of Sharon, Pa.; with the Eclipse Musical Co., of this city, as well as in the retail trade. He stated business had opened up fine and that the prospects looked very bright. The store presents a cheerful appearance and has been suitably arranged for demonstrations. As Mr. Denslow says he believes "in push and hustle 52 weeks in the year," he will undoubtedly meet with success.

Collister & Sayle report business seasonably active in both the retail and jobbing departments for Victor goods. They are having an active demand for the March list of records, and the machine trade is improving. The popularity of the Victor double-faced records is growing and the company carry a full list.

The Geo. J. Probeck Co. report a considerable increase in both the retail and wholesale departments. The management stated that business was fine, and that they made sales of more machines the last week in February than any week previous to the holidays. There is also a growing demand, it was said, for Columbia Indestructible cylinder records. The company are the exclusive distributers of Columbia goods in this territory.

W. H. Buescher & Sons report an excellent sale of both Victor and Edison machines and records for the past three weeks. Mr. Buescher said they were getting a very desirable high-grade patronage, since their removal to the present fashionable locality and attractive quarters.

The Eclipse Musical Co. report business in both the wholesale and jobbing line of Edison and Victor goods, as showing continual improvement.

B. L. Robbins & Co., the Arcade talking machine dealers, say trade is very good. Mr. Robbins speaks in high praise of the Amberol records and says they are daily growing in favor.

At the May Co.'s business in the talking machine department is moving along finely. Harry L. Tinker, in charge of the department, succeeding Mr. McNulty, who resigned March 1, says trade is especially good in Edison machines and records, and generally has shown considerable improvement in the last two weeks. He said the March records were taking well and selling readily.

The Hunter Jewelry Co. say they are having a fairly good talking machine trade, and that the new Victor double records are selling well, as are also the Edison Amberols.

Brown Bros. report business is good in both machines and records. During the past three weeks sales of a number of machines were made and the record sales surpassed that of any previous period this year. The company have a fine demonstrating room, and this department of their business is making good headway.

F. R. Miltner, piano dealer, 5371 Broadway, has just put in a full line of Columbia goods as a side line. He says trade has opened up very satisfactorily and prospects are most encouraging.

At the Hartwell Phonograph Store business is reported increasing and very satisfactory. "We have been selling a good many small machines lately," said Mr. Hartwell, "and the record trade, as also repair work, is good. We have just put in a full line of Zonophone records and now handle the Victor, Edison and Zonophone goods." Mr. Hartwell has invented a new sound-box diaphragm, which gives a clear, mellow tone, eliminating the scratching sound, and is pronounced by experts a decided improvement.

Business is reported rather quiet at the Gottdiner & Wicht Co.'s store. Demand for records was said to be improving, and a better business generally anticipated the coming spring.

John Reiling, successor to the West Side Columbia Phonograph Co., stated that trade was good and had materially improved within the last three weeks. He says he is having a good run of business in both cylinder and disc records, and expects soon to stock up with a full line of records in the foreign languages, as he has a large foreign clientage.

Aldrich, Howey & Co., 2120 Ontario Road, are doing a nice business, and have in recent weeks made a good many sales of the best and cheaper grades of graphophones. They carry a complete line of records, and affording ample demonstration facilities, are securing an exceedingly good patronage.

R. F. Rocknack, 5825 Superior avenue, is having a fine trade in Victor machines and records. He is preparing for a good spring business

The moving picture interests of Cleveland (there are over 100 moving picture theaters in the city), recently occupied six columns of advertising space in the Daily News. In good-sized type, it was a disquisition on the subject of phonographs and moving picture machines, showing them as a tremendous force for culture and amusement. The publicity was a contribution from the various theaters.

The Original House

We were the FIRST JOBBER of the Edison Phonograph and Victor Talking Machines in Philadelphia and have ever since maintained our position of "FIRST." We are FIRST in securing anything new, FIRST in making prompt and satisfactory shipments, and FIRST in caring for your interests.

WE INTEND TO CONTINUE FIRST AND IF YOU ARE NOT DEALING WITH US "GET NEXT."

MILWAUKEE'S BUDGET OF NEWS.

Spring Trade Opens Up in Lively Fashion—General Business Close to Normal and Money Easier—Personal Notes of Interest—How Various Houses Regard Conditions—Newsboys "Boosting" Columbia Graphophones—The Hoeffler Mfg. Co.'s Attractive Window Display—Amberol Records Popular—Other Interesting News of the Month.

(Special to The Talking Machine World.)

Milwaukee, Wis., March 8, 1909.

Spring trade in both the retail and wholesale lines has already opened up in the Milwaukee and general Wisconsin field. While there is usually not a noticeable increase in the spring business in the talker line, dealers say that this year trade has taken on an excellent turn. The general opinion seems to be that there will be a steady increase from now on until June, when one of the heaviest early summer trades in the history of the Milwaukee business is expected. General business, industries and manufacturing, is fast returning to the normal, money is becoming more plentiful, and prospects were never better. Collections are very satisfactory and cash payments seem to be more in evidence as time goes on.

A. N. Francis, recently retired from the contracting department of the interior decorating business, has been made head of the credit and collection department of the Milwaukee branch of the Columbia Co.

William Schmidt, formerly with Lawrence McGreal at Milwaukee, and now traveling representative of the Victor Co. for the State of Iowa, has now been transferred to Wisconsin territory, with headquarters to be at Milwaukee.

Lawrence McGreal has returned to town after a ten days' trip to New Orleans and other southern points with the Rose Marching clubs of Milwaukee. The party included Mayor Rose and 125 of Milwaukee's leading business men, and the trip was made primarily to advertise Milwaukee and to further its commercial interests. Mr. McGreal did more than his share in advertising Milwaukee as well as pushing the interests of his talkers. An Edison and a Victrola were taken along, the party was entertained, and records were taken of speeches made by prominent people at the different stopping places.

The new March records are proving to be winners with the Milwaukee trade. Demand for the higher class of records is still strong, and indications are that the more expensive records are filling a most important place in the field.

A substantial talking machine business of late has been reported by the Joseph Flanner music house, Milwaukee. A successor to Charles Iddings, former manager of the "talker" department, has not as yet been chosen, and the various employes of the establishment are filling Mr. Iddings' place.

A steadily growing business in the talking machine field is reported by the Wright music house at Walworth, Wis. The firm recently disposed of a $225 Columbia machine to Orcutt Bros., of Fontana, Wis., who have installed the talker in a pavilion at that place, where it will be kept busy during the summer resort season.

It is only a little more than a year ago that the Boston department store, in this city, took up the Victor and Columbia lines, but in that time an excellent business has been built up. The instalment plan of $1 weekly is being followed in the talking machine department of the store, and is resulting in a big sale of machines. Jobbers believe that the department stores are receiving an excellent share of the retail trade of the city. With unlimited capital back of the big stores, reasonable terms are allowed, while all classes of trade are reached with practically no extra effort.

"The new four-minute Amberol records are going a long way in making the Edison talking machine even more popular than it has been in the past," said C. C. Warner, well-known Eleventh avenue dealer. "While the growth of the talking machine business has been very great since its inception, I believe that the next few years will witness marvelous strides made. The spring business is proving to be very satisfactory, and indications are that the present year will exceed all others for a heavy talking machine business in Milwaukee."

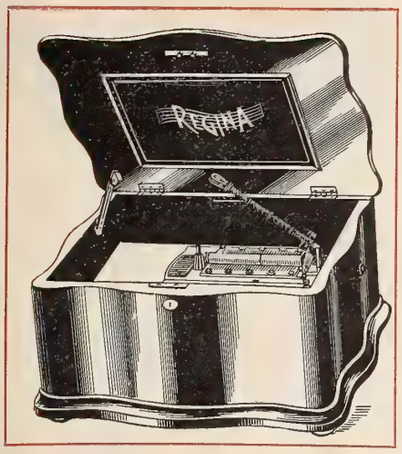
The window display recently made by the Hoeffler Manufacturing Co. is attracting much attention. Machines of the Edison and Victor line, cabinets, records and attachments have all been arranged in a novel manner by J. H. Becker, Jr., manager of the talking machine department. Attractive window displays are a strong point with the company, and the feature always brings excellent business.

Just as the "gallery gods" are an actor's best friends, so by a recent experiment, the newsboys of the Milwaukee Journal have proved to be the best "boosters" for the Columbia graphophone. "The thought occurred to me that if I could get the 'newsies' talking about our graphophones it would be the means of securing publicity that would be hard to beat," said A. D. Herriman, manager of the local branch of the Columbia Co. "My opportunity came last Sunday, when the Journal gave its weekly entertainment to the newsboys, which was attended by more than 500 boys. The Twentieth Century graphophone was enjoyed by these little fellows, just as much as the black-faced team or the cowboy quartet. When the Columbia part of the show opened up with 'Turkey in the Straw,' a bigger hit could not have been made, even if Billy Golden had been there in person and sung the song for them. 'Mandy Lane' and the 'Rag-Time Drummer' on the Columbia indestructible record followed, and received their share of applause. The show ended with 'Rainbow,' accompanied by a whistling chorus of 500 happy boys. They wanted more, but our time allowance was up, and after the deafening applause subsided the management announced that I had promised to give more music at the next entertainment."

William P. Hope, Wisconsin and Upper Michigan representative of the National Talking Machine Co., was a recent visitor. Mr. Hope is now traveling in southwestern Wisconsin and meet-

WURLITZER

Appointed Exclusive Regina Jobbers



We have been appointed by the manufacturers exclusive jobbers of Regina Music Boxes.

Dealers in the Middle West and West can save money by ordering of us direct.

THE REGINA has been on the market for almost 30 years—far longer than talking machines. There is absolutely no prejudice against it. You see it advertised on the same large scale as Victor and Edison. It has been awarded the highest honors at all the great expositions; is as standard as the piano, and there is a demand for one in every home.

The REGINA plays from indestructible steel tune discs, or records, which are interchangeable, the same as disc talking records. The music is as sweet as a harp and there are thousands of tunes—new ones monthly.

The REGINAPHONE is a combination of a REGINA Music Box and a disc Talking Machine, and enables you to offer the two instruments in one at about the price of one alone.

You do NOT have to order a large stock of REGINA goods to become a dealer. A machine or two and a small supply of tune discs are all that is required. You can increase your stock as the department grows.

Dealers' discounts, same as on talking machines. Write to-day for copy of handsome REGINA catalog showing the machines in colors, and our special agency offer.

The Rudolph Wurlitzer Co.

CINCINNATI and CHICAGO

Two Points of Supply; Order from the Nearer

Victor Edison and Regina Jobbers

ing with excellent success in the Edison lines.

James Selkirk, well-known talking machine dealer at Clinton, Wis., was a recent Milwaukee visitor.

Some encouraging sales of the Edison business phonograph were reported of late by the Hoeffler Mfg. Co. J. H. Becker, Jr., manager of the talking machine department, is handling the Edison business line and is giving special attention to this growing branch. Manufacturers, business men, professional men and others are showing their appreciation of the machine by placing some excellent orders.

A MILLION DOLLAR ORDER

Recently Booked by John H. Dorian in the Far East for the Columbia Phonograph Co.—Is Undoubtedly the Largest Single Order Ever Placed for Machines and Records—Mr. Dorian Doing Effective Work in China.

What is undoubtedly the largest single order on record in the talking machine business is that recently booked by John H. Dorian, manager for the Columbia Phonograph Co., General, in the Far East, namely, for $1,000,000. Speaking of it to The World, Edward N. Burns, manager of the Columbia Co.'s export department, said: "The order calls for nearly a million dollars in machines, double face and single records, and it was placed by an American company—the name it is needless to mention—the largest distributers of general merchandise in that part of the world, who have a fleet of house boats, which traverse all the principal rivers in China, and whose warehouses and depots are located throughout the interior, at points inaccessible to the ordinary traders. In fact, some of their outposts are so far inland that it takes fourteen days by camel to reach them.

"We had been working on the order from the home office for several months, and Mr. Dorian went to China to close the deal, which he did. It was through his superior finesse that the order was secured, and therefore the credit belongs to him. In our judgment Mr. Dorian is the best talking machine man in the business, from the buying and handling of raw material, to the process of manufacturing, and the marketing of the finished goods.

"This is the first time any talking machine company has been able to reach the interior of China. Heretofore we have only been in a position to sell in the treaty ports, that is, along the coast. Now the Columbia Co. will place their goods on sale in every part of North China, and for the first time talking machines will be shown in that hitherto exclusive section of the great Chinese Empire. You must remember there are two great classes in China—the Manchus, who are the ruling or dominant section, occupying North China, which they never leave. The Cantonese are the lower class, living wholly in South China, and they are the Chinese we see in this country and other parts of the world. All the records in this million dollar order are in the Manchu dialect, and the originals were recorded in Tientsin, Chefoo, Pekin and Shanghai, because, as I said, a Manchu never emigrates. Further, the records were made by people whose voices were never recorded before and probably never will again, and this was accomplished solely on account of the acquaintance we have there. The records will all be songs with instrumental accompaniments, mostly songs that have been sung for thousands of years. A few are comparatively modern selections.

"Special labels are used, the trade-mark or 'chop,' as it is termed in China, which is a horseshoe in this particular instance, being embodied in the design. There are no trade-mark laws in China, the recognition of one in business being an act of courtesy only. The labels on this particular order, the differences being to designate the kind of record, are to be (1) solid gold with black printing, (2) royal purple with gold lettering, (3) turkey red with gold lettering. Two shipments, each of which contain several thousand packages, have already gone forward. The third goes about March 15, with others to follow. Another innovation in connection with the introduction of our goods is that they will be advertised and exploited throughout North China in the same manner as it is done in the United States; that is to say, large posters of striking design and coloring—part of which will be finished here and the remainder over there—will be distributed everywhere, and the newspapers will also be called into play with effective advertising. This has never been done before.

"A retail store, on an elaborate scale, has been established in the Chinese quarter of Shanghai, which will be headquarters for the general distribution of the machines and records. It will be under the personal management of C. D. McGrath, who for many years had charge of the entire interests of A. A. Vantine & Co., New York, in China and Japan. In fact, Mr. McGrath will look after the distribution of the goods, or rather of the talking machine department of the company placing this gigantic order, and which, by the way, is their first venture in this line of business, so you will recognize the many novel factors in connection with the enterprise."

AUSTRALIAN POSTAL PACT MADE.

Weight of Packages Increased to 11 Pounds by Washington Agreement.

(Special to The Talking Machine World.)

Washington, D. C., March 5, 1909.

The Postoffice Department has reached an agreement with Australia whereby the weight of parcels post packages which can be exchanged between the two countries has been increased from four to eleven pounds.

The postage rate is to be 12 cents for each pound. The agreement will become effective March 1.

William Dorsett, talking machine dealer, has sold his stock to C. J. Jacobi & Co., Alton, Ill.

The Edison Phonograph Plays Amberol Records

Amberol Records are a new Edison Phonograph feature. No other instrument can play them and no other instrument offers a feature which means so much to your trade.

A Record that plays twice as long as a standard Edison record at a trifle additional cost is a great selling point for the Phonograph as well as for the Records.

Are you stocked with Amberol Records? Are you getting the new Amberols as they come out each month?

Are you demonstrating them and putting back of them the interest and enthusiasm they warrant?

If not, you are letting a big opportunity slip by. The time to make the most of a good thing is while it is new.

National Phonograph Company

59 Lakeside Avenue, Orange, N. J.

The Edison Record Making Talent

Every Edison Record is an argument for the Phonograph. Each month a great array of famous artists is represented.

It is one thing to secure such talent; it is another thing to get from that talent Records that do them justice.

This is done in every Edison Record.

Have you noticed the artists who are contributing to your selling possibilities?

Have you brought them to the attention of your customers?

Are you equipped to meet every call for Edison Records?

Keep up your stock and your enthusiasm.

Remember, there is a nearby jobber who can supply you promptly with Edison Phonographs of all styles and Edison Records of every number.

National Phonograph Company

59 Lakeside Avenue, Orange, N. J.

A GLORIFIED YANKEE INVENTOR

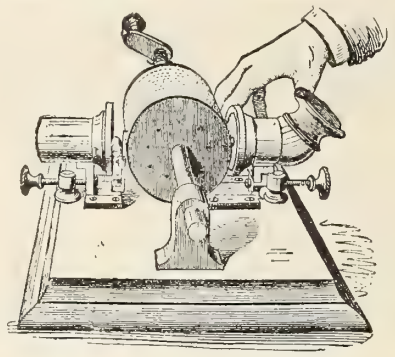
Is Thomas A. Edison, Who, by Real Genius, Patience and Energy Has Raised Himself to an Enviable Position Among the Most Distinguished Scientists of His Time—His Activity Is of Wide Range and Conquests of the Practical Arts Are Extensive and Varied.

As an inventor, Edison's chief characteristic is his pertinacity. "Genius is 2 per cent. inspiration and 98 per cent. perspiration," is an epigram of his, which has been worn threadbare by much newspaper use, but which contains the whole story of his intensely active career. Edison is a utilitarian to his finger tips. He never yet invented a machine that could not be employed in everyday life, observes the Scientific American in the first of a series of articles on "Impressions of American Inventors."

He is a glorified Yankee inventor, a mechanic of real genius who, by dint of rare patience and indomitable energy, has raised himself to an enviable position among the most distinguished scientists of his time. Despite the exceedingly practical bent of his faculties, he is a man of large ideas with a wonderful gift of what may be termed scientific penetration. Few engineers and physicists can grasp with anything like his swiftness of perception the meaning of simple phenomena, often accidental in their origin.

The phonograph, for example, which, although not his greatest invention, is probably the most marvelous in the eyes of the public, was suggested by experiments made with the telephone and automatic recording telegraph. He was working on a machine provided with a disc of paper, similar to the present disc talking machine. On the traveling arm was a magnet which had an embossing point which embossed or indented dots and dashes on the paper, the platen having a grooved volute spiral on its surface. After recording Morse signals a contact point swept over the record, and the indentations gave movement to the make and break and reproduced the signals on another line. When run at high speed, it would give a humming sound.

He knew from the telephone about the movements of the diaphragm, and had caused his voice to work a ratchet wheel and toy figure. Then he conceived the idea of indenting by the voice, and reproducing the sound by means of the indentations. The machine was made, but in cylinder form. Then he decided to make a talking machine—with what success everyone knows. When the first operative machine was produced, he packed up the instrument and came to the office of the Scientific American. Without ceremony he placed the machine on the editor's desk and turned the crank. The machine literally spoke for itself. "Good morning," it said.



EDISON'S FIRST PHONOGRAPH.

"How do you do? How do you like the phonograph?" And thus the editors of that paper claim to have constituted the first public audience that ever listened to the phonograph.

In every one of the hundreds of inventions that Edison has patented, the method of procedure (an object lesson to every inventor) is always the same. He invariably begins his investigations by a thorough course of reading, fully conscious that he is not the first in the field and that he must know where others failed. After a thorough review of the subject he begins actual work—an expert, who carefully avoids covering ground which has already been explored and who begins where others abandoned investigation. Experiments are made by the hundred and thousand. Model after model is built. Failure succeeds failure, until further efforts seem hopeless. For all that more experiments are made, and more models built. At last an experiment is conducted or a model constructed that seems faintly encouraging. A less experienced inventor would be elated. Edison, however, regards the favorable result with suspicion. Not until the partial success has been confirmed by many repetitions of the experiment is he convinced that something has been achieved.

The activities of Mr. Edison have been of such great range, and his conquests in the domains of practical arts so extensive and varied, that it is somewhat difficult to estimate with any satisfactory degree of accuracy the money value of his inventions to the world; but such facts as are available are abstracted from the forthcoming "Life of Edison," by Frank L. Dyer, president of the National Phonograph Co., and private counsel to Mr. Edison, in collaboration with T. Commerford Martin, editor of the Electrical Review. Aside from his phenomenal discoveries in electricity and their practical application, which alone run into many millions of dollars, the calculations that will interest the trade more particularly may be based on the phonograph, as an illustration only. At Orange, N. J., may be found the National Phonograph Co., the Edison Business Phonograph Co., the Edison Phonograph Works, the Edison Manufacturing Co., and a couple of other concerns. The importance of these industries will be apparent when it is stated that there are upward of 3,600 people employed, and an annual payroll of about $2,250,000.

There have been upward of 1,310,000 phonographs sold during the last twenty years, with and for which there have been made and sold no less than 97,845,000 records of a musical or other character. Phonographic records are now being manufactured at Orange at the rate of 75,000 a day, the annual sale of phonographs and records being approximately $7,000,000, including business phonographs. The figures given represent only about one-half of the entire business of the country in phonographs, records, cylinders, and supplies.

Taking next his inventions that pertain to "moving pictures," it is found that from the inception of the moving picture business to the present time Edison has made upward of 13,100 projecting machines and many million feet of film carrying small photographs of moving objects. Although the moving picture business is still in its youth, it calls for the annual production of thousands of machines and many million feet of films in Mr. Edison's shops, having a sale of value of not less than $750,000. The annual product of the Edison Manufacturing Co. in this line is only a fractional part of the total that is absorbed by the 10,000 or so moving picture theaters and exhibitions which are in operation in the United States at the present time, and which represent an investment of some $40,000,000. Licensees under Edison patents in this country alone produce upward of 60,000,000 feet of films, containing more than a billion and a half separate photographs.

To recapitulate these two great fields of industry in the United States only, founded upon or affected by the inventions of Mr. Edison, the following figures are given: Phonographs and moving pictures represent an investment of $10,000,000, producing an annual gross revenue or sales of $15,000,000, employing 5,000, with annual payroll of $6,000,000. Moving picture theaters—$40,000,000 invested, annual sales, $80,000,000; employes, 75,000; payrolls, $37,000,000.

It is reported that a large talking machine factory has been erected in Kawasaki, near Yokohama, Japan, by an American importer of machinery of Yokohama, who believes that as the import duty on machines and records is 50 per cent. ad valorem, a considerable saving can be effected by making the goods in that country.

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

TRADE HAPPENINGS IN ENGLAND.

An Optimistic Spirit Prevails and People in All Lines of Industry Are Looking Forward to Better Times—High Class Machines and Records Most in Demand—Many Evils to be Remedied—Patriotic Spirit Aflame—Lauder Chats of His Trip—Records of Carrie Nation—Premier Co. in New Quarters—A Visit to Cambridge Heath—The Stroh Violin—Recent Record Lists Contain Many Good Things—Increasing Demand for Amberols—How Advertising in World Brings Results—A Pathe Freres Suit—Anent Price Cutting—New Hornless Disc Machine—Reports from the Provinces do Not Show an Encouraging Condition of Business.

(Special to The Talking Machine World.)

London, E. C., March 5, 1909.

There are indications which point to a revival in general trade circles, and for the first time in many months people speak optimistically of the future. In many trades better times are reported, but unfortunately the talking machine business cannot be included, for since Christmas trade conditions throughout England have been very flat, so much so, that almost every day brings its quota of commercial troubles. Here's the president of the Board of Trade's view, which is somewhat radical, it must be admitted; he says: "I do not look upon a creditor as a public benefactor. The mere fact that he was a creditor showed that he had been guilty of misplaced confidence, and that therefore he was not altogether entitled, as many thought, to claim state protection." Good, isn't it? Only unfortunately we have to purchase state protection, which very often turns out anything but a profitable purchase.

From reports received from various talking machine traders it would seem that a goodly portion of the non-season business is likely to be of good-class stuff, as there is little spare money with the great middle class just now. The Gramophone and other companies say that the expensive outfits are finding a fair demand, which is somewhat of an index of things to come.

There are many crying evils in this industry which need reform, and although an occasional attempt is made to remedy certain matters, for want of support it usually fizzles to nothing. Consequently, the same old unsettled state prevails in the trade throughout all parts of the country—each man for himself—jobbing records, cutting the price of absolutely new issues, overstocking, mainly the result of the two-for-myself, one-for-you exchange schemes, restrictive agreements, and many other things which so disorganize trade. One instance of this is found in the fact that a certain London jobber is advertising "Star" machines at 50 per cent. off list. We sincerely deplore such action—it probably means that others will follow suit.

"An Englishman's Home."

Five of the leading actors in the above stirring play went to the office of the Gramophone Co. and recorded some of the most telling parts of the play. The object of the Gramophone Co. is to help on the cause of the Territorial or volunteer army. A whole page advt. in the Mail was taken to advertise the four records which have been made, and the company offer to send them free of charge, with machine and operator, to any hall, institute or village club within twenty miles of London. Apart from this we understand these patriotic records have obtained a splendid demand, which has resulted in yet another mission of national importance for the gramophone.

Following hard upon this comes the announcement from Ascherberg, Hopwood & Crew, Ltd., that they have issued a new song by Arthur Branscombe and Bowker Andrews entitled "Our Glorious Empire Day." Both words and music are of an inspiriting nature and well calculated to arouse the patriotic enthusiasm of the rising youth.

Quick Service to New York.

The White Star Co. announce their intention of placing their two great steamships, now being built, on the Southampton-New York service.

Music in the Parks.

For the provision of music in the parks this summer the London County Council have voted £12,500, which amount includes £63 for gramophone recitals.

Lower Postage to Newfoundland.

Penny postage between Newfoundland and the United States came into operation on March 1.

Harry Lauder Returns from America.

Harry Lauder, the famous Scottish comedian, reached Liverpool February 23 by the Cunard liner Lusitania, after his five months' tour in the United States, and had a hearty welcome from a large crowd as he left the steamship to enter the express for London. Giving his impressions of his tour, Mr. Lauder said: "Since I left England I have traveled 15,000 miles. I have given 252 shows, performing every day of the week, including Sundays. I didn't like traveling and working on Sundays, but I was in Rome, and I just had to roam. Then I was banqueted no fewer than eighty-two times. I didn't leave it to them to show me how to hustle." Mr. Lauder met President Roosevelt during his tour. "The American journalists," he said, besieged me for my opinion of their President, and I told them that President Roosevelt is a man who does not care what anybody thinks about him. I did not sing before the President, but Mrs. Roosevelt attended a theater where I was appearing, and she told her husband that she had never laughed so much in her life." The comedian described his visit to Ward's Island Asylum, where he taught the inmates to sing the chorus of "I Love a Lassie," until, as he remarked, they rendered it in a way he had never heard it rendered before. When he was in the asylum a woman inmate took him on one side and whispered in his ear, "For heaven's sake, Mr. Lauder, don't pull funny faces here or do anything that will make them think you are 'a bit off the top,' or they will surely keep you in." "And that wasn't after I had sung 'The Saftest of the Family,'" he added with a twinkle in his eye. A "welcome home" dinner to Mr. Lauder will be given at the Café Monico on Sunday, March 14, Sir Thomas R. Dewar presiding.

Carrie Nation Makes Gramophone Records.

Mrs. Carrie Nation has made two gramophone records, one a little speech on the evils of smoking, the other on drink. Two moral purchases for talking machine dealers.

Premier Co.'s New Offices.

The Premier Mfg. Co. write that "in order to deal with the business with more promptitude, we have transferred the general office from 81 City Road to new offices adjoining the works at Wandsworth. Our recording department and test rooms will be continued at 81 City Road, as hitherto." All communications are in future to be addressed The Point, Wandsworth, S. W.

Arab Folk Songs Heard.

A remarkable instance of modern science coming to the rescue of one of the arts of a by-gone civilization, says The School Guardian, is found in the fact that some of the old Arab folk-songs are now for the most part heard at the desert stations by means of the gramophone.

Twenty-Inch Records.

As given in my last report, the new twenty-inch record introduced in the European market is made by Pathés. To give it the necessary stability, the record is about twice the thickness of an average ten-inch, and plays for over five minutes. The greater diameter is responsible for a purer tone in recording and reproducing, and as it is the company's intention to record dance and other instrumental music for the most part, a good summer sale for these records is assured.

New Post Office Ruling.

For an extra twopence inland letters may be sent to London from the provinces by the next available train and then posted. The Postmaster-General states that he is trying to extend the

FROM OUR LONDON HEADQUARTERS—(Continued).

arrangement for foreign and colonial letters as well.

Latest Clarion Records.

This month's "Clarion" records include a dozen good numbers of a popular character, as follows: March, "Light Horse," Premier Military Band; "The Veleta" and "The Lover's Vow," both by the Premier Bijou Orchestra; while the concert orchestra gives us "Overture 1812," and selection of "Old Standard Songs." On the vocal side we have "Father O'Flynn" and "By the Blue Lagoon," by Stanley Kirkby; "I'm Here, If I'm Wanted" and "She Sells Sea Shells," by Percy Wilson; "A Little Bit More," Jordan & Harvey; "I Want to Telephone to Mammy," Harry Fay; and a humorous selection, "The Street Musicians."

A Model Record Plant.

The Russell Hunting Co.'s works at Cambridge Heath are a model in every respect of what a factory should be. That was my impression after a visit through the various departments in company with A. Ogden and C. Stroh. The perfect equipment of the gold molding department was of particular interest, and at my request Mr. Stroh very kindly explained the whole process in gold plating a master record, the finish and appearance of which was nothing short of beautiful, so perfect is the process. From here we passed to the matrixing and on to the molding department, which presented quite a busy appearance. And that reminds me that the Sterling record, as freshly molded by the Russell Hunting Co., has received a hearty welcome on its return to the trade; good orders have been placed, and the company is established with an excellent prospect of success.

Anent These Seditious Records.

The notice published some time ago in the Press about records of an alleged seditious nature is not correct, writes an Indian correspondent. To be sure, the sale of certain records has been prohibited, but not a single one, either Gramophone or Beka, has been "confiscated" by the police or the government. The particular records objected to cannot be regarded as of a seditious tendency, but are simply songs inspired with a patriotic and national sentiment. The only grain of truth in the whole matter appears to be that in view of the present unsettled political situation in Bengal, it has been considered advisable to prohibit the circulation of such patriotic, that is, "Swadeshi" records.

The Stroh Violin.

Geo. Evans draws special attention elsewhere to that remarkable invention, "the Stroh violin." Some idea of its construction may be gathered from the advt. illustration. The vibrations of the strings are conducted by means of an ordinary violin bridge, which rests upon a rocking lever to the aluminum diaphragm and resonator. The body of the instrument is in no way employed for sound purposes; it simply holds the various parts of the violin together, and sustains the pressure of the strings. When the strings are played upon, the bridge and rocking lever vibrate accordingly, and thus every vibration carries to the diaphragm. The resonator increases the volume of sound to equal three ordinary violins. Talking machine manufacturers throughout the world find the Stroh violin the best for recording purposes, and it is also in great demand by the general public. Foreign and colonial musical instrument traders should handle this line, in which there is a good profit. Mr. Evans will be glad to furnish particulars and prices upon request.

Attachment for Standard Machine.

The Premier Mfg. Co. are about to introduce a marvelously simple attachment applicable to the "Standard" machine to play the 200-thread record. It is most ingenious and can be fixed by just the manipulation of one screw only!

Gramophone Records for March.

From the popular nature of the titles of Gramophone records for March, I should say this is one of the best lists issued, both in that respect and in the good recording which predominate throughout all the records. To name a few: "Yeoman of the Guard" (Sullivan) and "Finale 4th Symphony" (Tschaikowsky), by the band of H. M. Coldstream Guards; "Il Bacio Valse" and "Mondaine Valse," by the Black Diamonds Band; "Masaniello" overture, by La Scala Symphony Orchestra; "Of All Septembers," John Harrison; "In Native Worth" (Haydn's "Creation"), Evan Williams; "Molly Brannigan," Plunkett Greene; "Who Is Sylvia?" Horatio Connell; "Serenade" ("Don Juan") by Mons. Renaud; "Life's Gift," Mme. Jones-Hudson; "Ah, Pourquoi suis-je revenue," Mlle. Brolby; Lady Maud Warrender has sung two fine selections, the royalties for which she hands to naval charities. Harry Lauder gives us of his usual witty wit in "Mr. John Mackay," and Mr. Bransby Williams recites "The Old Man's Pipe," which I take is a sort of soliloquy to his pipe; a very interesting record this. There are other good records in the list, but I would particularly mention a banjo record, "Sweep's Intermezzo," which is a really enjoyable piece played in excellent style by Olly Oakley. Signor Timini, the new operatic tenor, also figures in this list with four titles—three sung in German, one in Italian.

The Rena Disc Machines.

The Rena new series of disc machines are characterized by solid construction, beautiful appearance, and at prices which, to say the least, are remarkably moderate. The motors are well made, and built upon a scientific principle which is entirely new to the trade. With the exception of the governor, the whole motor gear is encased in a hermetically sealed metal box, which contains sufficient lubricant for two years—on a guarantee. The matter is really so interesting that I shall take an early opportunity of explaining the Rena motor mechanism more fully.

RUSSELL HUNTING & CO.

SUCCESSORS TO

THE RUSSELL HUNTING RECORD CO., LTD.

Cables (Hunting Code) "OBOES, LONDON"

OFFICE AND FACTORY ADDRESS

17 and 19 Bishop's Road
Cambridge Heath
LONDON, N. E.
ENGLAND

Sheffield last month, addressing 350 members of the Sheffield Festival Chorus, remarked: "Have you all got a gramophone? If not, get one at once, as it is of the utmost educational value to all musicians. In listening to the records of such great artistes as Patti, Melba, Caruso, Plancon, Battistini, etc., you will hear what true, right vocal tone is. As a vocal teacher of twenty-five years' experience, and as a devotee of the great Garcia method, I can assure you of the tremendous value of this invention, and how grateful we vocal teachers are for the aid it gives us in showing our pupils what right and beautiful tone is, especially in the provinces, where it is often impossible to hear the greatest voices. I firmly believe that if all teachers of singing had a gramophone in their studios as well as the finest vocal records, as published by the City Road Gramophone Co., and could let their pupils hear the brightness and ring of good voice production, it would do more to dispel and eradicate our fluty, hooty, breathy, dull, weak English voices than hundreds of pounds spent on useless lessons and in fruitless argument and controversy." In this connection a London firm has had a special series of records made of different voices, which are used in the teaching of correct singing.

Increasing Demand for Amberol Records.

The National Phonograph Co. report a continued good demand for Amberol records, of which the first list of British titles—numbering about fifteen—will be ready in April. The company further announce their intention to omit the title announcement from all future records. The Amberol list of English selections will contain some well-known artistes and leading instrumentalists of the day, a feature which should insure an enhanced sale for these now records.

A Charlesworth Souvenir.

The effects of Miss Charlesworth, of not-over-the-cliff fame, have been auctioned as mementoes. A gramophone was said to have fetched £9, while at the last moment a dozen or so gramophone records were successfully made claim to by the lady's sister. She certainly got the best memento.

The Latest.

A tortoise shell diaphragm is the latest.

Glasgow Beats New York.

Glasgow sandwichmen now carry talking machines wherewith to announce the virtues of their wares.

Noted Artists Heard.

In the Gramophone list (for March) of operatic artistes, Mme. Melba, Saltzman Stevens and Mr. Whitehill will figure with some new selections.

E. B. Samuels in South Africa.

By the time these lines are in print E. B. Samuels will have landed in South Africa. It is his intention to fix up suitable agencies for Odeon and Jumbo records, and at the same time look up the musical instrument trade generally, on behalf of the numerous lines—pianos, organs, and other instruments—which Barnett Samuels manufacture.

Beka Co.'s World Advertising Pays.

In a recent interview with your correspondent the Beka Record Co. paid a tribute to the value of advertising in The Talking Machine World. In response to their advt. they had had replies and inquiries from different parts of the world, and only just previous to my call, an inquiry was received from a prominent trader in Japan. It all goes to prove that there is undoubtedly a large field for European manufacturers—fertile ground which is amply covered by this paper month by month, which furnishes the best medium for the introduction of talking machine goods.

Recent Beka Issues.

Among the recent Beka issues are two very fine banjo selections, "Frivolity" and "Romping Rosie," by J. Pidoux, both very well recorded, as are "Mr. Thomas Cat" and "Dollar Waltz" (from "The Dollar Princess"), by the Beka London Orchestra, "If I Should Plant a Tiny Seed of Love" and "Then We Went to School Together," both sung with perfect enunciation by Harry Trevor, and "The Dear Little Shamrock," by the Lancashire Glee Singers. In this list are also some good comics and sentimental songs, as well as other instrumental pieces.

Sunday-at-Home Service by the Gramophone.

Those who for various reasons cannot attend church have now the benefit of the morning prayer, as prescribed by the Church of England, brought right into the privacy of their home by means of a special series of gramophone records made by the late Canon Fleming. The gramophone "service" is fully choral, in eight sections—each of which occupies four minutes in the delivery—that being the average run of a single record. The whole set may be purchased for £2. There is also a splendid list of anthems, carols and hymns published for use in conjunction with the service.

Danger of Cinematograph Fires.

The danger of cinematograph fires, it is said, can now be entirely obviated by the use of non-inflammable films which have recently been invented. One is a specially prepared gelatine film which has many advantages over celluloid, while the other is a special form of cellulose film which is equally non-inflammable.

Visitors to Leipziger Messe.

The Leipziger Messe, held March 1-15, will be attended by S. W. Dixon (Gramophone Co.), Mr. Fulton and G. Murdock, A. Vischer (Excelsiorwerke), Louis Sterling (Rena Mfg. Co.), Max Samuel and A. Balcombe (Barnett Samuel & Sons, Ltd.), O. Ruhl (Beka Record Co.), F. Heilbron (Willebald Tweer & Co.), and others, whose names are not to hand.

Recent Zonophone Impressions.

The excellence of the monthly Zonophone impressions gives sufficient indication of their popularity and demand at all times. The latest records in point of quality is well up to the Zonophone standard. Here are a few good ones:

"ROBINSON'S," The Talkeries
213 Deansgate, Manchester, Eng.

Action by Pathe Freres, Ltd.

Justice Hamilton had before him March 26 an action in which Pathé Frères, Ltd. (London), sought to recover from Cedric Percy Ivatts, formerly a director of the company, £1,479, moneys alleged to be due from the defendant to the company. The defendant denied the alleged liability and made a counter-claim for money which he said he had expended on behalf of the company.

Mr. Young, in opening the case for the company, made the statement that Mr. Ivatts, who appeared to have been the active director of Pathé Frères, Ltd., and the Pathé Cinematograph Co. seemed to have been in the habit of obtaining money from the secretary of the company for his private purposes, the amounts so received being debited against him. In 1906 it appeared that these companies, which had been prosperous for a time, were in less affluent circumstances, and an arrangement was come to by which the Compagnie Générale des Phonographes de Paris—the parent company of these two—should take over the assets of both the English companies. In consideration, therefore, the Paris company was to allow 400 shares in its own company, in order to satisfy French law, 300 to go to the Cinematograph Company and 100 to Pathé Frères. A resolution to that effect was passed at a general meeting, but in it there was no mention of a resolution passed at a meeting of the Board of Directors that Mr. Ivatts should be released from a debit of £866 standing against him on the books of the company up to the 29th of April, 1905, on the ground that the money had been expended by him on expenses incurred on behalf of the company. A reapportionment of the shares to be given by the Paris company was made later on, and under that arrangement Pathé Frères, Ltd., was to receive 275 shares and the Cinematograph company 125 shares. On December 17 the Pathé Fréres company went into voluntary liquidation in order to have these arrangements carried out. Then the liquidator, as a consequence of his examination of the books, made a demand upon Mr. Ivatts for £1,479, the amount standing to his debit. In reply he received a letter from the defendant denying liability on the ground that he had incurred that liability on behalf of the company and had been released from it by the directors. It was true, said counsel, that he had been released from £800 odd of that amount by a meeting of the directors—his friends—but that release had never been assented to by a meeting of the shareholders, and so had no validity. In respect of the balance of the claim made against defendant, amounting to over £600, the defendant advanced a counterclaim for expenses incurred by him in taking a flat which was used in part by the company. Among other things defendant said the company used one of the rooms in the flat, especially well adapted for the purpose, because there was no vibration there, in order to obtain cinematograph records from singers and others. The company paid part of the rent for a time, but it now denied that it was liable for the £332 paid by Mr. Ivatts for surrender of the lease of the flat.

Mr. Lush, K. C., on behalf of the defendant, while admitting that part of the money standing to the debit of Mr. Ivatts in the books was given for his personal purposes, submitted that the bulk of it was really advanced by him for traveling and other expenses incurred on behalf of the company. When defendant found that these traveling and other expenses were being put to his personal debit he remonstrated, and again raised the point when the question of the allocation of the Paris company's shares to the two English companies was raised. The defendant then held in conjunction with his brother a considerable number of the shares in Pathé Frères, Ltd., and they could have prevented the arrangement agreed upon being carried out if they had exerted their full rights, but defendant agreed to resign his directorship in Pathé Frères, Ltd., and give up his shares to a firm so as to allow of the carrying out of the arrangement, on condition that he was released from these obligations. Evidence having been called, the hearing was adjourned.

Anent Price Cutting.

Alexander Ogden, manager of Russell Hunting & Co., this city, writes as follows: "Dear Sir—In your issue dated February 15, New York, I notice a paragraph headed 'Anent Price Cutting.' I have read this through most carefully and beg now to draw your attention to that portion setting out that Sterling records are being sold at 5d. each. This may be so, but I would especially draw your attention to the fact that those records are from a job lot which was sold by the receiver for the late Russell Hunting Record Co., Ltd., of 15-17 City road, London, E. C., and are in no way, nor yet are we connected in any way with those cutting prices. As you are perfectly aware, the business assets of the late Russell Hunting Record

Talking Machines
Records and Supplies

Export a specialty. Shippers are requested to state their requirements.

American Talking Machine Co.
31 Tabernacle St., London, England

Co., Ltd., were purchased by Mr. Russell Hunting, and the writer and we are now manufacturing Sterling records under an entirely new and improved system, which I may say has so far given every satisfaction to the general public and we are daily receiving letters of congratulation upon the quality of our goods.

"I would ask you to give this letter publication in the next issue of The Talking Machine World, so that the public, dealers and factors may be made aware of the fact that these records which are being sold at cut prices are not of our manufacture, nor yet are we ourselves in any way connected with the vendors of this old accumulated stock that is now on the market.

"We have taken the precaution and we specially advise you that we have affixed to the lid of every box containing our newly molded cylinders a new label and a certificate which clearly defines our goods from this job lot, this being done solely for the purpose of protecting the consumers of the cylinder goods that they may know the genuine Sterling record against the cutting job lines which are now upon the market."

A New Hornless Disc Machine.

A new hornless disc talking machine has been introduced into this country by Richard Bogel, 42 Queen Victoria street, E. C., which is called the Eufon. It is manufactured by the Eufon Co., Ltd., Buda-Pesth, and is the invention of Mr. Presster, its principle being "wood resonance." The chief feature of the Eufon is its compactness. Its shape is oblong, 1 ft. 2 in. long, 10 in. wide, and 7 in. high. On the top is the revolving table (capable of taking 12 in. records), and an aperture in which the soundbox is placed. In the front, occupying about half its width, is a brass grille, through which the sounds emanate. These are carried from the diaphragm through the tone arm (which is only 9 in. long) and aperture and into the portion of the case which is separated from the mechanism by a sound-board tapering from the aperture to the width of the brass grille. There is absolutely no horn whatever, and the whole can be packed into a wooden case 17 in. long and 16 in. high, this leaving room for the special case containing the soundbox. As there is no horn the diaphragm has necessarily to be larger than usual. In this case it is 3⅛ in. in diameter, and special attention has been paid to this very important part of a talking machine. Owing to the extra length of the portion that holds the needle a bridge is placed across the diaphragm which gives the necessary firmness. To suit the convenience of colonial buyers a smaller size has been made, viz., 11 in. long, 6½ in. high, and 8 in. deep. The tone of this instrument is powerful, of good quality, and there is a gratifying absence of scratching. The new instrument is attracting quite some trade attention.

TRADE SUPPLIED

TRADE REPORTS FROM THE PROVINCES

MANCHESTER NOTES.

Manchester, March 3, 1909.

In Manchester and district it was generally anticipated that trade would open out considerably after the Christmas holidays, but, so far, there has not been very much to warrant this opinion. The business generally, with most of the retail houses, has been of a steady and careful description, not sufficient, however, to make up for the past bad season. It is recognized in many quarters that although the summer season may be a fair one, trade will not resume its normal capacity much before the fall of this year.

At Messrs. Duwe's, High street, trade has been steady, and a large number of small orders have been received, showing careful buying. We understand that it is Mr. Duwe's intention to cross over to the States about April next. He will probably get in touch with some of the largest houses there, and no doubt business will result to mutual advantage.

At Messrs. Burrows', trade has kept up very well, and Mr. Burrows expresses himself as highly pleased with the sales in Apollo machines, for which he is the sole wholesale factor in Manchester. The other goods, such as Zonophone, Twins, Pathé, etc., are also having fairly nice sales.

As mentioned in our last issue, Messrs. Richardson, of Manchester and Liverpool, have opened up very extensively in Blackburn and Burnley. Having purchased the business recently carried on by Mr. A. Greenwood, they will carry complete lines of Edison, Zonophone and Twins, and as their premises are practically next door to the railway station in Blackburn (No. 1 Railway road), it will be most convenient for dealers who cannot spare the time to go to Manchester or Liverpool for their supplies.

At the "Colmore Depot," 261 Deansgate, Manchester, business is reported by Mr. Davies, the manager, as having been exceptionally good until just recently. Like others, they are experiencing a slight falling off, but, generally speaking, they are satisfied with results up to date. Their principal lines are Clarion and Pathé goods. In each case they hold a large and comprehensive stock, factoring also the Apollo disc machines, besides cabinets, etc., of various other makes. This "Colmore Depot" is a branch of the Birmingham house, Birmingham being the headquarters of the company. Mr. Davies is looking forward to the arrival of the first batch of the 200 thread Clarion records, and anticipates good sales. He handles a good range of sundries and accessories for the wholesale trade alone.

LEEDS NOTES.

Leeds, March 4, 1909.

In the Yorkshire district business has kept rather steady, although sales have not been up to expectations.

Messrs. Appleton have now settled down in their new warehouse in Aire street, and their premises are very commodious for the business they have in view, consisting of three well-lighted floors, with plenty of space. They are enabled to departmentalise the various goods. They have recently taken up the agency for the new "Rena" machines and records, and antici-

Northern Depot: 271-273 Deansgate, Manchester

FROM OUR LONDON HEADQUARTERS—(Continued.)

pate a good trade in them a little later on. Messrs. Appleton consider that their action in concentrating both the Bradford and Leeds stock in one warehouse, as they have done in Aire street, will be advantageous to the dealers all around the district.

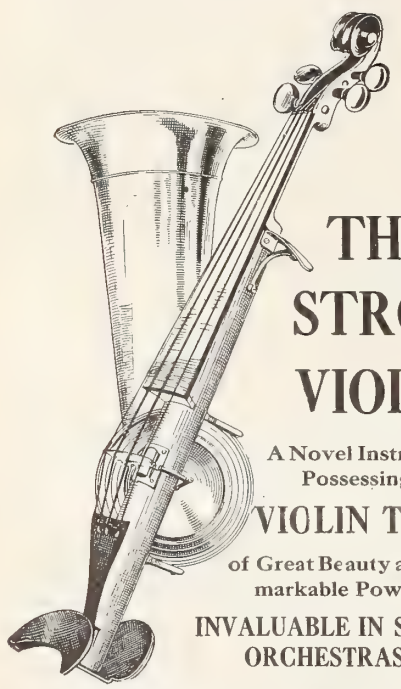
At Messrs. Scott's business was reported as moderate in volume, and although orders were slightly less than last year, in bulk, the numbers of them appear to considerably increase.

Messrs. Hilton & Co. report that they have in view several clever inventions connected with the talking machine industry, and no doubt in our next issue we shall be able to give our readers further particulars.

The Record Phone Co., Thornton Arcade, and Messrs. Jenkins, Queen Victoria street, report business as normal. Mr. Jenkins is apparently doing well in a new line of cabinet machines which he has placed upon the market. They appear to be nicely made, and Mr. Jenkins hopes that now he is manufacturing his own goods, to be more prompt in delivery than hitherto.

The Magazine Holder Co., Cardigan road, report an extraordinary good season in cabinet goods. The demand has been such that, for some considerable time, they have had to work night and day. They are now, however, getting through the bulk of their contracts, and Mr. Bleakley, the manager, is most enthusiastic about future prospects.

Mr. Kaiser (Messrs. Langes, successors) has been hustling round the North very much lately. Several good accounts were opened, and he has great expectations regarding the future. The proprietors of the Grand Central Hotel in Leeds recently purchased a £45 Klingsor. This, after carefully comparing with others, shows that Klingsors will sell. It is a magnificent instrument and gives exceedingly good results. We understand that several of the largest hotels in the North have ordered similar machines, so that Messrs. Langes are to be congratulated upon the headway they are making.



THE STROH VIOLIN

A Novel Instrument Possessing a

VIOLIN TONE

of Great Beauty and Remarkable Power.

LIVERPOOL NOTES.

Liverpool, March 3, 1909.

In Liverpool trade is not as busy as was expected by any means. The depression is still hanging over the city to a very considerable extent, and although there are faint signs of a revival of business, at present it is hardly worth mentioning.

In the wholesale trade, Messrs. Johnson report business as steady. Trading principally with the musical instrument dealers, the trade is not quite so precarious as with the bicycle agents, and the consequence is that business continues on much steadier lines with them than if they dealt with the latter class of people. They have also added to their talking machine business several good lines in musical instruments, which are, we understand, likely to be in fairly good demand.

At Messrs. Thompson, Helsby & Co.'s Pathé sales still predominate. Business is reported here as moderate.

At Messrs. Archer & Co.'s sales are uneven—one day perhaps really good and the next day poor. Mr. Archer, however, is very optimistic about the future, and believes that, as there is likely to be a revival in Liverpool of the principal industries, it will no doubt benefit trade in due time.

The Melograph Disc Record Co. have succeeded in obtaining a large order they had in view for export, and this will keep them busy for three or four months to come. Home orders, however, are very slow.

The Reliance Co. have closed up their depot, which they opened a short time ago, in Paradise street.

Messrs. Cramer & Co. report sales as steady. Their class of customers, however, are not affected by the depression, like those of some of the smaller shops, as they do a very high-class trade.

Messrs. Richmond Jones, in Bury street, have on view a nice display of Klingsor and Pathé machines, etc.

We regret to say that Jake Graham, of Renshaw street, has been on the sick list for the past three weeks, suffering from a severe cold internally. He has had to relax his attentions from business somewhat, and it will be some little time before he is at the helm again.

Mr. Cundle, of Lime street and Paradise street, concentrates upon Edisons, Zonophones and Twins. So far business with him has not been so good as in previous years, and at the present time he is experiencing, like so many other dealers, a slight lull.

From reports, generally, in Liverpool and district, we understand Clarion records have been selling very extensively.

There are one or two firms, who shall be unmentioned, in Liverpool, who seem to delight in cutting prices, not only in records, but in other goods also. For example, we saw ticketed in one shop window a reproducer which the usual trade price is £1, at 11½s. retail, and also several other articles in a like manner. We are sorry to say that where this occurs, it is in houses where they make the talking machine business a side line for two or three months only. Having got over the winter, from November to February, they then clear off everything they have in stock, irrespective of what the cost may be, or the detrimental effects caused to others in the business.

One or two houses in the talking machine business have also at the present time clearance sales, and it appears to us that this kind of business does more harm than good to the trade. Where a town like Liverpool should be an example to the trade in other districts for honest and upright dealing, it seems that its normal stability is lacking in many cases to obtain fair prices for business done.

FOR UNIFORM LAWS.

Federation Formed to Bring About Better Understanding.

The desirability of more uniform legislation in the different States has led the National Civic Federation to start a movement toward conformity. A committee, with John Hayes Hammond for chairman, was selected this week to undertake the organization of a council of 100 members to further the object in each State.

The Federation has issued a statement on the subject which quotes extracts from a speech by Prof. Edwin R. A. Seligman, of Columbia University, pointing out the national and international character, which the business of the United States is assuming through the operations of the railroads, the telegraphs and the banks. Quotations from an address by Elihu Root at Albany in 1906 emphasize the fact that an increasing burden is being thrown on the national Government. The statement says:

"The continued existence for eighteen years of the annual conference of Commissioners on Uniform State Laws, created by the different States at the instance of the American Bar Association, shows that the State executives and legislatures are fully alive to the importance of this subject. The last-named organization has been instrumental in securing the passage in thirty-five States of a uniform negotiable instruments law and is promoting other commercial measures, including a uniform food law to conform to the national law.

"This necessity for uniform legislation is further illustrated by the proceedings at the annual meetings of the National Association of the State Attorneys-General and of the State Labor Commissioners, Insurance Commissioners, etc.

"The development of the nation and the changes in conditions brought about by that development have emphasized the harmfulness of the incongruities in the law, adopted as they have been without any attempt at uniformity in regulating the same subject matter."

NOTED VISITORS TO "T. M. ROW."

It has been a long time since Henry J. Hagen, manager of the recording laboratory of the Universal Talking Machine Mfg. Co., Newark, N. J., has been a visitor in "talking machine row," Chambers street, New York. Monday, however, was the occasion for one of these rare calls, and as Henry is one of the most popular men in the trade he received a warm welcome. Another distinguished artist in the row at the same time was Cal. Stewart, the unique philosopher of Punkinville, who is now known everywhere via the records. Last Wednesday Cal. started in a vaudeville sketch, going to the Coast and into the Yukon country, and will not be in New York again until September.

SUIT OVER HORN INFRINGEMENT.

The case of Kaiser against General Phonograph Co., which appeared on the calendar of the United States Circuit Court, equity part, New York, Tuesday, means that Lipman Kaiser, director of the talking machine department of the S. B. Davega Co., of the same place, has commenced suit to sustain the validity of his wooden horn patent, which he claims the defendants are infringing. It is probable the case will not be reached until next week for a hearing, as the calendar is of unusual length.

Hot air will keep things afloat sky high for some time, then it gets chilled, contracts and becomes heavy, and then there's an awful drop.

Our credit is always good when we want to borrow trouble.

The children are your most discerning customers. Every child well treated means a grown-up friend for your store.

TRADE NEWS FROM GERMANY.

Little of an Encouraging Nature to Report—Business Not Over Active—Demand Is Principally for the Better Class of Goods—German Government Refuses to Participate in London Exhibition—Beka Co. Will Maintain Record Prices—Sauerlandt Waxes in Demand—The Condo Needle—Activity With Fritz Puppel—Doing Big Export Business.

(Special to The Talking Machine World.)

Berlin, Germany, March 1, 1909.

Regarding the talking machine trade in this country there is very little of an encouraging nature to report except as relating to the larger concerns. Very few new styles of machines are being produced, as the demand is small, the record business keeping the dealers going.

Just at this time the sale of talking machines and allied lines have suffered considerably through the fact that a number of towns have placed a tax on automatic instruments in an effort to swell the local treasuries. As this tax is heavy, the landlords, etc., have been deterred from purchasing such instruments to an even greater extent than the amount of the tax warrants.

The German government has positively declined to participate officially in the "Imperial International Exhibition of the Choicest Products of the World," to be held in London this summer, and it is stated that the French, Italian, Dutch and Belgian governments have adopted a similar course. As England does not stand very high in the estimation of German manufacturers, for obvious reasons, it is unlikely that there will be many individual exhibits made by them.

The Beka Record Co. emphatically deny the rumor that they contemplate reducing the price of their records and regret exceedingly that such a report got abroad. Their recent great improvements have added to rather than detracted from the value of the records, and the old price is still and will be maintained.

E. Sauerlandt, of Flurstedt, whose master-waxes for both disc and cylinder machines are well known throughout Europe, declares that despite general conditions the demand for his waxes indicates that the recording and record-making goes on uninterrupted and is on the increase.

The Condor needles, the "natural needle" made by Jos. Zimmermann, in Aachen, are meeting with continued success, owing to the excellent reproduction possible with them and the fact that each needle is fully guaranteed by the manufacturer.

Excelsior machines are selling very well, according to the manufacturers, the demand this season being greatly in excess of the past year's record. The aim is to give a first-class machine at a fair price, and it appears as though the Excelsiorwerke had succeeded. The loud-tone sound-box has proven especially popular with proprietors of large halls and outdoor resorts.

Fritz Puppel, G. m. b. H., of 35 Bouché street, this city, are rapidly forging to the front rank of German talking machine manufacturers. They make a specialty of low-priced disc and cylinder machines for export and exploit the line by means of a catalog in four languages, sent gratis upon request. They make a strong line of automatic machines according to American systems, all parts of which are made in their own factory. The Puppel talking machines are well known all over the world, and especially in this country, and the progressiveness of the firm makes their success well deserved.

FROM THE CITY OF CULTURE.

Talking Machine Trade for Spring Has Opened Up Briskly—Columbia Co. Move Into Their New Store on Tremont Street—Enormous Demand for Grand Opera Records—Iver-Johnson Co. and Hallet & Davis Co. Are Featuring Victor Records—Fitzgerald Sells a $1,050 Victor Outfit—New Edison Dealers—Some Recent Visitors.

(Special to The Talking Machine World.)

Boston, Mass., March 9, 1909.

Spring trade in the talking machine stores in Boston is quite brisk, and each week makes things brighter, for money seems easier and trades are being made right along on the higher priced goods among the best grade of people.

Manager A. C. Erisman, of the Columbia Phonograph Co.'s establishment here, who has just come from Detroit, Mich., says: "I have been very greatly surprised at the way the wealthy people here in Boston are buying talking machines. It is an entirely new trade that has been developed within the past three years. There has been a dropping off among the poorer class of people, but this will all come back later."

The Columbia Phonograph Co. have moved into their fine new store further down Tremont street, nearer Boylston, and it is a big improvement in every way, both in the matter of location and space, and accessibility and convenience. The company now occupies two entire floors of the building, and have arranged four fine record rooms and one large room in which nothing but grand opera records are shown.

"I have been amazed at the enormous amount of grand opera records that are being sold here in Boston," says Manager Erisman. "Why, the people seem fairly to eat them up, so large is the sale. Boston must be grand opera crazy. The most remarkable thing about our business, however, is the enormous sale we are having on the Columbia indestructible records. And we have established a number of new agents, too. You may say that business with us is booming."

The Victor line is being boomed here in town this month for the Iver Johnson Co., who have taken it on. The Hallet & Davis Piano Co., who are remodeling their building, will add a Victor department. They are now stocking up.

At the Eastern Talking Machine Co. it was reported this week that salesman W. J. Fitzgerald has broken the high-record sale which has been held for 11 years by one other member of the force. This week he sold to President Lucius Tuttle, of the Boston & Maine Railroad, a Victor Victrola and outfit of records that totaled $1,050.

and expects to sell him many more records. At the last Victor concert held by this firm there was only standing room left. The new style Victor 3 and Victor 4 have arrived and are meeting with good demand.

The International Paper Co., at Manchester, N. H., are now agent for the Eastern Talking Machine Co.

Herbert W. Royer, the Victor traveler, was here this week, and Jack Gately is reported as up in New York State selling Victors like hot cakes.

Marion Dorien, formerly manager of the Columbia's London office, and now assistant general manager, was in Boston last week and was greatly pleased with local conditions.

It was reported here last week that John O'Neil, of Lawrence, Mass., and Mr. Seavey, of Haverhill, Mass., are to take on the Edison business commercial machine.

At the Pike Talking Machine Co. a big business was reported on the Amberol.

L. H. Barbor, of Brattleboro, Vt., was a visitor here this week, coming down to see the automobile show.

HERE AND THERE IN CINCINNATI.

Favorable Trade Reports—Some Clever Publicity in Connection With the "Merry Widow" Opera at Wurlitzer's—Manager Dietrich's Report—Many Victrola Sales—Wurlitzer Become Regina Jobbers—New Disc Record Album Introduced—Other Comments.

(Special to The Talking Machine World.)

Cincinnati, March 9, 1909.

The trade report a good showing for February and early March. Improvement is one of the noticeable things about last month's trade over that of January. This fact is taken to mean that industrial conditions are slowly getting better. The workingman are not yet strong factors in the way of buying machines or of indulging in new records. For this reason the volume of instalment business is not so large by a good deal as when better times were with us. The number of cash sales are in the majority, and this leads to the conclusion that the higher grade goods are selling to the people who have surplus cash for luxuries. While the cash end of the business is satisfactory, yet the dealers are anxious to see the day when the instalment trade gets more lively. The outlook is considered fine for a good spring business in both records and machines.

Manager S. H. Nichols, of the Columbia Phonograph Co., was seen last week just before he left the city for a trip among the dealers in his territory, and speaking of trade conditions said: "The showing made by February over that of the February of 1908 is large, and confirms our opinion expressed before that the good times are now upon us. There was an increased sale in both records and machines. The month also shows slight improvement over January, which month also made a fine increase over the same month of last year. The better grades of goods are in demand, but when the silent factors of trade become strong again I am convinced that we will do an even larger trade than ever before. This month will show an increase like other months. Local retail trade is not as large as desired, but holds promise of improving right along this spring. Wholesale trade on the other hand is splendid and is making a steady headway each month."

E. N. Price, district manager of the Columbia commercial machine, was a caller upon Manager Nichols last week.

The Wurlitzer house was the scene of a romance this past month, and the staging of the plot was in the talking machine department. It all happened when Miss Josephine Ressler, saleslady in the talking machine department, gave ear to the whisperings of Dan Cupid, who was impersonated in the traveling salesman for the department, Irwin Levi. The couple were married February 20, and the following Monday morning, when the Wurlitzer salesmen and employes learned of the event there was a rousing reception in store for the couple when they appeared at the warerooms. The girls of the house have been a-flutter with excitement ever since, wondering who will be the next victim of Dan Cupid, and secretly hoping that it will not be the other girl.

The Wurlitzer house was the favorite stamping-ground of "The Merry Widow" play company while here two weeks ago, filling an engagement at the Grand Opera House. The entire company while on a visit to the Victrola department consented to pose for a photograph, the Victrola being the central feature of the picture. Other pictures of the stars of the company, Miss Rosemary Glosz and George Dameral, were taken while listening to the Victrola. A testimonial from the charming star of this fascinating opera was received by Advertising Manager Page. It reads: "I think your Victor-Victrola simply splendid. What joy for a home circle to be able to listen to the real voices of the great opera artists. And all of our beautiful 'Merry Widow' music, too. Is is not wonderful? I must have a Victrola of my own. Appreciatively yours, Rosemary Glosz."

The smaller dealers report a quiet trade, but look for this month to bring about an improvement in the demand for records and machines. Spring outlook is considered splendid.

Manager Dietrich, of the Wurlitzer talking machine department, had this to say regarding trade conditions: "While the business during the month of February has not showed any sensational developments, the outlook is extremely satisfactory. The features during February were the sale of 'Victrolas' and 'Red Seal' records. The demand for these lines has grown greater. In Edisons the instalment business has shown a wonderful increase. This means a great deal more to the small dealer than it does to the big houses, because the 'Red Seal' and the 'Victrola' trade keeps us busy, while the small dealer naturally must look to instalment sales and medium-priced machines.

"Another feature was the big demand for Taft records during the last few weeks. The President is a Cincinnati man, and the Cincinnati

public are loyal to him, and the different schools put on recitals for the 'Honor of the Day.' This activity has resulted in some very good advertising for the Victrola."

A notable change has been made on the first floor of the Wurlitzer establishment. The five rooms which were formerly divided into demonstrating and display rooms for talking machines and music boxes are now Victor record salesrooms. Each room contains a Victrola, a high-class Reginaphone and several of the largest styles of Victor machines.

A number of Victrola sales have been traced to this arrangement during the last several weeks. The owner of a Victor II or Victor III has been known to buy records which are demonstrated in these rooms on the Victrola or a large style Victor machine with a wooden horn. After the salesman demonstrated the good qualities of these more expensive machines the customer is easily approached with a view of getting his order in exchange for his old machine.

The Wurlitzer Co. also have perfected a plan for carrying an additional stock of records on the first floor to facilitate matters, thus giving the talking machine department twelve individual demonstrating rooms. The Cincinnati public are going to appreciate "Red Seal" records more than ever. At a fashionable wedding, which will take place in one of Cincinnati's exclusive clubs on March 17, the Auxetophone will be used to entertain the guests at the banquet accompanied by an orchestra.

The Rudolph Wurlitzer Co. have been appointed by the Regina Co., who make the Regina music boxes and Reginaphones, jobbers of their goods. The Wurlitzers will distribute these goods from both their Cincinnati and Chicago warehouses. They have begun an active advertising campaign, in which they suggest the Regina music box as a profitable side line for talking machine dealers. They also call special attention to the fact that they are the Regina Co.'s only jobbers.

The disc record album which the Rudolph Wurlitzer Co. have placed on the market is meeting with a flattering reception from the trade, who are ordering in large quantities. Their album is in the shape of a book with six leaves, each divided into two envelopes of a very stout and durable green fiber. A circular opening in the center shows the title of the record, etc. The album is very substantially bound in olive-green cloth and presents a highly attractive appearance and will wear well. There is an index on the outside binding on which the records are listed. The idea back of this "New Idea" book is that it insures systematic filing, ready access and protects the records from dust and grit. It is certainly a clever scheme for Red Seal record owners, since it enables them to segregate their records. They can have a Caruso album, a Farrar, a Schumann-Heink, etc., etc. Enlarging on the same thought, others will have their band and orchestra albums, their popular song hits, duets, etc. Another advantage is that the album may be kept in the book case, along with other books, thus carrying out the popular idea of a library of talking machine music. The Wurlitzers have patented their "New Idea" disc record album, and are acting as sole distributers to the trade.

It is better to lounge in the house of a probable customer than in the barroom of your landlord.

AN EARNEST WORKER

Is Roy J. Keith, Who Has Accomplished Much in the Talking Machine Field Since He Joined the Forces of the Talking Machine Co., of Chicago—Has Charge of Sales.

(Special to The Talking Machine World.)

Chicago, Ill., March 6, 1909.

Roy J. Keith, whose genial countenance is shown in this connection, is a young Chicago talking machine man, who has accomplished much in a short period of time, and is demonstrating the fact that a college education is a valuable asset in business if used in the right way. Mr. Keith went on the road for the Talking Machine Co. two years ago. He had been a fellow student with General Manager A. D. Geissler at Leland Stanford University. The latter not only liked Keith but recognized his ability, and when the opportunity came of renewing the association in a business way he was quick to seize it. Mr. Keith was equally glad to take advantage of the offer and to enter a business which he had investigated and had become vitally interested in. After some little time spent in the stock room and shop he was sent out by Mr. Geissler on a short road trip. He made good from the start, as the result of an unusually pleasing personality and the ability to present his proposition in a concise and forceful manner. When Virginius Moody, who had charge of city sales, resigned to go to the D. & E. Export Co., New York, Mr. Keith took the position and was later given charge of general sales and traveling men. He is an earnest and enthusiastic worker and has earned his rapid promotion.

ROY J. KEITH.

Never get cornered by people who feel smart. In a quiet way corner them if you can, especially if it be a business point for you.

DYER ON NEW COPYRIGHT LAW

Says That Besides Its Obvious Unconstitutionality It Contains Provisions That Are Harsh and Unjust—Horace Pettit Will Not Express an Opinion.

Frank L. Dyer, president and general counsel of the National Phonograph Co., Orange, N. J., expresses himself to The World as follows on the new copyright act:

"On the subject of the new copyright law, entirely aside from its wrong principle and, I believe, its obvious unconstitutionality, it contains provisions that strike me as being harsh and unjust; notably, the requirement that royalties shall be paid on all records manufactured using copyright music, whether those records are sold in the United States or foreign countries, whether they are never sold at all, or whether, if sold, they are returned by jobbers and dealers. Such a provision must strike anyone as being oppressive and unfair, but when we consider the almost indecent haste with which the bill was rushed through Congress, it would not be natural to expect anything different.

"As to what effect the bill will have on the phonograph industry I am not able to predict, but as it does not become effective until July 1, much can happen in the meantime. I am very strongly of the conviction, however, that before the talking machine business is to submit to any hold-up, the courts will first have to say that this legislation is constitutional, and I shall be interested to know in what way it will be maintained that the progress of American musical art is being advanced, as is necessary for any valid law on this subject under our constitution."

Horace Pettit, Philadelphia, Pa., general counsel for the Victor Talking Machine Co., Camden, N. J., writes The World as follows: "I prefer not to express any opinion at this time regarding the new copyright act, as I have not as yet had time to thoroughly consider the same in all its phases."

NEW FRENCH TARIFF ON TALKERS.

It Is Proposed to Increase Duties in a Measure Now Up for Consideration.

The new French tariff bill, about to be introduced in the Chamber of Deputies, places a maximum duty of $18 and a minimum rate of $12 per 200 pounds on talking machines and talking machine supplies. The latter figure will prevail with nations granting trading concessions to France. The measure was prepared by a commission of the Chamber of Commerce after laboring two years.

BUYS OUT ALFRED WEISS.

P. A. Powers, of Buffalo, N. Y., proprietor of the Talking Machine Co., Rochester, N. Y., and the Excelsior Phonograph Co., New York city, and who has been in New York for the greater part of this week, has bought out Alfred Weiss, of this city.

It is the first discredited note that does the damage. If there is never a first protest there can never be any danger, and your credit will always be gilt-edged.

TIMELY TALKS ON TIMELY TOPICS

When Sembrich, the famous diva, in her "farewell" appearance in grand opera, bid her goodbye "forever and a day," at the Metropolitan Opera House, New York, recently, with the understanding, of course, she would appear in concert next year, one of the leading critics, in his story of the historic occasion, observing her magnificent voice would not be heard again until then, eloquently remarked, "Now for the talking machine!" These are the only records of her splendid vocal powers, and her many admirers must, perforce, rely upon the records for their pleasure in the interim. Truly, the talking machine record has come into its own!

It was supposed that when the National Phonograph Co. announced their readiness to grant special licenses to Edison jobbers and dealers for the sale of second-hand or discontinued machines, the applications would run into the thousands. The contrary happened. The company were prepared to issue an unlimited number, if required, but instead, the ultimate number did not exceed five hundred. In other words, there are not so many machines of this description in the market as was represented or even anticipated. As one in a position to know described the situation, "The ultimate results were not only surprising but very gratifying. In the first instance, a machine that has been used for some time is really better than a new one, as the parts have been tried out to such an extent that the mechanism runs smoothly, which is true of every piece of machinery. Then, again, knowing the high quality of Edison construction, dealers are perfectly justified in overhauling such goods and reselling them as first-class in every particular. This is really no misrepresentation, and it proves that second-hand Edison machines are a negligible quantity in the market, and that in so far as they may be a hindrance, the charge to the 'profit and loss' account has been somewhat exaggerated. In other words, the so-called clamor for the privilege of selling these machines at less than the contract price is something of a 'mare's nest.'" Of course, there has been no objection on the part of the National Phonograph Co. about granting these licenses, but the unexpected happened. That's all.

In Florence, Italy, one day last month, Matthew Andrews, Cleveland, O., the right-hand man of the late Senator Mark A. Hanna, and of the firm of M. A. Hanna & Co., of that city, in speaking of business conditions in the United States, said: "I think we are beginning the most successful period of American finance," and of the marvels of wireless telegraph he made this comparison: "The wireless is, next to the talking machine, the most marvelous thing in the world." Those who rightly appreciate the wonderful advances made in sound reproduction, as typified in the talking machine record, are of the same opinion.

Here is an observation by Hy. Eilers, the well-known Pacific Coast piano and talking machine dealer, that is of more than passing interest, to wit: "The talking machine trade has kept up wonderfully well, and the fact that this makes for splendid cash returns and very short time paper is the reason why dealers are devoting more and more energy to it all the time. The danger, however, is that establishments get overloaded with records. Too much of the profits go back into dead stock, and it takes mighty keen and watchful management to prevent this." Possibly there are others of the same mind. At least current trade news would seem to bear Mr. Eilers out in his shrewd criticism.

Elsewhere is printed the particulars of a million-dollar order placed with the Columbia Phonograph Co., General, for the China trade. For an American company to sell such a bill of goods, probably in the face of competition on the part of the entire world, is a great compliment to the quality and standing of our product. The machines and records enter a portion of that mysterious empire heretofore closed to open trade, so that the compliment is of double significance.

The conferring of brevet business titles by The World in a complimentary spirit is taken exception to, apparently, by associates. In other words, so carefully—and with intelligence—are its pages read that the slightest slip in the pen as to nomenclature or position or attitude or expression of opinion is critically weighed and judged. The World aims to be accurate in all things, and if an error is made occasionally in this particular respect it is to be credited to the head and not to the heart. The magnificent constituency of The World is never regarded excepting in a spirit of entire friendliness—a sort of "brotherhood of man," as the socialistically inclined are wont to express it; and when a designation is employed that may be flattering to the recipient, but not wholly in consonance with the official title, the "offense," if such it may be termed, is applied in the nature of an uplift and not as an invidious distinction. Sabe?

When the case involving the validity of the Berliner patent (Victor Talking Machine Co. against Leeds & Catlin Co.) was argued in the United States Supreme Court, it was hoped a decision would be handed down on the reassembling of that august tribunal after the usual mid-winter recess on February 23. As yet, however, the court has failed to signify its findings, and possibly as this issue of The World comes off the press word one way or the other may have come from Washington. That the trade is eagerly awaiting this opinion is only too evident from the many inquiries being made, and the anxiety is not confined to this country alone. Foreign manufacturers are very much interested, and it is safe to say the entire trade will be greatly relieved when the Supreme Court has made known its attitude in this litigation long drawn out.

"Dubbing" cannot be considered a fine art by the veriest stretch of the imagination. No matter how the courts may decide the case now before them, it is a practice that should be more honored in the breach than in the observance, morally speaking. The Columbia Phonograph Co., General, have taken up the cudgels in the effort to protect their own property against its wilful appropriation by others in this process of "dubbing." The case, which was given a final hearing on March 4 before Judge Chatfield, in the United States Circuit Court, Brooklyn, N. Y., is of vast moment to everyone who has acquired or may acquire property interest in records of intrinsic worth and value. In this suit the defense frankly admitted they were "dubbing" records, as charged in the bill of complaint, but claimed that the commercial records used for the purpose had been purchased in Canada and in Europe, and therefore they could not be held liable for invading or infringing the rights of the plaintiff. The complainants frankly admit not a few fine points are involved in this case, and on that particular account it would have been much better if the sitting justice had been one who was to some extent, at least, familiar with the history and usages of the trade. As a matter of fact, this is the first "talking machine" case that has ever been brought before Judge Chatfield, and it is to be expected that he will reach a just decision in keeping with the facts and law as presented to him. At any rate, his opinion is one that will doubtless be far-reaching in its effects, both in the present and the future.

Considerable space is devoted in this issue of The World to the copyright act that was passed in the closing days in Congress, and comments thereon by the counsel of the National Phonograph Co. and a prominent officer of the Columbia Phonograph Co., General. Mr. Pettit, of the Victor Talking Machine Co., declined to express an opinion without a careful examination of the new law. The statute is a disappointment in several respects, and its weakness is made clear in the two communications referred to. Just what effect the law will have on the trade remains to be seen after it goes into effect on July 1. Doubtless the number of records on the regular lists will be diminished, and this will be welcomed by the trade as a blessing in disguise, and it is possible a new scale of prices may be formulated. No one is prepared to say just what will happen, and therefore patience must be exercised until the official promulgations are made.

A great deal is heard about the constitutionality of the act. On this point there is a sharp division of opinion. Leading attorneys of national reputation and standing differ radically, and doubtless Congress had this question before them when framing the law. It is not the function of The World to pass on legal matters, and it will be content to quote the official report of the House Committee on Patents, in unanimously recommending the passage of the bill, for the information of those whom it may concern, as follows: "A suggestion has been made that a compulsory license in copyright legislation would be unconstitutional. The great weight of opinion, however, is the other way. It is true that Congress could not legislate a man's existing rights out of existence, for thereby it would impair the obligation of a contract, but in this case Congress is creating a new property right, and in creating new rights Congress has the power to annex to them such conditions as it deems wise and expedient." As the law stands, the copyright owners have decidedly the best of the bargain.

Another distinction has fallen to the lot of Thomas A. Edison, the "most distinguished of ten living Americans," namely, a hotel of modest character and environment at Atlantic City, N. J., has appropriated his cognomen. Whether the famous trade-mark signature is employed as stationery insignia deponent saith not.

C. H. de Zevallos, of the Phillips & Buttorff Mfg. Co., Nashville, Tenn., who was in New York recently for ten days, made several visits to the office of the Columbia Phonograph Co., General, and on last Friday was taken to their laboratory, where he was very keenly interested in the work. He was surprised at the magnitude of and the number of processes incident to making a matrix, to say nothing of what would be further required in the factory. A trip to the factory was arranged for him, but his time was limited and he was unable to go. The Phillips & Buttorff Mfg. Co. have a corps of fifty salesmen covering the entire South from coast to coast, and Mr. de Zevallos expressed himself as highly pleased with conditions throughout his entire territory, stating that business conditions were rapidly improving and that trade was growing as fast as they could expect. E. H. Hickman is the manager of the talking machine department for this concern, and is arranging at the present time to make a trip over the territory in Tennessee, Alabama and Mississippi, which is controlled exclusively by this company. Traveling with each salesman on his regular route and in making the territories with the different salesmen, he expects to educate them as to the talking points on Columbia products. Mr. de Zevallos left New York on March 5 for Nashville, by way of Atlanta.

Frank L. Dyer, president of the National Phonograph Co., Orange, N. J., who was at Atlantic City, N. J., for a couple of weeks, taking a much needed vacation and a respite from pressing business cares, returned to the works Monday, feeling greatly improved for the brief outing.

We Are Creating the D

Not one of your customers who owns a cylinder machi can pick up a leading magazine without having Columbia Ind structible Records offered to him.

TALKING MACHINE RECITALS

Operas Produced in Part by Heppe & Son at Daily Entertainments.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 9, 1909.

A series of daily talking machine recitals has been inaugurated by C. J. Heppe & Son. Each opera produced by the Metropolitan or Manhattan companies is produced in part by the Heppes, and each day a delighted crowd of music lovers listens to the splendid reproduction of the voices of the world's most famous operatic stars.

Caruso's famous tenor and the voices of such stars as Melba, Sembrich, Tetrazzini, Scotti, Tamango, the dead tenor, and others are reproduced perfectly. The recitals are held in Heppe's Aeolian Hall, 1117 Chestnut street.

STUDYING MUSIC BY PHONOGRAPH.

For four years Marion Garson, who is playing on the Keith vaudeville circuit, has taken two lessons weekly in voice training with a teacher who has always been at least 4,000 miles away from her. When Miss Garson left Dresden to return to America for the stage, four summers ago, she and her German singing teacher hatched up this scheme. Miss Garson was to sing her practice songs in phonograph records twice each week, pack the records carefully and forward them to Dresden.

Miss Garson has followed out the plan faithfully and thus kept in constant touch with the man who "found" her voice. On receiving the records the old German writes a long letter to Miss Garson, telling her how her voice is progressing.

DISCUSSING DOUBLE DISC RECORDS.

In various sections throughout the West the matter of double-sided or single-sided disc records continues to be discussed by talking machine dealers. In one instance, in Southern California, the talking machine dealers have decided to test the feeling of the general public in a careful manner so as to get a definite "line" on the preference of the buying public. So far, the sales would indicate that the double disc is in favor.

HOW TO REPAIR TALKING MACHINES AND PHONOGRAPHS.

Second edition now ready. Every dealer should have a copy. The only work of its kind. Sold to dealers and repair men *only*. Postpaid on receipt of price, $1.50. Frank E. Drake, 4245 Tracy Avenue, Kansas City, Mo.

Reference: Gate City Bank.

BUSINESS FOR SALE.

Good phonograph business already established in large city in California. Record trade will keep business going. Only business of that kind in that part of town. Will cut down stock of goods to suit purchaser, but must have at least $1,000 cash to put in business. Room in store to handle pianos. Rent low. Best climate in California.

Reason for selling: Owner cannot put personal attention to business. Right party can clear $3,000 to $7,000 per year. Answer quick. Address 735 M, care of Talking Machine World, 1 Madison Avenue, New York.

HOW TO BOOM YOUR BUSINESS.

Advertise your phonograph business with my high-class copyrighted sheet music with your ad on last page. Ten samples and plan, 25 cents. M. Falkenstein, Sauk City, Wis.

Competent Manager Wanted

Wanted—A competent, hustling manager for a retail talking machine store in large Canadian city. Only those who are thoroughly acquainted with the Victor line need apply. A good opportunity for a man with brains and ambition. Address, giving age, experience, reference and salary expected. Box 402, care of The Talking Machine World, 1 Madison avenue, New York.

NEW ZONOPHONE DOUBLE DISC CATALOG.

About March 20 the Universal Talking Machine Mfg. Co., Newark, N. J., will have ready their new catalog, 500 selections, all double-disc records. Business is quite satisfactory with the company. B. Feinberg, who has been traveling the Middle West, is now in Oklahoma, and expects to establish a couple of representative jobbers. It is a great talking machine field, one jobber in another line simply coining a fortune in a short time.

FILES PETITION IN BANKRUPTCY.

Thomas C. Hough, a dealer in talking machines and supplies at 913 Nicollet avenue, Minneapolis, Minn., has filed a petition in bankruptcy, with liabilities given as $10,498.48, and assets at $19,182.11, of which $795 is exempt.

ARGUMENT HEARD.

On March 3, argument was heard in the case of the Victor Talking Machine Co., Camden, N. J., against the Hawthorne & Sheble Mfg. Co., Philadelphia, Pa., in the United States Court of Appeals, eastern district of Pennsylvania. Decision was reserved.

SCOTTI DECLINED.

The group was composed of Walter L. Eckhardt, of the Leeds & Catlin Co.; Scotti, the great baritone of the Metropolitan Opera House Co.; Frank W. Boyer, president of the Chicago Music Co. and The World, on Washington's birthday in the Knickerbocker Hotel. When Mr. Eckhardt offered Scotti a contract from his company for singing, the great artist expressed his thanks and gravely shaking his head in the negative, said, "Gentlemen, I am under contract to sing for the records for life with another company." That settled it, and Scotti quietly withdrew and walked up Broadway, seemingly content with himself and the world at large.

TALKOPHONE CO. AFFAIRS.

With the appearance of the affairs of the Broadway Savings Bank, Toledo, O., bankrupt, in the courts of that city again, February 27, mention was made of several notes of George C. Metzger, formerly of the defunct Talkophone Co. These notes are secured by bonds of the Peninsular Phonograph Co., which have no market value, and bonds of the Talkophone Co., in which suit has already been instituted to set aside the bond issue. Last week the export department of an eastern talking machine firm bought 1,800 machine cabinets at a price from the receiver of the Talkophone Co.

BEST WISHES FOR SUCCESS.

The moving picture enterprise which P. A. Powers and John Kaiser, of the Excelsior Phonograph Co., and C. V. Henkel, former president and general manager of the Douglas Phonograph Co., dissolved, will exploit in New York, will embrace a circuit of six or seven separate theaters. This will permit a convenient exchange of talent and furnish a more diversified and better entertainment bill throughout. The three gentlemen, who are well known in the trade, have the best wishes of everybody for their success, which seems to be a foregone conclusion.

WORLD TABLOIDS.

For the first time in a number of years Walter Stevens, manager of the National Co.'s export department, will not make his annual trip to Mexico. He generally starts in April, but Mr. Stevens considers the business in the sister republic in such good hands and in so satisfactory a condition that he considers the trip unnecessary. At the present time the recording laboratory has some vocal artists and instrumentalists from Porto Rico, W. I., here making a repertoire of their folk songs and native pieces.

Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, who has been confined to his New York home by illness for a couple of weeks, returned to the office for a while Monday. As president of the American Musical Copyright League, he intends calling a meeting shortly of the various interests concerned with the copyright act.

With the shaving off of his mustache, F. K. Dolbeer, sales manager of the National Phonograph Co., Orange, N. J., bears a striking resemblance to Thomas A. Edison. If his hair were gray, like the "old man's," his appearance would be still more like him. Mr. Dolbeer is busy on a proposition for the benefit of Edison dealers and jobbers, which may not be ready to announce within a month or two.

The new twin record catalog of the Leeds & Catlin Co., New York, will be off the press this week. It has a handsome cover, corresponding in color to the blue and gold label of the record. The company are making arrangements to move into a new suite of offices in one of the prominent buildings of the city, but retaining their laboratory at 53 East Eleventh street.

The Tosi Music Co., of Boston, Mass., have opened a branch at 303 Arwells avenue, Providence, R. I., where they are carrying a full stock of Victor, Edison and Columbia talking machines and other musical instruments.

Louis Hicks, New York, who has been identified with many talking machine cases in the Federal courts, is now on the legal staff of the National Phonograph Co., Orange, N. J.

SCHMELZER CO.'S NEW BUILDING

Will Have a Splendidly Equipped Talking Machine Department in Premises to be Occupied on June 1—Old Quarters for Wholesale Trade.

(Special to The Talking Machine World.)

Kansas City, Mo., March 8, 1909.

In the magnificent building which the J. F. Schmelzer Arms Co. will move into on June 1st, they will have one of the finest and best equipped talking machine departments in this city. The building, located at Nos. 1214, 1216 and 1218 Grand avenue, will be entirely remodeled and will be seven stories in height. The front will be built so as to render the best lighting facilities possible, and the fittings of the new store are to be in mission. Although the Schmelzer lease in Main street runs for two years longer, they will move as stated, on June 1, but will keep the old location as a wholesale store. They will also erect a three-story warehouse on a site yet to be selected.

MAX LANDAY'S GREAT TRIP.

Max Landay, of the Talking Machine Supply Co., New York, while away on a recent trip went as far west as Denver, Colo., stopping at Chicago, St. Louis, Kansas City, and then through the Northwest, also getting over into Canada. Mr. Landay did a fine business, his orders booked for needles alone running into many millions. Everywhere Max was cordially received, being accorded a personal welcome independent of his firm connections, which was very gratifying.

SOME COLUMBIA NEWS.

Tuesday a substantial shipment of records was made by the export department of the Columbia Phonograph Co., General, to Mexico. On March 25 E. N. Burns, general manager of this department, sails on the "Merida" for the City of Mexico, via Havana, Cuba, and Vera Cruz, Mexico, to look over the new retail store opened there February 15. He will probably be away a month. Enrico Tosi, with his wife and daughter, started on his long trip to Buenos Ayres, Argentine, where he will make headquarters, traveling the entire South American continent for the Columbia Co.'s export department. He goes direct from New York, transhipping at Rio de Janeiro, Brazil. Mr. Tosi will be away indefinitely.

TO DISCONTINUE VICTROLA XX.

Acting upon the advice and comments received from distributers the Victor Talking Machine Co. have decided to discontinue the manufacture and sale of the Victrola XX. Louis XVI design, now catalogued at $250 list. In this connection the Victor Co. state in a letter sent out late in February: "Up to date, we have not been able to supply the demand for our regular mahogany Victrola XVI. at $200, and it is our intention to bend our energies, for the present, to satisfactorily supplying this latter type. We will, therefore, cancel all orders for the type XX. now in our hands."

E. D. EASTON VISITING THE FAR WEST.

Edward D Easton, president of the Columbia Phonograph Co., General, is on a trip of inspection of the company's agencies in the Far West. He was in southern California last week. Mr. Easton, who was accompanied by his wife and daughter, will return east via the northern route. He is scheduled to be in New York in about two weeks. Geo. W. Lyle, general manager of the company, got back Monday from a quick jump from Chicago. Marion Dorian, formerly manager of the Columbia's Co.'s interests in Great Britain, with headquarters in London, Eng., is now supervisor of agencies here, with his office in the New York Tribune building, in the company's suite.

NO DECISION YET.

Ruling of Supreme Court of the United States in the Famous Suit of the Victor vs. Leeds & Catlin Co. Anxiously Awaited by the Talking Machine Trade.

Much to the disappointment of everybody the Supreme Court of the United States failed to hand down a decision in the case of the Victor Talking Machine Co., Camden, N. J., against the Leeds & Catlin Co., New York. The suit involves the validity of the famous Berliner patent, and the inquiries from all sources to the attorneys on both sides came from far and near. Downtown in New York it was the universal topic of conversation, and even business was neglected at times to discuss the probability of the court's action with every newcomer. Monday is decision day again, and wagers have been freely made as to the outcome.

VICTOR-VICTROLA FOR PRESIDENT.

Sol Bloom, of New York, Installed One in the White House on March 10.

Sol Bloom of New York, Philadelphia and Atlantic City, N. J., went to Washington, D. C., March 10 to install in the White House a Victor Victrola specially made for President Taft. The Victrola will be one of the features of the music room.

CASE AT LAST ARGUED.

After a number of postponements, owing to several judges of the United States Circuit Court of Appeals, New York city, being disqualified from sitting, the case of the American Graphophone Co. against the Leeds & Catlin Co., of the same place, was argued Monday. This is an appeal from Judge Hough's decision in the lower court covering the Jones process patent for duplicating disc records, which he held invalid. The International Record Co., Auburn, N. Y., were also defendants in the same suit, but represented by brief only. The arguments lasted all day and part of Tuesday. Decision was reserved.

VICTOR MEN IN SOUTH AMERICA.

Thomas F. Perry, traveling for the Victor Talking Machine Co., Camden, N. J., in South America, has been writing from Arequipa, Peru, to a number of his friends connected with the piano trade whom he met down there. Mr. Perry is spoken of as one of the best men in his line and a representative American in the finest meaning of the word. Charles Ferree Lightner, another star, is also in South America for the Victor Co.

NEW USE FOR PHONOGRAPH.

A plan whereby ante-mortem statements may be taken by the aid of a phonograph has been advanced by County Attorney O'Brien of St. Paul, Minn. His scheme has been discussed by the leading attorneys of this city, and Attorney General George T. Simpson has advanced the opinion that if this was done the courts would not refuse to accept such records. Such records, would in his opinion, constitute the best obtainable form of secondary evidence. A phonographic record, when properly sworn to by competent witnesses, he thinks much superior to a written statement, which is necessarily subject to errors in taking it, due to the condition and feeble voice of the person making it.

GRAPHOPHONE FOR ROOSEVELT.

It is announced that the Columbia Phonograph Co. have made a special graphophone which will form the equipment of Ex-President Roosevelt on his great hunting trip through Africa. It is made of aluminum for the purpose of transportation, and many records of value will be made by Mr. Roosevelt during his great trip.

The order for the apparatus, which is really a combination of the graphophone and the dictaphone, came from the Smithsonian Institute, Washington, D. C., under whose auspices and for whose benefit former President Roosevelt is making his trip to Africa. The instrument was tested in the presence of the distinguished gentleman, who was very much gratified with the results, and therefore concluded he would take it along not only for recording the noises and voices of the jungle, but it will be also used by Mr. Roosevelt for dictation purposes. The machine was delivered last week in care of the ex-President's entourage in New York.

It was reported this week that E. Clarence Jones, of E. Clarence Jones & Co., bankers, has purchased a large block of stock in the Camerophone Co. and Col. W. R. Amory has been elected treasurer and director and will be general manager of the company.

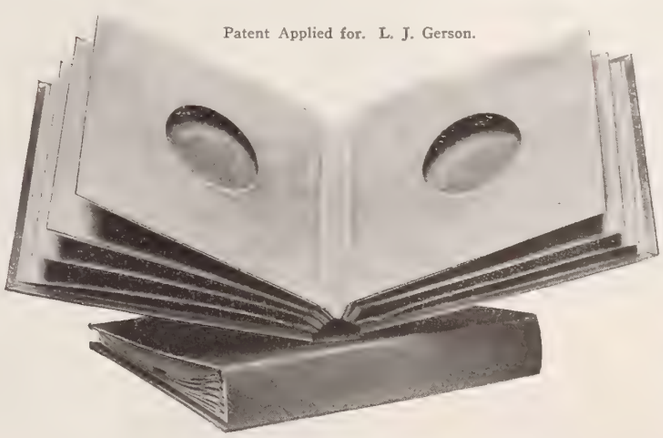
"ECHO" RECORD ALBUMS

"Read the Labels"

FOR HOLDING TALKING MACHINE DISCS

Form a complete system for filing Disc Records, Can be added to, Album by Album, on the Library plan.

Patent Applied for. L. J. Gerson.



Just the thing for

Red Seal Collections

"Echo" Record Albums preserve Disc Records against dust, careless handling, scratching or breakage

Index in every album facilitates instant location of every record.

Every album is finely bound and holds one dozen records in heavy green paper pockets, with cut-out holes for labels to be read.

Protects valuable records from injuryand breakage.

PROGRESS OF JOBBERS' ASSOCIATION

Next Executive Meeting in Columbus, March 28—Arrangements for Convention in July Being Made—Membership Steadily Increasing—Time to Become Interested.

The National Association of Talking Machine Jobbers has been very active, and results of their work are very gratifying, as is shown by the report received from J. Newcomb Blackman, chairman of the press committee, which follows:

"During the dull business period, which has had its effect on the talking machine trade, the Jobbers' Association has felt more than ever the importance of co-operation with the manufacturers, and the latter have extended a helping hand by giving their careful consideration to the recommendations of the association.

"When going up 'the business depression hill' there should be no backward movement, and with the dealer, jobber and manufacturer pulling together the 'goal prosperity' at the top will not seem so far or hard to reach.

"Several months ago I gave a report, with some detail, explaining the many concessions granted jobbers and dealers at the request of the association. Since then other important matters have been handled and favorable action taken by the factories which should interest every dealer and jobber and have their approval.

"The association wants the trade in general to know what it is doing, and that the factories should be supported, as their action in handling association matters certainly shows co-operation.

"The recent decision of the Victor Co., to very shortly ship all their records in envelopes has been agitated by the association for some time, and it is needless to say that their final decision to act accordingly was greatly appreciated.

"At the last executive meeting in Chicago, just before the holidays, the committee realized the importance of something being done to prevent high-priced Victor machines, particularly Victrolas, from being purchased at wholesale prices by people qualifying as dealers for that purpose only. It was pointed out how two or three retail purchasers could qualify a friend as a dealer and the discounts enable them all to save considerable on the purchase, thus absolutely cutting out the dealer's profit.

"The Victor Co. acted immediately on the suggestion of the executive committee by excluding the Victrola and Auxetophone from the initial purchase of three machines to qualify as a dealer, and there are probably many dealers who received a profit on Victrola sales during the holidays, in view of this action, which would have been lost otherwise.

"When the Victor Co. issued their double-face records the importance of giving distributers the usual profit on same was explained by the association, in view of there being a difference in the jobber's cost of the 10-inch double-face record.

"Again the Victor Co. acted promptly by changing the distributer's cost on this style of record. That every Victor distributer will benefit by this must be conceded.

"The disposition of second-hand phonographs has been a serious problem for some time, and while the National Phonograph Co. guard their one-price system most carefully they were quick to apply a remedy when convinced that jobbers and dealers would not abuse the license privilege.

"The request of the association for a license to sell second-hand machines at reduced prices under suitable restrictions was therefore granted, and the National Co. certainly deserve the thanks of the trade for such action.

"Such results prompt me to question why any jobber can feel otherwise than guilty in not supporting the association by his membership when he is getting the benefit of the great number of concessions granted by the manufacturers at the request of the association. Membership costs nothing when compared to the benefits. The action of the factories show, without doubt, that they are supporting the work of the association, but matters presented to them have greater weight as the association increases its members.

"We want every jobber who does a legitimate jobbing business of the Standard make machines and records as a member. The membership committee has written many who are not members, and while a large number have responded with their application there are many who still put off this important matter. As the applications will be acted on at the next executive meeting it is hoped that any jobber who has received a letter on the subject will immediately act by sending in his application.

"Letters have been sent out to members calling attention to the next meeting of the executive committee, which will be held in Columbus, O., on Sunday, March 28, at the salesrooms of the Perry B. Whitsit Co., and a general invitation is extended to members of the association to attend this meeting, and should any member have matters he would like considered for action a letter on the subject should be sent to the secretary or to the member of the executive committee in his territory.

"Postal cards have been sent out requesting members to name their choice for the selection of a city to hold the annual convention in July. This matter will probably be decided at the executive meeting this month, and it is hoped that members will reply promptly giving their choice.

"The officers and executive committee of the association want every member of the trade in general to realize that the object of the association is the promotion of anything that seems for the best interest of the dealer, jobber and manufacturer. We are not working for any special interests, but for the trade as a whole.

"Suggestions from dealers are invited, and if any jobber who contemplates becoming a member requires further information it will be promptly attended to by addressing either the secretary, Perry B. Whitsit, 213 South High street, Columbus, O., or J. Newcomb Blackman, 97 Chambers street, New York City, chairman of the membership committee."

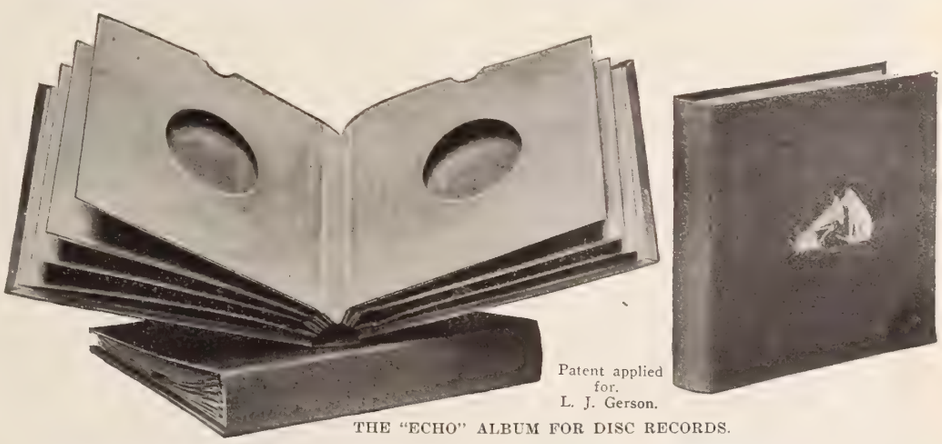
"ECHO" ALBUM POPULARITY.

In Demand by Users of High Priced Records—Some of Its Special Advantages Here Set Forth—Should be in Every Dealer's Stock.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 11, 1909.

A specialty that has proven most popular with the talking machine trade is the "Echo Album" for disc records which is being placed on the market by the Musical Echo Co., 1217 Chestnut street, this city. As can be noted from the illustration herewith this album is attractively gotten up, and especially suitable for Red Seal records. Through its use the lover of the talking machine is enabled to classify his records—in other words, to put all the song numbers by a certain singer together and thus save unnecessary labor in looking through his record cabinet, and the same applies to the instrumental records. They can be classified by the use of the albums into operatic, classic or popular, etc. Through the indexes the user is enabled to secure any selection instantly. In fact the use of these volumes grow on one, and have become absolutely necessary to the stock of dealers where high class records are sold. Of course, for that matter, they can be used for any record, but naturally people who pay from $3 to $5 for records have a greater desire to preserve them than those who pay 60 cents for popular numbers. Whether for the popular priced or expensive records the "Echo Album" is admirably suited, because it precerves the records against dust, careless handling and scratching. Louis Jay Gerson, of the Musical Echo Co., has a patent pending on these albums which form a complete system of unit filing for disc users.



Patent applied for.
L. J. Gerson.

THE "ECHO" ALBUM FOR DISC RECORDS.

A MUSICAL REVOLUTION

Is What Henry T. Finck Terms the Increasing Demand for Talking Machines and Player Devices for Pianos—Their Educational Value Descanted on Most Interestingly—Rupert Hughes and Other Noted Critics Pay Tribute to These Mediums of Musical Interpretation.

Henry T. Finck, the eminent critic and author of a number of musical works, has contributed a very interesting and lengthy article to a recent issue of The Circle, which is entitled "A Musical Revolution." It treats of the tremendous growth of mechanical means of interpreting music, and notes that its influence, in the broadest sense, is helpful rather than detrimental. He says in part:

"Not, perhaps, since music became an art has such a remarkable revolution occurred in it as that which is going on at this moment. Up to about a decade ago nearly all the music one could hear was made by singers, pianists, violinists, and players of other instruments requiring for their mastery years of patient practice. To-day there are in use hundreds of thousands of instruments which necessitate little or no practice on the part of those who use them, and which are at the same time marvels of modern mechanical ingenuity, marking a tremendous advance over the music boxes, hurdy-gurdys, barrel organs, orchestrions, and other mechanical instruments of the past. The wide demand for them is indicated by the large and steadily increasing number of companies manufacturing them (there are over seventy manufacturers of piano players!), whose prosperity is further indicated by the large scale of their advertising in the newspapers and magazines. The musical periodicals have special editorial departments devoted to these piano players and talking machines, and altogether this new departure in music presents one of the most curious and interesting aspects of modern civilization.

"What effect is the wide popular use of these instruments having and likely to have on the musical tastes and habits of the people at large, on the musical profession and trade, and on the development of musical art in this country?"

In marked contrast to the usual editorial onslaught on piano players and talking machines there appeared in Good Housekeeping an article by another musical expert, Rupert Hughes, author of 'The Musical Guide,' 'American Composers,' and other valuable books on musical topics, who takes the view that these devices are helpful. Far from discovering any decline in this country, he declares that the whole nation is feeling a musical uplift like a sea that swells above a sil-

marine earthquake. Heretofore we have been too busy hacking down trees and making bricks without straw to go to music school; but now we not only engage the greatest artists in the world and pay them bigger prices than they get anywhere else, but we are more and more learning to appreciate the higher things in music. Most of us are still too busy to devote years to learning to play an instrument; but a rescue has been recently devised and placed within the reach of every house. The rescuing device was, as usual, greeted with ridicule, but it is now established beyond criticism. To-day, the most eminent writers, composers and performers compete for adjectives of praise, and declare themselves beholden to mechanical piano players for both pleasure and profit."

Mr. Hughes then proceeds to pay a well-deserved compliment to the especial functions of the piano player which opens to those musically inclined the mines of classical and modern music. He also has a good word for the talking machine, which he likens to musical cold storage. It reminds him of the famous frozen horns which when thawed out play an old tune—if we may credit Rabelais, Munchausen and other reliable historians. It enables him in Texas to hear the famous artists of the Metropolitan Opera House in New York. It gave him and far off people the privilege of hearing the master singers interpret master songs. It made possible the frequent rehearing, comparison and analysis of important musical works. The fact is to extend their audience to an unlimited degree, while the market for books about music has also been broadened by it.

Mr. Finck then proceeds to quote from leading musicians and conservatories throughout the country, showing that the study of music has been increased rather than diminished through the growth of automatic musical instruments.

The question whether royalties should be paid by the makers of perforated rolls and phonograph records to composers comes up in a communication from Arthur Farwell, who says. "The manufacturers should have absolutely no right to reproduce a copyrighted work without a special contract with the composer. Anything less than this is piracy, whether it helps the sale of the same composition in sheet music or not. It is an immoral economic condition to get something for nothing, the more so when it is got from the composer of music, who has an especial difficulty in making a living."

Commenting upon this, Mr. Finck says: "It is undoubtedly true, as claimed on the other side, that the talking machine aids publishers and composers in some cases by creating a demand for certain pieces. A prominent publisher remarked in private conversation that he often gets letters from persons who want to buy a song or a piece which they have heard rendered by a phonograph. In such cases a talking machine might be likened to the space rented in a Broadway show window for advertising purposes. In England, composers and publishers often pay big sums to the popular artists who bring their songs before the public and thus create a demand for them. In the United States there are singers who get from $10 to $50 a week for 'boosting' a new song. Nevertheless, publishers and composers will no doubt continue the fight for their share of the profits in the perforated rolls of the piano players and the records of the talking machines. Italy, where the sale of mechanical music makers amounts to about a million dollars a year, the courts are deciding against their manufacturers on the copyright question.

"The most serious aspect of the question is that the time may come when the manufacturers of piano players and phonographs, inflated by wealth, will attempt to buy up popular composers, making them write for their instruments alone (apart from the stage). In that case, however, why should not the publishers help themselves to these goods freely? The law, surely, would not allow piracy to one party and forbid it to the other? For the rest, the music publishing business has no occasion for alarm. It has never been in a more prosperous condition. New firms are constantly springing up, and old ones have difficulty in keeping up with their orders.

"Are professional singers and players injuriously affected by the vogue of mechanical instruments? The singers whose popularity not only is indefinitely increased by their talking machine records, but whose pocketbooks are swelled to the bursting point by the money they get therefor, will chuckle at the question. Caruso has received as much as $3,000 for singing a song into a talking machine. The pianists, too—that is, the good ones—receive enormous sums for allowing the manufacturers of 'players' to 'can' their interpretations of the great masters' works of the past and present. Nor have they lost their concert monopoly; there are no piano player concerts except for advertising purposes, and no admission fee is charged. There is no indication, so far, that the agencies, and the women's clubs which do so much to encourage artists, are engaging machines instead of famous pianists and violinists. In some cities the singers and players are holding high revels as never before in the history of music. Evidently, there are no signs of the rout and demoralization of the regular musical army!"

After a splendid tribute to the so-called automatic pianos, in which Mr. Finck points out their great educational powers and brings to light a number of incidents in this connection, he closes by paying a tribute to the talking machine, as follows:

"The musical phonograph surely has its uses too—even for teachers. I was informed at a large music store that teachers often come and ask permission to hear a certain song as sung into a talking machine by Caruso or some other famous singer, to make sure of some detail of phrasing. Other teachers buy a machine so as to have it always on hand for their pupils. They can thus illustrate at any moment how Emma Eames phrases Micaela's air from 'Carmen,' or the 'Ave Maria' from 'Otello'; how Sembrich sings Chopin's 'Maiden's Wish' or Verdi's 'Caro Plancon, Schumann's 'Two Grenadiers'; Knote, the prize song from Wagner's 'Meistersinger'; and so on. Teachers also find that the talking machine is useful for letting the pupils sing into them and then study what they have done, with all the faults clearly revealed.

"The good music so liberally catalogued by the leading makers is doing missionary work and surely crowding out the trash from their catalogues. A salesman said to me: 'We get orders for Nordica, Caruso, and other records from the most remote corners of the country. In not a few cases the recipients do not at first like these songs, which they only ordered because they were associated with the name of a famous singer; but after hearing them a few times they like them and there is a new convert to good music.' The Salvation Army also finds the talking machine an aid in making converts to religion.'

"Let us be fair. A talking machine in the neighborhood is often a great nuisance, but so is a piano or a cornet or a singer. Besides, there are talking machines and talking machines. Some are much softer and more agreeable than others. I must say that I would rather hear Sousa's band in one of these superior "talkers" than in the concert hall, because the record makes it less noisy while at the same time preserving the peculiar quality or tone color of every instrument and soloist as well as every detail of expression. Herein lies the marvel of phonography—a marvel not only as great as ordinary photography, but as great as that of perfected color photography. Schiller's 'Dem Mimen flicht die Nachwelt keine Kränze" is no longer true. Actors, singers and players can now have their words and songs, with the individual quality of their voices and instruments, recorded for all time and admired thousands of years hence.

"What is more important still, they can have them heard and admired now by millions instead of by thousands only. An incalculable amount of innocent pleasure is given by them to children and adults in town and country. They turn farmhouses into concert halls; they will help to check the undesirable crowding of farmers to the cities. Personally, I have no need of them, for I happen to be a musical critic who hears all the best in music at first hand. But I feel in regard to piano players and talking machines as I do in regard to mountain railways in Switzerland. Being able to climb mountains easily, I have little use for them; but I am glad that they make the glories of the Alps accessible to thousands who could never know them without the aid of these railways. And the highest peaks still remain sacred to the professional climbers."

FALSE ECONOMY IN BUSINESS.

Where, in an Effort to Save, Old Fashioned Methods Are Put Up With the Efficiency of the Working Force Is Considerably Impaired Says a Writer in Collier's Weekly.

"Every business institution is continually creating its own atmosphere, and is in turn affected by the atmosphere it generates about itself. This fact is too often lost sight of in the efforts for economy in administrative expenses. The man who studies the balance sheet, or who dictates or executes the expense policy, may gain that invaluable viewpoint which only statistics can give, and yet by looking too long in that direction he may lose sight of other matters of equal importance. The man who keeps his finger on the pulse of the expense account needs very much to be a philosopher as well as a financier —indeed, it is impossible to be a true financier without being something of a philosopher. Every asset does not appear on the ledger. The tree that is cut and dried has stopped growing.

"When the expense man gets into the rut of thinking that his function is merely to save money, and that economy means buying whatever is cheapest, he is prone to forget the effect of the equipment on the working efficiency of an organization. It is hard to reduce to statistics the loss entailed by a man who does not do his best, and still keeps up appearances. But the loss is there—and it represents a big percentage of his value.

"The normally minded man responds to his surroundings in a greater degree than almost any one realizes. When he is provided with such equipment as ministers to his self-respect, he has an actual addition to his mental force, an added interest in his work, and a constant desire to attain higher standards with every new undertaking. But when this man is forced, by a close-fisted expense policy, to put up with out-of-date equipment and medieval furniture, he would be more than human if he did not come to express in his work some degree of the 'anything-will-do' spirit. This is especially so when he knows that his antique surroundings are not due to business necessity, but to lack of appreciation of the finer points of progressive business."

SOUTHERN CALIFORNIA NEWS.

Exton Co. Administrators to Sell Business—Fitzgerald's New Building—Wiley B. Allen Co. in Their Old Store—Hern Co. Feature Edison and Zonophone Goods—Columbia Window Publicity—The Music Master Wood Horns in Demand—Many Sales of Victor Victrolas by Birkel Co—Some News from San Diego and Santa Barbara.

(Special to The Talking Machine World.)

Los Angeles, Cal., March 1, 1909.

The unsettled weather of the season is almost past and trade in all lines is very firm.

The Exton Music Co. administrators have decided to sell out the business left by Geo. T. Exton on his death, including a stock of talking machines, small goods and sheet music. A special sale is now in progress which will shortly end the career of one of the city's oldest establishments.

The Fitzgerald Music Co. will open in their new building a talking machine department which is to occupy an entire floor. In the old location they at one time had a good talking machine trade, but lately have done little with it. The new location is a much better one, especially for talking machine trade, and directly opposite the Columbia Phonograph Co.'s store on Broadway.

Early in the month the Wiley B. Allen Co. moved back into their old store, which has been refinished and remodeled. The talking machine department has resumed its old quarters, and it would hardly be noticed that any change had taken place except for the new coat of paint. Business is very good.

Charles Ruggles, manager of Sherman, Clay & Co.'s local wholesale branch, has been very busy with the double-faced record question, which is puzzling the Victor trade in general. Andrew G. McCarthy has been spending a few days in this city visiting his firm's branch as well as the dealers.

The Fifth Street Store has been holding a special sale of the Busy Bee machine and records, and have advertised these goods in the local papers considerably.

O. A. Lovejoy, wholesale manager for the Southern California Music Co., has just returned from a trip to Ventura, where he sold to Nick Hern a complete line of Edison and Zonophone goods. Mr. Hern will hereafter conduct a first-class talking machine store and is credited with being an enthusiastic dealer.

The Columbia Phonograph Co.'s show window has attracted a large crowd by an ingenious mechanical device which demonstrates the durability of the Indestructible record in a very strenuous manner. They are having some splendid results with these new articles, as also with the double-sided records.

The retail trade of the Southern California Music Co. has been very good in both Edison and Victor machines. The wholesale department has received samples of the new Music Master wood horn, which are being displayed to the trade. E. H. Philbrook, manager of the Edison business phonograph department, reports a steady increase in the sales of commercial machines, and has recently installed a number of machines for the use of local court stenographers.

The J. B. Brown Music Co. have contracted for space in the leading theater programs for the benefit of their talking machine department.

The Geo. J. Birkel Music Co. have sold a number of Victor Victrolas as a result of their advertising these instruments. The Victrola has been almost at a premium with the dealers in this city. The Birkel Co., however, have been fortunate in being able to supply their trade.

The Kleine Optical Co., of 467 Pacific Electric building, have created a good demand for talking machines for use in connection with moving pictures. They have a number of customers in outlying towns which they supply with new song slides and records of songs which are used for illustrated song work. This venture is not a new one with them, as they have long since discovered the possibility of the talker in the smaller towns where singers are scarce.

K. I. Okada, proprietor of The Bunkwado, is one of the foremost dealers in the Japanese colony of this city. He is doing a splendid business in Edison and Zonophone goods.

Several changes have been made in the trade in San Diego. Thearle & Co. are in their new store, which is one of the best equipped in southern California. Mr. Thearle has been very dangerously ill for some time and much anxiety is felt in trade circles as to his condition. The Southern California Music Co.'s branch is having a good trade and have started an amateur record-making contest, which is the first venture of the kind attempted in the city. The Wiley B. Allen Co.'s branch has had more trade than they could care for in their present department, and have decided to add more space for records and another demonstrating room.

Santa Barbara is undergoing some changes in the talking machine trade. Garnsey S. Brown has taken the stock of the Bates Co. and has made additions to accommodate the stock purchased. The Southern California Music Co.'s branch has been almost crowded out by pianos, and more space is to be added so that the two departments will be entirely separate.

T. H. Sentell has patented a new system for record cabinets of the disc type which he is contemplating manufacturing for the trade. His new cabinet, which is of rotary design, is so constructed that it will hold 2,000 records in a space four feet high and three feet square.

J. J. MacGregor, of Ventura, is doing a fine business with Edison Amberol goods, and has added a new rack for Amberol records.

A move is under way to regulate the character of the pictures shown in moving picture theaters in this city.

A CHAT WITH HORACE SHEBLE.

Optimistic Regarding Future of Talking Machine Trade—Strong Demand for "Star" Line—Starola Machines Well Received—Establishing Foreign and Domestic Agencies—A New Tone Arm Being Featured.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 3, 1909.

When Horace Sheble, of the Hawthorne & Sheble Mfg. Co., was seen at the factory a few days ago he was in a most optimistic frame of mind regarding the future of the talking machine industry, and especially of the Star machines and records. "Orders for the past two months," said Mr. Sheble, "have exceeded in volume those for the entire six months previous, indicating a decided improvement in conditions. While the volume of business is not equal to that of a year or so ago, we are getting our share and are satisfied. Our Starola and Starola Grand cabinet machines have met with a very flattering reception from the trade and we will shortly put several new models on the market."

The Hawthorne & Sheble Mfg. Co. have an agent traveling in India at present and meeting with great success. He will shortly go to Australia and introduce the Star line in that country.

Gimbel Bros., in this city, and Ehrich Bros., in New York, have both taken on the company's line, put in extensive stocks, and are pushing it energetically. A new Canadian connection has also been made recently. The company are featuring a new tone arm that is highly spoken of by trade experts.

MORE FAVORABLE CONDITIONS

Prevail in Talking Machine Circles in Baltimore and Vicinity—Interesting Chat With Mr. Boden, of the Sanders & Stayman Co.—Reports Excellent Sales of Victor and Columbia Goods—New Quarters for the Victor in Cohen & Hughes' Handsome New Store—Will be Specially Fitted Up.

(Special to The Talking Machine World.)

Baltimore, Md., March 6, 1909.

Unlike the piano trade, the talking machine dealers seem not to have suffered any inconvenience to business in consequence of the pre-inauguration days. The business reports have been very favorable, and show that the talking machine is becoming more and more popular with the masses. A good idea of the conditions for the past month in regard to the local talking machine situation is given by Mr. Boden, who has charge of this section of the business for Sanders & Stayman, who handle both the Victor and Columbia machines, in addition to the Weber pianos and Estey organs. "With the exception of the few days preceding the day of the inauguration of President Taft," said Mr. Boden, "we had a particularly brisk demand for the various styles of the two makes of the machines we handle. High-price machines continue to be greatly in the limelight these days, the requests for the $200 and $60 Victors and the best grades of Columbias being the most noticeable. This briskness in business prevailed all through the month of February, and we have every reason to believe that with the induction of the President in office the same desirable conditions will continue uninterrupted.

"The double disc Columbia records have increased right along in popularity, and the demand for similar Victor records has also been heavy."

Manager Arthur Ansell, who has charge of the talking machine department of Cohen & Hughes, announces that the firm has had so much success with the victor that the firm is to take up new

Needles Free To Prove Quality

"THE BEST THAT MONEY CAN BUY"

Playrite TRADE MARK

NEEDLES

BLACKMAN TALKING MACHINE CO.

J. NEWCOMB BLACKMAN, President

97 CHAMBERS STREET NEW YORK CITY

quarters, where two entire floors will be devoted to the sale and display of these machines. The two stores now occupied by the firm at 121 East Baltimore street and 304 North Howard street, will be abandoned this month and a more spacious establishment will be occupied, into which the two stores will be combined. The new quarters are at 315 North Howard street, a handsome five-story structure. This building has a frontage of 35 feet and a depth of 175 feet. Two of the floors will be fitted up in modern style for the exclusive handling of the Victor machines. The firm contemplates having a sound-proof apartment for giving concerts for the benefit of prospective buyers and a separate room where the machines and records can be displayed to the best advantage.

GEO. W. LYLE ENJOYS EUROPEAN TRIP

Gives Impressions of Conditions in Europe—Smaller Concerns Being Weeded Out on the Continent, Leaving Business in a Healthier State—Pleased at Finding Steadily Improving Conditions in the Home Market—Enjoyed His Trip Abroad Immensely.

Tuesday, February 16, George W. Lyle, general manager of the Columbia Phonograph Co., General, arrived from Europe on board of the crack liner "Amerika," coming direct from England, and being listed as among the distinguished passengers. Later, in speaking to The Review, he said:

"My trip to Europe was greatly enjoyed. Besides visiting London, I was on the continent also, stopping at Berlin, Paris, and other places. General business I found extremely quiet, but the talking machine trade is no greater sufferer than other lines. As a matter of fact, the smaller manufacturers are dropping out, leaving affairs in larger and better hands, where ample capital is in sight. The speculative small fry, so to speak, who have disturbed the trade for years, are going the way of all such people when a financial crisis comes. For this relief, many thanks are due the trade. In other words, I am of the opinion that the talking machine trade is really on a firmer footing now than ever before.

"As for business here, I am more than pleased. The Columbia Co. were never in a stronger position than they are at the present time. Our selling policy to jobbers and dealers in exclusive territory is a great winning card, and I am delighted with the great success we have achieved on the double-face disc records. If you recall, we are the pioneers in this particular line and the others are trailers. The Columbia Indestructible cylinder record is also enjoying really a tremendous trade, and the Columbia Co. have therefore little, if anything, to complain about. Yes, my trip has done me a world of good."

SEEING IS NOT BELIEVING.

You May "See the Point" but You Should "Hear It" Before Believing.

It is a common saying that "seeing is believing," but in referring to needles for disc records J. Newcomb Blackman claims that you cannot rely on this rule. Needles are very much like the race referred to when the song, "All Coons Look Alike to Me," was written. In the case of needles there are many kinds under various names, and in most cases they look alike. The test is in hearing a record played with the needle and in noting whether the record is damaged. The Blackman Talking Machine Co., 97 Chambers street, New York city, on page 59, call the trade's attention to needles which they want tested before the purchase is made. It is evident they have confidence in the result, and such advertising is to be encouraged.

IMPORTANT BILL PASSED.

(Special to The Talking Machine World.)

Albany, N. Y., March 2, 1909.

The Senate passed last night Senator Davis' bill providing that a receiver for a corporation may be appointed in an action brought by stockholders owning 40 per cent. of the stock when the directors or other officers are jeopardizing the rights of stockholders or creditors, or in case of gross mismanagement.

HIGHER PRICED GOODS IN DEMAND.

While the Staple Lines Are Steady There Is a Big Call for Victor Victrolas and Other High Priced Machines—Business Is Improving More Rapidly in the West Than in the East.

Business with the talking machine jobber and dealer still remains uneventful. On staple lines sales are steady, but by no means startling, with the western people far in advance of their eastern confreres. The spirit in the Middle West, especially, is decidedly optimistic, and the great volume of business is transacted there at the present time.

One peculiar feature is the great and remarkable sale of Victor Victrolas. The demand has not lessened materially since the holidays, and more than one jobber and dealer was compelled to return "cash money paid in" because they were unable to fill their orders for these popular instruments, despite their so-called high price. Conditions have not changed in this respect, for Victrolas are not in "full supply," as is remarked in the live stock market occasionally—more's the pity, it seems, for a lot of good money is lost all around.

Last week H. A. Yerkes, manager of the Columbia Phonograph Co.'s wholesale department, went to Boston, Mass., Buffalo, N. Y., and other points, securing a number of good orders. He spoke enthusiastically of trade with Columbia jobbers and dealers.

A small fire in the five-story brick building, 21 Kingston street, Boston, Mass., damaged the second floor, occupied by the Columbia Phonograph Co., to the extent of $500.

THE TALKING MACHINE IN MEXICO.

No Country Where the Talker Is Better Appreciated Than in Mexico—People Are Intensely Musical—Columbia Co.'s New Store in Mexico City—A Chat With Mr. Tosi.

Returning from Mexico a few weeks ago, Ernesto Tosi will, on March 20, sail for South America, where he will be the traveling representative of the Columbia Phonograph Co., General, making his headquarters in Buenos Ayres, Argentina. He will visit every country in the southern continent, and possibly be away indefinitely. Mr. Tosi will be accompanied by his family, a wife and daughter, going direct from New York to Rio Janerio, Brazil, then down the coast to his point of destination. As he is proficient in Spanish and Italian, besides English, and is thoroughly familiar with the Columbia line, he is one of the best equipped men this company ever sent into that territory of vast possibilities, and in which they already have a large trade.

MEXICAN ORCHESTRA WHICH MADE COLUMBIA RECORDS.

The training of Mr. Tosi for his new and responsible position has covered several years. An Italian by birth, he was in the service of the Columbia Phonograph Co. some time, being attached to the headquarters staff of the export department in New York. About a year ago he was despatched to Mexico to learn the Spanish language and familiarize himself with the methods of doing business in the republic below the Rio Grande. In furtherance of this aim he traveled the country from coast to coast, visiting every state, from the northern line to the Central Americas on the south, his experience being varied and interesting, and not altogether free from personal danger in the semi-civilized or rougher sections. He carried a complete sample line of Columbia goods, and in the mountainous regions these were packed on mule back, while he was also mounted in like fashion, being fully armed for any emergency that might arise. Items in his expense account covered charges for an arsenal of no mean size and of formidable character. At times so hazardous were some of his trips that the local government furnished him with a military escort of the Guarde Rurales for safety. Mr. Tosi scored a great success as a salesman, his record of sales in Mexico being excellent.

There are no more enthusiastic admirers of the talking machine the world over than the Mexicans. In fact, their love of music carries them to extremes in this respect. In the distant mining camps, and in the most isolated sections of that wonderful country, the poorest peon will in some way manage to buy a machine and some records, and then his cup of happiness seems filled to overflowing. Next to the talking machine comes the sewing machine, and these two articles of American manufacture go side by side in the esteem of the natives. Not infrequently Mr. Tosi found, in his journeyings throughout Mexico, that where a native shack was found, possibly of the total value of $50, there a talking and a sewing machine were installed in the place of honor, costing several times more than the house. In fact, the Mexicans are "perfectly crazy on the subject of talking machines," as Mr. Tosi expressed it. "Further," he added, "in one city of 40,000 inhabitants in one year there were sold 250 of our BC, or Twentieth Century machines, for $350 Mex. ($75 gold). A curious sight is to see a barefoot Mexican come into town carrying a $200 machine, which he has brought in to be repaired. Ragged Indians buy the highest price operatic records, and this spirit animates the entire population, rich and poor alike."

The Columbia Co. on February 15 opened their first retail store in the City of Mexico on the Avenida Juarez 20, opposite the new opera house, and which has been handsomely fitted up and stocked with the very latest lines of the Columbia product. J. Hoffey, in charge of the wholesale department, a distinct and separate establishment, on another street, will supervise the new place until a permanent manager is appointed.

COLUMBIA STORE IN MEXICO CITY.

NUGGETS OF WISDOM

For the Salesman, Dealer, Jobber and Manufacturer—Little Acorns of Thought Which May Make Oaks of Success.

Slipshod management begets slipshod help; and carelessness, even in the smallest details, is never unnoticed by the employer.

Never wink at the overcharging of a customer. Reprove a clerk as quickly for an error in your favor as for one in favor of the customer.

No engagement is so unimportant as not to be worth punctuality. Be on hand when you agree to be and you can demand punctuality in others.

The successful man to-day is the practical man. If you are not already familiar with the working side of your business, begin the study of it now.

It will pay any man, no matter how big his store, to see as many customers personally as his time will allow. People like to do business with the head of the concern.

No arrogant man shall pass through the portals of Mercantile Success. He who is an arrogant employer shall have servile employes. What a prize combination for repelling trade!

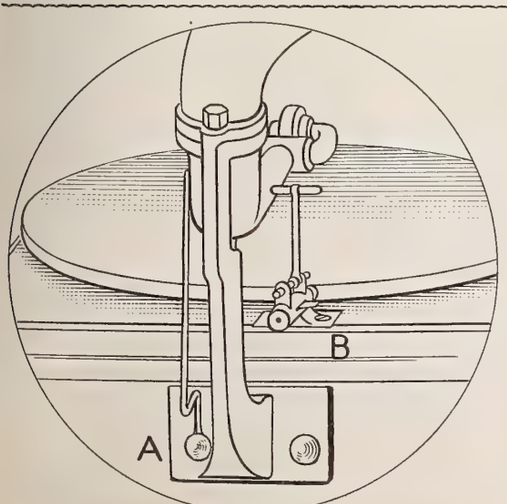
If you expect your clerks to be enthusiastic about the store and the business, see that you give them some reason to be. Nothing will starve to death much quicker than enthusiasm.

Cultivate the idea of faith in your own ability to sell. Have quiet confidence, but no cheek of the brassy kind.

It is better to be an active, well-paid canvasser on the road than a poorly paid, inactive salesman in the wareroom.

A glossy silk hat and an old-gold necktie won't sell anything unless there are brains between them.

Most everybody in creation is open to influence by common sense talk.



Cook's Automatic Stop FOR Talking Machines

Machine Stops Itself As Record Is Finished

HOUSE TO HOUSE CANVAS A GREAT SUCCESS

Many dealers are selling large numbers of these Automatic Stops by sending a man to call upon persons to whom they have sold machines and demonstrate the actual value of the stop. In almost every case a sale has resulted.

YOU CAN DO THE SAME THING

Fits Victor, Zonophone, Star and all other Disc Machines

Price $3.00, subject to regular trade discount

***Samples sent to dealers upon receipt of price*—Distributed only by**

COOK SALES CO., 29-31 Liberty St., = NEW YORK

The Needle Situation in a Nut Shell

¶ The machine buyer wants one of three tones—Soft, Medium or Brilliant. He himself doesn't know which he likes best.

¶ The inability of dealers to demonstrate each of these tones has often lost a sale.

¶ The regular Victor needle gives you the Brilliant tone and is an excellent needle.

¶ The Victor Victrola needle at the reduced price, highly polished, with uniform points of special tempered steel, is probably the best needle made.

¶ The B. & H. Fibre Needle, in the original length, gives you a soft tone. As you cut it with our Improved Fibre Needle Cutter, it develops a medium tone. This needle has many excellent talking points.

¶ Our Exhibition line of needles is made in five styles —Brilliant, Musical, Medium, Loud and Soft. Your cost on these needles guarantees you actually 250% profit.

¶ Send for our needle circular at once. The prices will be a revelation to you.

¶ Improved Fibre Needle Cutter retails at $1.50, the regular Victor discounts apply. Endorsed and supplied by the B. & H. Fibre Needle Co.

Improved Fibre Needle Cutter
Price $1.50.

(Special to The Talking Machine World)

Chicago, Ill., March 8, 1909.

Jobbers here and through the West generally so far as can be learned report that trade during February has been of fairly satisfactory volume, fully equal to January as far as the number of days was concerned, and in a few instances a comfortable increase for the month. The month showed an increase as compared with the same period last year varying in volume with different houses. The virility of the business is shown by the fact that all the local jobbers report quite a number of good new dealers opened up since the first of the year. Response to the Victor exchange proposition has been very general, but there is considerable complaint because of the delay in shipment of the double faced records. The new Victor II and III have been received with the greatest of approval, the new III being the subject of special commendation.

George W. Lyle, general manager of the Columbia Phonograph Co., General, arrived in the city last Friday, and after a very busy two days returned to the East on Sunday. The principal object of Mr. Lyle's visit was to consider the matter of a new location for the Chicago headquarters, as the big store, at 88 Wabash, so long occupied by the company, is to be given up on May 1. No definite decision was reached, but negotiations are in progress and the matter will undoubtedly be determined within a week or so. The desirability of a more central location was the determining factor in the refusal to renew the lease on the present quarters, and in all probability the Columbia will be found after May 1, somewhere between Adams and Van Buren streets, on Wabash. Mr. Lyle was very much pleased with the volume of their business, and said that February showed a marked increase over January all through the service.

The B. & H. Fibre needle is a Chicago product which has already won a world-wide reputation. Numerous items are beginning to crop out in foreign journals concerning the wooden needle. For instance L. E. Wright, in a communication in the February of "Sound Waves," of London, pays a high tribute to the fibre needle, especially for use on high class records. "My idea of perfection," he says, "is the use of fibre needles and the wooden horn in connection with a good machine and sound-box. Thus equipped the machine is a revelation." February was the biggest month in the history of the B. & H. Co., and witnessed larger orders from the coast than ever before and the opening up of the Canadian trade in a most satisfactory manner.

A rumor is extant that one of the New York talking machine dealers is considering the matter of opening up in the down town district of Chicago. The reports are very vague, however, and nothing may come out of the matter.

E. B. Bostwick, Western traveling representative for the Edison Business Phonograph Co., was in the city last week attending the business show and left on Sunday for a trip through the Central West which will be of at least two months' duration. "Not only are we securing representatives for the business phonograph in all the principal cities, but in a large number of towns of less than 10,000, we have agents who are doing a profitable business. Some of our strongest agents are among the regular talking machine dealers. Their knowledge of Edison phonographs is, of course, valuable and an enterprising man, with the aid we can furnish him, soon becomes proficient in presenting the proposition to business men."

Lyon & Healy have just installed a complete new system of record bins in their wholesale talking machine department. There are sixteen cases, eight feet high by ten feet long, and the compartments are horizontal, so that the records are laid flat. All of the records are carried in stock in envelopes and this arrangement aids materially in handling. The cases are nicely finished and present an extremely ship-shape appearance.

W. A. Voltz has returned to Lyon & Healy after a year's absence in other lines and will represent the talking machine department on the road. He is now on a Michigan trip. He is an experienced wholesale "talker" salesman.

The Salter Manufacturing Co. are having an excellent demand on their new improved disc record cabinet in which the discs are laid flat, one record to a compartment, and each shelf is lined with soft green felt, preventing the discs either single or double, from being scratched. The handsome double cabinet, No. 784, has had a prominent place in Chicago window displays the last month and has attracted admiring attention. Several attractive new cabinets, embodying the same principle, will soon be offered the trade by the company.

Malcolm B. Henry is now representing the Hawthorne & Sheble Manufacturing Co. in Chicago and the West, vice Harry K. Tilt, resigned. Mr. Henry has established an office at room 610, 40 Dearborn street. Although a young man, he has been continuously in the trade since 1893 and has a wide acquaintance among dealers and jobbers. He traveled in western territory for Hawthorne & Sheble for some time, leaving them to take charge of the Columbia branch in Denver. He has just returned from a successful trip to St. Paul and Minneapolis.

Siegel, Cooper & Co. contemplate changes in their building which will enable them to give greatly increased space to the talking machine department, which now occupies small quarters on the corner of the third floor. The open space above the shipping court will be enclosed from the third floor up and this additional floorage on the third floor, 60 feet wide by 20 feet deep, flanked on either side by elevators will be fitted up in first class shape for the talking machine and small goods departments. At one end of the new department there will be two Victor booths and at the other end two Edison rooms. The general salesroom will be located in a large space between the booths and here daily talking machine concerts will be given. The small goods counters will extend along the east end of the room. The house expects to greatly increase their talking machine department in their new quarters.

Number 304 Wabash Ave., which has so long been the headquarters for various branches of the Edison Co.'s activities in Chicago, will be entirely deserted by the representatives of the "Wizard" this week. George Hardin, Western representative of the Edison Manufacturing Co., and looks after both their moving picture and battery interests here, and A. V. Chandler, Illinois representative for the National Phonograph Co., will move to 90 Wabash avenue, northeast corner of Washington street, where they will occupy commodious quarters on the fourth floor. Mr. Chandler leaves this week for a trip through the state, which will extend as far south as Cairo, and will take him about a month.

George Ornstein, manager of traveling salesmen for the Victor Co., arrived in the city on Saturday last on one of his ever-welcome visits to the local jobbers.

Edwin H. Uhl, Western manager of the Rudolph Wurlitzer Co., left on Wednesday last on a trip to the coast by way of Salt Lake City and Denver. He was accompanied by Mrs. Uhl and they will be gone about six weeks. While the journey is undertaken primarily for pleasure, Mr. Uhl remarked to F. H. Siemon as he left the store, that he had a catalog and order book with him and that they would probably hear from him at various points in the trip.

Cal Stewart, the inimitable Uncle Josh of talking machine record and theatrical fame, was in Chicago on Friday last on his way westward to the coast. He is monologueing on the Orpheum circuit. The last time he was here he stayed for a couple of weeks, playing a "rube"

The Economy Racks

A NOTABLE INNOVATION

The Economy Disc Record Rack—Convenient, Portable. One record to a compartment. No handling of several to find the one you wish. Made in highly polished Mahogany or oak or oak mission. Attractive Billiard cloth cover. Retail prices—Rack for 10-inch records, $3.50; 12-inch, $3.75; Rack for insertion in cabinet, $1.50.

The Perfection Disc Record Racks—This is a rack similar to the Economy but less ornamental and therefore cheaper. Price, $1.50 for 10-inch records; $1.75 for 12-inch.

The Ideal Negative Rack—for photographers—Amateur rack, holds anything from a postal card to an 8x10 negative. Price, $1.25 retail. Professional rack, adjustable, holding anything from 8x10 to 14x17. Retail price, $1.75.

We can now make prompt shipment in Jobbing Quantities.

COMING—*The most unique talking machine cabinet ever introduced to the trade. It will embrace the "Economy" principle and will create a sensation.*

We sell "Everything known in Music."

Lyon & Healy

CHICAGO

character in a melodrama. This time, however, his public performances were all at Lyon & Healy's. He showed up at C. E. Goodwin's office about noon and was immediately taken in charge and shot down the elevator to Victor Hall, which was filled with its usual noonday capacity audience. Mr. Goodwin introduced Uncle Josh in his usual facile and polished manner, and Stewart told stories and incidentally demonstrated the trueness to life of the talking machine reproductions of his verbal characterizations for fully half an hour. Later in the afternoon he again appeared on the fifth floor and made records for anybody and everybody who wanted them.

The branch store of the Columbia Phonograph Co., at Joliet, Ill., has been discontinued, the accounts being turned over to the local Columbia dealer. Oscar Radix, the former manager, comes back to Chicago and will assume a position in the retail department of the local headquarters.

L. C. Wiswell, assistant manager of the talking machine department of Lyon & Healy's, has returned from a two week's trip through portions of Michigan and Iowa. He found business as fairly active all along the line, and in some cases more so. Rumor hath it that the establishment of several good new deals resulted.

B. G. Royal, president of the Universal Talking Machine Co., spent Saturday, Sunday and Monday, Feb. 27, 28, and March 1 in Chicago. He was accompanied by Mrs. Royal. From here they returned East.

A gentleman went into the Wurlitzer store the week before Christmas and told John Otto, retail manager, that he wanted a talking machine, the cheapest he had in the house. "The children say that it won't be a Christmas unless they get a machine," said he, "and I have got to get it, although I don't want it." Otto sized the customer up as a man of means and figured that he had not been properly introduced to the talking machine proposition. He showed him a Victor Jr., "That's all right," he said. "Give me half a dozen records and end the agony. No! don't play it." The salesman remarked that he wanted to see if the machine was in perfect order (although, of course, he would not have given him the sample machine) and put on a melodious instrumental record. He watched the man and saw that he was not greatly shocked, and quickly tried a Red Seal record, "Bartlett's Dream," on a Victor III. The customer showing appreciation and a desire to linger, a Caruso record was then rendered on a Victrola. The man admitted that he had never dreamed that such music could be produced by a talking machine. Before he left he had bought a Victrola and is to-day one of the best Red Seal customers they have.

E. A. Phillips, manager of the sporting goods, toy and talking machine department of M. Rothschild & Co., is in the East on his regular spring buying trip and will return in about a week. His assistant W. M. Baach, who, by the way, joined the noble army of benedicts a month ago, and is still laboring under a load of congratulations, reports business as very fair for the season and that they are getting more and more of the better class of business owing perhaps to their own persistent efforts in that direction. They still keep up their afternoon illustrated song recital with satisfactory effects on records sales.

Arthur D. Geissler, general manager of the Talking Machine Co., says that February broke even with January, in spite of the short month and holiday. The March list sold in great shape and the present month has opened up in a brisk manner both as regards machines and records. Generally speaking, stocks in the hands of dealers are not at all burdensome and the prospects for a good brisk trade are excellent. Some very enthusiastic letters have been received lately regarding the "cabinet that matches," which has created a remarkable demand for itself in the remarkably short time it has been on the market. The company has been compelled to increase its shop force on account of the increased demand for the Wade fiber needle cutter, which they manufacture.

The Columbia Phonograph Co. have one of their attractive feature window displays in this week. It exploits the three "Rose Hits," "Meet Me in Rose Time, Rosie," "That's What the Rose Said to Me," and "Roses Bring Dreams of You." The title pages of the sheet music of the taree are reproduced in colors on a large card and one of the records is kept revolving on a graphophone which also supports a vertical rod at the top of which is affixed another record which is also kept in motion. A solid window display of the indestructible records is also made.

Harry Berger, representing the Talking Machine Co., has just returned from a trip through Iowa and Illinois. He is proving a successful road salesman as he has in the other positions he has occupied.

W. W. Parsons, who after twelve years' service with the Columbia Phonograph Co., as manager of the commercial graphophone department, became identified with the Dictaphone Co. of America as district manager, when they took over the Columbia commercial interests a few months ago, has tendered his resignation and will take a much-needed vacation for a month or so, before re-entering business. He has several flattering offers but has not definitely decided as yet. Mr. Parson's experience in the dictation machine business extends over a period of over fifteen years. He started with the North American Phonograph Co. in 1893, later with the Talking Machine Co., for two years, and went with the Columbia Co. when they opened their Chicago business. Not only is he known as a thoroughly equipped talking machine man, but he has a reputation among office appliance men as a salesman and executive of unusual accomplishments.

General Manager J. W. Binder of the Dictaphone Co., was in the city last week and completed arrangements with G. L. Scofield to assume the district management of the company, vice Mr. Parsons resigned. Mr. Scofield has been a prominent figure in the automobile business in Chicago for several years past, managing the affairs of the Acme Co., in this section and also having charge of the used car department for the White Co., of the West. Prior to that, however, he was in business in Dallas, Tex., handling a general line of office appliances and specialties. The Dictaphone offices will be removed this week from the Columbia store at 88 Wabash avenue, to Suite 1704, Heyworth building.

Three of the Victor Co.'s salesmen were in the city Saturday to meet George Armstrong. They were Mr. Ebeline, who is now working Indiana, Mr. Sues, Michigan, and Mr. Phillips, who recently returned from California and is now traveling in Illinois.

L. A. Olmstead, proprietor of the Vim Co., talking machines, sporting goods, etc., 68 Lake street, has leased the three-story building at 166 Clark street, and will occupy it as a branch store after May 1. Mr. Olmsted recently opened a store at Minneapolis.

When Robley D. Evans came to Chicago to lecture last month he found L. K. Cameron of the Wurlitzer house waiting at the hotel with a Victrola and a camera, intent on securing a photograph of the famous admiral, listening to the Victor record of his farewell speech on retiring from the navy. It took some persuasion but he finally capitulated and settled himself with an expression of grim determination which was not what was wanted. The "Forza del Destino" duet, by Caruso and Scotti was put on and the ex-commander's face assumed an expression of rapture which was faithfully caught by the camera.

Jobbers state that they are at last able to obtain adequate stocks of the Economy and Perfection disc record racks, made by R. H. Jones, of 117 Bryan place, Chicago. These inexpensive, but very sightly and convenient racks, not only hold but one record to a compartment, thus making them equally suitable for double-faced or single records, but the record is held firmly at three different points, thus giving them additional protection. The number of styles has been increased, making a particularly fine assortment of rack meeting every requirement that the dealer is likely to encounter. The same principle is utilized in the ideal Negative, which Mr. Jones also makes.

The Edison Business Phonograph has been as usual represented at the annual business show at the Coliseum, which closed Saturday night. The exhibit this year is made under the auspices of the Business Phonograph Co., of Chicago, a local dealer, Edwin C. Barnes, manager. Mr. Barnes was assisted by his sales manager, J. D. Pahlman and E. B. Bostwick, Western traveling representative for the Edison Business Phonograph Co., manufacturers, of Camden, N. J., was in attendance and was kept busy exploiting the merits of the

machines. The booth was a large one near the center of the building and was attractively decorated, florally and otherwise. The various types of business phonographs were shown, including the spring motor, the direct current, and the Universal motor machines, and the electric shaving machine.

A vast amount of interest was of course created by the Universal motor, the company's latest production, and which will adjust to any electric light current, alternating or direct. Other late improvements such as the cylinder ejector, recorder guard, etc., were duly expatiated upon. Mr. Barnes stated that the show was a success so far as they were concerned and particularly so as they had learned from the experience of previous years to pick and centralize their efforts on the genuinely interested, treating the curiosity seeker with courtesy, but without waste of valuable time.

Nelson C. Durand, general manager of the Edison Business Phonograph Co., was in Chicago on Saturday, the 27th, and was therefore able to visit the booth, as the show opened that afternoon. He returned East on Sunday.

WATCH YOUR VIBRATIONS.

If You Like Music in C You Are Domestic, Mrs. Greeley Says.

Useful hints in regard to temperaments as indicated by the tuning of the personal vibrations were given by Mrs. Miriam Mason Greeley at the Tuesday Causerie at the Waldorf-Astoria last week. According to the personal vibration theory, the man who hankers after the ingenue type clad in white muslin with a blue sash has instinctively hit upon elements of vast psychic importance. The white has the vibration of ethereal perfection, the blue sash showing a shrinking, conservative, and thoughtful nature. If perhaps the girl prefers music written in the key of C the man has made an excellent choice for matrimony, because the vibrations of that key tone in with a domestic nature.

The color guide is the least satisfactory, for a woman who wears grays and blues for fashion's sake may have really the green feeling, which is a very uncongenial one, being pugnacious and partisan. In that case the woman should cultivate the blue feeling, for a plaid disposition in those shades would combine the combative and conservative in due proportions.

A genuine and instructive preference for red denotes an intense and passionate nature. In this instance the emanations from the color are effective. Mrs. Greeley quoted the case of a writer who, when she wished to produce a fervid passage, hung up a red shawl and let the intense emanations bring her to the proper state of mind.

The matter of numbers is more complex, but this much is sure, that any man who marries a woman whose natural number is nine will surely regret it, for "the combination of three times three means that when she gets through talking there isn't much left worth saying." Eleven, said the lecturer, denotes incompleteness, hence a scatter-brained individual. Twelve shows the ecclesiastical bent and the desire to convert the heathen.

Music is another guide for the wary. Any person liking the key of E, particularly if she also has a fondness for red, will be intense to the point of spontaneous combustion.

The difficulty of this matter is for anyone to distinguish from casual matters of fashion or custom by her true esoteric sense her favorite color number and musical pitch. Then one should apply it practically, for it should be, Mrs. Greeley explained, "the personal vibration, both esoteric and exoteric." When some one told the lecturer that no one knew what that meant she replied that she congratulated herself on finding something absolutely new.

"MERRY WIDOW" CO. ENJOY "MERRY WIDOW" RECORDS.

During the recent visit of the Henry W. Savage "Merry Widow" company to Cincinnati, O., where they played to large audiences at the Grand Opera House, they were frequent visitors to the handsome talking machine department of the Rudolph Wurlitzer Co., in that city, and so delighted were they with the "Merry Widow" records that the pictures of the entire cast were taken listening to the Victor Victrola machine which we are privileged to reproduce.

Indeed it would be difficult to find any body of singers so enthusiastic as were the ladies and gentlemen who make up the "Merry Widow" company, over their cordial reception at the Wurlitzer talking machine headquarters.

We may say, by the way, that during the stay of the company in Cincinnati the Rudolph Wurlitzer Co. made splendid use in their advertising copy of the repertoire of talking machine selections from the "Merry Widow" which they carry. It was up-to-the-minute work that merits praise for those who conceived and worked out the idea. It is publicity that is well worth emulating by the trade.

PHONOGRAPH IS HIS DOCTOR.

A wealthy bachelor of Fallon, Neb., who can neither read nor write, has solved the problem of taking his physician's instructions during his illness by having them dictated into a phonograph, which is taken to his home and placed in the bedroom. There he is reminded just when and how to take his medicines, what he can eat, and what other things he must do to regain his health. He was sorely troubled when he first became ill, as he was not able to remember his doctor's instructions, and refused to have a nurse. The mistake nearly cost him his life, and the phonograph was secured to solve the problem.—Edison Phonogram.

INCREASE YOUR RECORD SALES.

A System of Carrying Records Which Increases Sales.

The day of the dealer with a dusty stock of machines and records, making a success, is past. Customers will not patronize dealers whost stock is not well kept and in a clean condition, indicating that the goods are new.

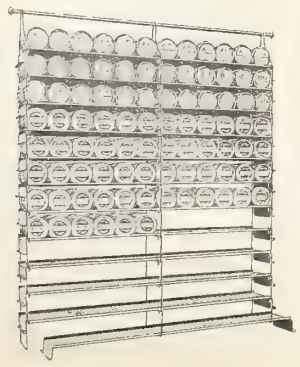
What is more aggravating to a customer than to wait five minutes for a dealer to tell him whether he has a certain record in stock and then in many cases find that the record is out? Up-to-date dealers realizing this are adopting the best system of carrying records, and according to the Blackman Talking Machine Co., of 97 Chambers street, New York City, their tray system used in connection with the Rapke label, as illustrated on page 33, fills the bill. Dealers will do well to investigate same.

ORDER WORTH $2,000.

L. W. C. Martense, a new Columbia dealer in Albany, N. Y., placed an initial order for $2,000 worth of machines and double-face records. Mr. Gaines said he had a splendid field and was working its possibilities to the limit.

Elbert Hubbard says: "To establish and maintain order, harmony and excellence in the territory under one's own hat, will keep one fairly well occupied."

There is the same distinction between buying goods and ordering them as between selling goods and taking an order.



Mr. Dealer: "Serves You Right!"

If you let the other fellow supply your customers with The Schubert Extensible Rack.

Made of metal interchangeable shelves, nicely black enameled, which can be formed into any size rack a customer has records to fill and then added to as more are gotten. Each shelf holds 12 records and as many shelves subsequently added to suit the occasion, ranging from 1 to 20 or more. Put together and taken apart at will. Records cannot fall out. Good profit to dealer and cheap enough for every phonograph owner. Small lot starts your whole trade, creating an endless chain of sales, both in shelves and records. Send for terms and prices, also jobber's name from whom you buy.

OHIO "TALKER" MEN MEET

In Cincinnati and Hold Quarterly Meeting—Many Notable Addresses Made—Next Meeting to be Held in Cleveland in May.

(Special to The Talking Machine World.)

Cincinnati, O., March 4, 1909.

The first quarterly meeting of the Ohio State Association of Talking Machine Dealers, which was organized in Columbus last November, was seld at the Sinton February 21. Routine business was transacted at the morning session, and in the afternoon Charles J. Williams, Zanesville, spoke on "Past, Present and Future of the Talking Machine Business," and W. H. Snyder, Columbus, delivered an address on "Competition." Mr. Doerzbach gave a talk on "Selling Our Line."

The members of the association, of whom 35 were present, were entertained at dinner at the Sinton that night by the jobbers of Cincinnati and other cities. Addresses were delivered by J. F. Bowers, president of the National Association,

PRESIDENT C. A. CAJACOB.

Chicago, on "Trade Organizations"; P. B. Whitsit, Columbus, on "The Relations of the Manufacturer, the Jobber and the Dealer"; Joseph Dittrich, Cincinnati, on "The Successful Dealer."

The officers of the association are: A. C. Cajacob, of Wapakoneta, president; Geo. J. Doerzbach, of Sandusky, vice-president; Charles Williams, of Waynesville, treasurer, and Martin Chandler, of Chillicothe, secretary.

The next meeting will be held in Cleveland on May 5.

Among the papers read at the convention was the following interesting paper on "Advertising the Talking Machine Line," by C. W. Page, of the Rudolph Wurlitzer Co.:

"A popular English writer has this to say about a certain class of people: 'They put us to sleep,' says she, 'because they tell us the reason of things.'

"I do not recall the circumstances that occasioned this remark, but I would not give 'thank you' for advice to do thus and so in business, unless the admonition carried a liberal accompaniment of 'reasons why.'

"Now, I have made what I call a very nervy start on my subject for this occasion. I have voluntarily put myself in a position where every piece of good advice I serve up has got to be reinforced with a carefully selected, quarter-sawed, hand-polished 'reason because' or I cannot expect much consideration at your hands.

"The subject of advertising is too broad, too deep, and our time is far too limited to attempt to treat it at length. I have just one thought to give you to-day, but it is a good, big thought, and if you will take it home with you and work it out in your business you should find it highly profitable. The thought is timely advertising.

"Take full advantage of current events that the public is interested in by advertising Victor and Edison in this connection in your local newspapers.

"To illustrate: The play, 'The Merry Widow,' comes to the theater. The newspapers are full of it; the billboards on every side appeal to passers-by with gorgeous lithographs of the seductive waltz 'that steals away men's souls.' The newsboys and school boys whistle, the school girls hum it on the streets; orchestras play it at dances; pianos take it up in parlors—in a word, the whole town is 'Merry Widow' crazy.

"Now for a series of good strong newspaper ads., headed 'The Merry Widow' in big bold capital letters, and a happy reminder that all the charming 'Merry Widow' music can be enjoyed in the home with a Victor or Edison.

"Mention the favorite songs and instrumental numbers and the artists who made the records. The Victor has 'The Merry Widow Waltz,' sung by Mme. Sembrich; the Edison has the Vilia Song, sung by the foremost European prima donna in the rôle of the widow, etc. 'Think of perpetuating the pleasure of the theatrical performance,' your ad will say, 'of renewing acquaintance with your favorite selections in your home, where they are most enjoyed.' Then conclude with a broad cordial invitation to everybody to come in to-morrow and hear 'The Merry Widow' music at the free all-day concert—everybody welcome.

"Don't you think such advertising must sell records to Edison and Victor owners and machines and records to non-owners?

"Next week perhaps another show comes to town; you look up its music in your record catalog and your public is again reminded that the music can be made a permanent feature of their homes, if only they invest in a Victor or an Edison.

"Keep this up consistently, and sooner or later everybody must get the thought that a talking machine is in truth a 'home theater.'

"Dress your windows up to harmonize with the newspaper advertising. Show managers are always glad to part with photographs of leading actors and scenes for this purpose, as well as colored posters that can be hung up or cut out and backed on pasteboard for standing up.

"This week 'The Merry Widow' is in Cincinnati. The advertising manager of the company came to our firm and gave us enough advertising matter to fit out a county fair exhibit. We even secured electrotype cuts of 'The Merry Widow Waltz' for illustrating our newspaper ads.

"A week ago Nat M. Wills was on the bill of a local vaudeville theater. We featured his Victor records and the newspaper furnished us with an excellent cut of this actor in his costume as 'The Happy Tramp.' It brought the people in. Your newspapers can help you out the same way and will gladly do it.

"Sometime since Admiral 'Fighting Bob' Evans lectured here. We made a strong feature of his record, 'Farewell Address to the Navy,' and the newspapers furnished us cuts of the Admiral for illustrating the ads.

"Another fruitful subject for newspaper ads is popular song hits of the day, such as 'Rainbow,' 'School Days,' 'Sunbonnet Sue,' 'Taffy,' etc.

"There is always something special to talk about. Keep your eyes open for the unusual things of wide public interest and press them into your advertising service. Make them pull for you.

"The thoughtful miller utilizes the strength of the stream for turning the wheel of his grist mill. Over the hill is his home. A lofty windmill stands close by. The vagrant currents of the air cause it to revolve and pump water for his household requirements. Neither the wind nor the water costs him anything, but both are made to pull.

"Such incidents as I have mentioned cost a dealer nothing; nevertheless, than can be made to pull."

After several "airship" trips to the West, Walter L. Eckhardt, president of the Manufacturers Outlet Co., and a director of the Leeds & Catlin Co., New York, is back East again. Walter is one of the busiest men in the business at the present time, and so is his friend, Frank W. Boyer, president of the Chicago Music Co., who distributes solid silver pencils to his allies and sells about all the mica diaphragms that are bought in this country. Mr. Boyer's home is in Valparaiso, Ind., but most of his time is divided between Chicago and New York. As Mr. Eckhardt described him, "Mr. Boyer is the mica king of this country."

You've been caught like this:

Customer comes into your store and asks for some Victor, or Victor Record, or some accessory that you haven't got.

You telegraph or 'phone your jobber at once.

He promises to ship by express same day *sure*.

You wait and wait, and then wait some more—and still wait.

Your customer comes again and again to get the goods.

You make a whole lot of explanations.

And finally your customer gets disgusted, and you lose the sale.

Don't let it happen again!

What's the use of losing business on account of a slow jobber? You don't have to do it.

Try us. We don't know what "slow" means. "Hustle" is our motto. And there's one thing we guarantee—YOUR ORDER WILL BE SHIPPED THE DAY WE GET IT.

Again! You'll never catch *us* short of stock. Send for any Victor, or Victrola, or Victor record; or horns, record cabinets, fibre cases, English needles, accessories or parts—we've got them, and plenty of each. You get just what you want, when you want it. We're "minute-men."

Another point! We don't handle anything but Victor goods, and we don't mix up orders.

Try us! Don't take your jobber's promise to "be good." He probably did his best before. Our best is *the* best. Send us your next rush order, and we'll show you how quick we can handle it.

We've got a mighty interesting booklet that we want to send you, called "The Cabinet that Matches." It tells about our record cabinets that exactly match every style of Victor in design and finish.

Drop us a postal to-day for this booklet and our catalogues. They're worth money to you.

TWO CENT ROYALTY COPYRIGHT BILL A LAW.

After a Three Years' Fight the Copyright Bill Was Unexpectedly Pushed Through House and Senate at Last Moment—The Much-Discussed Music Section—Comments of Members of the Trade on the Passage of Copyright Legislation—Goes Into Effect July 1, 1909.

(Special to The Talking Machine World.)

Washington, D. C., March 4, 1909.

What seemed impossible has been accomplished, namely, the passage of the revised copyright statutes by the Senate and House yesterday, the law being signed by President Roosevelt to-day among the very last measures enacted by the Sixtieth Congress, which expired by limitation at noon. The new copyright act, which goes into effect July 1, 1909, is the one prepared by the Hon. Frank D. Currier, of New Hampshire, chairman of the House Committee on Patents, and was called by his name. It was reported to the House and unanimously recommended for passage on February 17. Considering the few legislative days remaining of the short session, grave doubt was expressed that the bill would be placed on passage. Nevertheless, miracles will occur, and the enactment of an elaborate measure of this nature, dealing with so many interests of a more or less complex character, and which had been passionately discussed pro and con for four years, in the last day but one, when both the Senate and House are in the throes of the closing hours of an unusually turbulent session, must be so classified.

Early yesterday Mr. Currier called up the bill in the House under a suspension of the rules and it was passed as reported. In the evening the same procedure was followed by Senator Smoot, of Utah, chairman of the Patents Committee, and with like result. The chief hindrance in the passage of a copyright bill before this has been the musical section, and as enacted it reads as follows:

"Section 1. Any person entitled thereto, upon complying with the provisions of this act, shall have the exclusive right—(e) To perform the copyrighted work publicly for profit if it be a musical composition; and for the purposes set forth in subsection (a) hereof; to make any arrangement or setting of it, or of the melody of it in any system of notation, or any form of record in which the thought of an author may be recorded and from which it may be read or reproduced:

"Provided, That the provisions of this act, so far as they secure copyright controlling the parts of instruments serving to reproduce mechanically the musical work shall include only compositions published and copyrighted after this act goes into effect; and shall not include the works of a foreign author or copyright proprietor unless the foreign nation of which such author or composer is a citizen or subject grants, either by treaty, convention, agreement or law to citizens of the United States similar rights.

"And provided further, and as a condition of extending the copyright control to such mechanical reproductions, That whenever the owner of a musical copyright has used or permitted, or knowingly acquiesced in the use of the copyrighted work upon the parts of instruments serving to reproduce mechanically the musical work, any other person may make similar use of the copyrighted work upon the payment to the copyright proprietor of a royalty of two cents on each such part manufactured, to be paid by the manufacturer thereof; and the composer may require and if so the manufacturer shall furnish a report under oath on the twentieth day of each month on the number of parts of instruments manufactured during the previous month serving to reproduce mechanically said musical work, and royalties shall be due on the parts manufactured during any month upon the twentieth of the next succeeding month.

"The payment of the royalty provided for by this section shall free the articles or devices for which such royalty has been paid from further contribution to the copyright except in case of public performance for profit: And provided further, That it shall be the duty of the copyright owner, if he uses the musical composition himself for the manufacture of parts of instruments serving to reproduce mechanically the musical work, or licenses others to do so, to file notice thereof, accompanied by a recording fee, in the Copyright Office, and any failure to file such notice shall be a complete defense to any suit, action, or proceeding for any infringement of such coypright.

"In case of the failure of such manufacturer to pay to the copyright proprietor within thirty days after demand in writing the full sum of royalties due at said rate at the date of such demand the court may award taxable costs to the plaintiff and a reasonable counsel fee, and the court may, in its discretion, enter judgment therein for any sum in addition over the amount found to be due as royalty in accordance with the terms of this act, not exceeding three times such amount.

"The reproduction or rendition of a musical composition by or upon coin-operated machines shall not be deemed a public performance for profit unless a fee is charged for admission to the place where such reproduction or rendition occurs."

Regarding the duration or "life" of copyright the following applies:

"Section 23. That the copyright secured by this act shall endure for 28 years from the date of first publication, whether the copyrighted work bear the author's true name, or is published anonymously, or under an assumed name; Provided, that in the case of any posthumous work or any periodical, cyclopedic or other composite work upon which the copyright was originally secured by the proprietor thereof, or of any work copyrighted by a corporate body (otherwise than as assignee or licensee of the individual author or authors) or by an employer for whom such work is made for hire. The proprietor of such copyright shall be entitled to a renewal and extension for a further term of 28 years when application for such renewal and extension shall have been made in the Copyright Office and duly registered therein within one year prior to the expiration of the original term of copyright: And provided further, That in the case of any other copyrighted work including a contribution by an individual author, when the contribution has been separately registered the author if living, or his widow, widower or children, if he is dead, or his executors if there are neither widow, widower or children, or in the absence of a will, his next of kin are to be entitled to a renewal or extension for a further period of 28 years after registration."

In default of registration the copyright would expire at the end of the first 28 years from publication.

In the prosecution of infringements the act provides as follows:

"Section 25. That if any person shall infringe the copyright in any work protected under the copyright laws of the United States such person shall be liable:

"Fourth—(c) To deliver up on oath, to be impounded during the pendency of the action, upon such terms and conditions as the court may prescribe, all articles alleged to infringe a copyright; (d) To deliver up on oath for destruction all the infringing copies or devices, as well as all plates, molds, matrices, or other means for making such infringing copies as the court may order; (e) Whenever the owner of a musical copyright has used or permitted the use of the copyrighted work upon the parts of musical instruments serving to reproduce mechanically the musical work, then in case of infringement of such copyright by the unauthorized manufacture, use, or sale of interchangeable parts, such as discs, rolls, bands, or cylinders for use in mechanical music-producing machines adapted to reproduce the copyrighted music, no criminal action shall be brought, but in a civil action an injunction may be granted upon such terms as the court may impose, and the plaintiff shall be entitled to recover in lieu of profits and damages a royalty as provided in section 1, subsection (e), of this act: Provided also, That whenever any person, in the absence of a license agreement, intends to use a copyrighted musical composition upon the parts of instruments serving to reproduce mechanically the musical work, relying upon the compulsory license provision of this act, he shall serve notice of such intention, by registered mail, upon the copyright proprietor at his last address disclosed by the records of the copyright office; and in case of his failure so to do the court may, in its discretion, in addition to sums hereinabove mentioned, award the complainant a further sum, not to exceed three times the amount provided by section 1, subsection (e), by way of damages, and not as a penalty, and also a temporary injunction until the full award is paid."

Paragraph Relating to Moving Pictures.

The clause relating to motion pictures, etc., in the copyright act is subdivision (d) of section 1, as follows:

"(d) To perform or represent the copyrighted work publicly if it be a drama, or, if it be a dramatic work and not reproduced in copies for sale, to vend any manuscript or any record whatsoever thereof; to make or to procure the making of any transcription or record thereof by or from which, in whole or in part, it may in any manner or by any method be exhibited, performed, represented, produced, or reproduced, and to exhibit, perform, represent, produce or reproduce it in any manner or by any method whatsoever."

PASTOR'S VOICE AT OWN FUNERAL.

Dying Clergyman Makes Phonograph Records for Use at His Grave.

(Special to The Talking Machine World.)

Fairfield, Ill., Feb. 28, 1909.

The Rev. Daniel Bassett Leach, an aged clergyman of Bone Gap, near here, was told yesterday that he was going to die. He asked that his graphophone be brought to his bedside. Into the machine the venerable pastor talked. Besides an address he spoke some prayers and a benediction.

When Mr. Leach had finished he had the records repeated. Then he asked that they be used at his funeral. His relatives assented, and thus his relatives, congregation and friends will hear his own voice as they stand beside his grave. Mr. Leach was born in Chenango County, N. Y.

DECREASE IN BUSINESS FAILURES.

Dun's preliminary report of commercial failures in the United States in February shows 1,105 in number and $16,734,813 in amount of liabilities, which compare with 1,621 similar suspensions for $27,064,571 in February, 1908. Manufacturing failures numbered 231 and involved $8,161,384, while in February, 1908, there were 393, with liabilities of $12,011,375. In the trading class 841 failures this year compare with 1,170 and the amount of defaulted indebtedness was $6,410,597 against $8,672,143 last year. There were thirty-three other commercial failures, including real estate, brokerage, etc., involving $2,162,832, which contrast sharply with the fifty-eight similar defaults for $6,381,053 reported in the same month a year ago. This month's returns, the report says, indicate a wholesome growth toward more normal conditions in the business world.

Brodbeck & Co., piano dealers, who represent the Victor talking machine and Edison phonograph in Mount Vernon, N. Y., have built up a splendid demand for these machines and records in that rapidly growing city. The firm consists of Emil Brodbeck and Frank Brodbeck, both experienced piano men.

Don't be too loud, but let people know that you are alive. Then they will come in to see how healthy you are.

INJUSTICE TO MANUFACTURERS OF RECORDS.

Paul H. Cromelin, President of the American Musical Copyright League, Brings the Weak Points of the Copyright Bill to the Attention of Representative Currier—Manufacturers Compelled to Pay Royalty on Rolls and Discs Manufactured, Whereas Publishers Pay Royalty Only on Sheets of Music Actually Sold—Mr. Currier in His Reply States if Any Hardship is Worked in Bill, Which Has Now Become a Law, It Can Easily be Cured by Amendment.

The following correspondence which passed between Paul H. Cromelin, president of the American Musical Copyright League, and the Hon. F. D. Currier, in regard to the new copyright act, is interesting, in view of the injustice which the new law works to manufacturers of perforated music rolls and talking machine discs. To compel manufacturers to pay royalties on the number of rolls and discs manufactured and not actually sold is a most unusual procedure and must be remedied in due course by amendment, as it has a distinct bearing on the rolls and discs exported. Under date of February 27 Mr. Cromelin wrote:

"Dear Mr. Currier—Mr. Barney has sent me a copy of your new copyright bill, H. R. 28192, and I want to congratulate you and your co-workers on the committee for having framed up a measure which so admirably meets the complex situation you have had confronting you.

"There never was a compromise that was satisfactory to everyone, and your bill is no exception in this respect. Some features in it will cause American manufacturers, especially those doing a large export trade, great concern, but, we have been given such consideration by all of you, and there has been such a manifest intention to protect every interest deserving of consideration and to give everyone a 'square deal,' that we can only express our appreciation for what you have done.

"There are a few points which I feel it my duty to bring to your notice.

"First—In so far as cylinder records for talking machines and the cheap little plates used on some forms of music boxes are concerned, two cents a record, *unless added to the selling price and collected from the public*, is confiscatory. Cylinder records for talking machines are listed as low as 25 cents. From this price a discount is given to jobbers of 50 and 10 per cent. They are sold for export in some countries where the competition with foreign factories is keen as low as 10 cents each. There is not as much as 2 cents profit in them. The provision in Section E, Paragraph 1 of your bill, H. R. 22183, of 1 cent on small-size cylinders and discs, and 2 cents on those of greater size is therefore naturally more agreeable. Such a criticism, however, is of no importance if the royalty must be added to the price.

"Second—We believe that there is not a music publisher who pays royalty *on the sheet music printed*. Royalties are always based on sales, *not on manufacture*. In the case of the Columbia Phonograph Co., for example, they will be compelled to pay royalty, should the bill pass in its present form, on thousands and thousands of records which will never be sold and on which, in addition to never receiving one cent, they will have a 2-cent royalty added to their present manufacturing cost. In explanation, they have about 100 retail stores in this and foreign countries. Their factory is in Bridgeport, Conn. They manufacture goods and stock their stores. The return for their investment is received *only when the goods are sold*. In the natural course there are thousands and thousands of records which are never sold. A piece is popular to-day; they manufacture to meet an anticipated demand; its popularity suddenly ceases and the records go back into the pot at the value of raw material.

"We believe that royalties should be based on record sales, not manufacture, each manufacturer being compelled to report under oath the number sold, and in this connection the royalties should be due and payable only on records *sold within the United States*.

"Congress should not attempt to legislate for goods sold in foreign countries. The reasons for this will be more apparent when you consider the following:

"First—Until laws similar to that which you are about to enact are passed in various foreign countries, the manufacturers in those countries will not be compelled to pay any royalty whatsoever, but will be free to use the new copyrighted selection the same as heretofore. I do not believe that it was yours or the committee's intention to deliberately handicap the export trade of our American manufacturers, but you can readily see, with the competition with foreign manufacturers as keen as it is to-day, that if we had to pay a royalty and they not, we would be 'out of the running.' The American manufacturers are shipping to-day large quantities of goods into Mexico and South America in competition with German, French and British firms. The additional royalty cost which the American would have to pay as provided for in your bill would make it impossible for them to compete.

"Second—The countries of the Berne convention will before June, 1910, revise their copyright laws in accordance with the spirit of the recent Berlin Conference. It is left to the legislature in each country to impose such conditions and restrictions as it may deem best to the new rights granted to composers of music as respects mechanical reproducers. Such conditions and restrictions are limited strictly, however, to each particular country which imposes them, and shall have no force and affect in other countries. It is to be expected that each country will fix the amount of royalty to be paid to composers, and in some instances the amount will be greater, in others less than that fixed in the United States. All attempts in Berlin to bring about an international arrangement in this respect were futile. As soon as laws are passed in these various countries fixing the amount of royalty the persons who attempt to sell records of copyrighted music in any of these countries will be immediately enjoined unless he pays to the owner *in that* country of the particular copyrights the royalty provided by the laws of that country, and this quite regardless of the fact that the record may have already paid the American royalty which you are providing on manufacture. Thus there would be *double royalties*, as it usually happens that foreign copyrights are disposed of to third persons, and the fact that the record has once paid a royalty to the owner of the American copyright *when manufactured* will be of no interest to the owner of the foreign copyright, who will require payment according to the laws of the particular foreign country where the case arises. The provision in your bill which frees the record after it has paid the 2-cent royalty from any further contribution to the copyright except in case of public performance for profit, would not meet the situation. No such provision in an American statute could have an effect as respects any other country. As a matter of fact the payment of a royalty in the United States would not entitle the American manufacturer to bring the record into Italy at all, without the consent of the owner of the Italian copyright, and he might refuse absolutely to give such consent, having given the exclusive right to some other. Under the agreement at Berlin, it is expressly provided that each government shall have the right to seize records which are attempted to be brought into the respective countries until such records have in every way complied with the requirements of the domestic legislation. Germany has become a great exporter of these musical devices, and many countries get their supplies from Germany. From the Hanover factory of the Deutsche Grammophon-Aktiengesellschaft records are shipped to all parts of the world, and there are at least twenty manufacturers of discs alone in Germany whose product is principally sold outside the German Empire. All the records for the Fonotipia Co., of Milan, Italy, and London, Eng., are made by the International Talking Machine Co., of Berlin, Germany. I happen to personally know from conversation with important persons who attended the Berlin Conference on behalf of Germany, and by direct information since received from Berlin, that Germany will jealously guard this point in regard to export and not pass a bill which will interfere with or retard the growth of its increasingly important export trade in these devices. I believe that when these facts are placed before you, you will see more clearly the necessity for basing royalties on sales and not on manufacture.

"I bring the above matter to your attention not with a view to adding to your difficulties or placing any barriers in the way of the speedy passage of the bill. We have said all along that we had no fight on the composers, and that while we were opposed to any laws bringing these devices under the domain of copyright, that if we failed to convince you and the members of the committee of the correctness of our position, and if you prepared a bill in which all the interests would be protected, you would find us co-operating and not opposing. Nothing which has happened since the fight began has changed our viewpoint as to the inexpediency of the proposed legislation, but you certainly have done your part and you will find us assisting and co-operating to the best of our ability as promised."

Hon. F. D. Currier's Reply.

In reply to the foregoing communication, the Hon. F. D. Currier wrote as follows to Mr. Cromelin, dated Washington, D. C., March 2:

"Dear Mr. Cromelin—I thank you for your favor of recent date regarding the copyright bill. Of course, you know how long and troublesome this contest has been, and that to ever end it there must be some compromise. I am not sure that you are not right in the criticisms you make as to the basis of royalty. I expect that any bill that we may pass will speedily develop some defects, and that should this bill go through we will be amending it at every session for some years to come. We passed what we thought was a most careful revision of the trademark laws a few years ago, and I think I have reported out and had passed bills amending that act every single session of Congress since. The bill now receives the unanimous support of both the House and Senate committees. If it should be passed and work hardship in any respect, I have no doubt that it would be easy to cure the trouble by amendment."

CORPORATION LAWS.

Restrictive Bills Introduced in Legislature at Albany Last Week.

(Special to The Talking Machine World.)

Albany, N. Y., March 8, 1909.

Assemblyman Andrew F. Murray introduced several corporation laws to-day at the request of the Corporation Department of the Secretary of State's office. If these bills should pass, stockholders of corporations organized here cannot meet outside of the State for the purpose of changing the number of directors. Where the capital stock of a corporation is changed by the unanimous consent of stockholders without a meeting, a certificate showing such unanimous consent must be filed with the Secretary of State.

The advertising agencies argue strongly on the law of average, and claim that it is the only thing that is absolutely certain in advertising. The point they lay stress on is: "What one man likes or wants forms no criterion. When a thousand, at a certain expense, are led to spend a certain amount, you have an absolute certainty. The millions will do what the thousands have done." This appeals to reason. It is merely the application of the statistical laws which make all insurance ventures possible. There is a constancy about large numbers.

"TALKER" TRADE IN THE ORIENT.

A Most Interesting Review of the Talking Machine Situation in China Furnished by the U. S. Consul at Shanghai—Talking Machine a Most Popular Instrument With the Chinese—How American Countries Are Catering to the Eccentricities of These People—Some Import Figures.

(Special to The Talking Machine World.)

Washington, D. C., March 8, 1909.

In the very interesting report on musical conditions in China sent to the Department of Commerce and Labor by the United States Consul at Shanghai there appeared the following reference to talking machine affairs in that country:

When the American talking-machine manufacturers began to turn their attention to markets in foreign countries, it appears that the China field was by no means overlooked, for of the total imports American manufacturers control 80 per cent.

The imports of talking machines and accessories into China during the years 1904, 1905, 1906, and 1907 were $50,295, $64,622, $94,460, and $94,059, respectively. The imports credited to the United States in 1907 amounted to $32,080, while the imports from Canada were valued at $38,930 by the Chinese customs. These figures, however, need explanation. There are no Canadian talking machines on this market. The value of the importation credited to Canada should be added to the American total, the shipments of American machines and accessories having been made over the steamship lines of the Canadian Pacific Railway Company from the Canadian port of Vancouver, and thus credited to the Dominion. In competition with American machines there is a German machine, and also one introduced by a French company. The German machines have been in this market for some time; the French machines are later arrivals. These machines do not seem to be meeting with great success.

The talking machine is rapidly becoming a most popular instrument with the Chinese, who purchase by far the greater percentage of the imports. It is said that the business done with the foreigners in China does not amount to more than perhaps $2,000 a month. It is for the Chinese trade that the companies are in this market, and it would appear that this is a business which may eventually develop into much larger proportions. The percentage of the increase for 1907 over previous years is very encouraging. The Chinese do not purchase the higher-priced instruments, but demand cheap machines. They are not as particular as the foreigners, and do not mind the scratching so long as the machine is loud enough. The scratch in playing is also, to some extent, lost in the Chinese music. In northern China one of the American companies supply what are known as straight-armed machines, while in southern China the taper armed are supplied. The latter give less scratch in playing.

One of the American machine companies is catering carefully to the trade in China, even to its eccentricities. An energetic and experienced representative of this company came to the Orient in the summer of 1907. His machines had already been placed under the agency of the largest musical goods house in China, who had done excellent work in introducing them and building up an American trade. With the assistance of this firm he set about enlarging the field. There are now agencies in almost every treaty port in China. The head agency at Shanghai has eight or ten Chinese salesmen continually in the field, and every detail of the trade is being carefully watched For instance, it was found that the black horn, which was suitable for the home trade, did not appeal to the Chinese eye. The company has now placed bright red and yellow horns on their machines, and they are very popular. This company has 2,000 Chinese records and the other American company about 1,000.

There have been four expert record makers from talking-machine companies in this field during the past year—two American, one French, and one German. The French and German companies have about 1,000 records. There is at present an expert in China who is engaged in making another 1,000 records for one of the American companies. This record making is most expensive and is very carefully undertaken. The most famous Chinese bands and palace singers are being engaged to make records. They are being brought from all parts of the Empire to the three record-making centers—Peking, Shanghai, and Hong Kong. Here the apparatus for making the master records is set up and the recording done under the direction of the expert. The master records, however, are never sent home for duplication until they have been approved by the Chinese. It has been found that certain classes of records must be made especially for the northern, the central, and the southern trade. A record popular in the north seldom finds a sale in the South, and vice versa.

The Chinese do not care for foreign records, except for laughing songs and selections, with the bugle and snare drum. The talking-machine trade is not one which will be quickly swelled into great proportions, but the active and energetic work which is being done by the American companies in this line, is producing most satisfactory results and is certain to make an increased demand. The reports of graphophones and accessories, by ports, were as follows in 1907: Tientsin, $27,590; Shanghai, $43,551; Hankow, $6,352; Canton, $4,085; Newchwang, $2,116; Kiaochow, $1,781; Foochow, $999; other ports, $7,585.

IMPORTANT FREIGHT DECISION.

Spokane Wins Its Fight Against the Railroads—Rates from St. Paul to Spokane Reduced by 16 2-3 Per Cent.—Nearly the Same Reduction Applies from Chicago to Spokane—Pacific Coast Cities Benefit by Decision.

(Special to The Talking Machine World.)

Washington, D. C., March 3, 1909.

The Interstate Commerce Commission to-day made an important decision in a case brought by the city of Spokane against transcontinental carriers involving rates on long and short hauls. The commission decided against the railroads, holding certain rates to be too high and ordering reductions. The decisions will affect other cities in the Northwest where the conditions are the same as at Spokane and also the general question of rates on long and short hauls throughout the country.

The city of Spokane in the case complained against the Northern Pacific, the Great Northern and the Union Pacific lines on the ground that rates from Eastern destinations to Spokane were higher than those to Seattle, a more distant point, and that the rates to Spokane were inherently unreasonable.

The commission's decision reduces class rates from St. Paul to Spokane 16 2-3 per cent. and makes substantially the same reduction from Chicago to Spokane. Rates east of Chicago are not dealt with in this case, but the principles will probably be applied in cases pending affecting Eastern territory where conditions are similar.

NO LET-UP FOR PRICE CUTTERS.

The National Phonograph Co. are most assiduous in prosecuting price-cutting firms, no matter where located. Among recent restraining orders issued in their favor was one against Geo. J. Raymond, conducting business under the name of the Raymond Syndicate, throughout Massachusetts. A temporary restraining order was also obtained against Woodward, Clark & Co., Portland, Ore., for selling goods below price, and a final decree has been granted in a suit of the National Phonograph Co. against Wright, Metzler Co., of Connellsville, Pa.

GREAT LIST OF HEBREW RECORDS.

The Hebrew record list of the Universal Talking Machine Mfg. Co., Newark, N. J., is reported as being the largest and best selected in the country, and on which their sales almost equal those of the American numbers. The special bulletin, issued last week, has 14 numbers, the five duets being reproduced from the voices of the greatest Jewish artists in New York City, and that is saying a great deal. Their soprano solos are also equally high class. The duets were sung by Mme, Prager and Mr. K. Jurelier, and the solos by Mme. Prager. Other magnificent voices, the possession of these peculiarly gifted musical people—talents usually inaccessible—will be placed on the Zonophone records at an early date. Their regular Hebrew catalog contains 50 other numbers. Manager Macnabb is earning well deserved praise for his tireless efforts to have his record catalog equal to the best in the market in point of quality, finish and selling value.

George Porch is a new talking machine dealer in Johnstown, Pa.

NEWS FROM THE GOLDEN GATE.

Trade Quiet—Early Summer Trade Expected—Alaska-Yukon Exhibition Will Help—Clark Wise & Co.'s New Store—Pacific Phonograph Co. Take Over Kohler & Chase "Talker" Business—Victrolas in Demand at Sherman, Clay's—Bacigalupi Delighted With New Store—Ambassador Gray Touring the South.

(Special to The Talking Machine World.)

San Francisco, Cal., March 5, 1909.

The talking machine business has been undeniably quiet on the Coast for the last month. Things have been picking up a little for the last week, but there is still less demand than there should be at this time of year. The wholesale business settled down to the ordinary run about the end of last month, and both wholesalers and retailers are carrying good-sized stocks, as the movement during February was greatly interfered with by the continued rain. City people are not taking their usual interest, and dealers in the country towns say that people are too busy getting their crops started to pay any attention to talking machines.

Regardless of the present quotations, the San Francisco wholesale dealers believe that next summer will be the best in years with the outside trade. In most of the agricultural districts the outlook was never better. The northern grain country is especially prosperous, and business in Seattle, Wash., is sure to be helped by the Alaska-Yukon-Pacific Exposition, which will be held there early in the summer. Southern California is also coming ahead, as there is more money moving in Los Angeles than for several years past, and the surrounding country has received enough rain to assure unusually bountiful crops.

Prospects in San Francisco, while hardly as bright as in some other parts of the Coast, are still very encouraging. The scattered condition of business will doubtless hold things back during the spring, but by next fall most of the dealers will be settled so as to receive the full benefit of the downtown movement, and will be able to make more attractive displays than ever before.

In a few months Clark Wise & Co. will be in a position to do a much larger high-class talking machine business than for the last few years. Their new location on Grant avenue, in the heart of the best shopping district, will give them a hold on the finest trade in the city. Mr. Wise has always regarded his talking machine department as one of the best paying features of his business, and he expects to have a big sale of Victrolas and high-class records. He will devote an entire floor to this department, probably the second, and will have a complete equipment along the most approved lines.

Benj. Curtaz & Son plan to put the talking machine department on the mezzanine floor of their new store, which they will occupy in about six weeks. With a larger store they will be able to give more attention to this side of the business, and expect to make much more of it than they have done since the fire.

Further changes have been made in the talking machine organization of Kohler & Chase, and it may now be said that the company is entirely out of the wholesale trade. The Pacific Phonograph Co. was incorporated about a week ago, and has taken over this end of the business, though it will still be conducted at Kohler & Chase's store, and that house is the principal stockholder. The capital of the new company is $100,000, and the incorporators are Q. A., E. M. and Geo. Q. Chase, R. H. Blake and C. M. Jones. This change is expected to aid greatly in the conduct of the business, as it places accounts and collections, as well as sales, under entirely distinct management. C. M. Jones, who has been manager of both wholesale and retail departments, will continue in charge of the business, holding the office of secretary in the new corporation. The company's territory covers California, half of Oregon, and part of Nevada. Mr. Jones states that little has been done so far in the latter State, but an active campaign is to be started there in the near future. The company will handle Edison goods exclusively as soon as the stock of other lines now carried can be disposed of. The local retail business will remain with Kohler & Chase. Mr. Jones says that the business is now thoroughly systematized, and this month's business locally shows some increase over January, though greater things are looked for in the next six months.

Only the wholesale business of Kohler & Chase in Seattle was bought out last month by Messrs. Brown and Bruce, the retail department remaining with J. C. Walling & Co. The latter concern has now been taken over by Kohler & Chase.

Andrew G. McCarthy, manager of the talking machine department of Sherman, Clay & Co., made a visit to Los Angeles about a week ago, and has just returned. He considers the outlook there the best in years. Locally he finds a continued demand for Victrolas and high-class records, with a rather better record of sales than last month. Mr. McCarthy has been chosen publicity manager for a big celebration which will be held next fall over the re-establishment of business in the downtown district.

Peter Bacigalupi & Sons are more than delighted with their new location. They find already that more people pass their store every day—and more come in, too—than when they were out on Golden Gate avenue, and their retail talking machine sales show a great gain. By next fall, when conditions become more settled, the retail business should be nearly double what it is now.

W. S. Gray, Coast manager for the Columbia Phonograph Co., spent the greater part of the month in southern California visiting the various agents in that territory, and has just returned. O. W. Cyrus, the traveling representative, has also returned from a trip through the San Joaquin valley, and will leave next week for the South. His last trip was highly successful, as a number of first-class agencies were started and several good-sized stocks sold. The San Francisco headquarters of the company has

THERE'S A TIME TO LET GO—

Let go of old methods, if you want to be up among the leaders in your line of business. You must watch every spot where there is a chance for profits to leak and stop the leak.

We Want Your Business

¶ Our message is specifically to the dealers of Northern Ohio, and Indiana, and all Michigan. We want your business because we are in shape to care for your orders promptly, immediately. This does not mean that we will fill them to-morrow, or the day after, or next week, but on the day received. Within the hour your order is received, we will begin work, getting it ready for shipment.

¶ Our shipping facilities are excellent, in fact, they could not be improved. When you order from us, by mail, by telegram, or long distance 'phone, you will not be disappointed.

¶ Our lines in every department are most complete. Stocks are full, running over. We have everything and anything you want. We make it a point to keep forearmed at all times so that our customers shall not suffer through detail. Suppose you give us a trial order—nothing is so conclusive as the actual business, the practical test.

¶ We want your business, and if we get it we shall make it so advantageous to you that we will hold it.

are practical, nice looking and need no expert salesmen to sell them. Send for our latest catalogue.

SALTER MFG. CO., 102 to 108 N. Oakley Avenue CHICAGO, ILL.

just received a large shipment of records, and is now able to fill all orders for anything on the list. The retail branch in the Byron Mauzy building is being strongly advertised, and business is beginning to open up there very nicely, though it can hardly catch up with the main store for several months. No downtown location has yet been taken for the main headquarters of the business.

Byron Mauzy now has his wholesale talking machine department in good running order, and is able to conduct the business with much greater convenience than formerly. He is well satisfied with the wholesale trade in Zonophones, and the increased attention he is now able to give this line has been productive of considerable new business.

THE HON. CHARLES PARSONS.

Whilst it must be admitted that his greatest invention was the steam turbine engine, his name will be ever cherished by music-lovers for having invented the "Auxetophone" (or, as it is now styled, "The Auxeto-Gramophone"). This marvelous instrument arrived in Belfast in September, 1906, since when it has been well known to the habitués of the Ulster Hall, where it was so warmly appreciated at the Saturday evening organ recitals during winters of 1906 and 1907, also during early months of present winter, when it was heard by thousands of our citizens every Saturday evening (8 till 10 p.m.), from fourth story of the Scottish Provident Buildings, facing the city hall. The price of this "world's wonder" is £110, and is the property of Mr. T. Edens Osborne, 4 Donegall Square West, who introduced the Edison phonograph in autumn, 1893; the gramaphone in October, 1898; the auxetophone in September, 1906; and who probably holds a stock of gramophones, phonographes and other talking machines and records larger than the aggregate stocks of all other dealers in Ulster.—Belfast, Ireland, Evening Telegram, Feb. 16, 1909.

EXPRESS CHARGES UNFAIR

Says New York Merchants' Association Which Asks Chambers of Commerce to Aid Inquiry —Facts Collected by These Bodies Throughout the State Will be Laid Before the Public Service Commission—Earnings Divided With the Railroads.

The Merchants' Association of New York has issued a circular to chambers of commerce in the State asking for statements from merchants and shippers who have reasonable grounds for complaint against express companies, to be submitted to the public service commission in connection with the petition of the association for an investigation of express rates and methods.

This petition asks that inquiry be made into rates and charges based upon the cost of the service given, such charges to be so adjusted as to provide no more than a liberal profit upon capital actually invested for the efficient operation of the service, and in addition such further sums as may reasonably be set aside as a surplus for contingencies. Quoting from a special report of the United States census, attention is called to the fact that express companies pay to railroads a fixed per cent. of gross earnings for the service performed by the carriers. In 1907 something more than 46 per cent. of the aggregate charges collected upon express parcels was thus paid. The remaining 54 per cent. represents the terminal charges of the express companies.

It is contended as self-evident that the cost of transportation increases in proportion to the distance, and that the element of distance does not figure in the cost of terminal service. Yet it is the practice to increase such charges in proportion to distance, so that a much higher charge is made at one point than is imposed at another for identically the same service.

Assuming that 54 per cent. is received, it is shown by a tabular array of figures that on a package weighing 100 pounds, from New York to Yonkers, the railroad receives 23 cents for transportation and the express company 27 cents for collection and delivery. From New York to Albany the division is respectively 27½ cents to the railroad and 32½ cents for the express company; to Utica, 46 cents and 54 cents; to Buffalo, 57½ and 67½ cents; to San Francisco, $5.71 and $7.79. In this connection the petition admits that in some of these cases rehandling en route imposes additional cost upon the companies and a fair charge for it should be allowed in addition to the terminal charge, but in the cases of Yonkers and Buffalo the service is identical, while the difference in the charges for terminal service is 150 per cent.

THE OLD BROKEN RECORD.

How dear to this heart is the phonograph's singing!
What fond recollections my memory stir!
Sweet Jane does the winding and turns on the music
While I sit and tell her the tunes I prefer.
But oh, how it tears my nerve system to tatters,
Oh, how it deranges my comfort and bliss,
When Jane idly slips on an old broken record
Which reels off a song that sounds something like this:
"The old oaka-ka-ka-bucka-bucka-bucka—
ir r-r-r-r bou-wow-wow (crick ucket)
"—„„—"" (crick, crick, crick—ooooo)
That—hunk-k-k-k (b—r) w-e-l-l."
My stock of canned music I hail as a treasure;
For often when callers appear on the scene
And topics are scarce, it is truly a pleasure
To bring out our dear little talking machine.
The time passes quickly and every one's happy;
The phonograph pleases till Jane, so remiss,
Forgets about winding the works of the treasure,
Which drawls out a tune that goes something like this:
"B—eee i-i-i-t eeeeeee—ver s-o
Ha-ha—hum—b-b-b-b-bl—e
T—h—e—rererere—s n——o
Pl—pl—place l—l—k—e ho." —Puck.

TRADE NOTES FROM ST. LOUIS.

Trade Good and Steadily Improving—Manager Gressing's Encouraging Report—Harrison to Open Talking Machine Store at Louisville, Ill.—Death of Thomas Pelton—What the Columbia People Report—The Thiebes-Stierlin Co. to Occupy New Quarters Next Week—Other Items of General Interest.

(Special to The Talking Machine World.)

St. Louis, Mo., March 5, 1909.

The talking machine business in every department has been good for the last month, and is improving daily. February made a much improved showing over the same month last year.

O. A. Gressing, manager of the St. Louis Talking Machine Co., reports business very good, and increasing right along. Mr. Gressing has just returned from a business trip of several days to Evansville, Ind. L. A. Cummins, traveler for this concern, is home from a several weeks' trip through southern Illinois, and had a nice business. H. F. Harrison, traveler for this concern, resigned on March 1 to open a talking machine store at Louisville, Ill.

Theo. Pelton, the auxetophone expert of the St. Louis Talking Machine Co., died February 17 from an attack of cerebro spinal meningitis. He is succeeded by Jno. M. Ryan.

E. B. Walthall, manager of the Columbia Phonograph Co., reports their February business better than that of January, and that February was much better than for the same month a year ago. He considers the outlook very favorable for an improving trade. W. S. Byrd, the company's traveler, is on a three weeks' trip through Central Illinois. R. F. Phillips, formerly with the St. Louis Talking Machine Co. and the Finn Talking Machine Co., is now with this company as salesman.

The Koerber-Brenner Music Co. reports that their talking machine trade is picking up right along, showing a nice improvement in the last month.

D. K. Myers, the well-known Zonophone jobber, reports his trade in all departments to be excellent.

The Conroy Piano Co. report their talking machine business is improving right along.

The Silverstone Talking Machine Co. report a pronounced betterment of trade conditions, with a bright outlook.

The Thiebes-Stierlin Music Co. are enjoying a nice trade in their talking machine department. They will be in their elegant new quarters about March 15.

The Knight Mercantile Co. have had a nice month's trade. They have had an especially good trade on the double records.

EVIDENTLY A MISUNDERSTANDING.

About a year ago the National Phonograph Co. made a slight change in the construction of the governor for spring-motor machines by attaching an additional collar to the governor shaft. This new collar is connected to the regular collar by a wire spring, but the old collar is still tapped for the set-screw. In this connection the National company says: "This small hole is purely for the convenience of the factory assembly department. Apparently jobbers and dealers seem to be under the impression that the set-screw is missing, and proceed to place one in the hole in the collar. To do this defeats the object for which the improvement was introduced. From the numerous requests received recently from the trade for set-screws, it appears that the detail is generally misunderstood. It is hoped that this notice will clear up the misunderstanding."

THE ENTERPRISING EDISONIA CO.

(Special to The Talking Machine World.)

Newark, N. J., March 5, 1909.

When the Edisonia Co. bought out the Douglas Phonograph Co.'s Newark branch the members of the company arranged with the National Phonograph Co. to be the sole jobbers of talking machines in Newark. Newark, therefore, now has one of the largest phonograph jobbing houses in the State, handling exclusively the Edison and Victor machines.

At the headquarters of the company, 57 Halsey street, the Edisonia Co. have a large supply of the various size machines on hand. The building is two doors north of New street. It also has a branch at 12 New street. The Douglas Co., which the Edisonia Co. absorbed, occupied the spacious and well equipped store at New and Halsey streets.

J. NEWCOMB BLACKMAN GREETED

In a Hearty Fashion by His Associates and Friends on His Return to His Desk After a Four Weeks' Absence—Underwent Successful Operation for Appendicitis.

There was a happy time on Monday, March 1, in the private office of J. Newcomb Blackman, president and general manager of the Blackman Talking Machine Co., 97 Chambers street, New York, when, after an absence of less than four weeks, due to an operation for appendicitis, Mr. Blackman returned to business, much to the surprise and gratification of his many friends and his immediate company associates. Mrs. Blackman accompanied her husband over from their home in Orange, N. J., and the lady was as pleased as the large number of people on "talking machine row" who called to congratulate both of them. Mr. Blackman's recovery from an unusually severe—if not wholly dangerous—ordeal has been indeed remarkable. In a week's time after getting out of the hands of the surgeon he was looking after his business affairs in a moderate way, and within two weeks' time he was taken home from the hospital. Of course, the gentle and assiduous attentions of his wife were of material assistance in his convalescence. To demonstrate he was getting along finely, Feb. 27 Mr. Blackman went to the theater, and on Feb. 28 took a thirty-two-mile automobile ride. The following day found him at his desk, answering congratulatory wires and letters and exchanging felicitations with callers.

TALKING MACHINE IN JAPAN.

Exceedingly Popular in the Japanese Army—Used for Instruction, Entertainment and for Church Services.

One of the most potent attractions in the Japanese army is the talking machine. It is used not only in the soldiers' quarters, but in the auditorium in the barracks it is employed as a medium to hear the voices of famous men

JAPANESE ARMY LISTENING TO THE "TALKER."

in lectures, readings and songs—not merely of noted Japanese orators and singers, but of artists known the world over. Among the most popular numbers at the present time in Japan are the selections from the American light comic operas. The illustration herewith shows a gathering of Japanese soldiers listening to a sermon in their own language. Their reverent attitude shows the esteem in which they hold the talking machine.

WHAT BARZINI WISHES TO DO.

It was Luigi Barzini, a young man whose Italian hand penned the bulletins of the first Pekin to Paris auto race he rode in Prince Borghese's car—rode in it, that is to say, when they weren't dumped bodily out at some break-neck hurdle of skipped railroad ties and Siberian bridges—it was Barzini more recently, here in New York, who gave an inkling of the dusk of the gods of musical Europe to-day. As he put it in a dinner speech: "I hope that when you Americans have all our artists over here, you will send us back your moving picture machines and your vocal machines, so that we may still see and hear our operas in the nearest possible imitation of what they used to be."

Taken as his words were meant, half jestingly, the remark affords a mild and healing balm for any persons who may be wounded by the last loving remarks of a Milian *Correire della Sera* widely quoted here this morning. According to the writer there, "The conquest of the masses can never be possible in a country where musical taste is still in its embryonic stage."

HEARD THROUGH THE TALKER.

Dean Hitchcock and Congressman Rainey Entertained Amherst College Men at Dinner.

The grand ballroom at the Waldorf-Astoria belonged to Amherst men the other evening and from early in the evening until nearly midnight "old grads" and young fellows who nevertheless insist upon the title of alumnus hobnobbed together and listened to postprandial oratory, first hand and canned. One of the features of the dinner, which was the largest affair of the kind ever held by a college alumni association in this city, was the delivery of speeches from a big phonograph in the gallery.

"Old Doc" Hitchcock, the senior professor and dean of the Faculty at Amherst; Congressman Rainey, of Illinois, and Judge Samuel Sears, of Chicago, addressed the gathering through this medium. It was possible to make out all that these speakers said, and the crowd enjoyed the innovation.

CABLE CO.'S FINE DEPARTMENT.

(Special to The Talking Machine World.)

Ishpeming, Mich., March 3, 1909.

W. J. Locher, manager of the Cable Piano Co. in this city, has rearranged the interior of the store in the Mortley block. His office and talking machine department has been removed from the front to the rear room and the former has been given up entirely to pianos. A number of new instruments were recently received and the display room is now filled. Mr. Locher has also worked up a big trade in Victor and Edison talking machines and records, also in sheet music.

EARLY DAYS OF THE INDUSTRY.

Theo. F. Bentel Tells Some "Enormous" Orders in the Olden Days When He Started in the "Talker" Business in Pittsburg.

Theo. F. Bentel, treasurer of the Hawthorne & Sheble Mfg. Co., Philadelphia, Pa., was a guest at the Hoffman House, New York, recently. He was in the city on matters pertaining to important mining interests in the West, the sale of one property alone, which he negotiated while here, netted him the cool sum of $100,000. Mr. Bentel says he was the first man to place what was at the time considered an enormous order, namely, $2,500, with the Victor Talking Machine Co., of Camden, N. J., which, he further remarked, was a "life saver" at the time. The order was given Leon F. Douglas, the retired vice-president of the Victor Co., who is now living on his ranch in southern California, where Mr. Bentel is always a guest when he goes to the Coast.

Mr. Bentel also related how he ordered a hundred or so machines from the Columbia Co. in the early days, and when the goods were delivered it was a carload! Then he went up in the air, telephoned Mr. Edison in New York, who persuaded him to keep the goods and pay for them at his leisure. "The credit and confidence given me by the Columbia Co. then, despite the fact that I was scared to death by the quantity of goods, touched my pride, and I felt happy that such a concern had that strong belief in my business integrity. To make a long story short, that carload was the foundation of my business in Pittsburg. Would you believe that many a Saturday night I was obliged to have a policeman at the door, and on signal from me he would close the place against newcomers, as the store was so crowded the people could hardly move, and it was no uncommon thing to take in $3,500 cash for Saturday alone. I couldn't get goods fast enough. The great days are coming back again in the trade, and of this I feel assured."

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., March 8, 1909.

TALKING MACHINE MECHANISM. Horace Sheble, Philadelphia, Pa., assignor to Hawthorne & Sheble Mfg. Co., same place. Patent No. 912,425.

This invention relates to talking machines and has reference more particularly to machines of this character employing a record-tablet of cylindrical form. The invention is directed to the improvement of the construction of such machines, with respect especially to the mechanism for transmitting rotary motion from the driving shaft to the shaft on which the record-tablet is mounted, to the end that a structure is provided which may be manufactured at small cost, which is simple and compact, and with which reliable and efficient operation are obtained.

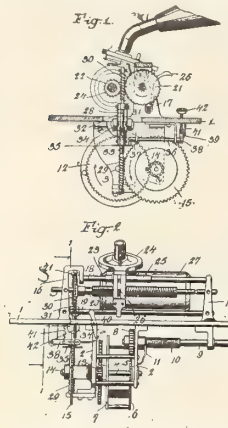

Figure 1 is a sectional elevation of the machine, the section being on line 1—1 of Fig. 2, and Fig. 2 is an elevation.

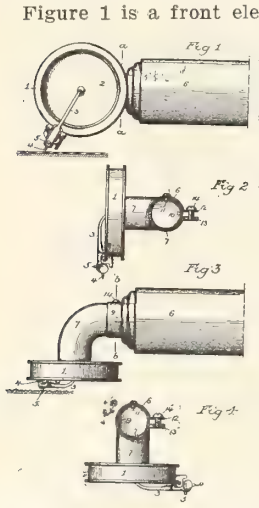
SOUND-BOX FOR TALKING MACHINES. Thomas Kreamer, Philadelphia, Pa., assignor to the Hawthorne & Sheble Mfg. Co., same place. Patent No. 912,857.

The object of this invention is to so construct a sound-box for talking machines that it can be used in connection with records either of the lateral-wave or hill-and-valley type.

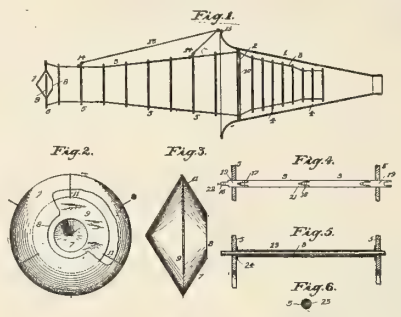
Figure 1 is a front elevation of a talking machine sound-box and a part of the hollow arm carrying the same, the sound-box being adjusted for use in connection with a record of the lateral-wave type; Fig. 2 is a view, partly in elevation and partly in transverse vertical section, on the line *a*—*a*, Fig. 1; Fig. 3 is a similar view to Fig. 1, but showing the sound-box adjusted for use in connection with a record of the hill-and-valley type, and Fig. 4 is a view, partly in elevation and partly in transverse section, on the line *b*—*b*, Fig. 3.



ATTACHMENT FOR THE HORNS OF SOUND-REPRODUCING INSTRUMENTS. Overend G. Rose, Camp Meeker, Cal. Patent No. 912,735.

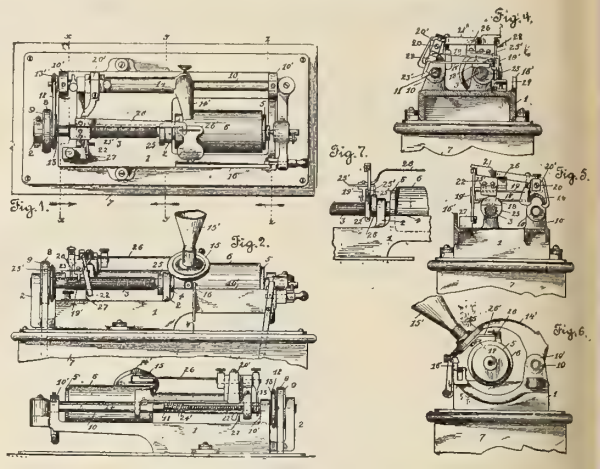
This invention relates to attachments for the horns of sound-reproducing instruments, and in general character, construction and purpose resembles the device described in Letters Patent No. 842,707, granted on January 29, 1907. In that patent is described a structure composed of a number of connected diaphragms, discs or rings, supported entirely within the horn and adapted to act both as sound projectors and as sound analyzers; the latter term being used to express such a separation or individualizing of the tones of different instruments, or of the voice and accompaniment, or of the solo and chorus whether vocal or instrumental as may be perceived in any original musical rendition. This kind of tone-analysis does not take place in the ordinary unobstructed horns; and so, while such horns are necessary for amplifying and giving volume to the tones reproduced, those advantages are obtained at a considerable sacrifice of clearness and delicacy, owing to the production of what might be called "horn-tones" arising in the horn itself. The device described in the said patent was adopted to prevent the formation of such horn-tones and to give the clearness and delicacy of original tones to those reproduced as well as their harmonious shading and blending; it has been found that the devices which are the subject of the present application are still better adapted and still more effective for those purposes. It must not be understood from the use of the term "analysis" or "separation" that the sounds of different instruments are individualized to the detriment of harmony. The inventor claims that just as in the original rendition each kind of instrument has its own appreciable value, at least to a musician, and can be distinguished from the others without at all detracting from the combined harmonious effect, so when the attachment is employed the same instrumental value can be appreciated in the reproduction.

Figure 1 is a longitudinal section of an amplifying horn with the attachment in position. Fig. 2 is a rear elevation, partly broken away, of one of the suspended sound-chambers. Fig. 3 is a vertical section of the same. Fig. 4 is a detailed view to show the joints by means of which the attachment can be made collapsible. Fig. 5 is a section to show a spacing sleeve between the discs or rings of the kind used when the frame of the attachment is not collapsible. Fig. 6 is a cross section through one of the rods of the frame and a surrounding spacing sleeve.



REPEATING MECHANISM FOR PHONOGRAPHS. Elam Gilbert, Portland, Oregon; Mattie E. Gilbert, assignors by Mesne assignments, to Albert A. Klingman, New York, N. Y. Patent No. 911,491.

This invention relates to improvements in repeating mechanism for phonographs. Figure 1 is a top plan view of a phonograph with the diaphragm or reproducer head removed, the question of the reproducing stylus being illustrated and likewise the means for raising the same clear of the record; Fig. 2 is a front view in elevation of the mechanism disclosed by Fig. 1 of the drawings, in said view the diaphragm or reproduced head being illustrated in position with a portion of the horn applied thereto; Fig. 3 is a rear view in elevation of the parts disclosed by Fig. 2 of the drawings, the sleeve on which the traveler works being partly broken and an arm connecting the reproducer head or diaphragm to the traveler being also broken. Fig. 4 is an irregular cross sectional end view in elevation, taken on the line *x*—*x* Fig. 1 of the drawings, and viewed in the direction of the arrow on the dotted line thereof. Fig. 5 is a similar view taken on the line *y*—*y* and viewed in the direction of the arrow, crossing said line, the parts being illustrated in the position assumed thereby when raised to lift the reproducing stylus clear of the record, in said view the position of the diaphragm or reproducer head is understood to be on the end of its outward movement; Fig. 6 is a similar view to that of Figs. 4 and 5 taken on the cross sectional line *z*—*z* Fig. 1 of the drawings, the reproducer head or diaphragm being illustrated in its returned position and the reproducing stylus thereof raised clear of the record, said view illustrating the parts just prior to the lowering of the needle to place same onto the record; and Fig. 7 is a detail broken front view in elevation disclosing the position of the oscillator when raised its full upward distance and the position of the catch lever when swung inwardly to lock the arm which carries the spring lever to actuate the reproducing stylus for holding same clear of the record during the return movement of the diaphragm or reproducer head.



"A PERSON WITH A RECORD CABINET and not enough records to fill it is the best kind of a prospect."

Furnish any customer with a cabinet and you will create a field for the sale of more records. You should be just as anxious to sell your customer a cabinet as you are a machine, because a cabinet is an absolute necessity to a possessor of a stock of records. They must be kept in a cabinet to be preserved, and the cabinet is an ornament in any parlor besides serving as a stand for the machine.

We want to sell you our cabinets and offer you a splendid line at very low prices. Exclusive designs, large variety, substantially made, made unusually good. Need we say more? Write for prices.

Record Cabinet
No 6.97

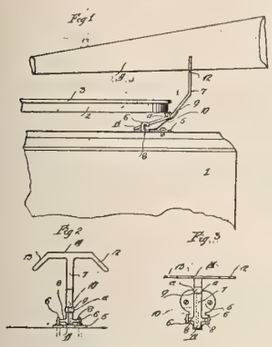
Rockford Cabinet Co., 1920-30 12th Street, Rockford, Ill.

AUTOMATIC BRAKE FOR TALKING MACHINES. Guadalupe Buelna, Santa Barbara, Cal., assignor of one-half to Arthur E. Burson, same place. Patent No. 911,202.

This invention relates to brakes for talking machines and particularly to that class of brake caused to be actuated automatically by the sound-box carrier arms of phonographs.

An object of this invention is to provide a brake, which combines simplicity with efficiency and which is readily and quickly applicable to all talking machines, in avoidance of all necessity for adjustment to the varying sizes of discs now manufactured.

In contradistinction to the brakes now manufactured and used, this invention contemplates the provision of an automatic brake designed to act upon the under surface of the disc carrier periphery. By causing the brake action to be effected in this manner, lateral strains and excessive wear of the elements of a brake are reduced to a minimum if not completely eliminated.



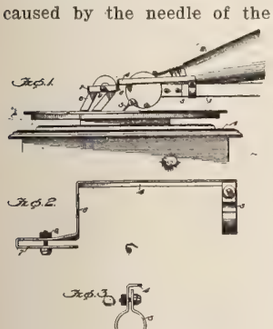
Consequently the brake may act with superior velocity without causing the strains by reason of the rotary motion of the disc carrier to be concentrated to one particular point. A brake after the present type not only causes the gentle application of the braking effect, but assists the carrier arm for the sound-box to traverse the ungrooved surface of the record previous to the application of the brake which is nearly simultaneous with the completion of the reproduction of the record.

In the drawing: Figure 1 is a side elevation of the invention as applied. Fig. 2 is a front elevation, and Fig. 3 is a plan view.

Specific reference being had to the drawing, 1, designates the motor containing box of an ordinary talking machine, 2, is a record carrier, 3, a disc record, and 4 a sound-box carrier arm of the ordinary type. Upon the box 1 is arranged to be fastened by any suitable means, a plate 5 having two hooks 6 made integral with the plate 5.

ATTACHMENT FOR GRAPHOPHONES. H. C. Kelly, West Burlington, Ia. Patent No. 913,508.

This invention relates to an improvement in attachments for graphophones, and the object is to provide means whereby the particles of dust caused by the needle of the graphophone as it becomes worn to be gathered off from the disc or record, thereby preventing metal from working into the records, and thus preserving the record. This manner of gathering up the particles will also overcome the scratching which is often caused after the record has been used for any length of time.



In the accompanying drawings Figure 1 is a view showing the invention applied to the graphophone; Fig. 2 is a view of the bracket for holding the magnet, and Fig. 3 is a detail of the arrangement.

SOUND-BOX. George Osten, Denver, Col. Patent No. 913,153.

This invention relates to certain new and useful improvements in the sound-boxes which form part of the sound-reproducing instruments, commonly known as phonographs and its object is to provide a device of the class named which, by its peculiar construction and the addition of an auxiliary diaphragm, will reproduce sound clearer, more distinct and sonorous than in constructions heretofore known. This object is attained by the mechanism illustrated in the accompanying drawing in the various views of which like parts are similarly designated and in which—

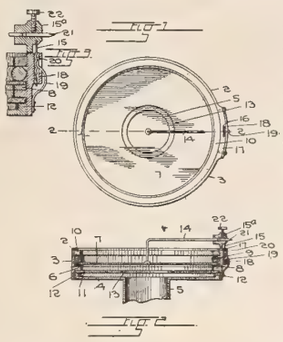


Figure 1—represents a face view of the improved sound-box, Fig. 2—a section taken along a line 2—2, Fig. 1, and Fig. 3—an enlarged, fragmentary sectional view of the needle holder and adjacent parts.

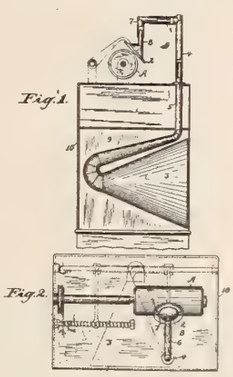
PHONOGRAPH HORN ATTACHMENT. George Shephard, Petaluma, Cal., assignor of one-third to J. N. White, and one-third to J. H. Andrews, same place. Patent No. 182,-039.



This invention relates to an attachment to talking machines and pertains especially to a means of connecting the horn with the reproducer.

Figure 1 is an elevation in partial section of a talking machine, showing the invention. Fig. 2 is a plan view of the same.

PATENT PACT WITH GERMANY.

Treaty Signed to Prevent Laws Such as Britain Passed Last Year.

(Special to The Talking Machine World.)

Washington, D. C., March 8, 1909.

A patent convention with Germany was signed at the State Department recently by Secretary of State Bacon and Count Johann von Bernst, the new German Ambassador. This is the first treaty signed by the German Ambassador since his arrival here several months ago. The treaty is designed to prevent either government from passing laws requiring that foreign patents must be manufactured in the country in which protection is asked.

A statute was passed in England last summer requiring that in order that foreign inventions might be protected from infringement in England they must be manufactured there. The treaty with Germany was designed to prevent the passage of a law similar to this statute. The treaty will go to the Senate for ratification.

PARCELS POST

System Authorized in P. O. Appropriation Bill.

(Special to The Talking Machine World.)

Washington, D. C., March 9, 1909.

The establishment of an experimental rural parcels post system is authorized by a provision of the Postoffice Appropriation bill, reported to the Senate the other day by Senator Penrose, chairman of the Committee on Postoffices and Post Roads.

The Postmaster-General is authorized to establish the system for experimental purposes in two counties to be selected by him, and to operate it under suitable rules and regulations, including the fixing of rates. He is directed to report the result of the experiment to Congress not later than Jan. 1, 1910.

It is understood that this provision is acceptable to Postmaster-General Meyer, who has strongly recommended the rural parcels post system to Congress. In a statement before the Senate Committee, Mr. Meyer asserted that a rural parcels post system would result in revenues amounting to at least $15,000,000 annually.

STEVENSON BUYS COLUMBIA STORE.

Robert Stevenson, of Gallitzen, has purchased the Columbia Phonograph Co.'s store at 1508 Eleventh avenue, Altoona, Pa., and will conduct it in future.

Geo. Joas, proprietor of the Chippewa Phonograph Co., Chippewa Falls, Wis., had all his stock moved to quarters on Central street recently when he discovered that the building was too small. Later he moved back into the Taylor block.

The Victor Talking Machine Co. on February 25th, reduced the price of Victor "Victrola" needles to dealers to 75c. per thousand. In making this announcement they state "It can readily be figured that this will increase the dealers' percentage of profit per one thousand from 76½ per cent. to 100 per cent., assuming, of course, that the majority of your sales are made in lots of two hundred, at 15c. per hundred."

GRINNELL MANAGERS MEET.

Reports Covering Every Department of the Business Presented—Representatives from Widely Separated Sections Present—Recreation for Visitors—Handsome Present for C. A. Grinnell—Now Touring the West Indies.

(Special to The Talking Machine World.)

Detroit, Mich., Feb. 28, 1909.

The annual meeting of the branch store and department managers of Grinnell Bros. occurred at their warerooms in this city on Monday, Tuesday and Wednesday of last week. In addition to the men in charge of the various departments of the Detroit headquarters, representatives were here from the following towns where Grinnell Bros. have branch stores: Adrian, Bay City, Escanaba, Flint, Hancock, Hillsdale, Jackson, Kalamazoo, Lansing, Mount Clemens, Port Huron, Petoskey, Saginaw, Sault Ste. Marie, Traverse City, Ypsilanti; also Windsor and Chatham, Ont.

The meeting opened with the reading of the minutes by H. E. Johnston, followed by an address of welcome by C. A. Grinnell, which was responded to by J. R. Shannon. Later addresses or reports were made by J. C. Weiss on the sheet music department; P. W. Guest on the small goods department; W. W. Walker on the advertising department; R. W. Smith on window display and show card department. Later in the evening the entire party took in the automobile show.

Tuesday morning papers were read by M. Strassburg on the Victor and Edison department; W. A. Grinnell on the shipping department; C. A. Gittery on the music box and electric piano department; P. H. Mugford on "The Traveling Orator," and J. W. Cliffe on "The New Prospect System." H. R. Fuller and J. Vaughan discussed the player-piano and piano-player department, while S. J. Guest spoke on collections.

In the evening the entire visiting force was entertained at a banquet at the Charlevoix. At this enjoyable feast some interesting addresses were made by I. L. Grinnell on "The Best Producing Force"; J. E. Fitzgerald on "The Best Music House," and W. W. Harrie on "The Best Hunter (for Business)."

On Wednesday E. P. Van Sickle discussed the tuning and factory ends of the business, and G. W. Guiley spoke on the Grinnell business throughout the State. This was followed by the opening of the Question Box, which proved a most interesting feature of the program. Later the party was entertained at luncheon at the new Y. M. C. A. building, and in the evening a visit was made to the Detroit Opera House, where John Drew proved a potent attraction.

This program will give an idea of the thorough manner in which business matters were taken up and discussed; in fact, every department was carefully reviewed, comparisons made and plans for future business completed. As will be noticed the serious business of the meeting was interspersed with some well-considered recreation, which was thoroughly enjoyed by the men.

A happy feature of the convention was the presentation by the managers to C. A. Grinnell of a handsome large oak table for his private office. This graceful act illustrates the cordial relationship existing between employer and employe in the house of Grinnell. In fact, although the Grinnell payroll numbers upward of 450 persons, it has often been likened to one great family, for the utmost cordiality and spirit of co-operation exists, and both I. L. and C. A. Grinnell take a personal interest in the welfare of even the humblest of their employes.

Mr. and Mrs. C. A. Grinnell left on the "Oceanic" for a tour of the West Indies on Saturday morning, Feb. 27.

LEASE FLOOR FOR TEN YEARS.

The Columbia Phonograph Co. have leased the entire top floor in the new Mark-Stern building, 102-104 West Thirty-eighth street, New York, together with the roof space for ten years, for a recording laboratory. They have occupied the premises for a couple of months, removing from Twenty-seventh street and Sixth avenue.

Half the disconsolate old age we see is due to giving up the chase and settling down to be a "has been" instead of insisting on being an "is."

THE TALKING MACHINE WORLD

EDWARD LYMAN BILL
EDITOR & PUBLISHER
1 MADISON AVENUE, NEW YORK

Entered as second-class matter May 2, 1905, at the post office at New York, N. Y., under the act of Congress of March 3, 1879.

To Business Men

Business men in every line admit the value of good trade papers.

A trade paper must be original—it must contain a variety of matter including news service—technical information—in fact it must crystallize the entire news of the special business world, and be a helpful adjunct to every department of trade.

Scan the columns of The Talking Machine World closely and after you have completed an analysis of the contents of this publication see if you can duplicate its value in any other trade!

The World is a help to the talking machine business.

It exerts an healthful optimism.

It wields an influence for the good and every man who sells talking machines, no matter in what part of the universe he may be located, should receive this publication as regularly as it is issued. He is missing a vital business point if he fails to do this.

Thousands of dealers not only in the United States but in every country on earth consult the pages of the World regularly.

They draw from the World pleasure and profit.

The talking machine business has a brilliant future, and this publication is doing much to enlarge the business horizon of every retail talking machine man in the world.

To receive this paper annually costs but $1.00. All foreign countries $1.25.

"Theory and Practice OF Pianoforte Building."

(Copyright.)

The above is the title of a technical work which is the result of two years of careful study and research by Wm. B. White. It covers in a comprehensive manner every essential of pianoforte building and scale draughting, together with the principles of acoustics. It is a book which should be in the hands of every man interested in piano development. It is profusely illustrated with original designs.

Here are a few of the subjects treated in this book:

THE EVOLUTION OF THE MODERN PIANOFORTE.
DESCRIPTION OF THE MODERN PIANOFORTE.
ACOUSTICAL LAWS OF SOUNDING STRINGS.
THE MUSICAL SCALE AND MUSICAL INTONATION.
THE EQUAL TEMPERAMENT.
PIANOFORTE STRINGS AND THEIR PROPER DIMENSIONS.
RESONANCE AND THE RESONANCE-APPARATUS OF THE PIANOFORTE.
THE CASING AND FRAMING OF THE PIANOFORTE.
THE IRON FRAME OF THE PIANOFORTE.
THE MECHANISM OF PERCUSSION.
THE TOUCH MECHANISM.
THE REGULATION OF PIANOFORTE TOUCH-MECHANISM.
TUNING AND TONE REGULATION OF THE PIANOFORTE.
THE DRAUGHTING OF THE PIANOFORTE SCALE.
DEVELOPMENT OF PLAYER-PIANO.
THE SMALL GRAND.

Every man, whether manufacturer, scale draughtsman, superintendent, dealer, or salesman, should own a copy of the first work of its kind in the English language.

The price for single copies, delivered to any part of the world, is $2.

EDWARD LYMAN BILL,
PUBLISHER,
1 Madison Avenue,
NEW YORK CITY.

Some Trade "Straws"

Here are some excerpts taken at random from the many letters which we have received from dealers, tuners and salesmen who enthusiastically endorse "Theory and Practice of Pianoforte Building."

Here is what the Phillips & Crew Co., Savannah, Ga., one of the leading firms in the South, say regarding "Theory and Practice of Pianoforte Building":

"We beg to hand you herewith our check for $2 to cover cost of one copy of "Theory and Practice of Pianoforte Building," which has been received with thanks. The book is all that you claim it to be and should find a ready place with all those connected with the trade. With our very best wishes, we beg to remain," etc.

George Rose, of the great English house of Broadwood & Sons, and one of the leading piano makers of Europe, writes:

"I have perused the book with much pleasure, and 'Theory and Practice of Pianoforte Building' should be in the hands of every practical and interested man in the trade."

H. A. Brueggemann, a dealer in Fort Wayne, Ind., writes: "I have one of your books, 'Theory and Practice of Pianoforte Building,' and will say that it is just the kind of a book I have been looking for for many years. I have been tuning pianos for fourteen years, and from studying the book, 'Theory and Practice of Pianoforte Building,' I have learned something that I never knew before."

John G. Erck, for many years manager of the Mathushek & Son retail piano business, and now manager of the piano department of a big store in Cleveland, writes: "You certainly deserve strong commendation, for your latest effort. 'Theory and Practice of Pianoforte Building' is a book written in such an instructive and concise form that certainly no piano player or piano professional enthusiast should lack it in his or her library. It gives to the salesman the highest knowledge of instruments and is invaluable."

Henry Keeler, of Grafton, W. Va., says: "I most heartily congratulate you for launching such a worthy book. I consider it the best work ever written upon the subject, and I hope that its ready sale will cause the reprint of many editions."

George A. Witney, head of the Brockport Piano Mfg. Co., himself being a scale draughtsman of national repute, writes: "'Theory and Practice of Pianoforte Building' is a valuable book for those interested in piano construction."

Every man, whether manufacturer, scale draughtsman, superintendent, dealer, or salesman, should own a copy of the first work of its kind in the English language.

The price for single copies delivered to any part of the United States, Canada and Mexico is $2. All other countries, on account of increased postage, $2.20.

If the book is not desired after examination, money will be refunded.

EDWARD LYMAN BILL, Publisher
1 MADISON AVE., NEW YORK CITY

Do You Wish To Know Something About Player Mechanism?

¶ We have a book that will tell you how to regulate, repair; explains to you in detail the functions of the different parts including control and technique. In this volume the leading piano player systems are described in detail.

¶ Do you wish to have all player problems easily solved and made perfectly clear? Do you wish all this information in a neat, compact volume, illustrated and printed in an artistic manner with an attractive binding?

¶ We have precisely such a volume and it is the result of long and careful study and examination of the principal player products in this country.

¶ We have established quite a reputation for technical literature and we feel confident that our new book, which is entitled 'A Technical Treatise On Piano Player Mechanism," will enhance our reputation along these lines. Every player, tuner, repairer, dealer and salesman should own a copy. It will cost but $1.50 delivered to any part of this country.

NEW YORK, APRIL 15, 1909

VOGUE OF ROLLER SKATING

Means That Upwards of $10,000,000 Has Been Invested in Rinks Throughout the United States—Craze Now Pronounced in England.

The vogue of roller skating which has prevailed throughout almost every section of this country has again reached England, where it is said to have started early in the eighteenth century. At the present time it is estimated that from six to eight thousand rinks are in successful operation in the United States, and the season of 1908 and 1909 promises to be equal to any previous period. Large and costly buildings for the purpose of conducting roller rinks have been built in all parts of the United States, and large sums of money have been invested in enterprises connected with the sport.

It is estimated that upwards of $10,000,000 have been invested in rink buildings throughout the country, and the sport affords employment for more than 30,000 persons, including some 3,000 or more engaged in the manufacture of roller skates and material pertaining to this industry.

The roller skate is a mechanical descendant of the ice skate, and the evolution from the comparatively crude affair of twenty-five years ago to the handsome, perfected article of to-day is but another evidence of American mechanical skill and ingenuity. The introduction of ball bearings in connection with the manufacture of roller skates was the brilliant idea of Mr. Richardson after a careful study of the bicycle.

In producing the roller skate that we know to-day the highest degree of mechanical precision has been reached, which has helped to develop the popularity of roller skating. Mr. Richardson's experience with the rink and skate business dates back to 1881, and since then he has been associated with some of the most successful rink enterprises in America. One of his most remunerative ventures in this direction was established in San Francisco in October, 1905, at the Mechanics' Pavilion. During a period of 130 days the proceeds of the business amounted to over $70,000.

During the present year a very general revival of roller skating has taken place in many foreign countries, and especially in England, says The Novelty News, where at the present time successful rinks are being conducted in most of the leading cities of Great Britain. Recently rinks have been established by the Richardson Co. at New Brighton and Sheffield, and other similar projects are being contemplated elsewhere.

TAXING DEPARTMENT STORE SALES.

The Chamber of Deputies at Paris, France, has passed an article of the income tax bill imposing an extra tax on department stores whose annual turnover exceeds $100,000. The extra tax is 1 per cent. on the turnover between $100,000 and $200,000, 2 per cent. up to $1,000,000 and 3 per cent. when the turnover exceeds $1,000,000.

It is just as well to put off till to-morrow the worries of to-day.

F. W. McINTOSH SPECIALTIES.

A Line of Quick-Selling Goods Suitable for Side Lines—The Vogue of the President Ink Pencil—Practical Information on Installing Side Lines at the Command of the Dealer.

(Special to The Talking Machine World.)

Chicago, Ill., April 9, 1909.

F. W. McIntosh, head of the F. W. McIntosh Co., of 179-181 Lake street, Chicago, is a man who has made the subject of quick selling side lines for dealers a matter of life-long study. The question of furnishing his constantly increasing clientele with articles of intrinsic merit and which lend themselves readily to forceful and result-bringing advertising has always absorbed his attention. The President Ink Pencil, which he has for some time made his prime leader, and

F. W. McINTOSH.

on which he has built up a remarkable trade throughout the country, is a specialty which appeals to all classes of people, and properly window displayed and advertised will not only prove a big profit maker to the dealer appreciating its possibilities, but will serve to draw customers into the store who would not have otherwise been attracted thereto. While it has the advantage of being a distinct novelty and will attract attention and create a desire for ownership for that reason, it has all the writing facility of a first-class fountain pen, can be carried in any position without leaking and is sold at a moderate price. The company also make a superior fountain pen ink under the President name, which stands for quality, and also a line of paste, mucilage and carbon paper. A recent addition to the company's line is a series of small copyrighted statuettes, selling at a low price, and which make ideal desk or mantle ornaments. A few of them scattered through a show window serve to brighten up the display wonderfully, besides proving quick sellers.

Mr. McIntosh has acquired a fund of practical information regarding the effective pushing of side lines which is always at the command of dealers handling his goods.

It sometimes happens that a fellow gets a reputation for genius simply because he is too lazy to work.

"There is no test of a man's ability so unfailing as his results."

THE VALUE OF PUBLICITY.

Correct Advertising Will Make Anything Good an Assured Success.

Year after year lines of goods which it was formerly believed could not be sold through advertising have found their way into advertising columns, and have stayed there, because it has paid to advertise them. The article which has once been thoroughly advertised and then has disappeared is the exception, not the rule. Fifty years ago advertising was comparatively unimportant as a factor in the country's industry. To-day it is not too much to say that advertising, properly administered, is by far the greatest single factor in the promotion of many of our greatest enterprises.

Do not be deceived. You cannot take a second-rate article, spend $100,000 in advertising it, and make a fortune. At least, it is not a wise thing to try. Advertising is a force of such power that it has even made fortunes for proprietors of second-rate articles, but restrictions, destined to become more stringent than at present, are stamping out the exploitation through advertisements of unreliable goods. If a manufacturer of a superior article will place a reasonable sum of money each year in advertising, placing his expenditures in the hands of a competent man or men, using general or trade publications of established reputation, which reaches both consumers and dealers of the desired class, and keep steadily hammering away, he is certain to win. If he does not do so, the trouble is either with the goods he makes or with the men who handle his advertising. The principle of advertising has been tried, and it is true beyond all shadow of doubt. It pays.

Look back twenty-five years and trace the growth up to the present. Note the great enterprises which have started small and have become great through advertising. Investigation is the only thing necessary to establish the power of advertising to create demand for reliable articles. It is its own defense. It needs no champions. The political managers have seen this. More business men are seeing it every year. Some will hold back year after year and finally give in. Advertising is only well begun, says Geyer's Stationer. Only the first steps have been taken. Its future is too big for words.

HOW SUCCESSFUL MEN WORK.

Have you ever watched a busy man as he waded through his work?

He didn't waste time in looking after the non-essentials.

He didn't fool around and whine about the immense amount of work he had to do.

He didn't call his wife up on the telephone and tell her he didn't "know how he was ever going to get through with his day's work."

He didn't stop to jaw the boys, growl at the girls or scold the men.

He sat right down at his desk, or he lifted his hammer or plane, and just pounded in, working with all his might and main, and presently the thing was done.

The TALKING MACHINE WORLD AND NOVELTY NEWS

THE SIDE LINE SECTION

is a part of The Talking Machine World, which is published on the 15th of each month by Edward Lyman Bill, 1 Madison Ave., N.Y. Complete copies 10c. each.

Subscription by the Year $1.00 Domestic; Foreign $1.25

NEW YORK, APRIL 15, 1909

A DEMAND FOR SIDE LINES

In Talking Machine Trade Indicated by Results of Advertisements in "The World."

Advertisers in the Side Line Section of The Talking Machine World have expressed great satisfaction with the results secured in the way of business through advertising in this Section, and it is obvious that many talking machine dealers, with available space and working force at their disposal, have broadened out their field of operations and put in such side lines as would be best fitted for their locality and best fitted to bring them returns in a monetary way.

A side line which is proving one of "the big sellers" is the motorcycle. In its perfected form it is destined to become as popular as was the bicycle in its palmy days. It is virtually the automobile of the man of moderate means. It enables him to cover vast distances and produces an exhilaration and intense interest in its operation, which induces an enthusiasm that is certain to become contagious.

It is certain that the motorcycle will be one of the most popular favorites of the day, that is, those manufactured by firms of established reputation, hence the wisdom of dealers giving them every consideration.

The following gratifying communication, entirely unsolicited, received from the Auto-Bi Co., is not only a compliment to the Side Line Section of The Talking Machine World, but emphasizes the interest which talking machine dealers are manifesting in the motorcycle as a valuable side line in their business:

"Buffalo, N. Y., March 20, 1909.

"The Talking Machine World, New York.

"Gentlemen—We take pleasure in saying that our first advertisement of Greyhound Motorcycles in The World has brought us replies that promise business, though it has been out but a few days. Apparently your constituency are of the kind that read the signs of the times and are interested in 'live lines.' We may say that we have every indication from all parts of the country that the development in the motorcycle business for the season now opening will be such as to surprise those who have not kept in close touch with the matter.

"We regard dealers in talking machines in general as being in very favorable position to take up the motorcycle, and it is our intention to give them most favorable opportunities in the matter of agency terms, and to co-operate with them in every way for mutual profit. Yours very truly,

"THE AUTO-BI CO.,

"W. C. Overman, Vice-President."

EXPANDING A BUSINESS.

What the Dealer Must Consider When Adding New Lines—Established Reputation as an Asset—A Common-Sense Talk.

When an established dealer installs a new side line it is not sufficient to place a few samples of the new line on the shelves and in the window and treat it as a matter of course, but it should be made an event in store history, and every bit of publicity emanating from that store should be devoted in part to the new line.

When a man starts in a particular business he has to build up both trade and reputation, and has a hard row to hoe until he establishes his standing among his competitors in that particular field. The man who introduces a line as a side line, no matter how extensive or elaborate it is, has a much easier battle before him. He has already established his reputation and standing in his first line of business, and has that solid foundation to build new trade on. When Jones, the talking machine dealer, puts in a line of sporting goods he simply has to call the attention of his regular trade to the new departure, and while getting them in line can devote a portion of his advertising to interesting sportsmen in general in his latest venture. Meanwhile, he is selling talking machines and records as usual, and will keep on selling them while his sporting goods trade is being put on a solid basis. Then it is time to look for larger quarters and hire more salesmen.

Sporting goods are simply mentioned by way of illustration, and the same method can be pursued with almost any line. If the dealer selects his various lines with care and foresight he will be able to insure a busy store all year round, for when trade in one line is dull he can boom things with the other, and keep busy instead of sitting still and bewailing hard times. With rent and other fixed expenses running along steadily it certainly pays to keep busy.

To install side lines does not indicate, as some dealers seem to imagine, that the one doing so has proven a failure in his former field or that the line he previously handled was losing popularity. Far from it. If that were the case, John Wanamaker, the late Marshall Field, and proprietors of the great department stores all over the country might well hang their heads and acknowledge that they were failures in many lines of endeavor. Of course, to handle side lines successfully the dealer must consider the particular needs of his present trade and of the trade he is in a position to reach, and what competition he would be liable to meet. In fact, to establish a successful side line requires so much study as to start in any business independently, and when the subject is given this consideration success is more readily assured.

PROFITS IN SLOT MACHINES.

Independent Annual Income Possible Where the Machines Are Placed in Advantageous Positions.

When a concern advertises that upon a certain amount invested with them an annual dividend of from 75 to 250 per cent. will be guaranteed, your Uncle Samuel opens his eagle eye and casts a glance toward that advertiser. Sometimes said glance spells trouble for the "glancee," but there are instances where the advertised statements are decidedly conservative, and they are in the realm of slot machines.

A dealer, especially in a medium-sized town, with a sum of money to invest will do well to investigate the possibilities for placing a number of slot machines in various prominent places, on a commission basis. There are card-printing, fortune-telling, weighing, strength-testing, and a host of other machines of similar character, as well as coin-operated machines for vending everything, from candy, chewing gum and hot peanuts to towels, soap and other necessities, at from a cent to a dime.

Many manufacturers of coin-operated machines send them out practically free, or sell them at actual cost with the understanding that the lessee or purchaser buy all the goods needed for keeping them replenished direct from said manufacturers.

Machines are easily placed in attractive positions on commission, which may often be as high as 20 per cent. of the gross intake, railroad stations, cafes, trolley waiting rooms, lunch rooms and other frequented spots being naturally considered the best locations. As a rule, the machines do not receive rough treatment and rarely need any attention except replenishing stock and an occasional oiling of the working parts.

So valuable are slot-machine privileges considered, that even the great New York Central Railroad retain the privilege themselves, own the machines and have the amounts received go through the office of the auditor of passenger accounts for checking. The privilege in the New York subway and elevated roads is leased for an amount hard to realize, and yet the lessees are said to be simply "coining money," after paying salaries to a large force of men spending all their time in keeping the machines full of candies and chocolates and collecting the pennies.

It is a field well worth considering by any talking machine dealer, whether he has his store filled with talking machines and side lines or not. It is a departure that would require very little attention except from a clerk or collector. The number of articles disposed of by a vending machine are easily checked. The machines are filled when put out, and when the collector makes his rounds he is supplied with a certain number of packages. For each package he places in the machines he returns a coin to headquarters, and dishonesty is practically impossible. Weighing and similar machines are usually supplied with a register as a means of checking the intake.

With the proper kind of machines in a well-chosen locality, profits are sure and large, and the large incomes claimed will seldom prove overestimated.

BUSINESS GROWING BETTER.

Conditions Improving but There Will be a Halt Until the Tariff Is Out of the Way.

Business conditions are steadily improving, but not as rapidly as we would be pleased to witness. Tariff talk in Congress is halting the onward trade march. But Taft will hurry the debate as rapidly as possible. The Taft administration is as free from handicap as would be possible under any political system. Of the same political faith as its predecessor it is under no campaign promises of correction, reformation or overturn. It can build on foundations already laid instead of digging up to begin over again. The new President is a man of vast experience in public affairs. In no position and under no practical test has he been found wanting. His knowledge of national affairs and world policies, his sound judgment that has its base in common sense, his methods of self-poise and judicial balance, and finally his sense of humor which will prevent his ever mistaking himself for it are a guarantee that while progress will be sustained and reform evoked at Washington in the next four years the Government will not be run under a forced draft, and the White House will be the executive mansion for public affairs and not a hothouse for the incubating of ideas and theories on all the questions of human thought or endeavor. The business interests of the country are to be congratulated on the outlook. It has been a long pull, and now they can sit back and regain their breath. And there are a lot of people who would like a little breathing spell.

YOUR IMPRESS.

Now what is your niche in the mind of the man
who met you yesterday?
He figured you out and labeled you; then carefully filed you away.
Are you on his list as one to respect, or one to be
ignored?
Does he think you the sort that's sure to win, or
the kind that's quickly floored?
The things you said—were they those that stick,
or the kind that fade and die?
The story you told—did you tell it your best?
If not, in all conscience, why?
Your notion of things in the world of trade—did
you make that notion clear?
Did you make it sound to the listener as though
it were good to hear?
Did you mean, right down in your heart of
hearts, the things that you then expressed?
Or was it the talk of a better man in clumsier
language dressed?
Think—what is your niche in the mind of the
man who met you yesterday,
And figured you out and labeled you; then carefully filed you away? —Success.

TRADE Gillette MARK

KNOWN THE WORLD OVER

The Gillette Company begs to announce the construction of a hundred-thousand-dollar addition to its present million-dollar factory in Boston—the fourth enlargement of facilities in four years.

The present factory contains about four acres of floor space and employs seventeen hundred people. The new addition is to increase the blade equipment, which has been greatly taxed during the past three months.

Foreign demand has become so great that GILLETTE factories have been established in Canada, England, France and Germany.

The GILLETTE has been granted basic patents by twenty-two foreign Governments and is protected by over a hundred Registrations of Trade Mark.

As a money-maker for the retail store the GILLETTE is of growing importance. Dealers find it pays to give it prominent display and to use freely the GILLETTE signs, literature and trade helps.

SALESMANSHIP QUALITIES THAT WIN.

The Foundation Stones Are Character and Strong, Honest, Self-Reliant Manhood—Elements That Make Success in Any Undertaking Are Essential in Selling Goods, Namely, Knowledge of the Goods Handled—A Strong, Earnest Talk Upon a Vital Topic.

The subject of salesmanship is an old time one with writers and speakers but there is always something left for the new comer when treating of this subject. S. A. Sanderson, of Lincoln, Neb., in a recent paper on salesmanship said that the basic requisites of success in this field are confidence, self-appreciation, proper attitude, loyalty, sincerity, manners, alertness, honesty, interest and perseverance, and added, "Each of us is the architect of his own future. We draw the plans for the construction of our future human edifice, and we select the materials that enter into the structure. The purpose in life is more than simply making a living; but the question of salesmanship and the matter of trade ethics, which are never to be overlooked, are principles which should govern us in the conduct of our business. So that the first thing that we want to-day is character; strong, honest, self-reliant manhood. These are the foundation stones which should enter into the structure of any human edifice. We must all learn to go it alone, and not spend too much of our time watching our competitor.

SELLING MORE IMPORTANT THAN BUYING.

"In merchandising there are two very essential things—buying and selling. The old saying is, things well bought are half sold, but it don't make any difference how well you buy them, you do not get any returns until you sell them. If you purchase too many simply to get them cheap, you had better pay more and sell them oftener. I would put the selling above the buying for the average merchant, and state that in my opinion if he is unable to look after both carefully, he would better leave his buying largely to some conscientious jobber whose interest it would be to see that he had the right goods in the right quantities, and at the right price, and then push his sales.

"'Tis sales that move the wheels of business.' The same elements that make success in any undertaking are essential in selling goods—viz., knowledge, confidence and enthusiasm. Knowledge of yourself and knowledge of your goods; confidence in your goods and in your ability to favorably introduce those goods to your friends—your customers, and enthusiasm born of that knowledge and bred of that confidence.

KNOWLEDGE OF SELF.

"I place first knowledge of yourself. Self-appreciation stands at the top. I mean by that, self-appreciation, know yourself, develop the strong points and overcome the weak ones. That is what I mean by knowledge of yourself. Build yourself up. You should have a knowledge of your goods, how they are made, how constructed, and who makes them, and why one factory's goods are better than the other's, and why you believe they are better. Also cultivate appearance and attitude, for first impressions are lasting ones. There is a sermon in every line, and there is a sermon in every one of those points.

YOU SHOULD ALSO KNOW HOW TO APPROACH PEOPLE

in order to make them see as you see, and think as you think regarding the merchandise being shown. The purest Anglo-Saxon is more convincing than effort at oratory.

"First, prepare the way by getting the attention of the customer. This is done largely by judicious advertising and attractive display; then a conscientious showing of the goods (not your ability, or your oratorical powers, but your merchandise), thereby creating an interest in them. Interest naturally leads to desire, and then close the sale.

CONFIDENCE IN THE GOODS

is necessary, as the customer must see that the salesman is sincere, or no amount of talk will avail. The manners and general appearance may create the confidence of the customer in the salesman and therefore in his goods. The salesman's interest in the goods is soon transferred to the customer, and he likes the goods because you do; and in order to keep the confidence you have won you must at all times be honest with your customer, and you can do this by being at the same time honest with yourself, and honest with your house.

ENTHUSIASM AND LOYALTY.

"Under enthusiasm I would speak of loyalty—loyalty to the interest of your customer, and above all, the house you represent. If you are not in love with your business get out of it, and the quicker the better. There is not a man before me but what can make a good living in any undertaking which he seeks to enter. If you are not in love with your business, and do not believe in the goods you sell, and your ability to buy the right kind of goods and successfully introduce them to your customer, then get out of the business. You must have enterprise and loyalty.

If you cannot speak a good word for your employer, get a new job, and do it now. If you are working for yourself, and you are down and out with yourself, just quit your business, sell out, and travel around for a year and rest up; quit smoking, and eat more beefsteak, and as soon as you are full of ginger and vim then start out right.

PERSEVERANCE AND ENERGY.

"You must have perseverance. Perseverance means energy—not genius; labor—not love; perspiration—not inspiration. Keeping everlastingly at it always brings success in any undertaking.

"The real difference between men is energy. A strong will, a settled purpose, an indomitable disposition to go ahead and succeed is the real difference between great men and little men.

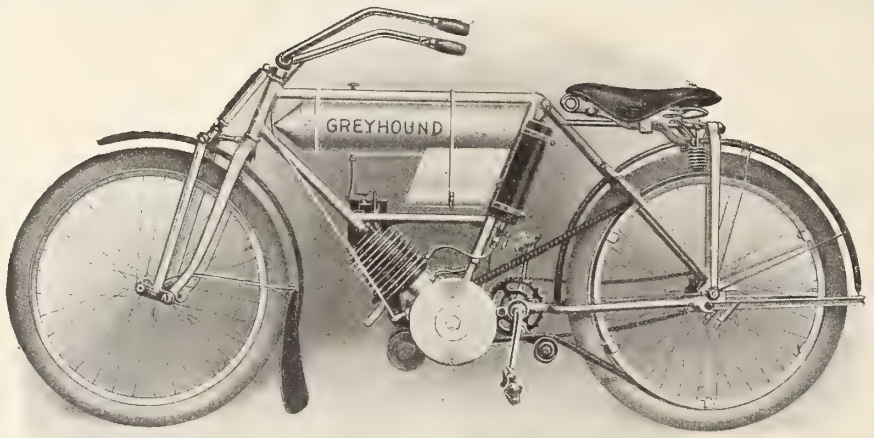
BE SINCERE AND HONEST.

"You want to be sincere in your business. Honesty above all things is essential. When you tell a person a thing you yourself want to believe that it is actually so. If it is not true do not say it. Stand back of your statements; if you recommend an article higher than you ought to and the customer brings it back, give him a new article and do not ask any questions, or make him feel that he has encroached on your rights.

"How is a person to create another's interest in an article unless he is first interested in it himself, unless he knows about the article; how can he expect to intelligently present his case, and how can he expect to close the sale unless he is really enthusiastic in the presentation of the case, and yet many customers in our stores are actually obliged to sell the goods to themselves, simply because of the diverted and divided minds of your salesmen.

"The lack of concentration is a sale killer. The clerk who is thinking backward to the baseball game of yesterday or living in anticipation of the dance to-night is in no condition to sell goods. Forget those things and keep your mind riveted upon your business."

GREYHOUND



MOTORCYCLE BUSINESS IS COMING STRONG

For sport or business the little two-wheeled automobile is hard to beat.

A little motorcycle department added to your business now will soon become a big one.

We want to correspond with dealers who appreciate live issues and favorable opportunities. The 1909 Greyhound has no equal for SIMPLICITY and COMFORT.

1448 NIAGARA STREET - - - - - - BUFFALO, N. Y.

HOROWITZ & CO. IN BANKRUPTCY.

A petition in bankruptcy has been filed against Horowitz & Co., jobbers in souvenir post cards at 9 to 11 Delancey street, New York City. The assets of the firm are estimated at $1,000, while the liabilities will probably reach the $3,000 mark. Among the creditors are the Rotograph Co., Heywood, Strasser & Voight Lithographic Co., and Bamforth & Co.

DOESN'T PAY TO DIVIDE ENERGIES.

It is unsafe to attempt too much for one's equipment, mental or otherwise. The man who tries to kill two birds with one stone often discovers that he would have done better to attack one bird with a whole handful of stones.

A STATE OF PREPAREDNESS

Is a Good One to Dwell in, and Also be a Member of the Sunshine Club Says The Hardware Magazine—Moping Never Did nor Will Pay.

While glancing backward is profitable, too much of it is apt to dislocate one's mental neck. The woman who presided over the household of Uncle Lot in the days of Sodom and Gomorrah proved that, when she lingered too long in remembrances and became a pillar of salt. "Westward, ho!" shouted the mariners who set out to discover a new world. Their faces were set toward the future. So we, who are of faith, and hope, and good cheer, set our faces toward the to-morrow. To drop metaphor and get down to brass tacks. A man in business should be one move ahead of the game. Of course, he knows what he is doing to-day, but he also should know what he is going to do to-morrow; and the day after, too, if his eye will carry that distance.

When France declared war unexpectedly against Germany the news was flashed instantly to Von Moltke, the commander of the German army, that he might plan his campaign. He turned calmly to his secretary and said: "Hand me the contents of drawer A." The papers were opened and there was a plan of the campaign down to the most minute move. Orders were sent forth instantly, and in an hour the German army was on the march. Napoleon was overwhelmed and France for the time put out of the ring. Von Moltke had been at his work during years of preparation. A hardware merchant cannot know what bar iron will sell for next year, or how much nails will be in September. But he can study conditions and size up present events and guess those of the future, even as the weather sharps tell us what is coming to-morrow. But, above all things, he can look for sunshine. He can make to-morrow brighter than to-day is by willing it to be brighter. Let him cultivate his latent hypnotic power. Half the fun of a thing is in anticipating it. What avails it to mope to-day because it may rain to-morrow? What if it does rain? It will clear up the day after. The gospel of cheerfulness; that is the leaven that enters into business life and brightens everything that falls under its influence.

MAKING IRISH HARPS.

The Clark Music Co. Have Started a New Industry in the Manufacture of Irish Harps.

The Clark Music Co., Syracuse, N. Y., have recently started a new industry, viz., the manufacture of a genuine Irish harp of beautiful tone which possesses all the virtues of the larger harps. It is a portable instrument, weighing only eleven pounds. It has thirty strings, four and one-fourth octaves, and is finished in green and gold in mahogany or maple. The height is 29 inches and the space of the strings is the same as in the larger harp. Each string may be raised one semi-tone, enabling one to play easily in eight different keys with all their various modulations. In design and construction these harps are similar to the ancient harps which have been immortalized by Moore and other famous poets. The Irish harp made by the Clark Co. is easy to learn and equally effective as a solo, accompanying, or orchestral instrument. Everyone who has seen or heard this instrument admires its beauty of form and powerful tone.

EXPANSION MEANS PROGRESS.

Almost daily letters are received at this office addressed to the Editor of the Side Line Department, and requesting suggestions regarding the installation of profitable side lines and names and addresses of firms handling various lines of goods of almost every conceivable description. No further proof is needed that the trade appreciate our efforts in this direction, and we welcome all such communications. One dealer writes: "Our talking machine department is one of the largest in the city and is steadily growing, but we see trade in other lines that we can capture and we're going after it."

That's the idea. It's the spirit of modern business "expansion." It was the desire to get more and then some more that made England the power she is, and later the same spirit in the early government of the United States that made this country what it is to-day. The man who is satisfied with what he has and stops will discover that he is gradually falling behind. Greater business means something besides merely more money; it means greater opportunities for the man, a broader career and a chance to show ability. Side lines are the branch roads that lead to new treasures in business opportunities and profits. Get in touch with our Side Line Editor and get information that will prove interesting and valuable.

THE ROOSEVELT LION HUNT.

Report Apparently Is Confirmed That Photographer Will Work in the Jungle and Secure Moving Pictures of the Great Hunt.

Ex-President Roosevelt, according to a well authenticated report, is to be accompanied on his hunting trip through Africa by a moving picture machine in charge of two operators who are acting for William Morris. The report was at first received with incredulity, but it was confirmed last night by rivals who had failed to get the privilege.

The moving picture operators have instructions to catch Mr. Roosevelt, if possible, in the act of bagging the big game he is after. It is understood the moving picture expedition was launched with the great hunter's full consent. The operators are now on board the "President" with the ex-President. The picture machine is to be shipped to Africa by Paul Murray, the London representative of the Morris people.

The confirmation came from J. R. Rogers, manager for R. G. Knowles, a competitor of Mr. Morris in the moving picture field. Mr. Rogers tried to get permission from Mr. Roosevelt to send one of Mr. Knowles' representatives with the hunting party, but was met with the statement that the privilege had already been granted to Morris.

"The best that Mr. Knowles could do," said Mr. Rogers to a reporter, was to camp on the roof of the steamship pier all the night preceding Mr. Roosevelt's departure. There he lay in wait with his moving picture machine for the President. He got fine pictures of the crowds that gathered to see Mr. Roosevelt off, and some splendid pictures of the President waving them goodbye. These pictures will be shown by Mr. Knowles in a few days. It is a fact that the Morris people will have the real African pictures. Such pictures will pack any house in the world for an indefinite period."

When Mr. Morris was seen at the Lincoln Square Theater, he refused to affirm or deny the story. His general representative was seen later at the American Music Hall. "Well," he said, "it is true, but we had not intended making any announcement of the matter until the pictures were well in hand. Naturally we want the field to ourselves."

NOT SO CHEAP.

The story is told of a man who went into a hardware store to buy an axe. Being shown the article and informed that the price was $1.15, he said: "Why, I can get the same kind of an axe from a mail order house for 90 cents."

"Very well," said the hardwareman, "I will give it to you for the same price provided that you will do the same with me as you would with them."

"All right," replied the customer as he handed over a dollar bill, the merchant giving him back 10 cents in change.

"Now," said the hardwareman, "I want 25 cents more to pay express charges," which the purchaser gave him. "How much did your axe cost you?"

"One dollar and 15 cents," the man answered.

"Very good; now give me 5 cents more for money order fees and postage," which the purchaser had to hand over. "Now how much did your axe cost you?"

"One dollars and 20 cents," said the customer.

"Not so cheap after all," said the merchant, whereupon he picked up the axe, tossed it back on the shelf and told the customer to call for it in 10 days, as that would be as soon as he could get it if he had ordered it from the mail order house.

FIX UP SHOW WINDOWS.

Show windows should be backed up to keep dirt and dead flies out of them, as poorly-kept windows reflect on one's business. Velvet as floor covering adds much to the appearance of show windows, and should, therefore, be used instead of paper or cheaper cloth. Do not be stingy about dressing the windows, and above all, keep them clean and well lighted. Remember that you are paying a big rent for the store front, which rental is based on the number of people passing by every day; therefore, if you do not attract the attention of these passers by you are not getting your money's worth out of your rent.

Do not permit your clerks to smoke in the store, as tobacco smoking is offensive to many people, besides the habit distracts their attention from their work, and indicates lack of discipline. Small matters like these count for more than many merchants realize.

PUT UP THE HAMMER AND BOOST.

"Put the hammer in the locker,
Hide the sounding board likewise:
Anyone can be a knocker;
Anyone can criticize;
Cultivate a manner winning,
Though it hurts your face to smile,
And seems awkward in beginning,
Be a booster for a while."

NEWFIELD & NEWFIELD
Selling Agents for European Printing Works
98 WARREN STREET, NEW YORK
Agents wanted in uncovered territory

OBSERVATIONS AND COMMENTS.

Manufacturers of post cards are making strong efforts to rid the field of the class of men representing themselves as jobbers who buy in minimum quantities and then place assortments in stores in their respective localities on consignment. The majority of these people are employed during the day and take this means of getting a little extra money at night.

As almost any small storekeeper will display cards, if they are on consignment, and may be returned if unsold, the legitimate dealer who has invested his good money on a carefully selected stock of post cards naturally suffers from this unfair competition, simply to give some young fellow a dollar or two extra to spend each week.

The manufacturers have taken the matter in hand and are carefully investigating the standing of those claiming to be jobbers and hope to make the "gyp" dealer a thing of the past.

"Billy Possum" Succeeds "Teddy Bear."

With the change in the administration the "Teddy bear" has given way to "Billy possum," and everywhere one sees these possum figures dangling by their elongated tails. The orders for live possums became so numerous that a law was passed in Georgia setting a closed season on them and prohibiting hunters from molesting them for several months each year. The imitation possum is therefore in constant demand, and a funny little creature he is, too. A company has been formed in New York for the express purpose of supplying these stuffed possums, and it is said they cannot fill their orders.

Handling Supplies With Bicycles.

When a dealer handles talking machines he also handles all accessories and supplies, and when he adds a line of motorcycles and bicycles it is likewise policy for him to capture all the resultant trade by handling a full line of supplies for those vehicles. He need not necessarily conduct a repair shop but can supply the materials to the riders, such as tape, tire solution, rim cement, extra spokes and handle bars, brackets. lamps, etc., and for motorcycles, engine oil, batteries, spark plugs, etc. If the dealer is progressive he can make every machine purchaser a steady customer for supplies.

Vacuum Cleaning Gaining Popular Favor.

That the vacuum system of cleaning for home use has appealed to the general public, for sanitary and other reasons, is evidenced by the increasing number of those cleaners being placed on the market, the prices ranging from $5 to $100 or more. Vacuum cleaners constitute a side line that can be demonstrated in a convincing manner and may readily be sold at prices that allow a fair margin of profit. There are so many lines on the market that one may be easily found for the needs of any particular locality.

The Vacuum Bottle for Vacationists.

Another Twentieth Century product that is receiving considerable attention at present is the vacuum bottle for keeping liquids hot, or cold, for lengthy periods. There are several styles made by as many different concerns, each with distinct features to commend it. There should be a lively demand for these bottles during the summer months from campers, yachting parties, picnic parties, etc., who desire cold drinks at luncheon time and who are unable to obtain ice when desired or carry same with them. While the prices of the bottles seem rather high at first, when it is considered that they are practically indestructible, and so very convenient the first cost seems low.

Stationery a Clean Line to Handle.

A line that should appeal to the dealer as being compact, clean, salable and altogether attractive is that of stationery and allied novelties. Writing paper, envelopes, blotting paper, pens, ink and pencils are always in demand in any section, and are so graded as to allow an excellent margin of profit to the dealer. Most of the lines are well advertised, and therefore easily sold, a feature not to be overlooked in installing new lines. The range of novelties is practically unlimited and embraces various forms of push pins, dainty stitched and loose leaf memorandum books, fancy pencils, pen holders and ink wells, paper knives and envelope openers, sealing wax outfits and initial seals, and other similar articles. Where the store has become local post card headquarters a line of stationery should prove an immediate success and provide a generous income for the dealer handling it.

Typewriters as a Side Line.

Last month we mentioned the fact that an energetic dealer should be able to handle typewriters as a side line with considerable profit. From the correspondence reaching this office it would appear that several dealers had thought of the same matter some time ago, and acting promptly had already established a substantial trade in both typewriters and supplies in connection with their regular talking machine business, while others are making arrangements to follow suit. There seems to be no reason why such a line could not be handled without misgivings. The competition in the typewriter field is somewhat keen, but each make has certain distinctive features that appeal to certain persons very strongly. Where supplies are also handled a steady source of income is practically insured for ribbons, carbon paper, erasers, oil and other supplies are in almost constant demand.

The tendency at the present time seems to be in favor of the visible writing machine. Several concerns are at present producing such machines, and even the old and conservative manufacturers have recently added such machines to their line, it being claimed that they save time in inspecting work and insure greater accuracy.

Watches at Popular Prices.

A number of talking machine dealers have added inexpensive watches to their stock and have found them a first-class paying side line. These popular-priced watches are now turned out so attractive in appearance and are so perfected that in point of accuracy (and after all that is the main essential) they compare favorably with their more ornate brother. But the dealer has far more than this on which to stake his success, for the manufacturers of these watches have advertised so lavishly that in more than one case their name alone sells the article, and all one has to do is to set them out where all who pass may read. There are no confusing technicalities to go into to prove their worth, for if not satisfactory the purchaser knows that an exchange is assured him. So with this line at least the manufacturer, dealer and consumer are all satisfied.

Leather Goods as Side Lines.

There are a large number of specialties in the line of leather goods that should form excellent side lines for dealers desiring to enlarge their business. There are pocketbooks and ladies' bags in countless designs, wall hangers, doilies, table covers, secretaries, pipe racks, albums, portfolios, music rolls, card cases, pillow covers and Indian novelties galore. There is a wide range of prices, so that they appeal to all classes and to all pocketbooks.

Fountain and Stylographic Pens.

A standard line that is finding ready sale everywhere is fountain and stylographic pens. While it is possible to invest almost any amount of money in these lines a small outlay is only necessary at the start and a good margin of profit assured. Very few men in business can now get along without some sort of stylographic pen, while almost every school youngster and college boy finds it just as necessary to his equipment. These pens are worthy the consideration of dealers desiring specialties that will interest the buying public.

RENEWS MOVING PICTURE WAR.

The moving picture war which has been vigorously pushed by Mayor McClellan was complicated somewhat last week by the service upon the Mayor and the Chief of the Bureau of Licenses, Frank Oliver, of a writ of mandamus issued by Justice Marean of the Kings County Supreme Court ordering that a license be granted to Herman S. Schnitzer of 627 Fifth avenue, Brooklyn.

Schnitzer's license was revoked by the Mayor after he had received petitions from the Rev. Frederick J. Keech, pastor of the Church of Atonement, at Seventeenth street and Fifth avenue, and the Rev. Louis K. Moore, pastor of the Sixth Methodist Episcopal Church, both of which are near Schnitzer's establishment. The latter then applied to Justice Marean for an order compelling the Mayor to show cause why the license was not issued, and it develops that there was some misunderstanding as to the date on which the order was returnable.

Assistant Corporation Counsel Crowell, who is attached to the Mayor's office, will endeavor to obtain a rehearing of the case from the Justice.

THE ABILITY TO ABSORB IDEAS.

Almost as Valuable as Initiative in Business—Egotism a Bad Thing for the Merchant—How Business Men Have Profited by the Ideas of Employes—James J. Hill's Method—Make Every Employe Sort of Partner and the Business Will Surely Grow.

Next to having strong initiative, the greatest blessing of the merchant is to have the ability of realizing the value of the ideas of others and adapting them in whole or in part to his particular business.

Egotism and self-conceit are the rocks that have wrecked the ships of many merchants who have never been broad-minded enough to see that no man, no matter how experienced or clever, can know it all.

Of course, the ideas that should receive special consideration from the business man are those of his employes, for as a rule they have to do with the particular business he is conducting.

We know of a certain man, much admired for his clever trade-getting schemes, who owes the majority of said schemes to the loyalty and earnestness of certain of his employes, though they rarely receive the direct credit. A subordinate comes forward with an idea, it is pulled apart and all but ridiculed, and the employe retires feeling that his idea is valueless. Shortly, however, the head of the house puts the suggestion to practical test, it proves successful, and when he is complimented upon his business sense acts as though the idea were entirely his own and such thoughts were continually forcing themselves through his brain. While the employe gets very little credit, nevertheless the employer shows decidedly good business wisdom in accepting and profiting by a good idea when he sees it, and in his own way.

Another opposite case may be cited, where a merchant not far from the metropolis was noted for his unfriendly attitude toward employes with ideas of their own. He quickly informed anyone with a suggestion to advance, that "he was running that business, had run it for a quarter of a century, and didn't need any help." As a result, he was not kept informed of the up-to-date moves of competitors, did not put initiative back of his business, and not long ago, shortly after the beginning of the depression, the sheriff got him.

The twentieth century idea is aptly illustrated in the remark of the head of a well-known and growing sporting goods house, to a salesman of supplies in his line: "Can't do business with you to-day, old man, would like to and will soon, but don't forget to come in often; maybe we can teach each other something."

Get it? It's the little things that go to make the big ones. If Carnegie had kept in his shell he would very likely be only the owner of a small foundry instead of a retired steel king. He realized the value of the ideas of others, took a number of bright young fellows—Schwab, Corey and others—and made them partners and gave them a chance to spread themselves. Any reader of the daily papers knows the results.

Take James J. Hill, the head of the Great Northern railroad, he appreciated the value of an employe with ideas, and when he discovered one, even in a section gang, that man's rise to high position was meteor-like while his ideas lasted and he proved his value to the Great Northern. At the first indication of plodding, however, that man went down the toboggan quickly.

The head of the business will find initiative an invaluable asset, it is true, but his willingness and ability to profit by initiative of his employes, pick out of their suggestions that which is of value and put it in a form that will insure success, will be found to be a sufficient asset to insure a growing institution under his direction.

One of the most successful of this year's post cards is the "moving picture" card, wherein by slowly moving a card in or out the effect of life is produced in the picture. A large number of subjects are produced, including a horse race, piano player, etc.

PROLIFIC YEAR FOR HARMONY CO.

Great Chicago Musical Instrument House Sold Nearly 40,000 Guitars and Numerous Other Instruments—A Story of Rapid Growth—115 Men Employed at Present—Some of the Leaders of the Company's Line.

(Special to The Talking Machine World.)
Chicago, Ill., April 8, 1909.

In a recent talk with the World, William F. J. Schultz, president of the Harmony Co., of this city, one of the largest manufacturers of musical instruments in the country, reported last year as having been the most prolific ones in the history of the house. No less than 39,410 guitars, 10,502 mandolins and 1,548 drums were manufactured and sold by them in 1908.

These figures represent an enormous increase over the output in the first years of the company's history. Starting in business in small quarters in 1891, in three years they were able to erect the main building of their present plant, to which a couple of years ago additions were made, more than doubling their already great capacity.

There are 115 men now on the payroll and from present indications the number is likely to be increased very shortly, as the present force is taxed to the utmost to supply the demand on the entire line of Harmony goods.

The guitars and mandolins manufactured by the Harmony Co. possess some valuable and distinctive ideas, while their drum embodies a patent on the rods that insures for these instruments an increased durability and lightness that is appreciated by the users all over the country.

Failure does not come through making mistakes, but in refusing to learn by mistakes how to avoid them.

The man who borrows may not be able to wear better clothes than the man who lends, but he usually does.

THE TARIFF ON POSTCARDS.

Members of Lithographic Trade in Germany Reported to be on the Way to America to Protest Against Increase of Duty and American Lithographers Prepare to Combat Their Arguments—Importance of the Industry.

The news that representatives of the lithographic trade in Germany were coming to America to protest against the increase of duty on lithographic work has started the lithographers of this country to action. The employers and the lithographers' unions which have been working in harmony in the efforts to get a higher tariff on lithographs from abroad are satisfied with some of the provisions in the tariff bill, but they are not at all satisfied with the increase of tariff on the picture postal card.

Committees of the National Association of Employing Lithographers and of the unions in the different branches of the lithographic trade have held several conferences in New York to prepare to meet the arguments of the German delegation when it arrives. The commitee of the employers consists of Robert M. Donaldson, of the Lithographic Co., New York; Horace M. Reed, of the Niagara Lithographic Co., Buffalo, and George Meyercord, of Chicago. William A. Coakley, the spokesman of the committee, said:

"The increase on the duty on postal cards under the Payne bill will not keep a single postal card from Germany out of this country. This is a very serious menace and it is a growing one, as these cards are made in towns in Germany where wages are very low and the purchasing power of money very high. Washington is flooded with them, and pictures of the Capitol on these cards printed in Germany are for sale in all the stationery and other stores in Washington. You can imagine what an effect this has on American industry."

The stand taken by the unions as to the postal cards is also taken by the employers. They say that this is not a case of unionism or non-unionism, but a case where employers and employes alike in the trade in this country are involved.

Several meetings of the Postal Card and Manufacturers and Allied Trades Protective Association were held during the past ten days at 9 Walker street, New York, for the purpose of agitating for a higher tariff on picture postal cards than is provided in the Payne tariff bill. The members of the association throughout the United States employ 30,000 to 40,000 persons, and they say the occupation of these persons is to allow of the work being done here.

According to the members of the association the industry was just starting in this country when the Dingley bill was introduced, and nothing was said about the tariff then. Since that time the trade grew enormously until the manufacturers of foreign picture post cards began to imitate the American subjects and to sell the cards in this country at prices with which the American could not compete.

THE BUSINESS DECALOGUE.

I.

Thou shalt have no other god except Honesty—including in that godhead Integrity of Purpose, Sincerity in Effort, and Loyalty to all Business Duty.

II.

Thou shalt not cherish Meaness, Spite or Envy toward thy neighbor.

III.

Thou shalt not Advantage thyself wrongly through the weakness or error of thy craft brother.

IV.

Thou shalt not use thy power of position to crush thy struggling competitor. Do but consider that thou and he live for the Service of mankind.

V.

Honor the Moral Code of thy calling and pay heed unto the Ethics of thy guild.

VI.

Pay thy just debts without haggling and rancor.

VII.

Demand thy just Discounts, for Time is an element of Value which thou shalt not despise.

VIII.

Exact of thy debtor Specific Performance of his Duty to thee, lest thou shouldst lose his respect and encourage him in ruinous habits of default.

IX.

Be thou of Good Cheer, for Honest Business is a joy in the sight of the Almighty.

X.

Regard thy Business as a divinely appointed office for Human Advancement; so shalt thou be blest all the days of thy life, and thy house after thee shall wax in honor, riches and power.—The Novelty News.

The boy who takes down the shutters as cheerfully as he puts them up, hides under his coat one of the successful merchants of the future.

To save time: Be on time all the time.

INCORPORATIONS OF THE MONTH.

Among the new incorporations in the State of New York is the Cooper & Franks Camera Co., New York, organized with a capital of $6,000, to manufacture cameras and photographic apparatus. Incorporators—Thomas W. Cooper, 321A Monroe street, Brooklyn; Ernest R. Franks, 50 Nassau street; Edward A. Munger, 26 Cortlandt street, both of New York.

The Empire Film Co., Brooklyn, has been incorporated under the laws of the State of New York, with a capital of $5,000, to manufacture moving picture appliances. Incorporators—Adam Kessel, Jr., and Katherine M. Kessel, 867 Jefferson avenue; Frank Dunham, 942 Bedford avenue, all of Brooklyn.

A recent incorporation in the State of New Jersey is the Yankee Fishing Reel Co., Newark, organized to manufacture fishing reels, with a capital of $50,000. Incorporators—George Edward Matts, Charles Schied, Lee Ottolengui, Franklin W. Klein, Newark.

The Mutual Vending Machine Co., New York, has been incorporated under the laws of the State of New York to manufacture and operate machines for vending cigars, tobacco and candy, with a capital of $25,000. Incorporators—William Sinclair, Jersey City; John J. O'Hara and George F. Kuhne, 3225 Cruger avenue, The Bronx.

The Van Westerborg Cossenas Co., New York, has been incorporated under the laws of the State of New York, with a capital of $10,000, to deal in novelties and specialties. Incorporators—Nelson W. Van Westerborg, 503 Fifth avenue; Miltiades W. Cossenas, 503 Fifth avenue; Charles L. Pierce, 89 Eighth avenue, all of New York.

Among the incorporators in the State of New York is the Bronx Realty Co., of New York, organized with a capital of $5,000 to manufacture slot machines, musical machines, etc. Incorporators—W. Engesser, 336 East 156th street; Herman Rothe, 5 Sylvin place; Fred Knowlton, 527 East 147th street, all of New York.

The Dow Rim Co., of New York City, has been incorporated under the laws of New York State to manufacture motorcycles, bicycles, etc., with a capital of $100,000. Incorporators—Francis J. Erwin, 219 West 12th street; William H. Heagerty, 135 West 104th street, both of New York; Emma W. Renne, Hoboken, N. J.

Among the new Massachusetts incorporations of interest to talking machine dealers handling side lines is the Boston Camera Exchange, Inc., of Boston, organized to deal in cameras and photographic supplies of all kinds, with a capital of $2,000. President and treasurer, Philip L. Grabau; clerk, William H. Gould, both of 36 Bloomfield street, and attorney, Charles F. Jenney, 35 Congress street, all of Boston.

The Steingold Mfg. Co., New York, has been incorporated under the laws of New York State, with a capital of $5,000, to manufacture novelties and household furniture. Incorporators—Abraham Stein, 690 East Fifth street, Brooklyn; Julius Gold, 16 West 117th street, New York; Jacob B. Greenspan, 1550 St. Marks avenue, Brooklyn.

A decided novelty in the post card field is the decalcomania post card, the design of the card being concealed underneath an opaque tacking. The recipient must "transfer" the postal to view the subject just like children used to "transfer" pictures to scrap books and even on their arms. The new cards are made by the Meyercord Co., Chicago.

It is estimated that Germany uses $1,394,800,000 post cards annually, the United States 1,000,000,000 and Great Britain 800,000,000.

LOCAL VIEW POST CARDS.

One of the Specialties of Newfield & Newfield, New York Manufacturers—Many Styles Offered That Must Appeal to the Public.

Among the reliable post card manufacturers, who make a specialty of printing local views to order, are Newfield & Newfield, 98 Warren street, New York, and the variety of styles offered by them are interesting and attractive, ranging from black and white at $4 per thousand to colored print in panel effect at $11.50, in all about ten distinct styles. The dealer will find a series of local view cards a decidedly profitable investment, especially during the vacation months when so many travel. There is no better souvenir of a visit at a certain town than a set of local view post cards, and by the time a circle of friends are remembered the purchase will amount to a very respectable figure. Not only that, but the inhabitants of the town are generally desirous of having their friends in other sections see the local view points and the post card proves the easiest and best means to accomplish that purpose. Get your views together and send for samples and prices, so that you may be prepared to answer to the call.

THE DUSTLESS AGE.

How It Can be Brought About Through Suction Cleaners—Popular-Priced Machines Now Being Placed on the Market—Good Side Line for Progressive Dealers.

The great campaign against tuberculosis and the means to avoid it, which is now going on in this country and, in fact, throughout the world, has resulted in a regular war on dust, particularly in the home. The old-fashioned method of brushing carpets and dusting with loose cloths is being abandoned in favor of vacuum cleaning. It has been well said, "abolish dust and the standard of health will improve." It will take only a short tour among the many dealers in these various new cleaning devices to convince the most skeptical that there is great truth in their arguments. With the new cleaners, be they vacuum, compressed air or merely bellows style hand-pumping affairs, the dirt in a room or hall or theater is not merely scattered from one place to another, with only the larger pieces picked up and removed, but every particle is gathered into a cylinder, to be burned in the furnace or stove.

There is a great demand among people of moderate means for a popular-priced vacuum or suction cleaner, and this want is being rapidly supplied by manufacturers, with the result that dealers in general specialties are putting in a suction cleaner line, with profit to themselves and benefit to their community. There is no question but that the old system of cleaning is distinctly out of date and is not in harmony with this rapid age of wireless telegraphy and flying-machines. The day for getting rid of dust without danger is here, and there is a sure trade for the dealer or jobber who will get hold of a good machine and sell it in his community.

THE IMPORTANCE OF SYSTEM.

Without It Business Is Like a Ship Without a Compass—Drifts on the Rocks.

Business without system is like a ship on the ocean without a compass; no one knows which way it is drifting. Some of the fundamental laws of system are:

1. The art of keeping all departments of the business enterprise in good running order, as regular and as smooth as a faithful clock.

2. It is keeping your store and shelves in such good order that at a moment's notice an article can be produced.

3. In buying goods know exactly what you have in stock, and especially what you should not buy. Buying goods that are not needed is the contributive cause of over-stock.

4. Your correspondence requires system. You are using system when you can lay your hands within five minutes on any letter written or received, or any order shipped during the year.

You follow system when you can see at a glance the voucher of every article in the store, where it came from, what it costs and what it sells at. The jobber can keep books for this purpose. The retailer can write it in small figures on the tag of each article, says Wettstein in The Traveling Man. When you have a little book in your vest pocket in which you write down, as soon as the thought comes to you, everything you want to remember. Such a little contrivance is a great relief to an overtaxed brain, because you don't need to worry about some important matter being forgotten. When you know at the end of each year exactly how much profit you have made, or how much money you have lost in every department of your business. If one department does not pay throw it out.

When you know every three, six or twelve months whether a traveling salesman makes or loses for the firm. In the latter case the place must be filled by a better man.

When, daily, you can see at a glance how many goods of a certain number are sold, how many are in stock and how many are ordered.

When you can ascertain in a moment what kind of goods sell and what kind do not sell.

When every employe is in his proper place, knows exactly what his duties are and does not interfere with anybody else.

When you can every moment open your ledger and point out exactly how much expenses you had, how many goods have been sold, how much money is outstanding and how much you owe.

When not a thing can go out of the store without it is properly examined, counted, checked off, paid for or charged.

When the smallest articles, as wrapping paper, twine, ink, are charged to the expense account and added to the cost of the goods. Not to furget interest on capital invested, which many merchants do.

Here is a small illustration of what system is:

MEXICAN OFFICE
4 Calle de Tacuba, - - MEXICO CITY

M buys $3.90 worth of goods in a country store, pays $3 cash and tells the clerk to charge 90 cents to his account. Now, if you follow his instructions literally and charge M in your books with goods at 90 cents he may claim in two or three months, when he comes again, that he never bought anything amounting to 90 cents, and that he does not owe you that amount. You very likely will have forgotten the exact nature of the transaction and will cross off the charge from the books rather than make an enemy of a good customer. If you had system in your business you would have charged the man with $3.90, specifying the goods, and credited him with the $3 cash payment. It is still better to give the customer a carbon slip of each charge and purchase.

CHICAGO SPORTING GOODS CO. BUSY.

Plant Working Overtime on Baseball Goods for Approaching Season—Purveyors of the "White Sox"—A Strong Side Line Offered to Progressive Talking Machine Dealers.

(Special to The Talking Machine World.)

Chicago, Ill., April 7, 1909.

Manager Ratsch, of the Chicago Sporting Goods Co., predicts from the business coming to hand a banner year in the company's history. At this season of the year the company's plant in this city is working overtime in turning out baseball equipment, including bats, balls, gloves, masks, chest protectors, uniforms, etc., to meet the demand that the thousands of baseball teams throughout the country are creating through the dealers. Chicago has long been the foremost city in the country relating to baseball and the Chicago Sporting Goods Co. has long furnished the "White Sox," the world's champions of 1906, and the hundreds of semi-pros and amateurs with uniforms and equipment. Quality has been the company's slogan from the start and is responsible for the growing demand for their goods.

For talking machine dealers who are desirous of putting in a strong and seasonable side line the company are offering a special proposition in order to get them started. An outlay of $99.69 invested in a choice assortment of baseball goods can be easily and quickly turned over to a profit of 85 per cent. should prove a magnet and not only put the talking machine dealer wise to a good side line that would draw a large new trade to the store, but put him in touch with a concern that can supply them sporting goods for the fall and winter as well as the summer season. A postcard to the company will explain in detail this attractive offer. Their address is 303 Fulton street, Chicago.

THE POSTCARD VOGUE.

To be a Universal Institution—A Wonderful Disease, Says The Sun, Which Attacks Young and Old of Both Sexes—The Emotions of the Sender and Recipient—Traveling via the Post Card Album.

The postcard vogue has spread over the entire world, and no matter where you go or where you journey the post card is omnipresent. In this connection the New York Sun said the other day:

"In the last few years a new disease has appeared on the earth and has spread with incredible rapidity over all parts of the globe where post offices may be found. Indeed its germs have been disseminated chiefly by the mails.

"It is a disease of the brain, caused by a germ which has at last been isolated though as yet no neutralizing agent has been found. It attacks alike old and young, only infants and very young children being immune.

"Women are said to be peculiarly liable to it, as are travelers, though one of the worst cases known is that of a Brooklyn man who has never crossed the East River. It will thus be seen that the stay at home is by no means safe, especially as the disease is contagious. The initial attack gives immunity from a second, because the first lasts as long as the victim lives.

"The onset is usually sudden. The germ attacks the optic nerve and rapidly makes its way to the brain. The first symptom is a feeling of intense pleasure upon receiving a postcard and a desire to reciprocate in kind. If this desire is sternly repressed and the picture postcard consigned to the flames, there is a possibility that the attack may be averted.

"If, as is almost invariably the case, the victim yields through ignorance of his ailment the motor centers will become involved and he will rush to the nearest drug store for picture postcards. From this point the progress of the disease is rapid.

"The victim may be heard at piers and railway stations shrieking 'Be sure and send lots of picture postcards' after his departing friends, who in nine cases out of ten are as badly off as himself. The germ has now reached the speech center of the brain, and after this the disease is incurable.

"The victim will now invite you to dinner and then will require you to wade through albums filled with multitudinous atrocities in color showing where he has been, where his friends have been, and where he will go in his next vacation time.

"You will say 'Wonderful,' 'Beautiful,' 'Interesting' and even 'Gorgeous,' till you begin to feel like a phonograph with a limited vocabulary.

"By the time the fifth volume is reached you are ready to take leave of your host, he protesting that it is not late and that his Egyptian collection is the most interesting of all and that you really must see it another time.

"Victims of this disease are always interested in art, and with a collection of moderate size they will assume the air of a connoisseur.

"They will show you the Mona Lisa on a postcard and will assure you that it is an exact reproduction, especially as to color, and that it was painted by Layonardo da Vinchy, eyeing you furtively to see if the pure Italian accent has impressed you. You at once ask if they have a picture of Bottitchelli's 'Spring,' and honors are even.

"You will be called on to admire in one evening the frescoes of Andrea del Sarto, the Grand Cañon of the Colorado, the Cathedral of St. Sophia and the California pepper tree. The sufferer has by this time lost all sense of proportion, and art to him is one great conglomeration of picture postcards.

"In the later stages of the disease a new symptom develops, the victim being unable to write except on the margin of a postcard. The thought of writing a letter becomes abhorrent and even the sight of an envelope may be followed by unpleasant sensations.

"The case is recorded of a woman who traveled abroad for two years and in that time sent her husband 2,250 postal cards and only two letters.

"At the end of the second year he wrote telling her of the death of her mother. Her reply came on the margin of a postcard: 'Am sending you this lovely picture of the Taj Mahal. If only dear mamma could have a tomb like this on ever so small a scale I shouldn't grieve! Am leaving for home at once, so may not be able to send any more postals.'

"For obvious reasons lovers are the greatest sufferers when this stage of the disease is reached, and it is upon this class of unfortunates that the antitoxic serum will be first used when it is found."

WONDERFUL GEOGRAPHICAL CLOCK.

It Revolves Like the Earth and Tells the Time in All Parts of the World.

The Empire clock, which J. Hadden Overton, of Woodstock, has invented, is an ingenious contrivance for giving practical instruction in geography and enabling the student to ascertain at a glance the mean-time in any part of the world.

At first glance this wonderful clock might be mistaken for one of the ordinary globes used in schools. Its principal novelty is an invisible clock, which performs with absolute accuracy and precision the duties ordinarily performed by the teacher in giving lessons on the earth's diurnal motion, latitude and longitude and geography generally.

Some of the points claimed for the Empire clock are that it gives the correct time all the world over; that it demonstrates the actual rotation of the earth on its axis in twenty-four hours, and shows at a glance the difference in time between all places on the earth's surface and the correct mean-time at any town or place in either hemisphere. The motive power is a clock in the base of the stand upon which the globe is mounted, and the apparatus requires winding once a week.

Don't imitate the ideas of your competitors. Go and see them and let them serve as ideas on which to improve.

"It takes as much time to cultivate an acre of yellow clay on a hillside as an acre of rich valley loam. And look at the difference in results."

MR. DEALER!

When you add musical instruments to your stock you use excellent judgment as no line fits in more appropriately with talking machines.

NOW

let us give you a little pointer that many dealers have learned in the hard school of experience,

THAT IS

HARMONY INSTRUMENTS

PIRATED PLEASANTRIES.

It was raining outside, and little interrogative Irma was in one of her worst, or at least most trying moods. Father, busily writing at his desk, had already reproved her several times for bothering him with useless questions.

"I say, pa, what——"

"Ask your mother!"

"Honest, pa, this isn't a silly one this time."

"All right, this once. What is it?"

"Well, if the end of the world was to come, and the earth was destroyed while a man was up in an airship, where would be land when he came down?"

Capt. Pritchard of the Mauretania relates the following:

"Last summer," he said, "there was a young lady whom I showed over the steerage. As we were making our tour the steerage people were eating their dinner, and I couldn't help remarking the tremendous appetite of a red-haired man. I said, 'Just look at the amount of food that fellow consumes!'

"'I suppose, captain,' said the young lady, 'that he is what you sailors call a stowaway!'"

They were on their honeymoon and were climbing the Schnupfelgapfenspitzen peak, and she stood above him some twenty feet.

"What ho!" he gasped. "What do you see?"

"Far, far below," she cried, "I see a long white streak, stretching like a paper ribbon back almost to our hotel."

"Ha, ha!" he ejaculated. "I'll bet it's that blessed bill overtaking us."

And they proceeded onward and upward.

A beautiful young girl and her mother were discussing the eternal marriage question.

"Well, there's Charles Adams," murmured the mother, thoughtfully, after a long pause.

"Charles Adams!" sneered the girl. "He is old, he is ugly, he is mean, he is a coward. Charles Adams! Why, he has nothing in the world to recommend him except his wealth."

"You forget his heart disease," said the mother softly.

"Archimedes," reads the pupil, "leaped from his bath, shouting, 'Eureka! Eureka!'"

"One moment, James," says the teacher. "What is the meaning of 'Eureka?'"

"'Eureka' means 'I have found it.'"

"Very well. What had Archimedes found?"

James hesitates for a moment, then ventures hopefully:

"The soap, ma'am."

"Bobby," said the teacher to a small pupil, "what is the hardest stone ever discovered?"

"I don't know," replied Bobby.

"Can't you think?" queried the teacher.

"Yes, ma'am," answered the little fellow, "but I can't think hard enough."

"Why have you broken your engagement with Mr. Moonington, the poet?"

"He wrote a poem in which he pretended to extol my beauty and entitled it 'Lines on My Lady's Face.'"

Stranger—I'd like to have my measure taken for a $65 suit of clothes.

Tailor (eyeing him)—I've taken your measure, sir. You'll pay in advance.

"Mama, can God hear everything?" "Everything, Willie." "And is God always happy?" "Always, Willie. Why do you ask?" "Well, I should think it would make Him suffer a little to hear what sister and that fellow of hers are saying to each other in the next room."

"Would you mind if I went into the smoking car?" asked the bridegroom, in a tender voice. "What! To smoke, sweetheart?" questioned the bride. "Oh, dear no," replied the young husband; "I want to experience the agony of being away from you so that the joy of my return will be all the more intensified."

IMPORTANCE OF PROMPT PAYMENT.

Carelessness in Settling Small Accounts Often Leads to a Bad Business Reputation for the Merchant and, Consequently, Much Future Trouble.

How many dealers realize the importance of settling their accounts regularly and on time, how much it means toward building up their business reputation and as an asset when the time comes when credit is really desired?

It is safe to say that fully eighty per cent. of unpaid bills remain unpaid simply through carelessness. Perhaps the amount is small and no discount is offered on prompt payment. The dealer sees the bill and thinks, "Why bother; it's only a small matter and the firm will never miss it. I'll pay it when the account is larger." He doesn't stop to realize that if fifty debtors held back ten dollars each it would mean the fairly respectable sum of five hundred dollars.

After several statements the dealer finally settles and perhaps expresses his indignation at being bothered over such a trifle, though at the same time pushing his collections right up to the minute.

In the future perhaps that same dealer finds himself slightly pushed for cash. His business has grown and so have his bills for goods purchased. Then he confidently writes to his creditors, explains his trouble and asks an extension of credit. His past record is looked into and his slow paying propensities discovered. The result is that further credit is refused just when he really needs it and a crash is inevitable. The dealer wonders why he is the victim of cruel fate. The answer is, his own carelessness.

When a bill is rendered payable in ten days or thirty days, it should be settled in the time specified if the money is at all available. When a discount is offered business sense dictates that prompt payment be made and the reduction taken advantage of. Two per cent. discount in thirty days does not mean six weeks or two months, but thirty days flat, though some merchants never seem to appreciate the fact and feel mistreated when they are denied the discount after the stated time. Prompt payments do not appear so very important when business is good and money plentiful, but the transgressor will realize that such a course proves its own reward in times of adversity.

Certain dealers can vouch for the fact that the above is gospel truth and regret that they did not appreciate it when times were good. A reputation for paying bills promptly has saved many merchants from ruin in time of adversity, for their creditors had faith in their honesty.

A PIANO CATALOG OF INTEREST.

(Special to The Talking Machine World.)

Chicago, Ill., April 8, 1909.

The Cable-Nelson Piano Co., general offices at the Republic Building, Chicago, Ill., have just issued a new catalog of their product which will prove of special interest to talking machine dealers desirous of embarking in the piano business. It is attractively covered, of convenient size, and presents a handsome full-page half-tone illustration of the five leading styles of Cable-Nelson pianos, together with succinct detailed description. The introduction entitled Cable-Nelson Traits presents some general facts regarding the goods described which will be read with keenest interest, backed as the statements are by the strength and reputation of the well known house. The frontispiece shows the company's great factory at South Haven, Mich., which shipped last month over 600 pianos, a remarkable record, and one which should carry with it conviction as to the popularity and salability of Cable-Nelson pianos.

THE MAN WHO WINS.

Business is not like backing horses. The man who wins in business wins because he has deserved to win; the man who loses, does so because he deserves to lose.

This truth may not always be obvious, but it is none the less true. Of course the unsuccessful man won't admit it. It would be better for him if he did, for then he would seek for the deficiency in himself which brought about his failure and strive to eliminate it.

It is the old principle of the survival of the fittest. The fittest is the man of pluck, with strong belief in his own powers and a keen energy to seize every chance.

The man who believes in luck would probably be more profitably employed in backing horses, where his peculiar talents would have more play.

The trade of the moneyed class is most desirable, but don't get the name of running a store for one class of customers unless that class is large enough to supply all the business you want.

As soon as a man gets $10,000 he begins to fear that somebody is trying to stir up class hatred.

SOME BUSINESS METHODS.

The Views of a Successful Merchant Who Sells General Trade in a Small Town—Some Excellent Points That The World Man Heard.

When The World representative is making his peregrinations in some of the smaller cities and towns he rubs up against all kinds of tradesmen, talking machine men, sporting goods dealers, hardwaremen, etc. Recently a hardwareman was in a communicative mood and The World man whipped out his notebook. Here's what the hardware man delivered:

"The question of profitable salesmanship is one that is constantly before the retail dealer; having his business well understood, his trade partially established, and wishing to satisfy his customers and pushing for more, he knows an exact system in his store will reduce friction to a minimum in handling his customers, and further, his sales, as perhaps no other factor will.

"What, then, about his system? He wishes to avoid insane simplicity of little worth and red tapeism, a positive damage, and to further sales by a comprehensive and smoothly running system between the two mentioned extremes.

"It is for the reason that taking stock in a retail hardware business is such a herculean task that the hardwareman has become discouraged at the outset, when the question of system is broached. Inventory has always been looked upon as the first and necessary step in order to properly regulate the profit and call attention to losses, and study of the business as regards the selling end, but an inventory at frequent times is not possible in this business by reason of the immense amount of work it entails.

"How is the hardwareman to keep close tab on his sales? how is he to know whether he is making or losing money in his tinshop or sporting goods department? how is he to know whether he is getting all that is due him in his house furnishing department? are his average profits being sustained in the hardware department?

"He must be able to make comparisons every day, week or month. These comparisons are and must be of vital necessity in scanning the business horizon for sales; how can they be most profitably made? If this is not possible, the leaks are liable to sink the ship. It is a relief to the merchant to be able to plan and formulate and leave to his bookkeeper to do what formerly required many moments or hours of his own time each day. It is a relief not to answer questions many times a day or in an hour; in a word, it is a relief to reduce his business to such a system that he will have time to work out new preparations, formulate new plans to interest the buying public and advance his business until unharassed by a thousand petty details he will find himself growing and expanding.

"Did you ever stop to think how much your own presence is required every moment at your work? how dependent your clerks are on you for prices? how many kicks you have from your customers because, so often, no two clerks charge the same? how often your memory serves you badly in buying and selling goods?"

The World man thought the opinions taken down were worth reproducing for general good, and the managing editor agreed with him.

GET A TRANSFER.

If you are on gloomy line,
Get a transfer.
If you're inclined to fret and pine,
Get a transfer.
Get off the track of doubt and gloom,
Get on the sunshine train, there's room.
Get a transfer.

If you are on the worry train,

And there is lots of room for you—
Get a transfer.

If you are on the grouchy track,
Get a transfer.
Just take the happy special back,
Get a transfer.
Jump on the train and pull the rope
That lands you at the station, Hope—
Get a transfer.

A correspondent of the New York Times in a letter sent to that paper recently emphasizes a phase of the moving picture development which is not generally considered. He says: "The art of posing for moving pictures has in some cases reached a state of development where individual recognition should be given, because intelligence, industry and ability are evident in the acting of those who pose for these pictures. With regard to some at least, as to facial expression, gesture and grace of carriage, it might be said that their work is of exceptional merit, and comparable to the work of many dramatic 'stars.'"

WHY FAILURES OCCUR.

A Well-Known Business Man Has Some Interesting Things to Say About Causes of Failure.

When a leading business man was asked by this publication for his views as to causes of business failures, he remarked:

"To lack of capital is attributed over 50 per cent. of the total number of failures. I believe this is much over the reality, for many prefer to attribute to lack of capital the cause of failure rather than their own administration. I have studied and had occasion to investigate many failures, and I have found that when in the first years of business with no capital a merchant had succeeded in making a capital of $3,000, $5,000 or $8,000, he thought he was rich and began to pay less attention to business. He became a little more extravagant in personal expenses, and, above all, less attentive to customers, leaving it to his clerks to look after their wants.

"This departure has the most fatal effect on the staff, for the moment the owner of a business lacks energy, stability and punctuality the whole of the staff follow suit. Hence capital is wiped out, and the man fails and attributes to lack of capital his lack of energy and ability.

"Inexperience and incompetence count for a very large share, and I am greatly surprised at this, as this is surely one of the absolute qualifications of a successful trader, and I believe no jobber or manufacturer should grant credit to a man in business who is incompetent, and this is one of the easiest things to find out.

"The main cause of most failures is to be found in the peculiarities of those who fail rather than in the conditions against which they have to contend. Study the methods of those who succeed, and you will find that they are taking to their work with no faint heart, that they are not carried away by the pleasures of society, outdoor sports, and the theatre or similar amusements.

"I do not mean that one should refrain from all such pastimes, but they should occupy only a secondary place in our minds and occupations, for no one can hope to get along in the world without concentrating all his energies toward the attainment of the object he has in view. In this respect the same rules apply as regards business, and as regards the trades. Do not be afraid to accumulate too much information, but work on earnestly and steadily, picking up all available data as you go along, and finding out where the various wares can be procured to the best advantage. Never fail to keep an engagement, for punctuality is the mainstay of business success. Cultivate uprightness and honesty, which are indispensable to success; always keep your word. Never make a statement without being positive that it is true, and should you find out afterward that you were mistaken do not hesitate to acknowledge your error. By doing so, you will retain the confidence not only of your customers, but that of your jobbers as well.

"Economy is another indispensable quality."

The foremost advertising virtue is persistence. One can no more make a single effort, however large, serve a year's publicity, than he could get physical nourishment for a lifetime from a single dinner.

Suppose your newspaper published the same news items every day? asks Business Help. How long would you continue to read that newspaper? How long can you expect people to read your advertising if you continue to use the same old copy, day after day, week after week, month after month, year after year?

Never bore your customers with tales of your personal tribulations. Leave it to them to tell the hard luck stories. Always be bright and cheerful, as a matter of habit.

A dollar in the till is worth more than two dollars on the suspense account or a dozen dollars in the bankruptcy court. A good merchant is a good collector.

ACTORS FOR PICTURE SHOWS.

Squads of Them Kept for Purposes of Machine Companies Alone.

How vast a business is the moving picture industry may be seen from the stables, so to speak, of actors that the film men keep. In this country scenes are being rehearsed and played all the time before cameras. There are actors who make a good business out of just this sort of thing. The vaudeville artists dance and sing for the devices which show the artist at work on the film while his voice proceeds from some talking instrument. This is an artistic bit, too, because the dancing figure does things that are fitted to the music.

It is no silly automatic performance either. It is genuinely entertaining and of the highest class. These actors go through their evolutions in the most lifelike manner and every detail of perspective and the like is attended to with remarkable fidelity.

In other countries, too, the actors are trained for the work. Some of the most distinguished performers have appeared before the moving picture man's camera on the other side and some vaudeville features have been known here through the medium of the machine long before they have been brought over "at great expense" by some manager of vaudeville in this country.

That may lead, too, to another thing which is comparable to the work of the phonograph in reproducing the voices of great singers. If the great stage performers appear before the phonograph and the moving picture machine it will be possible for later generations to get a very good idea of what sort of actors and actresses they were, so that there will not have to be a dependence on tradition and sayso alone.

Some of the companies have very clear films which always show up well. That is ascribed by them to the lack of handling by the workers. There is no need for very many hands in the business of developing and fixing up the reels of film. There are machines for all this work, so that even in a very big factory the actual number of operatives employed is small, says the Sun. Most of the persons who import their negatives do the work of the developing of the films and preparing them for the market in this country.

That is something of the progress of a business that began to be at its greatest only about five years ago. There is a great combination of $15,000,000 of one line of manufacturers which is like the licensed association in automobiles; the others, and there are many of them in the country, are the independents. It is well nigh impossible to say what amount of money is being harvested in the business, because every day the sum grows greater. But it suffices to say that it is one of the largest business developments in the country and that it will be much greater.

VITAK CO. IN TROUBLE.

Receiver Named for This Concern Which Made Among Other Specialties a Popular Priced Moving Picture Machine for the Home.

Two petitions in bankruptcy have been filed against the Vitak Co., manufacturers of moving picture machines at 180 Lafayette street, one by the John Simmons Co., a creditor for $501, the other by these creditors: David S. Plumb, $1,296 for merchandise; Edward F. Purcell, $4 for trucking, and Alton Manufacturing Co., $120 on a contract to buy 5,000 goose necks for $200, of which 3,000 were delivered on November 2 to November 5, but the company refused to accept them and refused to carry out the contract. It was alleged that the company is insolvent and transferred property, $1,000, to certain creditors to prefer them. Judge Hough appointed Henry W. Sykes receiver. He said that the liabilities are about $6,600 and the nominal assets $15,000, the actual value of which is much less; that the trouble was due to dissensions among the officers, all but one of whom have resigned, and that some time ago Burr Brothers, who had the sale of shares of the company, sold some for $3 a share, but the company received only $1 a share, and he intended to have the matter examined. The company is a West Virginia corporation, incorporated in March, 1908, with a capital stock of $1,000,000 of 100,000 shares, par value $10 a share, and succeeded to a business started in September, 1906. The company's machines were for use at home.

SUGGESTIONS FOR ADVERTISERS.

How to Make Display Matter Attractive—Retail Dealers Should Take Notice.

The use of cuts in advertising has become so general that there is hardly an advertiser to be found who does not believe they are useful if not absolutely necessary. In fact there are very few forms of advertising where a little artistic decorative work will not enhance the effectiveness of the ad. It may not be exactly a picture, but it requires the work of the artist in combination with the work of the typographer to get the most out of the ad., or the most into it, which ever way you please to figure.

In speaking of cuts or pictures in advertising we include not only pictures but decorative designs, borders, etc., says R. H. Callahan in The Furniture World. There are three ways of using pictures in advertising. One way is to use a picture that represents the article advertised. Another is to use a picture that illustrates the line of argument pursued in the advertisement, and the other is a picture which is used merely because it is pretty and will attract a passing glance.

The cuts which show the article advertised are extremely useful, provided there is something distinctive about the article, and, therefore about its picture. The picture of a brass bed is of no particular advertising value, unless it clearly shows some point wherein the bed is different from others, which is unusual. Invariably,

Union Hardware Co., Torrington, Conn., U. S. A.

though, the pictures we see in advertisements of brass beds do not show anything in particular, and as the average cuts of brass beds look enough alike to be twins the pictures are of no particular use.

Cuts which show the article advertised in use are good—they have action which arrests the eye. The picture of a Morris chair is not particularly inspiring, but the picture of a man reposing comfortably in the chair while reading a paper is something altogether different. The picture of a dressing table is not a subject that an artist would select for his prize painting, but, put the figure of a comely girl—perhaps with disheveled hair, and in the act of making her toilet—before the dressing table and you will have something which cannot fail to attract attention.

The picture of a pretty woman will never lose its advertising value as long as human nature remains what it is. No matter what the subject may be or what the story is if you can ring in the picture of a really handsome and alluring sort of a woman you are going to catch the public eye and hold it. Pictures of children are also very attractive, and are most useful in the advertising of articles intended for children. Even in repose the picture of a pretty girl or child will attract attention, but, if possible, get action into the picture. Have the person in the picture doing something in connection with the article advertised, if possible, but doing something, anyway.

At season events and during special sales allegorical pictures emphasizing some particular point in favor of an article or occasion are very popular. Historical characters and events are useful for the sake of the simile supposed to exist.

Cuts of humorous nature are usually very sad and depressing. The sense of humor of the average advertiser seems to be badly deformed. Most of the funny cuts used in advertising are not at all funny and are calculated to be a source of grief to all sensible people. A really humorous cut is a good thing now and then, and there can be no objection to it, but very few people seem to exercise the right kind of judgment.

PROMPTNESS—AN ESSENTIAL.

Promptness is a component part of so many things that it is perhaps wiser to particularize. For instance, promptness distinguishes the children at school. Promptness is essential in the management of a household; if the mistress is indolent and careless the servants are over keen to take advantage of every opportunity; the children grow lax and indifferent, and even the husband becomes demoralized. And promptness in meeting business obligations is the great essential in commercial life.

WM. G. FRAZER ON WESTERN TRIP.

Manager of Post-Card Department of American News Co. Visits Various Agencies—The New 1909 Post-Card Catalog.

Wm. G. Frazer, manager of the post card department of the American News Co., New York, has been upon a trip as far west as Denver, Col., visiting the various branches of the company en route.

The American News Co. have just issued their catalog No. 6 for the season of 1909, and it is an imposing volume of over sixty pages, embracing practically every style of card on the market, and giving full details with prices. Attention is also called to the company's facilities for producing post cards from photos and local views furnished by the customer. Dealers everywhere handling post cards should not neglect to write immediately for the new catalog and get a line on what's what in up-to-date cards.

LATEST CUSTOMS RULINGS.

Cinematograph Films Are Held to be Dutiable as "Photographs."

The government received a serious setback last week in its attempt to assess a high rate of duty on cinematograph films used in the moving pictures when the Board of United States General Appraisers decided that the films have the right to enter this country as "photographs" with duty at the rate of 25 per cent. ad valorem.

The merchandise in question was imported by J. A. Borst and Sussfeld, Lorsch & Co., who objected to the classification imposed by the Collector as articles of which collodion is the component of chief value. Under the assessment made by the Collector the importers were called upon to pay duties at the rate of 65 cents per pound and 25 per cent. ad valorem. According to the importers this classification was out of all proportion to the value of the merchandise.

General Appraiser Fischer says in his decision for the board that the importers made two claims. One alleged that the goods should be admitted as "photographic dry plates or films" at 25 per cent., or as "photographs," the rates of duty in either case being the same. In sustaining the contention of the importers, the General Appraiser says in part:

"The mere circumstance that such positive is pictured on a strip of celluloid and not on a strip of paper is immaterial. In either event the reproduction is light-written, and, therefore, a photographic picture or photograph. To say that the continuous method by which this negative was secured was unknown when the act was passed, and, therefore, a photograph of it was not covered by the act, is to beg the question."

TWO NEW INVENTIONS OF INTEREST.

The Amphibo-cycle and the Maritime Skate—One Paddles Over Land or Water and the Other Invites Travel on Boat Shoes With Oars.

Two young men of Lyons, France, have just invented apparatus for traveling upon the water. One of these is called an amphibo-cycle, because it enables a man to cycle both on land and water. The inventor, M. Girard, has caused some sensation in his native city, where he is seen daily cycling on the River Saone at an average speed of nearly six miles an hour. The amphibo-cycle consists of a bicycle to which are attached two cylindrical floats with conical fronts. These floats can be easily raised or lowered, according as the rider is on land or water. When necessary the amphibocycle can move backward. It is steered by means of a rudder placed close to the front wheel. The total weight is 50 kilograms; length about 7 feet, width 3½ feet.

The other apparatus is called by its inventor a "maritime skate." This consists of a pair of wooden clogs, to each of which is attached, before or behind, a pair of floats made of waterproof cloth, which can be inflated or deflated at will. These are stiffened below in such a way as to make them lie horizontally on the water when the wearer's weight is placed on them. The inventor, Robert Rendu, has been using them upon the River Saone, and has reached a speed of about three miles an hour. He uses them like skees sometimes, but prefers to aid his progress with a long paddle, consisting of a bamboo pole with a blade on either end. The whole apparatus weighs less than five pounds, and when deflated for carriage makes a bundle 3 feet 7 inches long by 4½ inches thick, and can be carried in the hand like a gun.

THE GOSPEL OF CHEERFULNESS.

A Mighty Good Gospel for the Business Man to Study.

Hit up the old prosperity trail. Hope is the mother of courage. The man who dares is the one who expects to succeed. He scans the face of to-morrow and sees encouragement. He discounts her smile and coins it into capital. He uses the future as the basis of his work to-day, and yet he builds also on yesterday. The mistakes he made, then, are the signal bells of alarm telling him of what he must beware. Curb your temper; yesterday you lost a sale because of it. Take a venture in a new line; you declined one yesterday, and the fellow across the street has taken it on. Encourage your help; a good salesman left you yesterday because he thought you did not appreciate him. Push your collections; you should have got your money of Blank yesterday, and to-day he failed. The successful man looks back and sees his pathway strewn with mistakes, and yet he has prospered in spite of them—perhaps because of them—else he would not be where he is to-day. The man who has never made a mistake is the one who has never done anything.

It seldom is wise to inform a customer that he is offered an article below cost. It is apt to lower his opinion not only of the goods, but of the methods of the merchant. Of course, this does not hold in case of a clearing sale or a cut-price table, where it is openly confessed that the goods are sacrificed for the sole purpose of getting rid of them and of replacing them with others.

NATIONAL COLORTYPE CO. Department 9 CINCINNATI, OHIO

COLORED MOVING PICTURES.

Latest Feat in Photographing in Natural Tints Shown With Considerable Success in London.

Colored photography is no longer a dream of the future, it is an accomplished fact; it no longer lies in the region of theory, it has become a workable, mechanical process. So much was proved by the remarkable series of colored bioscope pictures shown to the public for the first time two weeks ago at the Palace Theatre in London, Eng., by Charles Urban and Albert Smith.

The beautiful colored transparencies exhibited last autumn by Langdon Coburn, Baron de Meyer and others of the "Linked Ring" showed what wonderful progress color photography has made during the last few years. Though much time and money and thought have been spent on experiments with bioscope pictures, the exhibition referred to was the first public presentation of actual results.

"Kinemacolor" is a distinct advance on anything that has been done before. It is a step in the right direction, and every step brings nearer the perfect realization of photographing nature in her own hues. The bioscope pictures are colored entirely by the action of the sun's rays. The films are in no way touched by hand after being taken, except to be developed like ordinary photographs.

The process is this: An ordinary reel of films (a ribbon of celluloid is the technical name) is placed in the bioscope machine and in front of the aperture are placed two screens, or filters as they are called, which alternate as soon as the machine is set in motion, so that each piece of film as it is exposed is influenced by the filter which comes between it and the scene it records. These filters divide all the colors of the spectrum into two groups, one ranging through white, yellow, orange and scarlet to the darkest reds; the other through white and yellow to green, blue, violet and indigo to black.

The film itself is monochromatic and can be used for ordinary bioscope pictures, but when being used for kinemacolor pictures it is necessary to place two screens in front of the aperture of the machine, these being complementary to the filters used in taking the photographs, so that each picture when illuminated and projected on the sheet reproduces the colors according to the original filters, first orange red, then blue green, and those alternate so rapidly that the tints of nature are more or less reproduced.

Houses are red, trees are green, rocks and roads are brown, and sky, sea and people are represented to a certain degree as we are accustomed to see them. Doubtless when the process is further improved the tints of nature will be absolutely reproduced.

To say that the invention has not yet reached perfection is to cast no slur upon the inventors. Attached to the programme of this exhibition is a little explanation by them setting forth a few facts about their process. They admit that it is capable of fuller development, and add that they are daily working at experiments toward that end.

As it is the pictures are remarkable. They fail only in so far as they do not yet reproduce all the tints of nature. Yellows and blues are negligible quantities, while reds and greens are too insistent and apt to be a trifle crude. To account for this a rather fuller explanation of the process is necessary.

Every one knows the means by which an ordinary photograph is obtained, and that the rays from a light object when passing through the lens of the camera darken or thicken the negative, and that the thickening of the negative when placed over the sensitive paper prevents the light from affecting the paper, and so the object becomes light again in the positive. It is the filters used in taking the kinemacolors that determine the color of the picture.

These filters are so prepared that the filter that is complementary to the orange-red screen allows the rays of light to affect the negative in such a way that when the positive is illuminated the light passes through the orange-red screen only in such a degree as is necessary to the color of the picture. The same is true of the blue-green filter, and the intermediate colors or grays are produced by a little light passing through both filters at the same spot.

In color printing every tint and graduation can be perfectly reproduced by means of three blocks, each block representing one of the three primary colors. In the kinemacolor pictures it may be that the use of only two screens, red and green, does not permit of such graduations.

It may also be that blue and yellow are more affected by artificial light than red and green and that therefore, although the photographs may be true as to color in daylight, in the artificial light which is used in showing them it would be necessary to overemphasize the blue and yellow to give these colors their proper value.

Another fault of the kinemacolor pictures is their tendency to show a prismatic line where one object touches another, and this is particularly noticeable where a white object is relieved against a dark background. For instance, in the series which shows a little girl playing with her rabbits first a red line, then a green line and then both a red and a green line appear between the edge of the child's white hat and pinafore and the trees and fence behind her. Some pictures show this much less than others; those that are simple and contain a few objects are best.

Cultivate the acquaintance of the working people when they have time to talk with you. Better, in this case, to loaf in the daytime, unless you are one of those rare people who "improve each shining hour."

The cheapest thing to be obtained in the way of raw material is courtesy. Yet how valuable it becomes when included among the permanent assets of a talking machine store.

A SIDE LINE

which may soon become

YOUR MAIN LINE

We can refer to quite a number of talking machine dealers who have taken on our line of

PIANOS and PLAYER PIANOS

and feel well pleased with the results achieved! Suppose you consider this proposition!

We control the output of two large factories furnishing a complete line of pianos and player pianos of unexcelled merits!

Let us hear from you.

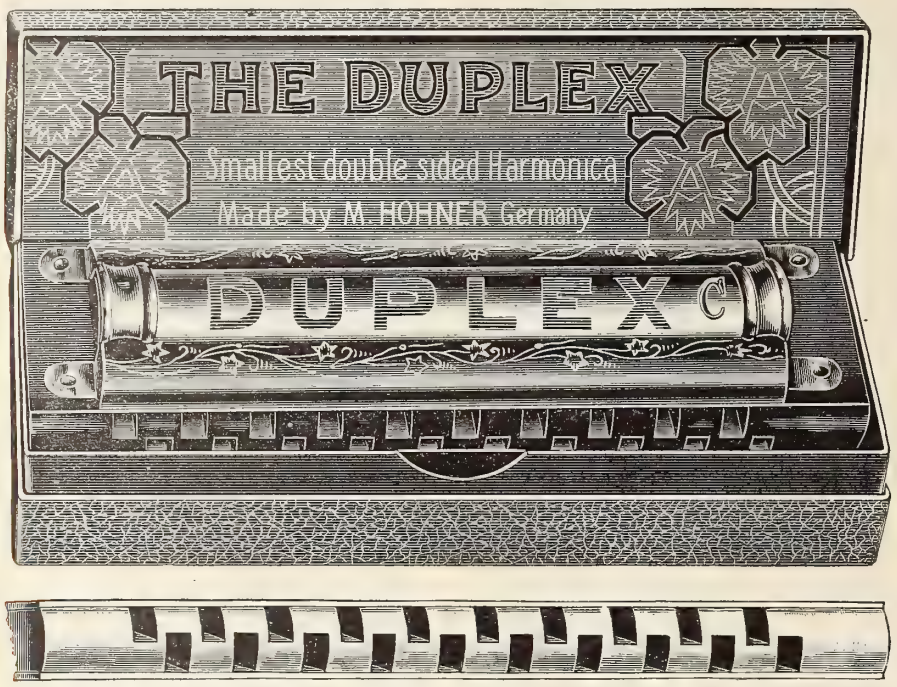
HARMONICAS AS A SIDE LINE.

Profitable and Quick Selling Specialties—Hohner's Great Line Are Known the World Over—People Call for Them—It Pays to Handle These Instruments.

Talking machine dealers looking around for a profitable side line will find the Hohner harmonicas one of the easiest to handle, as such a thing as "dead stock" is unknown when these world-famous goods are taken on. They are rapid sellers, from the fact that the designs, patterns and finishes of these instruments represent the very latest improvements, as they are made in the oldest, largest and best-equipped factory in Germany—namely, at Trossingen.



One of Mr. Hohner's very latest innovations in this line is the Duplex No. 702, herewith shown. This harmonica sustains the Hohner reputation, for it is, perhaps, the finest novelty ever produced in the harmonica trade, and will, without doubt, prove an excellent seller. The construction of this instrument differs in many respects from that of the ordinary harmonica, inasmuch as it is a double-sided harmonica only, of full concert size, constituting two perfect harmonicas in different keys. This has been made possible only by the new construction of the reed cells and is an exclusive feature of Hohner harmonica No. 702. Its neatness and compactness makes it a very desirable instrument. The Duplex has forty holes, 40 reeds, brass plates, nickel-plated tubular shaped corners. For prices, etc., address M. Hohner, 475 Broadway, New York City.

ALL KINDS OF PEOPLE.

Some of you we know have to associate with cross, crabbed, irritating, quarrelsome customers who are out of touch with the world and everybody in it, including themselves. They are, however, here for a purpose—to teach forbearance. We wouldn't know there was such a thing in business if it wasn't for such men. We will not argue that they are worth cultivating for bosom companions, but we must admit that they are worth cultivating for the sake of orders. It is so often the case that a salesman lets a few moments' unpleasantness of this kind make him lose sight of the fact that every order counts on reckoning day. It's not a bed of roses, but if we didn't have a few customers of this kind to deal with, we wouldn't know how to appreciate the ones who are decent. And that certainly would be a calamity. So, after all, the grouch does answer a purpose, and we hope you'll make up your mind to tolerate him, for your own sake as well as that of the customer who treats you like a human being.

F. & H. LEVY MFG. CO. TO MOVE.

Lease Entire Loft at 53 Crosby Street—To Produce Only High-Class Cards—Working on Holiday Styles.

The F. & H. Levy Manufacturing Co., the well-known post card manufacturers at present located at 111 East 14th street, New York, have leased an entire loft at 53 Crosby street, running clear through to Lafayette street, and will remove to the new quarters upon the expiration of their present lease May 1. This firm have been particularly successful since entering the post card field, and their product has improved in quality until to-day there is not a cheap looking printed card in their line. Most of their cards are lithographed in from 8 to 12 colors, including gold, and are heavily embossed, each style being produced in a half dozen or more designs. Besides plain, birthday, congratulation and similar cards they are already at work upon a superb line of Thanksgiving, Christmas and New Year cards which, it is said, will surpass all their previous efforts in this direction.

MOVING PICTURES CENSORED.

Only a Few Hundred Feet Out of 18,000 Condemned and That for Art's Sake.

The Motion Picture Patents Co., 80 Fifth avenue, which has called in a committee of citizens to act with the management in passing upon the propriety of films to be supplied to the 5,000 moving picture theaters which this company supplies, to the end that no evil seed shall be dropped into the young mind from these pictures, held a conclave last week for the purpose of passing judgment on new films.

Charles Sprague Smith, president of the People's Institute and chairman of the committee, was present, along with the Rev. Walter Laidlaw, of the Federation of Churches; Thomas McClintock, of the Society for the Prevention of Crime; Gustave Strabenmuller and Evangeline Whitney, of the Board of Education; Miss Theresa Townsend, of the Women's Municipal League, and several others.

The picture company, it was explained, supplies about a hundred film exchanges all over the country, these exchanges supplying 5,000 theaters. An officer of the company said that the company not only would refuse to supply anything except films beyond reproach, but would withdraw licenses from all the theaters on its list which did not keep its house in safe and sanitary condition.

The temporary board of censors labored for five hours, inspecting the 18,000 feet of pictures. The formal report will be made later, but it was said by one in authority that less than 300 feet would be objected to, including "Every Lass a Queen," because it was inartistic!

The VIASCOPE SPECIAL
NOW READY

¶ After years of study we have perfected a moving picture machine void of all vibration and absolutely flickerless. All working parts of mechanism encased in a highly polished nickel-plated steel case. Its construction is so simple that it can withstand the hardest usage without getting out of order.

A PLAIN QUESTION

Do you wish to increase your business?

Do you wish to form an alliance with a product which will win you dollars?

Presumably you do, because most business men are not engaged in conducting retail establishments purely for health reasons.

Now, we can assist you very materially to build up your trade, no matter where you are located.

We make some of the most attractive pianos ever put forth.

They are good to look at and they are pleasing to listen to.

They are good business companions.

They will help you.

Yes, we have the pianos at the right price.

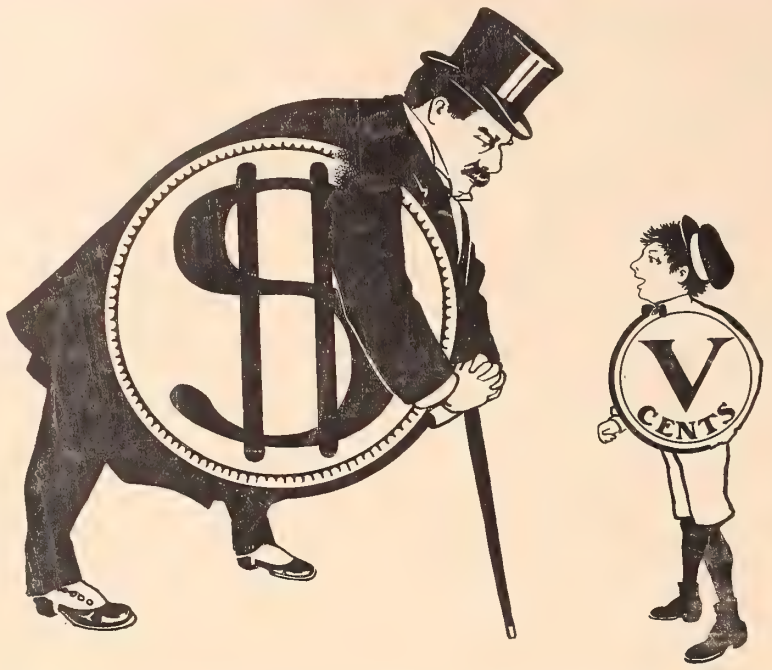
In fact the values offered are surprising. We have the business builders, and you have a retail establishment.

Now, let us get together for mutual good.

Not soon, but now.

CABLE-NELSON PIANO CO.

General Offices, Republic Building **CHICAGO, ILL.**



STOP——

No matter in what part of the world you may be located.

No matter whether your lines are complete or not, you can do an increased business if you have an article which will appeal to the critical tastes of the people.

Now it is generally admitted that the piano player is a "middle of the road" proposition to-day.

In other words, the people are interested in piano players more than almost any other product of human brains and skill.

It is a fact, too, that the Peerless Automatic Piano is admittedly far in the lead.

It is a player which is marvelously attractive, and any dealer who secures the agency for this product has a business asset that is worth many dollars to him.

Some talking machine dealers who have handled the Peerless line have been overjoyed at the results obtained.

The Peerless coin operated player has large sales possibilities.

Just think for a moment of the hotels, cafes and other places of public amusement, etc., in your locality, and see if you cannot at once see trade possibilities opening up which are interesting.

We can help you to make them interesting, and we can help you to create a new paying business, thereby increasing your business profits. Write us.

STORE LIGHTING AND ITS VALUE.

Too Many Merchants Overlook That a Brilliantly Lighted Store Carries Conviction of Honesty and Fair Dealing.

"In vino veritas," runs the old proverb—"in wine there is truth." In luci veritas expresses equal truth in nobler form—in light there is truth. There are few words in the English language whose literal and metaphorical meanings are so nearly akin. To have light on a subject is to have the truth concerning it, and to illuminate a physical object with physical rays of light is to bring out its true physical existence—its material truth.

The importance of this fact, and the value of the association of the two ideas, is something to which every merchant should give thoughtful consideration. A brilliantly lighted store carries with it the positive, though unconscious conviction of honesty and fair dealing. Where there is light there is manifestly no desire to conceal. Merchandise that is displayed in the full rays of the modern light-source is literally exposed to the light of truth.

Sincerity is expressed far better in actions than in words. The invitation to "look for yourself" which is vividly written wherever a brilliant light shines is a more potent guarantee of sincerity and honesty of purpose than all protestations of word or pen.

Just as surely as you walk with caution in dark or dimly lighted places, so you buy with caution in the dimly lighted store.

Some merchants, recognizing this general truth, have used "the daylight store" as an advertisement; with modern illuminants there is no excuse for any store not being a "daylight store."

An ample and generous use of light is a many-sided virtue; it attracts the purchaser by its air of hospitality, wins his confidence by its manifestations of sincerity, and satisfies his sense of justice and fairness by its searching revelation of the truth.

Let there be more light!

DUCKS EX MACHINA.

How Bob Green Gets Geese With a Phonograph.

A recent dispatch from St. Charles, Mo., gives us an old story in new dress. It reads thus: "Nature writers, give ear to the wonderful tale of Bob Green, of Orchard Farm, and his phonograph. Recently Bob purchased a phonograph and some blank records. The next day he caught a goose, the biggest one on the farm. Setting the machine going, Bob pulled the goose's tail. "Honk, honk, honk, saw!" screamed the bird.

"Bob released the goose and stopped the phonograph. Then he caught a duck and went through the same operation. 'Qua-a-ck, quah-a-cak, qua-wa-wak, quak!' the duck yelled.

"Next day Bob took his machine and the two records to a thicket on the Marais Roche. He turned the goose record loose and with shotgun in his hand awaited results. Soon a flock of wild geese passed over. One gander and three geese fell to his aim. Fancying a change, Bob substituted the duck record. The results were similar. This time he bagged three drakes and a duck.

"And local pessimists significantly suggest that Roosevelt has departed for Africa."

THE VICTOR IN LECTURE RECITALS.

Talking Machine Used to Illustrate Talks by E. J. Meyer Under Auspices of D. S. Johnston Co., Tacoma, Wash.—A Great Success.

(Special to The Talking Machine World.)

Tacoma, Wash., April 3, 1909.

The D. S. Johnston Co., 943-945 C street, this city, concentrated a great deal of public attention on their talking machine department recently by sending out invitations for two lecture recitals given by Edmund J. Meyer, the subjects being, "The Singing Voice" and "The Real Power of the Truly Great Singer." In his lecture on "The Singing Voice," Mr. Meyer illustrated by the use of the Victor talking machine the differences between the artistic and the common tone, explaining why two voices of equal compass and power belonging to two singers of equal musical knowledge and ability differ so greatly in artistic and commercial value—why one voice will command $2,500 per night and the other not more than $25. By way of illustration and Comparison, Mr. Meyer used the voices of Caruso, Melba, Calve, Scotti and other artists, and also had some songs sung by Gunnar Matthiason, a well known baritone, explaining how the artist is distinguished from the good singer.

In a second lecture Mr. Meyer showed that true power does not lie so much in volume, compass or physical strength; not so much in the development of the two forces, motor power and control so necessary; but that it lies in an inner, a high power, that which is called "the third power of the singing voice." This is a power which is possessed by nearly all singers to a greater or less degree, but is so seldom developed.

Mr. Meyer, who lectured on this occasion, has won an international reputation through his teaching, his lectures and his essays on tone color, tone character and the artistic tone. His works on the singing voice are recognized as standard in all countries.

The lecture recitals were given at the Temple of Music and attracted large audiences, who were most appreciative of the enterprise of the Johnston Co. It was an impressive illustration of the splendid merits of the Victor grand opera records which enabled Mr. Meyer to bring home the salient points of his lecture to great advantage.

PETMECKY CO. ARE VICTOR JOBBERS.

The Petmecky Co., of Austin, Tex., who became famous through the needle which bears their name, have qualified as distributers for the Victor Talking Machine Co. They will carry a very large and complete stock of Victor talking machines and supplies, and intend to cater in a large way for the trade of their territory.

SPANISH AMBEROL RECORDS

Just Finished at Laboratory of National Phonograph Co.—Set of Fourteen Records Made by Spanish Artists—Also Twelve Porto Rican Selections Produced as Well as Four Bandurria Records.

The National Phonograph Co., Orange, N. J., have just finished at their New York laboratory a series of "Amberol" (4-minute) records, intended primarily for their Spanish trade, but which should be well received by cosmopolitan music lovers, as they are a representative collection of typical songs of Spain and Spanish-speaking countries. They utilized the services of several Spanish artists now at New York, with the Anna Held Company in the successful musical play, "Miss Innocence," and made a set of fourteen Spanish-"Flamenco" records—six soprano solos; three by instrumental trio, (two guitars and one "bandurria," a small guitar with wire strings being the baritone of a combination, the mandolin or lute being the soprano; and four guitar solos. The soprano, "Lola la Flamenca," is a prominent Spanish dancer and singer, very popular, not only in Spain, but in other countries, especially in Paris, from where she came direct to New York. She was born at Seville, Spain, and is a specialist of "flamenco" songs, songs typical of Andalusia, a region of southern Spain, and which have the same charm and languor which distinguish the songs of southern countries. The instrumental trio has played delightful selections. This trio is composed of Amalio Cuenca and Eduardo Salmerón, guitar players, and Miguel Casares, "bandurria" player. They are immensely popular in Europe and Spanish America. Eduardo Salmerón is especially popular in England. He resides at London, and has played before King Edward, who complimented him personally for his fine execution. Amalio Cuenca is also a splendid guitar player. He has a great reputation in Europe, and also in Mexico, where he played before President Díaz and was warmly praised by him.

The company have also made twelve Porto Rican selections, sung by Gracia López, a young Porto Rican soprano, with a very fine natural voice, and by Jorge H. Santoni, a well known Porto Rican singer and musician. They are beautiful selections and are a representative collection of the songs of that delightful island possession, which, in common with all Spanish countries, has numerous typical and folk songs full of charm and sweetness.

Last, but not least, the company also made four "bandurria" solos by Joseph Ramirez, the best "bandurria" player in the world. Mr. Ramirez is a Spaniard and has a great reputation throughout the world. He is also well known in this country, as he was the originator and organizer of the Spanish troubadours, which toured this country with great success several years ago. He has also been with Maude Adams in "Twelfth Night," with Frances Starr in "The Rose of the Rancho," and of late with William Faversham in "The World and His Wife" and "The Barber of New Orleans." The selections recorded by him are delightful dance airs.

MILWAUKEE'S BUDGET OF NEWS.

March Business Proves Very Satisfactory to Dealers and It Is Confidently Expected That the Entire Year Will be Prosperous—Lively Demand for April Records—Lawrence McGreal Plans Immense Retail Talking Machine Store—Huseby Co. Stock Sold Under Hammer and Bought by A. D. Geissler—Other News of the Month.

(Special to The Talking Machine World.)

Milwaukee, Wis., April 8, 1909.

Milwaukee talking machine dealers are well satisfied with business thus far for the month of March, and indications are that the total volume of trade for the month will be far in excess of either January or February. The spring business has opened up very satisfactorily, and predictions are made by dealers that the entire year of 1909 will be a prosperous one for the Wisconsin talking machine field. The piano business in Milwaukee has been taking big spurts of late and a corresponding gain is being noticed in the talking machine line. It is a well-established fact in Milwaukee that when the piano business is good, talking machine dealers seem to meet with a better trade. The present condition of affairs seems to result from the general improvement that is taking place in all lines. Money is becoming more plentiful, confidence has returned and people are again feeling free to buy talking machines and pianos.

A lively demand for the new April records is being met with all over the city. The new double-faced Victor and Columbia records are proving to be ready sellers. Demand for the Amberol four-minute Edison records is going on unabated and dealers are finding themselves just about able to keep their stocks up at a stage to satisfy the trade. Records of the more expensive class are still increasing in popularity.

M'GREAL LEASES NEW BUILDING.

The initial steps in establishing in Milwaukee what will be the largest retail talking machine store in the entire Northwest have been taken by Lawrence McGreal, Milwaukee's retail and wholesale talking machine dealer, in leasing for the period of a quarter of a century the six-story Patton building located at the corner of Grand avenue and Fifth street. The consideration for the twenty-five year period is $350,000. Mr. McGreal's lease begins May 1, 1909, although some of the leases held on parts of the building will not expire until May 1, 1910. When the lease on the lower floor of the structure expires in May, 1910, Mr. McGreal will remodel this floor and move his entire retail business to this location. This will give the well-known dealer a space of 50 by 100 feet, located in a district which, by next year, will be the heart of the business center of Milwaukee. The upper floors of the building will be rented as offices. Within the next few months Mr. McGreal will lease his retail quarters in his present building at 172-176 Third street. The wholesale talking machine establishment on the third floor of the Third street building will not be moved.

The six-story structure purchased by Mr. McGreal was erected by the Builders and Traders' Exchange for its own use, and has been declared to be one of the most solidly constructed buildings in the city. It stands on a foundation so firm that the building could easily permit of an addition of five or six stories, if it is ever found necessary. Plenty of room will be given Mr. McGreal for the further expansion of his business. The trade of the well-known retailer and jobber will probably more than double itself within the next few years if location will act as a factor. The district surrounding the Patton building is fast becoming the all-important retail center of Milwaukee, owing to several reasons. The big department stores, office buildings and other structures are gradually being erected westward in this locality, the free growth of the city in this direction being unimpeded. The city's two newest electric lines pass close to the building, the Chicago & Milwaukee road's cars passing the door and the Milwaukee-Northern's cars passing within a block of the structure. Barrett's new department store is located directly across from the building, while the Uhlein property, declared to be the future location of another big department store, is located diagonally opposite the recently acquired property of Mr. McGreal. Mr. McGreal believes that, disregarding the immense importance of the location for his retail business, the building will make him a wealthy man from the very nature of the investment.

TELEPHONE TO TRANSMIT MUSIC.

Wisconsin owners of talking machines may now utilize the telephone to transmit music to their less fortunate neighbors as often and as much as they wish. At least the practice will not be prohibited by law. The Wisconsin Legislature recently refused to pass a measure which aimed to make it unlawful to hold the telephone receiver to listen to conversation or to transmit music, and talking machine owners who had been in the habit of transmitting over the telephone the production of the latest record to their admiring friends and neighbors are now breathing much easier. Officials of the telephone company say that this practice is followed extensively in the country districts, and that while some little inconvenience may result they are willing to aid the talking machine in its good work of education and enlightenment.

HUSEBY CO.'S AFFAIRS.

The Huseby Co., well-known Milwaukee talking machine dealers, 454 Grove street, and with branch offices in the Majestic building, has made an assignment to its trustee and its stock has been sold under the hammer. Liabilities were scheduled at $6,500 and assets at about $3,400.

The suit of the Victor Talking Machine Co. against the Huseby Co., in which the Victor Co. sued for recovery on money due, and which resulted in a victory for the Victor Co., with a decision calling for the payment of $1,008.78 damages, was a final blow to the Milwaukee concern. The main store of the Huseby Co. has been located in an extremely poor business section of the city, while the branch offices of the company in the Majestic building were out of range with the average trade. A series of unfortunate circumstances seemed to work to the downfall of the company, and George G. Huseby, president of the company and general manager, is being accorded the sympathy of Milwaukee dealers. It is said that Mr. Huseby will not reengage in the talking machine business, for the present at least.

The general stock of the company, consisting of talking machines, records, attachments, cabinets and bicycles, was sold at public auction in the city on March 22 and was bought in its entirety by A. D. Geissler, manager of the Talking Machine Co., of Chicago.

Lawrence McGreal was in attendance at the recent meeting of the executive committee of the National Association of Talking Machine Jobbers held at Columbus, O.

TUBULAR CHIMES FOR M'GREAL.

The only set of tubular chimes in Wisconsin has been erected in front of the talking machine establishment of Lawrence McGreal, 172-176 Third street, and are attracting the attention of all Milwaukee. The chimes are of the Westminster variety, and so loud and clear are their tones that they are heard at least a block away even above the usual noises of street traffic. The chimes strike the quarter, half, three-quarters and hour as follows: At quarter past the hour, four strokes, Westminster; at half past the hour, eight strokes, cathedral; at three-quarters past the hour, twelve strokes, reveille; at the full hour, sixteen strokes, Westminster, followed by the striking of the full hour. The chimes were manufactured in Minneapolis, where they were secured by Mr. McGreal.

CHAFING UNDER ORDINANCE.

Theater owners and talking machine dealers at Fort Atkinson, Wis., are chafing under an ordinance passed by the Common Council, of that city, prohibiting "barking" on the streets by men connected with electric theaters and other places of amusement. Talking machine dealers of the city are wondering if the ordinance will prohibit theater owners from using a machine for announcement and for outside attraction.

Lawrence McGreal and an Auxetophone recently filled an important rôle at the "Irish Bohemian" night at the Milwaukee Elks' Club on St. Patrick's night. The Auxetophone gave selections interesting to the former natives of the Emerald Isle.

A RIVAL TO "HIS MASTER'S VOICE."

Jessie, the bull terrier mascot of the Milwaukee branch of the Columbia Talking Machine Co., is the mother of six young terrior pups, all "Columbia dogs." Manager A. D. Herriman announces that he will give one pup to each of the Columbia establishments at New York, Chicago, Boston, Philadelphia, St. Louis and Kansas City. Jessie, the Milwaukee mascot, is an exact likeness of the famous Victor dog, and it is a standing boast among the Milwaukee Columbia men that if she ever met her Victor likeness there would be a battle royal.

SOME EFFECTIVE CONCERTS.

J. H. Becker, manager of the talking machine department of the Hoeffler Manufacturing Co.,

OUR

VICTOR RECORDS

Guaranteed Perfect

We have arranged for two entirely distinct and separate stocks of **VICTOR RECORDS** ONE RETAIL, ONE WHOLESALE. By this system we are enabled to guarantee our Wholesale Trade that they will receive from us **VICTOR RECORDS** in absolutely the same condition they are supplied us by the factory.

NOT RECORDS THAT HAVE BEEN USED FOR DEMONSTRATING MACHINES; NOT RECORDS THAT HAVE BEEN PLAYED FOR RETAIL PROSPECTS

But—

Absolutely New Unplayed Records

We don't need to enlarge upon the advantages of this system. You will appreciate it. We originated the system of supplying the high-grade

RED SEAL RECORDS IN SEALED ENVELOPES

This is appreciated by dealers in Victor Records, and we are sure the new method of filling wholesale orders from a stock which is in no way connected with our retail stock will be even more appreciated by them.

This magazine and newspaper advertising reaches millions of people and benefits dealers everywhere. It's to your advantage to have the complete list on the simultaneous opening day, April 28, so that you can take care of every customer.

You know every *Victor Record* is a perfect record; has the unequalled *Victor* tone quality. And every *Victor Record* you sell means a pleased customer, and helps you build a steady, profitable record business.

So make an effort to get all this desirable trade that's in your neighborhood.

Victor Talking Machine Company, Camden, N. J., U. S. A.

Berliner Gramophone Co., Montreal, Canadian Distributors

To get best results, use only Victor Needles on Victor Records

has been offering some successful concerts in Milwaukee of late. A recent Auxetophone concert at the building of the Milwaukee Electric Railway and Light Co. was listened to by more than 2,000 employes and officials and was one of the most successful events of the kind ever presented in Milwaukee. Mr. Becker believes that the talking machine can fill an important place in the churches, and on several occasions has offered the use of his machines to Milwaukee houses of worship. Mr. Becker and a Victrola recently officiated at a sacred concert at the Wesley Methodist Episcopal Church, Grand avenue and 25th street, and members of the audience say that the Victrola carried off the honors of the evening.

Roy J. Keith, of the Talking Machine Co., of Chicago, recently called upon the Milwaukee trade. Manager A. D. Geissler, of the same company, was also in the city in connection with his purchase of the stock of the bankrupt Huseby Co.

ATTRACTIVE DISPLAY WINDOW.

The talking machine displays in the windows of the Hoeffler Manufacturing Co. usually attract any amount of attention, and the exhibits of the last few days have been no exception. During the week that "The Red Mill' was presented at one of the Milwaukee theaters Manager Becker conducted a wonderful sale of "Red Mill" records as a result of a catchy window exhibit. A real mill occupied the center of the window during the week, and over the mill itself was a large red card advertising the talking machine records. In addition to the big sale of records, Manager Becker reports the sale of a Victor machine, as a result of the unique advertising scheme. "Faust" records have been in demand of late, owing to the presentation of "Faust" in the city and a big poster display of the "Faust" records in the windows of the Hoeffler Co.

Mrs. A. D. Herriman, wife of Manager A. D. Herriman, of the Columbia branch, is fast recovering from a dangerous attack of diphtheria.

Mr. Becker, of the Rudolph Wurlitzer Co., of Chicago, called upon the Hoeffler Manufacturing Co. recently.

E. R. Austin, a well-known talking machine man from the East, has been made manager of the Edison business phonograph department at the Hoeffler Manufacturing Co.

W. C. Fuhri, western district manager of the Columbia Co., was up from Chicago recently to call on the Milwaukee branch.

The Johnson Lumber Co. and the Columbia Construction Co. have added Edison business phonographs to their office equipment.

Milwaukee talking machine dealers are interested in the revival of the crusade against street signs, as a result of the action of the assistant district attorney, in urging that the 3-foot ordinance be repealed. This measure has allowed dealers a leeway of 3 feet in putting up their signs, and was counted upon as a permanent protection by merchants in general. Last year there was a general crusade against electric signs and dealers were forced to tear down their big and expensive signs and conform them to the 3-foot leeway. This second move will mean another tearing down in many cases and will entail considerable expense. Lawrence McGreal, the Hoeffler Co. and one or two others have had their illuminated signs close to the buildings of late, but many dealers are not so fortunate.

WHY RECORDS WERE SUPPRESSED.

L. R. Tairsee, Writing from Bombay, States That Records Were Not Needed to Spread Sedition and None Was Seized—The Facts of the Case in Brief.

Bombay, India, March 5, 1909.

Editor The Talking Machine World, New York.

Sir—On my return this day from an extended business tour in India, Burma and Ceylon, I found my friend The Talking Machine World of January 15 awaiting me here, and have read with interest and not a little surprise the paragraphs relative to the alleged seditious Indian records. You rightly say that the yellow journals have seized the opportunity with avidity, and without taking any trouble to verify the news has made copy and capital out of it. My apology for taking up your valuable space is to put the facts before your readers more than to contradict the newscoiners and scare-mongers.

To understand the situation it is necessary to go back to the ill-starred (and so the Indian government have found out and admitted) partition of Bengal, carried out against the unanimous opinion of the united Bengal. The people of India having no voice, or next to none, in the administration, and having found by experience that petitions do not carry them further and that their grievances remain unredressed, the people of Bengal organized the boycott of English goods as a protest against the partition of Bengal. The National Congress that met in Calcutta, by a unanimous resolution declared the boycott organized by Bengal by way of protest as legitimate under the circumstances, and thus India set its seal of approval on the same. The boycott was the negative side, the positive side being the fostering of indigenous industries, a movement known on our side as "Swadeshism"—Swadeshi meaning "of one's own country" as contrasted with foreign. Swadeshism was hence an act of self-denying ordinance, and giving preference to indigenous goods even at a sacrifice. This movement led to the creation of Swadeshi sentiment and feeling, and ushered in the composing and singing of Swadeshi songs, which, apart from national sentiment, became very popular. One of such songs is "Bandematram" ("Hail, Motherland"), and was on the catalog of the Gramophone & Typewriter, Ltd., Calcutta (now the Gramophone Co., Ltd.), for a long time, but the same has been now dropped. It is but natural that the various talking machine companies here recorded these popular songs, and in this every one acted as the other, and when some of these appeared on the market, owing to the prevalent political situation in Bengal, the government proscribed the sale of Swadeshi songs, and in this no company could be said, or can legitimately claim to be, more fortunate than the other, as all were equal sinners (if not all), and equal sufferers. It is not true that any Indian records were seized by the government; the fact is that the talking machine companies were warned against the sale of certain songs, which since have been withdrawn from the market. The alleged seditious records have no sedition about them, and this can be judged from the fact that the "Bandematram," recorded first by the Gramophone Co., Ltd., was sold in quantities for years without any objection. The same is a national song, and the "Bengalee" (a leading Calcutta paper), writing about its proscription, said as follows:

"It (meaning the circular of the Commissioner of Police) prohibits the singing on the stage of even the famous song of Bankim, beginning 'Bandematram.' The notice will be strongly resented by the whole community, and we must enter a most emphatic protest against it. 'Bande matram' has practically become the national song of Bengal. To proscribe it is to commit an outrage upon the public opinion. Not a word in this song, which has already been translated into English, can be said to be seditious or improper. It is a patriotic song, pure and simple. To proscribe it is to proscribe patriotism itself. We appeal to the new lieutenant-governor to look into the matter himself, without depending upon police reports, which often are as misleading as inaccurate, and direct the withdrawal of the Police Commissioner's notice."

Thanking you in anticipation for insertion of the above, I remain, faithfully yours,

LAKHMIDAS ROWJEE TAIRSEE,
The Talking Machine & Indian Record Co.

It's the way a man sticks to a thing that marks him as a success or a failure. Many a fellow has won out at the eleventh hour, just because he wouldn't let go. Don't be a quitter.

Where ignorance is bliss 'tis folly to be one of those fellows who know it all.

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

Every Victor Dealer is a Music Teacher

Exactly! A teacher is a developer, and every *Victor* dealer is a strong factor in the development of the higher musical tastes of his community. He is selling the musical instrument which is creating a greater appreciation of and love for the best in music—the VICTOR.

Every *Victor* placed in a community helps to raise the musical standards of that community. And each additional *Victor* makes it possible for more people to hear the masterpieces of the world's great composers sung and played by the greatest artists and musicians of the age.

What an honor this is for you, Mr. Dealer! What an incentive it should be for greater activity in selling the *Victor!* What an opportunity to be of service to your town or city! And what possibilities for business and money-making it holds out to you.

It pays well to sell the *Victor*, Mr. Dealer. It pays in prestige, in popularity, and in profit.

Be the greatest music-teacher in your town!

NEW YORK, APRIL 15, 1909.

CONDITIONS in the talking machine trade have not changed materially since the last appearance of this publication, and a survey of the situation at present causes us to believe that while trade during the spring months will show some betterment, it will not reach an exuberant condition before early fall.

We are moving steadily upward, but not as rapidly as most of us would desire.

There is every indication of improved business just as soon as the tariff question is definitely settled, and from present indications it would seem that this will be not long deferred.

The general business of the country grows steadily despite the tariff uncertainty, and it should be understood that in times past whenever there has been a disturbance of tariff conditions, business has been in a large degree unsettled.

It is the belief, however, that when this subject is finally disposed of, that the country must then soon reach the highest level of prosperity.

The greatest of all industries is that of transportation, and the current earnings of the railways show that they are again in sound condition.

SOME of the great railroad magnates assert that there will be no reduction in wages, and the present ease of money assures to the railways a good market for securities wherewith to make extensions and improvements.

This fact in connection with their increased earnings shows that they are in a position to make this liberal expenditure for labor and supplies, and upon which, more than any other one factor except good crops, the industrial and general prosperity of the country depends.

It is well known that in the great manufacturing districts where labor has been laid off there has been a general decrease in the sale of talking machines and accessories, and it is due largely to the fact that labor has been unemployed in many sections that the sales of talking machines have been materially cut.

All lines of trade have suffered, even those which deal solely with the necessities of life have joined in the general complaint.

To those men who have exhibited lack of faith in the future of the talking machine we would say, wait until the clouds of business depression roll by and then see how the talking machine trade will brighten up when the sun of general prosperity strikes upon it.

THE talking machine business will reach a larger volume than ever, and the trade will not be divided among so many individual concerns.

Why?

Simply because there has been a thinning out of the ranks brought about by reason of poor business.

Some men have become discouraged after losing faith in the business future of the talking machine and have dropped out of the business completely.

In this particular the talking machine trade does not differ materially from other lines.

But this industry is new. It deals with a special product, and because sales have not kept up to a reasonably high standard, a lot of men have lost confidence in the trade future.

That is needless, and there is no real ground for entertaining the belief that the talking machine has seen its best days.

It has not, and next fall, in our opinion, will witness a trade revival in this industry which will be unprecedented, and we repeat there will be fewer men in the industry to divide the business plums among.

WHERE formerly a number of merchants shared in the trade in certain localities, it will now be taken care of by a much less number. Then, too, it is pretty certain that the men who remain in the industry possess the right kind of energy to go ahead and will make the most of improved trade conditions.

They possess the great business essential—confidence in what they sell.

No man can succeed in business very long unless he himself exhibits faith and confidence in that which he offers for sale.

Months ago we visited a number of talking machine establishments and it seemed to us that too often the men in charge, in displaying instruments, showed a lack of zeal and enthusiasm—a sort of a take-it-or-leave-it plan which did not impress the customers—and they did not succeed, of course, in making sales.

Some of these men have retired. They were not of the right kind. They could not have succeeded in any line of business, and so, in the end we will get down to a quality trade. And so the weeding out process goes steadily on.

The men who stick to the talking machine business will be those who have confidence in its future, and will do a quality business rather than a quantity trade. And as a matter of fact the progressive men of every business community are the ones who make the trade wheels revolve.

IT'S better far that an industry be controlled by ambitious, wide-awake, progressive men, less in number but large on determination, than to have it made up of a lot of weaklings, some of whom have no confidence in the trade—have no faith in the talking machine business or in themselves, but have just entered the business as a sort of a "flyer," thinking that they could pick up dollars easily, and that the talking machine was a sort of a little gold mine.

Stuff and nonsense.

The quicker men who entertain such views are out of the business the better it will be for the clean trade.

We want in this trade men of stability; men who will inject a certain amount of ginger into their work that will win the confidence of customers.

NOW, there are some things in connection with the talking machine business that should not be lost sight of.

Not for a moment—follow the leaders—the business builders.

Do the manufacturers themselves show lack of confidence in the future of the trade?

Is there anything in their actions which would cause such a belief?

Are they unloading stocks in a manner which is detrimental to trade interests?

Are they pushing out their lines from irresponsible sources and through channels which seriously interfere or are intended to enter into competition with the legitimate dealer?

No. On the contrary they are doing everything to safeguard the industry.

They are carrying on aggressive advertising campaigns and investing huge sums of money in lines of publicity which could be saved if they so desired.

No, the talking machine men of the industry have faith and confidence in it.

Their actions prove it.

Now, just think it over, Mr. Talking Machine Man of the weak heart and shaky nerves, and just take a leaf from the leaders in the trade.

Follow out their line of policy and see if you can draw from it the belief that they have lost heart in the business.

No; certainly not.

But———

The stream cannot rise higher than the fountain, and the talking machine business cannot rise higher than the general trade conditions of the country.

It is ridiculous to suppose for one moment that it could, but it is surely rising with the general tide of prosperity.

Mark that.

Take heart. Draw inspiration from good sources.

Revitalize your business with the energy which will insure you success.

Get your business house in order.

There are always matters to consider in the conduct of your affairs which may have escaped you.

Keep close to the subject.

Watch the changes which mark the years.

Remove that clot from your business brain, that the talking machine has seen its best days.

It has not.

Look at the demand to-day for the higher-priced machines, which is so large that the manufacturers have been unable to meet it with the promptness most desired by dealers and jobbers.

The higher-priced machines were never in such demand as they are to-day.

Just hustle.

TAKING ADVANTAGE OF SUMMER OPPORTUNITIES.

Dealers Sould be Prepared to Place Machines in Various Outdoor Pleasure Resorts—Value of the Talker Should be Impressed Upon Town Officials—Dealer Should Put Energy Behind His Efforts and There Will be No Dull Seasons in the Talking Machine Trade.

The arrival of pleasanter weather and the near approach of summer brings to mind that dealers should now prepare for the inauguration of an active campaign for the use of the talking machine in public parks, amusement, camping-out resorts and country homes.

An old-fashioned idea prevails that the interest in the talking machine ends with the winter, and therefore dealers should "sit down" and wait until next fall for business activity. As a matter of fact the summer months should prove as successful in the matter of sales with the live dealer as those of the fall and winter. But results will not come automatically. A definite campaign must be outlined and prosecuted in the thousands of small towns and cities with small parks where concerts are not given during the summer months.

What a rare opportunity for the dealer to call upon the village trustees, the town council, or authorities of the city, and emphasize the fact that the talking machine, as now developed, is one of the great creations of the age; that to-day the greatest bands and orchestras and the greatest singers of world-wide fame can be heard through this medium; that it is not only entertaining but distinctly educational.

How much better to hear the expensive and perfected talking machine than the incompetent village band? And if there is no village band, how pleasing these concerts would be of a summer evening in the public square or park.

Of course, this cannot be brought about unless the dealers start the ball rolling. It is necessary to be aggressive and persistent in presenting the claims of the talking machine to the consideration of those in authority. It will be found in the end not only profitable for the dealer, but for the community, for the music of the great bands, orchestras or the singers of grand opera or popular fame cannot be heard without being helpful, carrying pleasure, consolation and enlightenment in their train.

Last summer a number of talking machine concerts were given in this country in public parks, but a great many more in England. They proved to be so successful that arrangements have been consummated for their repetition the coming summer.

Now the same activity that is necessary to bring the talking machine to the attention of the town authorities can be displayed in the matter of getting the talking machine into the home and amusement resorts. There is nothing so interesting or so entertaining for the summer home as the talking machine.

Special literature bearing upon this phase of the talker should be sent out by the dealer or jobber in his territory. People who leave town for their summer homes at the seashore or mountain should be carefully tabbed and circularized.

The fact is the business will come to him who seeks it; but, like everything else, it means hard work. It is the kind of work, however, that brings compensation, and that is what the business man is in business for.

Dealers must get over the old-fangled idea that the talking machine is an instrument of seasons. That might have been true ten years ago, but it is not true to-day. The talking machine is a necessity for all days of the year. And this must be continually pounded into the people. But the dealers must wake up to the conditions. They can't expect the manufacturers to do everything. They have a duty which they should not shirk.

As a matter of fact all the leading manufacturers of talking machines have been, and are, conducting most stupendous campaigns of publicity, all of which tend to the dealers' advantage.

In the meantime a great many dealers are doing absolutely nothing to help the manufacturers or themselves.

They expect trade to come their way without seeking it. A great deal of it does, but much more would be theirs if they realized the opportunities around them.

This continual complaining about poor trade, while sometimes justified, is in the main a chronic condition, brought about through the dealers' own inability to analyze and meet the situation in their localities.

They should carry advertising cards in their local papers. They should so arrange their windows and stores as to make them attractive. They should better display the hangers and literature sent out by the various talking machine companies, and they should bring the talking machine to the attention of the editors of the local papers so that they may realize its improvement and progress, and thus keep it in the public mind.

This "sermon" on "summer opportunities" is delivered early in the spring so as to impress talking machine dealers with the importance of planning ahead and laying out their campaign in good season, to the end that the coming summer will be a highly profitable one for them.

CAJACOB OPTIMISTIC

Over the Future of the Talking Machine—Compares Past and Present.

C. A. CaJacob, of Wapakoneta, president of the Ohio State Association of Talking Machine Dealers, is most optimistic when speaking of the future of the talking machine business. In chatting recently he said: "You used to hear persons say that the day of the talking machine is numbered, and you could also hear them say that you could not hear a talking machine anywhere except in a barroom or a construction camp or in the penny theaters. Now it may be found in the most exclusive clubs, in homes and in hotels, where they are used, in lieu of bands or orchestras to regale the patrons during the meal hours.

"The talking machine is here to stay and is destined to become more popular in the ratio of the improvements that are being made on the machine from time to time. I venture the prophecy that the talking machines, both cylinder and disc, will be improved to the extent that they will repeat with the same volume of tone the notes of the best singers and orchestras and bands. Ten or twenty years ago," added Mr. CaJacob, "we were almost afraid to ask $25 for a machine, but now—well we do not hesitate to ask from $300 to $500 for regular styles of the better grade talking machines."

In speaking of the spelling of his name, Mr. CaJacob said that the name is Swiss-Roman in origin, and that his people are probably descendants of the people with whom the Cæsars used to wage war to the north of Rome and on the Alpine border.

CHINESE BUYING TALKING MACHINES.

The Chinese of the Pacific Coast have a craze for talking machines. When they were first introduced the Chinese thought they were possessed by devils, but some ingenious salesman devised a scheme of procuring Chinese records. When these were heard, every Chinaman with the price wanted a "talker," and now the streets of the Oriental quarter are musical at all hours of the day and night.

Sibley G. Pease has taken charge of the talking machine department of the Holmes Music Co., 113 South Spring street, Los Angeles, Cal., the old stand of the Fitzgerald Music Shop, of which Mr. Holmes has been part owner for the past five years. This firm, which succeeds Pease & Foot, are handling a complete line of Victor talking machines and records.

Stinson Bros. department store, Evansville, Ind., are making a special run on graphophones.

BLACKMAN SAVES MONEY FOR DEALERS

"LIVE" DEALERS ARE FOLLOWING HIS "SAVING" PLAN

YOU ARE WASTING TIME AND MONEY.

That's what you are doing if you handle EDISON and VICTOR but buy each line from a different Jobber.

STOP THE LEAK AND INCREASE YOUR PROFIT.

Don't keep sending TWO orders, waiting for TWO shipments, and then pay TWO expressages.

ORDER BOTH EDISON AND VICTOR FROM "BLACKMAN."

Simply make out ONE order for anything you want for EDISON or VICTOR, send it to BLACKMAN and you will get the goods AT ONCE in ONE shipment instead of TWO. See the time and money it saves?

LET "BLACKMAN" DO THE WORRYING.

We say this because he won't do any. These "ONE LINE" Jobbers may tell you that "BLACKMAN'S" stock of EDISON or VICTOR is not as complete as theirs. Put the test in an order and we will ship you "BLACKMAN'S" answer.

YOU CAN'T AFFORD TO OVERLOOK THIS.

Watch your most successful competitors and see if they don't get the "BLACKMAN SERVICE."

We don't handle anything but EDISON and VICTOR and you can bet that we are there with the goods. You don't have to take our word for this. Send us an order and find out for yourself.

YOURS FOR THE GOODS

FOLK SONGS PRESERVED

Through the Aid of the Talking Machine—What Two Recent Volumes on the Peasant Songs of Russia and the American Indian Revealed in This Connection—An Interesting Summary of These Two Books.

The value of the talking machine as a means of preserving the folk songs of the people of all nations is being emphasized to a very marked degree these days. Two volumes relating to folk songs recently published tell of the part played by the talking machine in the preservation of the old-time songs of Russia and of the American Indian. These volumes are entitled "The Peasant Songs of Great Russia," by Eugenie Lineff, issued by David Nutt, of London, and "Hopi Songs," by Benjamin Ives Gilman, published by the Houghton, Mifflin Co., Boston, Mass.

In the opinion of Eugenie Lineff, the chief strength of the modern Russian music which at present plays so important a part in the concert halls of two continents, lies in this: that it reflects the life of the people collectively, the masses having helped in creating this music. As the critic of the Evening Post very aptly says: The Russian composers, from Glinka, the creator of national opera, through Dargomijsky, Borodin, Seroff, and others, to Rimsky-Korsakoff and Tchaikovsky, wrote works which are full of the echoes of popular melodies. These melodies have been frequently collected and printed in a more or less—generally less—satisfactory manner, and they are frequently sung in Russian music halls and sometimes in ours. Some years ago, when Eugenie Lineff gave some "lecture-concerts" in this country, she was frequently asked whether her company sang "genuine folk-songs." She could only reply that they sang according to the best existing collections; but on her return to Russia she determined to make a thorough study of the originals, with the aid of a phonograph. She soon discovered that the collections she had followed were frequently misleading, the songs having been noted down by ear, a process particularly untrustworthy in the case of the Russian songs that are sung in two, three, or four parts. She compares the recording of a song by phonograph to the kinematographic process, and asserts that the twenty-three songs printed in her volume are the first record of Russian peasant tunes made in this manner. In transcribing them from phonograph to piano some of the exactness of the phonograph had to be sacrificed because the piano has only the "tempered" intervals; but in other respects, apart from tone color, these part songs are as sung by the people—at times, for the singers incessantly vary them in accent and other details in accordance with the district, village, street, and the inspiration of the moment; for these performances are largely improvisations. There are also chapters on the singers of these songs and on the tonality and musical scales. The second half of the volume, containing the musical illustrations, is printed in the Russian language; but, fortunately, the Russians use the same musical notation that we do.

If the tonality, the modes, and scales of the older Russian folksongs present puzzles to our ears, far more does the American Indian music of which Mr. Gilman presents specimens in his volume on Hopi songs, which completes an inquiry into Pueblo music begun in 1891 with a study of Zuñi melodies. The records upon which these investigations are based were obtained in Arizona by Dr. J. Walter Fewkes, now of the Bureau of Ethnology, Washington, at the time in charge of the Hemenway Southwestern Expedition. He first applied the phonograph to the preservation and study of aboriginal folklore. To the lay mind nothing seems simpler than the taking of such phonograph records, but these pages show that the securing of exactness requires the most exacting investigation and adjustment. These records show not only how Indians make music, they show music itself in the making. In his treatise on Zuñi melodies the author called them examples of a music without scale. "In this archaic stage of the art," he says, "scales are not formed, but forming." For this novel view he now has sought confirmation in the performances of Hopi singers, which, in his opinion, strengthen the belief that aboriginal American music "is a type apart, whose essential remoteness from the music of Europe and Asia may be symbolized, as it doubtless was conditioned, by the physical isolation of the Americas. . . . The hearer seems witness to a wholly strange method of musical thought and delivery."

Not only is this Indian music apparently without scale, but it is otherwise characterized by the freedom which the white race personifies in the Indian. No metes and bounds to invention manifest themselves; such exactness as the music possesses does not lie in the individual intervals, and the melodies may apparently be altered by every performer: "The song is no fixed scheme in the singer's mind, but a composite memory of many free renditions, as a folk-tale in the mind of the narrator, minute exactness alternating with wide latitude in the recital." Of particular interest is what Mr. Gilman has to say about "mutation" in this music; that is, a partial change in the pitch of repeated phrases. While having points of resemblance to both discord and modulation, mutation is a different means of musical effect from those upon which our music is largely based. There are several kinds of mutation used by the Zuni tribes, and with their aid the Indian singer can produce changes of mood comparable to those we attain by passing from the gay major to the sad minor mode. One of the tunes recorded in this volume makes up "a dialogue of moods like Tennyson's 'Two Voices.'" Here is a new thought for our white composers of red music, says Mr. Finck. But they had better make haste, or Debussy will hear of this and get ahead of them by writing an aboriginal American opera. It is just in his line.

There is more individual benefit in applying the Golden Rule than in having it applied to you. A point worth considering.

BROWN SUCCEEDS SMOOT

As Chairman of Patents Committee—The Tariff Schedule Dealing With Talking Machines—A Term Obsolete in This Country.

(Special to The Talking Machine World.)

Washington, D. C., April 9, 1909.

The Senate has announced the new chairman of the Patents Committee, namely, Senator Brown, Nebraska, succeeding Senator Smoot, Utah. In the event of an amendment being proposed to the new copyright act, as is talked of regarding the word "manufacture" in paragraph E of Section 1, instead of "sold," as pertaining to records, etc., the new chairman will probably be "from Missouri," and want to be shown the why and wherefore.

In the tariff bill passed by the House this week, is the following paragraph, in the Sundries (N) schedule dealing with talking machines, etc.: "460. Phonographs, gramophones, graphophones, and similar articles, or parts thereof, 45 per centum ad valorem." The learned chairman of the Ways and Means Committee might have ascertained from anyone connected with the business that the word "gramophone" in this country, at least, is obsolete, and is not employed excepting in legal papers and court decisions. By substituting the term "talking machines" instead, the tariff measure would have been brought up to date and its meaning more clearly understood by the public and the trade.

COLUMBIA LINE IN SACRAMENTO.

Kirk, Geary & Co., of That City, Appointed Jobbers Controlling Sixteen Tributary Counties—Placed Large Initial Order.

(Special to The Talking Machine World.)

Sacramento, Cal., April 2, 1909.

Kirk, Geary & Co., Inc., wholesale druggists of this city, have been appointed Columbia jobbers controlling the sixteen counties tributary to Sacramento and the entire State of Nevada, excepting the counties of Elko, White Pine, Eureka and Lincoln, all of which was formerly operated by the San Francisco store.

Kirk, Geary & Co. are one of the substantial wholesale concerns of the State of California, having a capital stock of $500,000, and do a large business along the entire coast. They have a large force of traveling salesmen covering the territory who will represent them most thoroughly and they are starting off with a prospect of doing a very large business in Columbia products.

The Academy of Sciences at Vienna has decided upon the creation of phonographic archives, which will be divided into three parts, and which will probably be the most remarkable library on record. The first section will be devoted to examples of European languages and dialects of the different peoples spoken at the beginning of the twentieth century. The second will contain examples of music and song of the same period, while the third section will be reserved for the records of contemporary orators.

TRADE ON THE PACIFIC COAST.

Noticeable Improvement in General Business During Month—Change in Business District of City Disrupts Trade Temporarily—Wholesalers Satisfied—Clark, Wise & Co. Moving to New Building—Benj. Curtaz & Son Fitting Up Department—Columbia Co. Placing Jobbing Agencies—Some of Those Appointed—New Local Manager for Columbia Co. Interests—Bacigalupi & Son Taking on Lines of Pianos and Piano Players—Southern California Music Co. Become Columbia Jobbers.

(Special to The Talking Machine World.)

San Francisco, Cal., March 31, 1909.

The general talking machine trade in the Pacific Coast territory as a whole has picked up considerably this month, and the condition is now moderately satisfactory, though there is still room for a good deal of improvement. Locally things remain quiet. The great change in the business "center of gravity" of the city, coming rather suddenly this spring, is a disturbing factor in the trade, and for that, or some other reason, the people here are holding on to their money tighter than usual. There is more business than last month, however, and none of the dealers are complaining. While business is likely to remain more or less unsettled through the summer, a big fall business may be counted on with some certainty.

The wholesalers are well satisfied. Several orders of considerable importance have been taken during the last few weeks, new connections have been formed outside of the city, and deliveries of goods are larger than they have been for several months, while new orders continue to come in from all parts of the state. The traveling men are able to cover the territory without difficulty, and with fair weather most of the time for the last six weeks dealers in the smaller towns report a lively demand for all classes of goods.

Clark Wise & Co. are now moving into their new building on Grant avenue, near Sutter street, and will be ready for business there before the end of the week. The new talking machine department, occupying the entire second floor, has been fitted up in accordance with the latest ideas, and will be a decidedly high-class establishment. The stock will be materially increased, and particular attention will be paid to high-class goods.

Benj. Curtaz & Son are now beginning to fit up their talking machine department, but are not likely to start business in the new location before the end of April.

The Columbia Phonograph Co., which has heretofore covered their California territory directly through their own extensive selling organization, are now giving over certain portions of the field to jobbing distributors, who will have entire charge of the business in the sections they cover. The first important development in this line was the announcement about two weeks ago of the appointment of Kirk, Geary & Co., of Sacramento, as distributors in northern California. Now comes the announcement of a similar deal in the southern part of the state. Coast Manager W. S. Gray spent last week in Los Angeles, and closed a transaction with the Southern California Music Co., whereby that house is to have the distribution of Columbia goods in that field. The company have placed an order for a full carload of Columbia records and a complete stock of machines, etc. Mr. Gray states that things are booming all through southern California.

Kirk, Geary & Co., of Sacramento, will be able to fill all orders for Columbia goods beginning April 1. E. W. Cyrus, who is to have charge of the department, went to Sacramento the first of the week. These deals are considered highly advantageous to both Kirk, Geary & Co. and the Southern California Music Co., as the Columbia organization has developed the territory pretty thoroughly during the last few years, and their goods are regularly handled by a large number of retailers who will take their supplies from the new distributors.

Mr. Scott, who has been associated for several years with the San Francisco office of the Columbia Phonograph Co., has been appointed San Francisco manager, succeeding Mr. Beck, who has severed his connection with the company. The downtown branch in Byron Mauzy's store has been discontinued, as Mr. Mauzy has leased his entire ground floor to another firm. The lease on the Van Ness avenue branch, which expired in February, was renewed for six months, at about 30 per cent. of the former rental. It is expected that the company will find a new location downtown before the expiration of the present lease. Mr. Beck expects to go into business for himself at some point outside of San Francisco, but will first take a couple of months' vacation, as he has been at work continuously for eight years.

C. M. Jones, manager of the Pacific Phonograph Co., reports a far better wholesale trade in March than in January and February. He is making some large deliveries of both machines and records. Billy Morton, formerly with Peter Bacigalupi & Sons, is now on the road for the Pacific Phonograph Co., and at present is visiting the northern California trade. Mr. Jones looks for a fine country business after the middle of April, and has made full preparation for it, getting in an absolutely complete stock of Edison goods. He states that Kohler & Chase are doing an unusually large business at the Oakland branch.

Peter Bacigalupi & Sons have taken up a couple of lines of pianos and piano players, but are paying as much attention as ever to talking machines, which will continue to be their main line. While the street in front of the store has been torn up most of the month, the business has not been interefered with to any great extent. They are pushing the Zonophone with great success, and are rapidly selling off their old stock of 10-inch Zonophone records. Mr. Bacigalupi reports a steady improvement in his wholesale department.

WHY ADVERTISED GOODS PAY.

An Interesting Discussion Between Advertising and Non-advertising Merchants—Advertised Goods do Not Cost More—The Reason Why.

The question of advertising and non-advertising was the subject of a discussion recently between two manufacturers of some importance. The non-advertising house made this statement in substance:

"Our goods are better for the dealer to buy because we charge him less than the manufacturer of advertised goods; and they are better for the customer to buy of you because we put into our goods the money others spend for advertising."

The reply made by the advertising house covered the situation so thoroughly that we take pleasure in printing it:

"In order that an advertising campaign shall be profitable, the advertising must be directly responsible for an increase in volume of sales, sufficiently large that the profits on the increased business will pay for the advertising and leave a fair margin for net profit. It, therefore, is not necessary to raise the price or reduce the quality to pay for the advertising. The advertising pays for itself. Furthermore, it would be poor business and foolish for an advertiser to raise prices or reduce quality, and in this way offset the value of his advertising. He is not advertising for the fun of it. He advertises to get business, and it is this increase in business that pays for the advertising, and not you, Mr. Dealer, or your customer.

"Advertised goods cost you no more on account of the advertising. If the price is higher than that of some non-advertised goods, the difference is in the quality. The advertised line costs you less to sell, because of the demand that has been created for it through general publicity advertising. The manufacturer who advertises to the public helps you sell his goods. He is not satisfied to simply ship you the goods and take your money. He helps you to sell them, so that you can buy more. If you handle advertised goods, your first cost is no more for the same quality, your selling expense is less and your net profit larger.

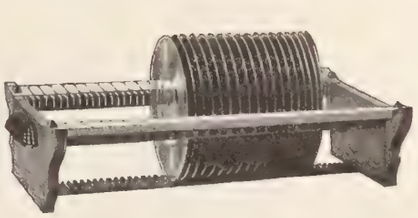
"Advertised goods are better for your customer to buy of you because the manufacturer stakes his reputation and chances for future sales on the superiority of his goods over non-advertised makes retailing at the same price. For advertising to be successful it must be backed up with goods of quality."

EDISON GETS ADELSKIOLD PRIZE.

A despatch from Stockholm, dated April 1, says: "The Royal Academy has presented Thomas A. Edison with the Adelskiold Gold Medal for his inventions in connection with the phonograph and the incandescent light. This medal is conferred only once in ten years. It was handed yesterday to United States Minister Graves for transmission to Mr. Edison."

HERE'S A BIG SELLER FOR YOU

AND WE'LL HELP YOU SELL IT



There are hundreds of talking machine owners in your town that can't pay $10 to $25 for a cabinet, but they will be glad to buy a

CRESCENT
Disc Record Cabinet

for $3.25 or $3.75 (according to finish), and thank you for the opportunity.

The CRESCENT holds fifty records, holds them securely and SEPARATELY—absolutely no rubbing or scratching as the record comes in contact with no other record or surface.

People already owning cabinets will buy the CRESCENT for the new double face records when its advantages are explained to them.

The CRESCENT is convenient, occupies small space, is attractive in appearance. The selections can be inscribed on the white spaces in full and instantly located, thus doing away with the numbered index.

RETAIL PRICES:

Golden Oak or Mission.....$3.25
Mahogany $3.75

GET OUR SPECIAL SALES PROPOSITION TO-DAY. WE'LL BRING THE CUSTOMERS FLOCKING INTO YOUR STORE.

A. E. CROFT & CO.

40 DEARBORN STREET MANUFACTURERS **CHICAGO**

EDISON
Phonographs and Records

Enlarge Your Field for Edison Amberol Records

Your field for these new, long playing Records should be limited only by the number of Edison Phonographs in existence in your territory.

Every style of Edison Phonograph (except the Gem) can be equipped with the necessary attachments to play them.

Every instrument so equipped means a new Amberol Record buyer and an Amberol Record buyer is the most profitable Record buyer there is.

The sale of Amberol Records promises to soon equal the sale of Edison standard Records. This shows what the public thinks of them.

You should use every effort towards getting the Phonographs in your territory brought up-to-date. It is easy. Let any Phonograph owner hear an Amberol Record and you will have no trouble in selling the attachments.

Your trade should know about this. You should have the attachments and make a noise about them. There is good profit for you in putting them on and the profits they make possible will continue as long as people care for entertainment.

There is a jobber near you ready to supply everything you need in Edison goods.

TRADE NOTES FROM "THE HUB."

Coming of Spring Enlivens Business as Does Presence of Grand Opera Company—Changes in Victor Line Please Dealers—Eastern Talking Machine Co. Improve Their Quarters—Employes' Association Formed—New Columbia Store Winner—B. & H. Fibre Needles Popular—Big Talker Business at Houghton & Dutton's—Oliver Ditson Co. Report Good Victor Trade—Other Interesting Trade News.

(Special to The Talking Machine World.)
Boston, Mass., April 10, 1909.

Warm, summerish weather has driven the canoeists and out-door enthusiasts who own talking machines to the stores, and as a result the retail business has taken on quite a little spurt, with Saturdays as a sort of "Rush Day." The presence of the Hammerstein's grand opera company has also acted as an impetus on the high-priced records, which, by the way, continue to make a decided gain in proportion to the total volume of business. Jobbers in Boston report that the demand for high priced goods has grown unusually strong in the little outlying districts. The Constantino records on the Edison, the Melba and Calve on the Victor, and Zenatello on the Fonotipia seem to be the favorites at this time. Tetrazzini has made thousands of friends in Boston.

The changes made in the Victor line seem to please the dealers here, and the exchange proposition has met a good response. About the only complaint heard anywhere is as to the impossibility of getting enough double disc records to supply the demand. The new Amberol record is making itself felt in the Boston market in an ususually strong way.

Not to be outdone by the Columbia people who recently moved into a fine new store where everything is looking very spick and span, Manager Taft, of the Eastern Talking Machine Co., who had his fingers crossed all the time, has just had a very fine new floor laid in his retail wareroom, which is a big improvement and lifts the store up into practically the class of "everything new and bright." He has also fitted up a fine ladies' reception and concert room on the second floor, putting expensive rugs on the floor, and furnishing it in mahogany, so that milady hasn't a finer place in town to go to. On the street floor, too, Mr. Taft has moved the salesmen's desks across the floor, and this leaves a much better opportunity for displaying stock. One of the things that shows the spirit of progressiveness that characterizes this store is the recent formation of a store association which will hold monthly meetings and a little dinner and at which it will be permissible to talk "shop." Thus every man can tell the boss how he thinks the business should be run, and what he would do if HE were manager. A feature of this organization is the appointment of a press representative, a berth which it was felt only Freeman could fill, so hereafter he will see that the newspapers are supplied with correct news about the doings in the store. It is very probable that the Eastern Talking Machine Co. men will organize a ball nine again this summer, and arrange games with nines from the other stores.

The new store of the Columbia Phonograph Co. has proven its worth the past two weeks, for the volume of business there has been much greater than it ever was at the old store. Now that the warm weather has come and the doors can be left open, the store and sidewalk are usually pretty well crowded by listeners. Manager Erisman is out for a record in the amount of business he can pull into the store. Since coming from the West he has fallen in love with the city of Boston.

The B. & H. Fibre needles seem to be "The Thing" at the local stores, and all along the Row come reports of sales of these to customers who had always been complaining of their other needles. The verdict returned on the next visit to the store is that they are perfectly satisfactory, and give a much better tone. The difference is especially noticeable on the grand opera records where a Fibre needle seems to bring out the softness and purity of the singers' voices.

They are talking at Houghton & Dutton's of enlarging the talking machine department again, because of the amount of business being done and the necessity for more room. The Edison line here is being boomed, and there is a great call here for what are known as the "popular" records, such as Lauder, etc. The March list is proving a big seller.

At the Oliver Ditson Co. the double disc victors have the call this month, there being twice as many of these sold as of anything else. The New Victor II and III is especially adapted to the high class trade which this company caters to, and Manager Winkelman says that he cannot get enough of them from the factory to supply his customers, some of whom have waited several weeks for their machines. Mr. Winkelmann is filling orders for quite a number of the big summer estates along the North Shore this spring.

No firm in the city recognizes the value of the talking machine as a business venture more than the C. E. Osgood Co., and they give a great deal of space in their store to this department. The front of the store has recently been remodeled, giving one immense window for display, and the talking machine department has made good use of this window. Considerable advertising has been done on the March lists, and the report of the salesmen is that business is improving every day. There seems to have developed here a big demand for band music.

At the Boston Cycle & Supply Co. the Edison line is being handled with more promptness than ever before. The new system of trays for store use is also in demand.

The Iver Johnson Co. have been making a special window display of cabinets for records, which has attracted quite a lot of attention. This firm is fortunate in being situated on a corner where everybody has to wait for their late-at-night or early-in-the-morning cars, so that their windows get a much larger crowd than most stores. If the windows were kept lighted an hour or so later than they are now it would mean considerable more business to the company, it is generally believed.

The Indestructible records seem to have favor at the Pike store this month, as they are being advertised quite extensively. Mr. Pike was one of the first to introduce these in Boston.

The Hallet & Davis Co. are getting in their stock of Victor machines and records, and will have them on display in their enlarged retail wareroom very shortly.

LAWRENCE McGREAL

174-176 Third St. Milwaukee, Wis.

TO DROP 300 DOMESTIC RECORDS.

National Phonograph Co. Announce That This Will Occur on Aug. 1—Why Dealers Should Get Rid of This Stock.

The National Phonograph Co. announce that they intend dropping from their record catalog to be issued on August 1 three hundred domestic records of which a list is given in the latest number of the Edison Phonograph Monthly. In this connection they state: "As may be seen the list is made up almost entirely of desirable and good selling selections. They are records we would not think of dropping if we based such action upon their sales. They are selling in the aggregate nearly 400,000 records a year, and in dropping them we deprive the trade and ourselves of that much business. We are dropping them solely because the trade has demanded that the total records in our catalog be materially reduced.

"It has been urged that we ought to keep the total as near 1,500 as possible. Dropping 300 will still not reduce the total to 1,500, but it is expected eventually to keep the catalogue at approximately that number. If we continue to issue 20 Standard and 20 Amberol selections to and including August and drop 300 on August 1, our catalog will then contain 1,469 Standard selections and 194 Amberol. This is but little in excess of the desired 1,500 and later cut-outs will reduce the list.

"Between now and August 1 dealers will have four months in which to dispose of all stocks of these records they may have on hand, and they ought to dispose of them so that there will be no necessity of returning any to the factory in exchange for other selections."

RECEIVER AGREES TO A DECREE.

March 30 Judge Lacombe, United States Circuit Court, New York City, filed a decree against the Talkophone Co., defunct, Toledo, O., for infringements of the Jones process patent for the duplication of disc records. Several years ago the American Graphophone Co., the owners of the patent, brought suit against the Talkophone Co., and with the multifarious changes that have occurred in this company for some time this case was allowed to "sleep." Recently the complainants insisted that the case should be adjudicated, and the receiver of the Talkophone Co. agreed upon the decree, which was handed down by Judge Lacombe.

Lange Successors a Limited Company—New Companies Registered—New Beka Meister Records—Premier Mfg. Co. Demonstating Records—Other News.

(Special to The Talking Machine World.)

London, E. C., April 6, 1909.

A careful canvass in all sections of the talking machine trade discloses a not too happy state of affairs, for sales this month have been rather below the level for the time of year. The season may now be said definitely to be over, and while retailers very wisely devote their attention to selling cycles, etc., the talking machine side of the business should not be altogether neglected, since there is always a certain amount of encouragement for those who have the good sense to keep their customers regularly posted with the current record issues. It doesn't require a large outlay in postage, and the literature is supplied free by the manufacturers. The exercise of this policy, and if possible in conjunction with a small standing advertisement in the local paper, would undoubtedly prove profitable to most dealers. Why not try it?

Questions have arisen in one or two quarters as to the effect of the proposed increase of the French duty charges. There has been no bill yet actually passed by the French Chamber, and if the increase is eventually authorized it will affect the importation of talking machine goods very little to be seriously alarmed about.

The announcement in last month's Talking Machine World of the new American copyright act, which provides that a royalty of 2 cents per disc be paid to the composer, has aroused deep and widespread interest in this country. It is summed up as an iniquitous measure which is only another manifestation that the law is "a hass!" The one and only consolation is the "no monopoly" clause, for which small mercy our thanks go to the powers that be. No similar law has yet been laid down in England, and if at all, we are not likely to be troubled until next year.

One result of the keen competition among the disc record manufacturers has been a general reduction of prices all along the line. The standard price for a double-sided 10-inch record now seems to be recognized as 2s. 6d., which leaves little margin of profit to anybody, since there are three distinct traders with a finger in the pie. But this is the inevitable outcome of too much competition and lack of combination, or any cooperation among makers to control a price sufficient to show a fair working margin to all.

Gramophone Publicity.

In a charming little booklet just issued attention is drawn to three further records by the great prima donna, Mme. Melba, who sincerely appreciates the power of the gramophone, which so faithfully carries her sweet voice to the thousands of admirers throughout the world. The three new records are, Salce (Willow Song), "Otello," Verdi; Ave Maria, "Otello," Verdi, and "O Lovely Night" (Landon Ronald). Another beautiful singer, Maria Galvany, the new soprano, who recently had the honor of singing before Her Majesty the Queen, has made seven gramophone records, all very well recorded. A complete catalog of gramophone records for April, May and June has just been published. It is of handy and practical use to the dealer, since it entirely obviates confusion and delay by its alphabetical and numerical arrangement. The monthly list of records for April contains among other good things the following: "Faust," selection (band of H. M. Coldstream Guards), which also very faithfully renders "Egyptian, Babylonian and Gallic Dances, No. 1" (Herodiade). The Black Diamonds Band gives us "The Dashing Little Duke," selections 1 and 2; "The Lost Chord" and "King of Cadonia"; "Meistersinger," overture (Wagner), La Scala Symphony Orchestra; under concert music John Harrison and Evan Williams figure, while Plunket Greene renders "Off to Philadelphia" with fine feeling; a grand record is that of the closing scene from "Götterdammerung" (Wagner), by Mrs. M. Saltzmann-Stevens; while the world-famous song, "Home, Sweet Home," is sympathetically rendered by Mme. Jones-Hudson. That universal favorite, Bransby Williams, is real clever in his recitation of "Devil-May-Care," which is one of his best examples of dramatic execution. And last, but not least, there is an excellent banjo selection by Olly Oakley entitled "Uncle Johnson." Other records issued this month are a series of titles for the use of Territorials, to enable them to learn quickly the various calls, words of command, etc.

The Library oak bijou grand is a new machine which the Gramophone Co. have just marketed. It is a beautiful instrument containing triple-spring motor, and standing 46 inches in height. The cabinet is of inlaid oak with semi-circular front doors.

Gramophone dealers have received notice that the company will send records on approval from April 1 to Sept. 30. Full particulars should be applied for.

British Amberol Records.

The first list of British Amberol records is to hand, and from the nature of the selections given I venture to think they will be more acceptable to the trade and public alike than the American titles, which, while they received a good reception, were not so suitable for this market. Be that as it may, there can be not the slightest doubt of the success of these first British issues, which in the majority of cases are exceptionally well recorded, and are as follows: "Interruptions," a good comic by Tom Woottwell; "The Bold Militiaman," sung by Arthur Osmond, who also gives us "Nobody's Satisfied," which is all the rage just now at the music halls; "You All Want Something to Cuddle" (Harry Fay), which speaks for itself. Ernest Pike and Peter Dawson harmonize with good effect in singing two duets, "Come Back to Erin" and "The Old Rustic Bridge by the Mill." Two favorite titles are "Always" and "The Death of Nelson," which Ernest Pike sympathetically renders; while the famous Peter Dawson is equally good in "The Trumpeter" and "The Volunteer Organist." It is obviously rather difficult to record a female voice on such a fine thread as 200 to the inch, but in that beautiful song, "Tosti's Good-bye," Carrie Lanceley makes a really satisfactory record. "The One Word, Mother!" a touching piece, is feelingly sung by William McIvor. Under instrumental we have three splendid selections, "Our Troops," "Crown Diamonds Overture," and "The Bells of St. Malo," by the National Military Band; and the last is an excellent concertina solo, "Nautical Airs," by Alexander Prince.

Catch-Phrases

It is indeed very interesting and instructive to observe the many and varied ways in which manufacturers endeavor to bring home the merits of their goods to the advertisement reader. In the publicity put out by talking machine record manufacturers the one dominant and common policy lies in the adoption of a suitable catch-phrase or sentence by which the reader will at once recognize the particular goods advertised. The value of such is in its power to produce a train of thought or association of ideas, and that it does so may be seen from the following specimens picked at random from the publicity matter before me: "His Master's Voice," Gramophone; "For Real Music," Beka; "The People's Favorite," Favorite; "The Record that's half an inch longer," Sterling; "For Titles," Tilley; "For Stock," Stockalls; "Every Record a Picked

THE INTERNATIONAL FAVORITE RECORD CO., Ltd. (of Great Britain)

45 CITY ROAD, LONDON, E. C. 213 DEANSGATE, MANCHESTER

FROM OUR LONDON HEADQUARTERS—(Continued).

One," Rena; "Money Makers," Clarion. Others, such as Barnett Samuels, National Phonograph Co., etc., have a particular style of setting by which their advertisements may always be recognized. They present a "character," as it were, all their own, which is just as much a trade-mark as the foregoing phrases. And the value of this "distinctiveness" cannot be denied. Every maker should characterize his goods in this way, and thus double the life and value of his publicity generally.

Censoring Records in Russia.

Following on the recent censorship of certain (too) patriotic records in India, comes an announcement that the Russian authorities seek a further outlet for the energies of their secret emissaries. Things have been rather quiet of late, it is true; yet far from being a hopeful sign of regeneration, the Russian police censor regards it in the light of a calm before the storm, and he is evidently greatly alarmed; so much so, that he needs again turn to the talking machine record. It has never yet been found to lend itself to the propaganda of sedition, but the Russian officials have always looked with suspicion upon records; no doubt realizing the power for good or evil which they wield, and so it has come about that all new issues must in future be submitted for judgment before they are distributed. We are in hopes that the continuous verdict of "not guilty" will soon enlighten this absurd government to the annoyance and stupidity of their action.

Pathe Freres vs. Ivatts Hearing.

The hearing was concluded of the action reported last month, brought by Pathé Frères (London) Ltd., against C. P. Ivatts, formerly a director of the company, to recover $1,479, money alleged to have been advanced by the company to Mr. Ivatts to meet his personal expenses. Mr. Ivatts denied liability, contending that the money was spent on behalf of the company and that he had been released from any obligation to pay the amount. In giving judgment His Lordship said that Mr. Ivatts had failed to prove that he was authorized to charge to the company the sums which he had expended in entertaining the artistes. There had been no real release by the company of Mr. Ivatts' obligation to pay. He entered judgment for the company on the claim and counterclaim with costs. Stay of execution was granted on Mr. Ivatts bringing the amount of the claim into court within ten days.

Microphonograph Co. Novelties.

Several novelties have recently been marketed by the Microphonograph Co. "Lubrica" is a high grade flaked graphite preparation, especially recommended for lubricating coiled springs, motors, etc., of any machine. The difficulty of adopting a tone arm for any size machine has been successfully overcome by the use of the "Seymour" tone arm, which comprises a series of tubes, arranged telescopically for adapting to any size either for playing the phono or disc-cut record. Yet another of Mr. Seymour's new goods is a sound-box with a diaphragm of quite a new variety; it is made of horn and I must say the results are indeed excellent and well bears out the claim that it absorbs fifty per cent. at least of the scratch without detriment to the tone. Those wishing to obtain reproduction of their records in the greatest detail with full and rich tone should see that they are not without a Seymour sound-box which may be obtained at a moderate price.

Two Important Price Reductions.

The Beka Record Co. advise me that after very careful consideration they have decided to reduce the prices of their now world famous records from April 1st. The ten-inch double-sided, which hitherto has retailed at 3/, will now be sold at 2/6, while the double 12-inch record is reduced from 6/6 to 5/ each. We understand this applies only in the United Kingdom, and is the result of the company's determination to further popularize their products by getting into line with what appears now to be a standard price. Monthly recording will continue and all the latest hits and best pieces will be secured, while the very high quality in both artistes and reproduction—qualities which have made the name "Beka" stand for "real music" everywhere—is to be more in evidence with each succeeding monthly issue. A further announcement of great interest comes from the Favorite Co., who are also reducing the price of their ten-inch D. S. records from 3/ to 2/6, and the twelve-inch D. S. from 5/6 to 4/ each. As Mr. Vischer aptly puts it, "We are lower in price, but higher in quality." And that sums up the future policy of Favorites, and indeed, they are Favorites all the time.

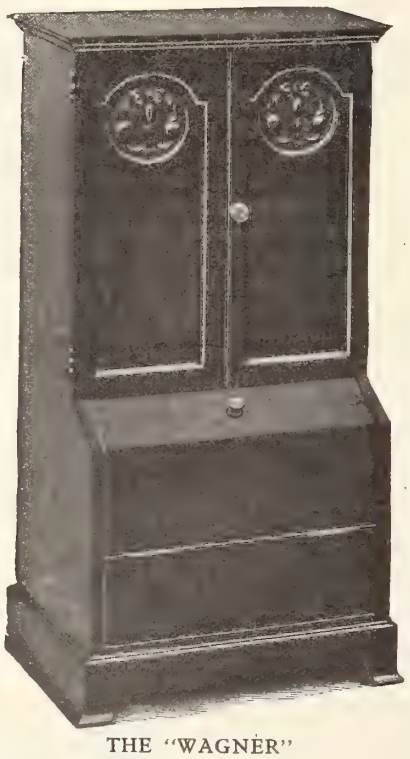
Material for Use of Diaphragms.

Various material for the use of diaphragms is on the increase; each carries claims to be "better," and the result to the man in the street is confusion. Here is a list of diaphragms now in use: Glass, wood, mica, paper, carbon, tortoise-shell, copper, ivory, horn, and amber, not forgetting Pathés air sound-box. As a matter of fact the comparative difference in either is infinitesimal, except in certain instances in relation to reproducers as distinct from a disc box.

Merits of the B. & H. Fiber Needle.

Daws Clarke writes me that the B. & H. fiber needle is gaining a good demand from all real music lovers, and from a personal test I can fully endorse the claim that results from the

KLINGSOR



THE "WAGNER"
Highly finished solid Oak Cabinet

THE new season is here and you cannot, to your own advantage, do better than to apply to us for our new colored illustrated catalogue of our celebrated ***Klingsor*** Talking Machines and Sundries. We challenge any machine on the market concerning working, tone-quality, finish, etc. We do not claim cheapness, as you are well aware that a good machine cannot be cheap, but we are still cheaper than any other machine for what we give you for your money.

All machines are of the best and solid wood, either in oak, mahogany or walnut, British made throughout, specially adapted for export to stand any change in temperature.

The machines are fitted with the best motor in the market "the well known and famous Excelsior Motor."

fiber needle are much superior to steel for playing records in an average size room, for the tone comes out more mellow and quite as distinct. Another advantage accrues in saving your records practically for all time, as fiber needles rather improve the sound grooves than wear them out, and at the same time they create hardly any surface noise at all, which in all respects is otherwise with the steel needle. I would recommend all those who detest harsh and loud reproduction to use in future fiber needles in conjunction with Mr. Clarke's tension attachment and Flex diaphragm, which latter, by the way, reproduces faithfully and brings all the best out of a record. Mr. Daws Clarke, 5 Longford Place, Longsight, Manchester, will be happy to forward full particulars upon request.

"Ebonite" 200-Thread Records.

Probably by the time these lines appear the first list of "Ebonite" 200-thread records will have been issued. The latest issues of clarion standard records are as follows: "It's Easy to Pick Up the Chorus" and "Welcoming Him In" (H. Rule); "Sweetheart Days" (S. Kirkby); "Shadowland" (Harry Fay); "I Like Your Old French Bonnet," and "Anywhere Will Do," both by Harry Blackmore; a good song by Frank Miller, "Sweet Western Bell"; "Good-Bye Ebenezer" (Miss Cassey Walmer). There are some well recorded band pieces by the Premier Military Band, "British Patrol," and "Waldmere March"; "The Elephant and the Gnat," Premier Bijou Orchestra, and "Reels and Strathspeys," by the Premier Concert Orchestra. The whole twelve are good numbers and will no doubt sell well.

Walter Gibbons Acquires Premises.

Walter Gibbons, who controls a number of music halls in London, has acquired the premises of the Edison Bell Co. in Charing Cross Road.

Seymour vs. F. M. Russell & Co.

This was a keenly contested case which occupied the courts for a week. The claim was for breach of contract and damages. Both sides called over twenty witnesses and counsels were often at loggerheads through the failure of the defense to disclose certain documents which were put in as evidence. Mr. Seymour came in for some complimentary remarks from Mr. Justice Grantham, who, however, thought he had not fully made out his case. After fifty-five minutes deliberation the jury returned a verdict for defendants.

Rena Manufacturing Co.'s Progress.

For a young concern the Rena Manufacturing Co. are doing big things. Their latest record list is evidence of this, and in up-to-date titles they are supreme.

Carl Lindstrom, Ltd., Increase Capital.

Carl Lindstrom, Ltd., the well known Berlin talking machine manufacturers, have increased their capital from £37,500 to £50,000.

Strange Things Will Happen.

A remarkable instance of a debtor's honesty of purpose comes from Nottingham. A man was made bankrupt as far back as 1887. Little by little he has saved up until just recently with sufficient in hand he was able to pay his creditors in full with the addition of 4 per cent. interest. Such conscientiousness is worthy of the fullest credit, and I trust it may point a moral to all and sundry—particularly in this trade, where of late there seems a tendency to slide monetary obligations in the vain hope of regaining lost ground to other persons detriment at the end.

Company News.

International Talking Machine Co., M. b. H. L. (Berlin) particulars filed 10th March. Capital, 400,000 marks. Registered in Germany on the 3d of August, 1903. British address, 30 City Road, where G. Frampton is authorized to accept service.

Winslow & Co., Ltd. Registered March 4th with a capital of £1,000 to take over the business of gramophone and phonograph merchant carried on by Fanny Winslow at 13 Regents street, Swindon, as Winslow & Co.

Simplex Kinematograph Synchronizer Co. Registered February 26. Manufacturers of a patent device for establishing synchronous running of cinematograph and gramophones. Address, 12 Little Newport street, London, W. Partnership for fourteen years, from 22d February, 1909. General partner: F. A. Thomassin, 20 Gleneagh Road, Streatham; Ltd. Partner: R. H. Miller, Ravenstone street, Balham, contributing £100 in cash.

Becomes a Limited Company.

An important change has been made in the establishment of H. Lange's successors, who through increase of business in the talking machine and record trade, have decided to form into a limited company, which by now has been done. It is a private limited company, with a capital of £20,000. The general manager is Mr. Karl Maurice. New premises in City Road have been secured, and the company will be installed therein very shortly.

Beka Meister 12-Inch Records.

Three more of the famous Beka meister twelve-inch, D. S. records have just been issued, and they are the following: Overture from "Rienzi"; Fantasie from "Flying Dutchman" (Wagner) played by the Beka Symphony Orchestra, which is composed of the chief members of Mr. Henry J. Wood's celebrated Queen's Hall Orchestra; the London String Quartet gives Haydn's "Adagio from Emperor Quartet," and Schubert's "Andante from Quartet in D Minor," while Signor Alleno (baritone) renders with truly sympathetic feeling Valentine's song from "Faust" (Gounod) and Ella Giammai M'amo from "Don Carlo" (Verdi). All these records are remarkably pure in tone and well recorded.

Agents wanted in all towns where we are not represented

tachment for Pathé and other phono sound boxes; the invention of J. Lewis Young, is to be manufactured under royalty by the Microphonograph Co. of Goswell Road, London.

Premier Mfg. Co.'s Exhibition.

Way down Clapham Junction the residents had a most enjoyable time the other evening at Munt's Hall, which the Premier Manufacturing Co. had taken in order to give a concert and demonstration of their five-minute "Ebonite" cylinder record and other new lines. These were very effectively displayed in a well appointed show-salon off the main hall. I have already dwelt in former issues upon the excellent 200-thread "Ebonite" record, and apart from mentioning that it is cased in a very striking box-made square, I would say that from the general all round good qualities of this record there is certain to be a huge demand from the trade. The retail price is 1/6, the material is hard and smooth, and surface noises are conspicuous only by their absence. I was next shown a new cylinder machine, which plays either the 100 or 200-thread record just at will and by the simple movement of a lever. The motor is of strong and good workmanship, as are the other parts, but that of particular interest was the reproducer, which plays both kinds of record. It is done by means of a two-edged sapphire, the alteration for either track being effected by the movement of a small lever. It is a most ingenious arrangement, gives every satisfaction, and is an undoubted achievement worthy of the fullest credit. The diaphragm in this reproducer is of copper. Yet another new device consists of an attachment for the well known Edison standard machine. It is marvellously simple and is easily fixed to make the necessary gear-change to play both records.

These revolutionary new products so carried me away with enthusiasm that I quite forgot to remain throughout the concert, but in nowise did it suffer, for from reports since received I learn that many well known talking machine artists rendered unto the gods of their best, which the crowded audience heartily appreciated. Harry Lauder and George Robey might have been there but for pressing engagements; still, the void was successfully filled by a good demonstration of the five-minute record, at which the enthusiasm was unmistakable. The whole arrangements were organized and carried through without a hitch by that well known sales manager, Mr. G. C. Hallett, to whom: "Tu ne cede malis, sed contra audentior ito."

Meeting of the Creditors.

The first meeting of the creditors in the matter of the Russell Hunting Record Co., Ltd., under winding-up order, dated January 26, 1909, was held March 31 at 33 Carey street before the official receiver, who said that the statement of affairs which should have been received in January was not lodged until March 30. This precludes him from giving complete information on this occasion. But the position of the company on May 4, 1908 (date of the voluntary liquidation) showed that there were seventy-nine unsecured creditors, with claims amounting to £3,847, while the claims amounted to £4,329 13s. 4d; fully secured creditors, (loans or debentures) £2,515; preferential creditors—for rates and taxes, £574. At that time the estimated assets to meet the claims of unsecured creditors amounted to £4,595. But the present position to-day, according to the statements made, resolved itself into the fact that after allowing for all official expenses of liquidation there remained in round figures the sum of between £1,000 to £1,500 available for the unsecured creditors. The following are particulars of assets realized: Sale of records to Mr. Holmes, £3,988; sale of business to Mr. Hunting, £800, and £90 from Mr. D. Rees for the Linquaphone business. In the course of his remarks the official receiver said it would be a matter for the liquidator to consider as to impounding some payments made to certain creditors in preference to others a few weeks prior to the resolution to wind up the company, and also to consider the legality, or otherwise, of certain debentures issued on or about the same time. Application to the court will be made to appoint Mr. E. Johnson as liquidator, with also a committee of inspection comprising three of the principal creditors and two shareholders.

NORTH OF ENGLAND NOTES.

Manchester, April 4, 1909.

Talking machine trade in Manchester during the past month has been somewhat slow. Money has been rather hard to get in from the retailers, who are undoubtedly feeling the pinch of the scarcity of it as regulated by the spending powers of the middle and working classes. Generally speaking, in the North, the larger mills are only employing their hands three to four days a week, instead of six. This leaves no margin whatever for luxuries, such as talking machine goods, and we are sorry to say that there are at present no signs that these conditions will be any better for some time to come. In fact, it is generally recognized in the trade that there will be a diminution of dealers who cannot stand the strain before the business regains its normal capacity.

At Messrs. Richardson's, of Manchester, Liverpool and Blackburn business generally is reported as moderate. They anticipate that the new British list of the "Amberol" records will give to a large extent a considerable fillip to the cylinder trade and thereby increase the sales in records in a British variety that have been hitherto unobtainable. They report that their new venture in Blackburn is meeting with considerable success.

Both Burrows & Co. and Messrs. Deuve, of High street, also report busines as fairly moderate. At present there is somewhat of a lull, the same as being experienced with other large firms in the North.

The Stroh Violin

¶ A new instrument possessing a VIOLIN TONE of great beauty and remarkable power, which will appeal to all music lovers. Invaluable for Small Orchestras.

¶ The Stroh Violin being scientifically constructed will withstand the varied temperatures of the tropics, where the ordinary violin is useless.

THE ANNUAL TRADE FAIR AT LEIPZIG

Not Quite as Important as in Previous Years—Leading Record Firms Failed to Exhibit—Display of Machines, Horns and Accessories Also Reduced—What the Leading Firms Exhibited—Tendency Toward Hornless Machines—Combined Piano and Talking Machine Shown.

(Special to The Talking Machine World.)

Leipzig, Ger., April 4, 1909.

Peter Strasse was, in appearance, as gay as usual this year for the annual talking machine and novelty exhibition. All reports confirm that the fair was not so important as in previous years, probably owing to the fact that the majority of the leading record firms refrained from exhibiting while the keen competition among manufacturers of machines, horns and accessories also reduced the field of exhibitors. There were, however, some very attractive displays, the chief center of interest being that of a new concern styled the Saechsische Holzwaren Fabrik, Max Bohme & Co., formerly very large cabinet makers who have now entered the field as manufacturers of motors, tone-arms and records. The tone-arm is the well known Columbia pattern, with sound box with patent clip. The motors are unique, being quite different in make to anything else on the market, and needless to say the firm are reaping the reward of their enterprise.

Carl Lindstrom had a very busy time. His display of machines—something like 150 models, ranging in price from 10s. to £100—caused a deal of interest.

A very fine range of machines was also exhibited by Fritz Puppell, who appeared to be doing a thriving business.

Several lines were shown by Herman Thorems.

One or two Swiss firms had displays, but their machines, in appearance at any rate, were somewhat inferior to the German standard.

Pathé Frerés had on show their new 20-inch record, which gave very fine results and was the recipient of much praise.

Another exhibit very much admired was that of the Symphonion Co.

The weather during the fair rather damped the ardor of most people, but for all that trade seemed to be quite satisfactory.

Among the English visitors the following were in evidence: Messrs. S. W. Dixon and Berliner (Gramophone Co.), M. Herzolf and M. Ficker, of the New Polyphone Co., M. G. Murdock and M. Fulton (J. G. Murdock & Co.), Max Samuel and A. Balcombe (Barnett, Samuel & Sons), M. Cullum, of Lockwoods; A. Vischer (Favorite Record Co.), Louis Sterling (Rena Manufacturing Co.), M. Craies (Craies & Stzavridi), O. Ruhl (Beka Record Co.), M. Andres (Homophone Co.), M. Bragg (Universal Talking Machine Co.), and M. Cooper, of Messrs. Cooper Bros., Ltd.

The Deutsche Novophon-Werke, G.m.b.H., Berlin, had on exhibition a new talking machine called the "Serenate," with a new style patented reproducing apparatus. The reproducing apparatus is readily placed on various makes of machines and consequently a large demand is expected for it.

Excelsiorwerk, m.b.H., Köln, Nippes., had a fine line of machines at the fair, including a new automatic model, selling at a moderate price.

A large number of hornless machines were exhibited and seem to be gaining in popular favor, though numerous improved styles of horns attracted considerable attention.

One of the novelties of the show was a talking doll, exhibited by the Intern. Sprechpuppen Gesellschaft, m.b.H. of Newstadt, b., Coburg. The doll speaks and sings to perfection and seems assured of a successful future.

The Magazin-Sprechautomat No. 1 is an improved form of automatic talking machine carrying eight double-sided disc records, it being possible to reproduce any desired selection. The machine was made by the Polyphon-Music-Werke.

Other exhibitors were Ernst Holzweissig, Nachf.; the "Boma" Apparatebau Gesellschaft m.b.H.; Louis Bauer, Mermod Frères, Excelsiorwerke, m.b.H., all makers of machines and records, and the Schwabacher Nadelfabrik, H., Reingrüber and Nürnberger, Schwabacher Nadelfrabrik, G.m.b.H., makers of needles.

Lenzen & Co., of Krefeld, showed a decided novelty that made a great impression, namely, one of their Herold talking machines, built into a player-piano. The piano accompanies the music of the records perfectly. It appears that the records are prepared in the following manner: the disc desired (for instance, a vocal solo) is played and at the same time accompanied by a pianist on a piano fitted with a receiver. In the reproduction the same disc is used, together with a music roll perforated to correspond to the receiver of the piano. The effect is really astounding. All the more so when it is taken into consideration that the price of the instrument is not increased to a very great extent by the addition of the talking machine and the synchronal mechanism. An ear for music is, however, to a certain extent necessary in managing the instrument, as should the pitch of the piano fall away somewhat, the velocity of the talking machine must also be moderated until both have again the same pitch.

Another difficult problem which can now be regarded as solved is the reproduction by mechanical means of the strains of a violin. The best solution has been found by the Ludwig Hupfeld Co., who have constructed a reproduction piano with accompanying violin solo. For this purpose a revolving interminable horse-hair bow is used in connection with a violin with extended neck. The different notes are attained by fingers which are controlled pneumatically and which press on the strings on the neck of the violin at certain intervals, thus shortening the strings as required.

Wilber Gibbs, Bellingham, Wash., jeweler, reports talking machine business in the Edison line has improved every day.

EDISON ON COLLEGE STUDY.

He Thinks Very Little of the Arts Part of It—Academic Training, He Says, Is Old and Does Not Keep Pace With the Times—A Scientific Career Spurs Because It Interests —Man the World Wants.

Thomas A. Edison in an interview recently in the Yale News scored academic education as a waste of time for practical business or industrial men. He said:

"My answer to the question 'Is a college education an essential or even a valuable advantage as a preparation for a young man about to enter upon a scientific career?' is that it is decidedly not an essential. As to its being a valuable advantage I should say that, of course, the mental development which a college course brings quickens the perceptions and enables a man to more easily grasp the minute points of science, but it seems to me that a purely academic training is a great waste of time, since in four years no one can learn all the essential points of science, and four years of active and experimental work will be of much greater value than an equal amount of time spent in obtaining a college education.

"I do not mean, however, to depreciate the value of a college education too much, for it is undoubtedly a desirable foundation for any of the professions, such as law, the ministry, medicine or literature. For a scientist four years of academic work seems to me to be a waste of time, in spite of the fact that college men's minds are better trained and therefore attain further learning more easily.

"In scientific work, as in all other work, the chief factor of success is the power of sticking to a thing. I attribute all that I have accomplished to the fact that I hold on where most persons get discouraged. Another fundamental characteristic for a successful scientist is the power of being a close observer. For instance, while I am experimenting to find some special thing by my close observation I often see dozens of other things not connected with what I am after, and thus the scientific field is one that is constantly expanding and broadening out into new fields.

"Unlimited opportunities are offered in the scientific field for good practical scientists, and the higher positions are awaiting the skilled men. For all the $3,000 or $4,000 positions there are many capable candidates, but when it comes to the $10,000, $15,000 or $20,000 positions it is very hard to find the right man. Accordingly at the present time many important high-salaried positions are vacant for want of enough capable scientists. In fact, the modern times are always demanding a higher intellectual standard for all important positions.

"What the country needs now is the practical, skilled engineer who is capable of doing anything. In three or four hundred years, when the country is settled and commercialism is diminished, there will be time for the literary men. At present we want engineers, industrial men, good business-like managers and railroad men. In fact, there is a field for the men everywhere.

"One of the chief attractions of scientific work is that it is extremely and constantly interesting. A literary career often becomes monotonous, while scientific work is always increasing in interest. This spirit is shown, for example, by a machinist who toils at one thing all the time, but just set him at some experimental work for a while and his keen interest is at once manifest.

"My greatest objection to a college education for a scientist is that academic or classic learning is old and does not keep progress with the times. It does not teach a man to think practically. Science is deeper than Latin or Greek. It is easy for a lawyer to get along with small ability, but a poor engineer is found out in less than six weeks, and unless he has learned to think for himself and understands his work he cannot succeed.

"A scientific education is valuable not alone to an engineer, but also to a business man, for it teaches practical lessons. On the other hand, Latin or Greek are of no value to the practical business or industrial man. If colleges could teach their men to become first-class draughtsmen that would be a great advance, for skilful draughting implies that a man can do anything. In my opinion the best course offered at present in the colleges is economics, for this strengthens the mind in many ways and gives one a clear conception of things as they really are.

"In conclusion I say that as it is impossible to learn everything in the world, let each man pick his course, and with care and then follow it. As for the literary or professional man, although this is not the time for the former, he should follow a classical course such as is offered at Yale, Harvard, Princeton or some of the other colleges."

GRAPHOPHONE FOR SUNDAY-SCHOOLS.

Sunday-schools and churches are rapidly recognizing not only the entertaining, but educational features of the talking machine and employing it to good purpose. From a Louisville (Ky.) paper of recent date we clip the following which emphasizes our opening remarks. It reads:

"That the modern graphophone is something better than simply 'canned sounds,' was demonstrated last Sunday morning at Trinity M. E. Church Sunday-school, where under the direction of Morris Silverstein, local manager for the Columbia Phonograph Co., this machine rendered a sacred concert. The introduction of the graphophone into the Sunday-school room was a decided novelty as well as a complete success, the machine rendering in a clear and intelligent way such favorite hymns as 'Holy-Holy-Holy,' 'Nearer, My God, to Thee,' 'Lead Kindly Light,' etc. With the possibilities of the Columbia Graphophone as a part of the church musical organization, thus demonstrated, it is probable that other churches and Sunday-schools will follow the innovation set by Trinity."

INSURE AGAINST PANICS.

Liability Insurance Companies Protect Managers Against Loss—A Board of Censorship to Pass on Films.

Insurance companies, according to Frank L. Dyer, of the Moving Picture Patents Co., controlling ninety per cent. of the film production for moving picture shows, will now cover not only the fittings, furnishings, machines and films of any licensed theatre in the United States, but will issue also a liability insurance for amounts as high as $10,000 for damages or death resulting from fire or panic.

Mr. Dyer, who is also president of the National Phonograph Co., said: "A board of censorship has examined 30,000 feet of films in the last few weeks and I predict that within a short time not one of the 5,000 licensed theatres in the United States will be able to procure films that are not moral, educational or cleanly amusing."

PUBLICITY PAYS.

The advantage of a trader keeping his name before the public was exemplified the other evening at a crowded political meeting held at Ballycastle, County Antrim (Ireland), when one of the speakers, Mr. Crawford, referred to an opportunity of their member (Mr. Glendenning) joining issue with his Tory opponent and doing some educative work in the constituency. "And," went on Mr. Crawford, "if he were himself unable to reply, Edens Osborne would have supplied him on short notice with a gramophone record, with which he could have pulverized his opponent by the simple process of winding up." This sally was greeted with loud laughter and applause. There is no doubt that Mr. Osborne deserves the free advertisement given by the reference.

Alden Bidinger & Co., Waukegan, Ill., have taken a five years' lease on the building next door to their present quarters and have arranged for a double wareroom, in which separate rooms will be provided for Edison phonographs and Victor talking machines.

L. T. Grubb, Dayton, O., has sold his stock of talking machines and supplies to Crawford Jobes, who will continue the business.

THE FAMOUS VICTOR ORCHESTRA.

Portraits of the Men Who Make Up This Very Clever Organization—Records to Their Credit of Which Any Body of Musicians Can Well Feel Proud—Produced by Request of Many Admirers Throughout the Country.

Many talking machine dealers and others have frequently expressed considerable curiosity regarding the men who make up the famous Victor Orchestra—that band whose superb playing is reproduced in millions of homes throughout the world by means of the Victor records. We have become familiar with the portraits of the great opera singers, of the popular recording artists and a score of others, but the men who go to make up the orchestra have largely remained unknown except through their work.

SNAPSHOT OF THE VICTOR ORCHESTRA.

This is hardly fair in view of the pleasure given by the instrumental records produced by the Victor Co. It is difficult enough to make the record of a soloist, but the perfected record of the orchestra means that every musician in the band must be above criticism. As the record is virtually a photograph of the playing, so will all errors and mistakes appear; hence each player must be an artist to insure the perfect ensemble. It is with much pleasure, therefore, that we present herewith a picture of the famous Victor Orchestra, whose clever playing has delighted millions and added so much to the prestige of the Victor records.

The photograph herewith shows the following artists: Top row, from left to right, J. Truncillo, T. Levy, A. Levy, A. Trepte, J. Fuhs, F. Schrader, W. Pryor, H. Conrad. Bottom row, from left to right, D. Lyons, H. Rattay, Walter B. Rogers, conductor; E. Kenecke, L. Christie.

The Flick-Hynds Co. are a new firm of music dealers in Nashville, Tenn. They will handle pianos, talking machines and other musical instruments.

J. A. Clore has opened a hospital for talking machines at 1116 Walnut street, Milwaukee, Wis.

NEW COMPANY FOR HOUSTON, TEX.

Houston Phonograph Co. Organized by J. N. Swanson, Who Purchased Stock of Texas Piano and Phonograph Co.

(Special to The Talking Machine World.)

Houston, Tex., April 10, 1909.

A corporation will be organized at once by John N. Swanson, who purchased the stock of the Texas Piano and Phonograph Co., with a capital stock of $25,000. Application to the State of Texas for a charter will be made for the concern under the name of the Houston Phonograph Co. Mr. Swanson has been at the head of the company agency in Galveston for the past two years, and from now on will conduct a jobbing and retail house in this city, maintaining at the same time a branch house in Galveston in the same line of business.

Since selling out his talking machine business to P. A. Powers, of Buffalo, and Rochester, N. Y., and New York city, Alfred Weiss, of the latter place, has gone into the motion picture film business. He is owner of a film exchange and also operates a theatre, and his profits are so alluring that Mr. Weiss says he can hardly realize the way they roll up; in other words, it is "easy money." Mr. Weiss, speaking of the official censoring of films said it was the best thing that could happen to the business, making it cleaner and more wholesome, and eliminating the disreputable features which the best men in his line always deprecated.

Tom ("I. W.") Murray, of the Wooden Phonograph Horn Co., Syracuse, N. Y., favored New York with a visit a fortnight ago. He was warmly greeted and cordially welcomed by the jobbers. Of course he visited Wall street, and disposed of a batch of his high priced stocks at an advance of a dozen or more points. Then they jumped fifteen more points, and Tom sadly remarked regarding the disposal of another lot, "I won't, I won't."

TIMELY TALKS ON TIMELY TOPICS

Finally the case of the New York Phonograph Co., New York City, against the National Phonograph Co., Thomas A. Edison, Edison Phonograph Works and others, Orange, N. J., has been settled out of court, and arrangements were amicably agreed upon by both sides on the evening of April 8. The terms of the stipulations exchanged are withheld for obvious reasons. Suffice it that they are satisfactory to the parties immediately in interest, and the suits in the Federal and State courts will be withdrawn. This cause celebré has been before the courts, in one form or another, going on ten years, the contest being waged bitterly at times. Eminent counsel have been engaged, to whom retainers startling in their magnitude were paid. The latest stage of the litigation occurred March 17, when the United States Circuit Court of Appeals, second circuit, affirmed the opinion of Judge Hazel in the Circuit Court. It is needless to go into the particulars, for neither Edison jobbers or dealers were directly concerned, although attempts to scare the New York trade "stiff" by threatening to mulct them in large sums of money—running into millions—were occasionally made in the course of the proceedings. It was what is termed a "company fight," the termination of which is happily welcomed no less. The National Phonograph Co. are not likely to issue any formal statement in connection therewith, and as it did not cost a single Edison jobber or dealer a penny, notwithstanding the vast sums that were expended in a case so complex that even experts lost their bearings occasionally, the best the trade can do is to "forget it."

Of course, an exchange of views on business is always in order and the opinions of some men on this topic are naturally more sought and of greater value. The expressions of the mere gossip, shallow-thinker and poorly-informed are like so much chaff, that is blown which way the wind listeth. In the case of J. Newcomb Blackman, of the executive committee of the National Association of Talking Machine Jobbers, it is different. He is a close and an intelligent observer, and being an eminently successful merchant he is entitled to more than passing consideration when talking of current mercantile affairs. Returning recently from visiting several important points where trade affairs were discussed by men of the same caliber as himself, he spoke as follows to The World and in a candid manner: "I found the talking machine business generally quiet, but this is also true of other lines. In the fall, however, I expect a revival of trade, and then the field will be much more fertile, as the jobbers and dealers who have remained are more representative.

"In other words, the best material has remained. Jobbers who played at doing business are survived by those who have done business in a business way; have more capital, keep larger and more varied stocks, and are equipped for and capable of promoting, stimulating and developing trade. It has always been my contention that there were too many jobbers and dealers who were in no manner competent to manage their business successfully and therefore profitably. They were a detriment and a hindrance. The weeding-out process that has been going on for a year or more is of incalculable advantage to the trade at large. The National and Victor companies have formally announced their policy of refusing to create any new jobbers or dealers, unless their lines in the territory in question are not properly represented. The shrinkage that has occurred in this respect strengthens the hands of the people who, as I said before, do business in a business way, and the scope of the fall trade will prove the truth of my judgment. I do not look for a boom, just a steady trade that will keep right on expanding and widening out as conditions improve, as they surely must. If I am wrong in this prediction, then I will be grievously at fault, which hardly seems possible when everything is considered."

The statement above is a reminder of the recent meeting of the executive committee of the National Association of Talking Machine Jobbers in Columbus, O., the particulars of which appear at some length elsewhere in The World. The association is attracting more and more attention on the part of the trade, as well as much greater respect for the practical work it has done, and is doing. This is due, in no small measure, to the painstaking and very efficient executive committee, whose individual members are constantly exchanging views by mail, "drumming up" new members or getting together in formal consultation. Among other matters disposed of at the Columbus meeting was the selection of the time and place for the annual convention, namely, Atlantic City, N. J., July 13 and 14. Hereafter the conferences of the executive committee will not be confined exclusively to members, but any one of the association is invited and is privileged to attend, so as to make the meetings general as much as possible.

Caruso and a few of his colleagues may be the only mortals who make $10,000 to $20,000 a year by singing into phonographs, but there are many humbler singers in all parts of the world who have their songs preserved for all time. Students of folk-song and primitive music are busy making records. Doubts have been expressed as to the reliability of such records on the ground that a primitive musician might not, when in presence of an awe-inspiring apparatus in rapid motion, sing as he usually does, but this objection is founded, as Benjamin Ives Gilman remarks, in his new book on "Hopi Songs" (Houghton-Mifflin Co.), on a wrongful attribution to exotic peoples of our own habitudes of self-consciousness. He says on this subject: "A Kwakiutl Indian, whose performance before a phonograph I once heard through Dr. Boas' kindness, sheepish as was his air before beginning, when once buried in his song crooned away as simply and unhesitatingly as if he had been squatting on damp stones in a circle of his mates by a British Columbian river, instead of being seated in an office amid inquisitive Americans. Among Javanese and Syrians I have found, as I had before among Chinese, neither constraint nor indifference, but instead a very lively interest in and delight over the instrument and great pride at being selected as spokesman to this marvelously docile echo. Dr. Fewkes tells me that his experience in recording the performances of the Hopi was very similar. The Snake chants had all to be repeated to the old priest who sang them, and not until they had passed his censorship and he had breathed upon the cylinders would he consent to give the records over."

The "Side Line Section" of The World has been received with every evidence of approval by the trade. E. A. Schweiger, Brooklyn, N. Y., handling the Victor and Edison lines as leaders, also photographic outfits, sheet music, sporting goods, etc., very frankly said a few days ago: "I am free to say that I think the 'Side Line Section' of The World the best thing ever done for the trade. It shows enterprise of a high order and excellent journalistic judgment. Besides, as it is conducted on the same exalted plane as The World—the best paper of its kind the world over—I have every confidence in the firms who use it to advertise their specialties. To me the 'Section' has been of great advantage, for in addition to putting me in touch with lines that I can handle conveniently and profitably, these same goods bring new customers for my regular stock—talking machines. One helps the other, and I am certain many more talking machine dealers throughout the country are of the same opinion, and have been benefited in the same way likewise."

It will be observed in the tariff bill now being debated in Congress that in the paragraph referring to products of the trade, which is published in a Washington, D. C., special on another page, that the words talking machines are not used. Instead, "phonographs, gramophones and graphophones" are employed. Phonographs and graphophones are all right, as each describes a specific type, but "gramophones" is never heard in the American talking machine business. Our national solons should "get acquainted" with trade usages and keep up with the procession in the employment of correct nomenclature when it comes to framing laws intelligently, especially such as pertain to the tariff, wherein even the misplacement of a punctuation mark has not infrequently led to momentous consequences.

These piping days of spring look good to the motion picture contingent. So much is heard of the profits in this line as to make the margin of ordinary commercial business seem tame, if all the stories one hears can be credited. Almost without exception, if a place is operated in a cleanly and fairly enterprising way, the coin literally rolls in, and with the expenses comparatively light, it can be readily believed that there is more truth than poetry in the tales that are floating around respecting this business. With the introduction of the talking machine in conjunction with the moving picture a very desirable and attractive feature is enjoyed. In fact, unless speaking or singing are added the show is comparatively "stale, flat and unprofitable," though such vast strides have been made in the improvement of the films that they are well night perfect. To be sure, disreputable people are in every line, and the motion picture amusement institutions have their "black sheep," who have brought considerable discredit on the profession, as it were, by pandering to the vicious and evil minded. Fortunately this element is now almost eliminated by the film manufacturers submitting their pictures to a board of censors, and the latter's objections are heeded and their criticism accepted in the best of spirit. Films which the censors declare are not fit to be seen by women and children, not to say men, are not placed on the market, and in this way a pure, clean and enjoyable entertainment is presented. The result is these vaudeville parlors of nickelodeons, or theaters, as you please to call them, are crowded daily and nightly, and the potentialities for wealth of the moving picture institution are described as "beyond the dreams of avarice."

A flying machine with a sound reproducing attachment is an idea of an inventor of Long Island, N. Y. As the party in question has had years of experience as a profesional recorder and is a man of a mechanical bent of mind, the scheme may be more than a passing fancy. The utility of this peculiar combination is still to be demonstrated.

A sound-box that may be heard of in the future has no gravity reproducing needle, and its seating is of a composition that practically eliminates the scratch of a disc record. The material absorbs the foreign mechanical noises on the same principle as it is accomplished in telephony. Great things are predicted for its use when the promoters get ready for the market. Besides these enthusiasts claim to have a new and original method of reproducing that "lays over" everything now known in this line.

Commenting on various improvements embodied in the talking machine of the present day, an expert of international renown remarked the other day: "From what I know and can learn, the machines of the future will be hornless, and of the music-box type. The European trade are more familiar with this pattern, and I am firmly of the belief it is only a matter of a comparatively short time before they will be introduced in this country. They have their advantages, the reproduction being very satisfac-

tory, while their neat, compact appearance is to be commended. My opinion is, also, that within a year we shall see a number of innovations in the trade unheard of heretofore."

The Edmund Treavor L. Williams, who was appointed last month by the president of the Board of Trade, London, Eng., as one of a committee to examine the International Copyright Convention signed in Berlin, Germany, November 13, is president of the Gramophone & Typewriters, Ltd., of Great Britain. The convention differs with the British act, and the committee are to consider whether the existing law should be amended in accordance therewith. As Mr. Williams was placed on the committee to represent talking machine interests, his knowledge of the trade and its position on copyright matters as connected with the production of records will be of great value. No better informed man could have been selected for this complicated and delicate task.

Charles A. Parsons, the famous English inventor of the Auxetophone and also of the turbine marine engine, now being generally adopted on war vessels and the ocean steamship lines, arrived in New York, Friday last, from London, aboard the "Mauretania," the great Cunarder. This is the first time Mr. Parsons has been here in twenty-four years, coming to visit friends and expecting to stay ten days only. He regards the Auxetophone as one of his minor achievements, though it is cutting something of a figure in the talking machine trade on both sides of the Atlantic.

It appears like an easy task to stand before a horn in a laboratory and have one's voice reproduced. But, strange as it is, until the speaker or singer becomes accustomed to the work, nine times out of ten a species of stage fright ensues, the voice gradually sinks to a whisper, then ceases altogether and the novice finds he cannot utter a sound or control his vocal cords in any manner whatsoever. A veteran "lab." man, in relating one of many instances of this kind to The World said: "This breakdown or stage fright is quite an ordinary occurrence with us. The other day a fresh example of this overconfidence in his ability to control his voice happened. You know, of course, that a good reproducing voice must have a certain timbre, resonant quality or tone color, if you please, to get any satisfactory results. Well, the chap in question, when cautioned as to what might occur, and instructed how to throw his voice into the horn, was greatly amused and answered he knew precisely how to act, and so forth. Well, he started in, and before he had finished two sentences he broke down completely. You see, he was recording the nature of a business enterprise that he was promoting, and in order to save the repetition of the same story by himself to every man whom he aimed to become interested, he conceived the novel idea of placing his argument on a record, and then 'turning' it off on a machine whenever the occasion offered. Of course, what the party had in hand was a talking machine proposition, and the idea was not half bad, so to speak. Well, when his voice failed absolutely you never saw a more astonished man in your life. He was speechless, and he grew white and red by turns and then nervous; but not a word was spoken. His jaws wagged, though not a sound came. I laughed, naturally, and after I advised the 'victim' to sit down a while and recover his confidence and nerve, he finished his speech. Not having been trained, as I said, why his effort was so weak as scarcely to be heard after the record was pressed up. But you never saw such an astonished fellow in your life, as he discovered his voice had gone back on him. Well, never mind Balaam's ass, for that is another story."

The reason most great men live in small communities is that they have fewer neighbors to knock 'em.

CUBAN TRADE.

Each Section of the Island Should be Exploited by American Manufacturers Desirous of Securing Trade in That Country.

Vice-Consul H. M. Wolcott, of Santiago de Cuba, writes as follows concerning the necessity of canvassing the trade of the island by districts instead of confining all efforts therefor to Havana:

"A writer in the January number of an American trade publication makes the following statement: 'Commercially speaking, Havana is the last and only word in connection with business in Cuba.'

"While it is not thought that the foregoing statement represents the general opinion of American exporters, it is believed that they give too little attention to the trade of this section of Cuba. Of course, many times it is not possible for salesmen who visit Havana to make the trip across the island, but they should not be deterred in so doing by the erroneous belief that the trade of the provincial cities is not worthy of their attention, nor less secure in the thought that they have accomplished their mission in Cuba when they have visited Havana and established general agencies there. Salesmen representing European firms come to this city and spend a week or more in studying trade conditions, thoroughly informing themselves as to local demands and establishing trade connections.

"While it is true that a considerable part of the trade of Cuba is controlled by Havana firms, it is not, by any means, true of all lines, and it is believed that much valuable trade is lost to American manufacturers by reason of the fact that when Havana is canvassed by their salesmen they consider that a trip over the rest of the island is not worth their while. According to statistics obtained from the local customhouse, there was imported into this port during 1907 over $1,600,000 worth of textiles alone, of which only about 7 per cent. came from the United States. It would seem that more of this valuable trade should have been secured by American manufacturers.

"This section of Cuba is at least keeping pace with the rest of the island in commercial growth, and American exporters will do well not to neglect the trade here. American salesmen who visit Santiago are urged to call upon the consul, who will render them all assistance consistent with the duties of his office."

MUSIC LIKE ELECTRICITY.

William L. Tomlins, in Lecture, Tells of Its Uplifting Force in Life.

"The power of music as an unlifting force in life is as tangible as electricity, and can be utilized as electricity is at present," said William L. Tomlins, former choral director of the World's Columbian Exposition, in an address on "The Moral Influence of Music" before the department of superintendence of the National Educational Association, in Chicago, recently. Continuing to amplify this novel statement, he said:

"Real music does not lend itself to ignoble expression. Music vitalizes as nothing else can. Under the influence the careworn are refreshed and strengthened, hearts are stirred and all feel moved as if by one mighty bond of brotherhood. This power of music can be utilized for the betterment of mankind. Every school in the land should be filled with song. Grown-ups, too, may get out of it something that will impart strength to fight the battle of life.

"The whole nation can be benefited by the power of song. As in electricity, so in music. We have not learned half its uses. Music comes in a flash. Those who hear it are lifted up by its power. A few take the strength and joy that music has given away with them. It is from these that we get an inkling of the power in music."

BRUCE & BROWN CO.'S GOOD REPORT.

The Bruce & Brown Co., of Seattle, Wash., report that business for the month of March showed an increase of 35 per cent. over the month of February, and the present outlook is that the month of April will show an increase of at least 40 per cent. above the month of March. They are doing strictly a wholesale business, sell only to dealers, and are able to fill orders absolutely complete the day they are received.

"THAT'S JUST WHAT WE'VE WANTED!"

Our beautiful New Idea Disc Record Album is proving just what every disc talking machine owner wants.

Have you seen it? Have your customers seen it? They will all want it "BAD" when they do.

A powerfully reinforced, cloth bound book with outside index. It contains 12 Record Envelopes, or pockets, with attractive leather finish, and guarantees systematic record filing, instant access, and perfect protection from scratching and breakage.

It may be kept on the center table, on the piano, or in the bookcase with other books.

Machine owners can now keep Records of certain classes together—can have their Red Seal Album, band and orchestra Album, comic songs, quartets, etc., etc.

The Red Seal enthusiast will have a special Caruso Album—a Schumann-Heink—a Farrar. Nothing like the New Idea Album for Red Seal collections!

And why not? Anybody who pays several dollars for high grade Records will surely pay a small sum for a filing system that preserves them perfectly, and keeps Records of a certain artist or class together.

This Album is protected by U. S. patent and *cannot be sold by other jobbers.* Our name does not appear on it and we will furnish handsome advertising circulars printed in 2 colors ready for your imprint.

How many New Idea Record Albums may we send you on approval?

Dealers' prices, **90c.** for ten-inch size; **$1.20** for 12-inch, (used also for 10-inch Records).

THE QUAKER CITY'S BUDGET OF NEWS.

Columbia Phonograph Co.'s Store Destroyed by Fire—Secure Retail Quarters at Once and Are Again Equipped to Handle Both Wholesale and Retail Trade—Manager Gouldrup's Appreciation of the Courtesies Extended Him by Local Competitors—Trade Not Startlingly Brisk —Strike Talk in Mining Sections Hurts Trade—Some Attractive Easter Windows—What a Run Around the Trade Reveals.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 5, 1909.

Fire, followed by two explosions in the building occupied by the Columbia Phonograph Co., at 1109-1111 Chestnut street, caused a damage early to-day to that building and adjoining premises approximating $200,000. The first explosion occurred just after the firemen arrived, and blew out the windows of the Columbia Co.'s store, hurling a dozen firemen across the street; soon afterward the second explosion occurred in the rear of the building. A score of fire fighters were scorched by the flames or choked by the fumes, and were treated in near-by hospitals.

The Columbia Co.'s loss was a total one. Manager Gouldrup, however, did not allow the grass to grow under his feet, for within twenty-four hours he was again in business, having established temporary offices in the Stephen Girard building, and from there is handling correspondence and carrying on the usual work of the business as if nothing had happened. He arranged for wholesale shipments being made to dealers direct from the factory. He also arranged for retailing headquarters at 1020 Walnut street, to where a full stock was immediately shipped from the factory. Within a very few days he will be well equipped to meet all demands.

Mr. Gouldrup, by the way, is most appreciative of the courtesy and thoughtfulness of all the local talking machine men. They offered him the use of their warerooms and offices, and he speaks enthusiastically of the good feeling and sympathy which they manifested in his trouble.

The talking machine trade in this city and vicinity has changed very little during the past month either for better or worse, though several of the jobbers express their firm belief that it will not be very long before a decided improvement will be noted. Those houses doing business in the steel and mining regions are far from satisfied with present conditions in the western part of the State, the dealers placing very conservative orders, if any, and practically standing pat, awaiting the settlement of the labor situation in those districts.

When business so far this year is compared with that of the same period for 1908 it is found that there has been a considerable gain which is encouraging. Both Edison and Victor records are in good demand in Philadelphia and the larger cities, and several jobbers are bewailing the fact that they are unable to get Victor Victrolas fast enough to meet the demand for those instruments. Most of the jobbers have installed the handsome Easter window exhibit furnished by the Victor Co., either whole or in part, and credit numerous sales thereto. The exhibit consists of a marbelized covering for the floor and a number of special Easter records by noted artists attractively displayed. The records are surrounded by white cardboard rings upon which appear descriptions of the records and those who make them. The various signs are decidedly handsome and appropriate and attract much attention from passers-by.

Louis Buehn & Bro., since the closing of their Harrisburg branch, a couple of months ago, have been pushing things at a lively rate at their headquarters in this city, and regarding business as a whole, have no particular complaint to make. Only last week they disposed of three Victrolas at retail and filled a dealer's order for over a thousand Edison records. Louis Buehn returned last week from Columbus, O., where he attended the meeting of the executive committee of the National Association of Talking Machine Jobbers. He was appointed one of the committee of arrangements for the annual convention of the association to be held in Atlantic City.

The Penn Phonograph Co. report a slightly improved demand from their dealers, and state that their only difficulty at present is in getting Victrolas in sufficient number to fill orders for those instruments. They placed the entire Victor Easter display in their window, and Manager Barnhill credits a number of good sales to the attractiveness of the exhibit.

Horace Sheble, of the Hawthorne & Sheble Mfg. Co., when seen by The Talking Machine World correspondent, expressed himself as being well satisfied with the amount of business coming to his firm, and especially pleased with the success of the Starola machines. Their representative, who has been traveling through India and the Far East, has established some excellent connections for the line in that part of the world, and the export end of the company's business has become a very important factor.

The Hawthorne & Sheble Mfg. Co. have several new moves in contemplation which, when made public, should prove of decided interest to the trade.

The talking machine department of H. A. Weymann & Son has been getting a good share of the local business, especially in the Edison machines and records, and the near future is viewed optimistically.

C. J. Heppe & Son report a very good business, both wholesale and retail, in view of general conditions. While the single orders sent in by dealers are somewhat small, as a rule, they come with greater frequency, and as a result a very fair average is maintained for the month.

At the local store of the Columbia Phonograph Co., trade in Philadelphia and vicinity was declared to be quite satisfactory, though in the mining regions in the western part of the State the unsettled labor situation was reflected in the general business conditions.

Manager Gerson, of the Musical Echo Co., concurred with the reports of local trade conditions made by the other jobbers and expressed the belief that there would be a decided improvement in the near future. The "Echo" album for disc records has proven immensely popular with those who realize that to get the best results for the longest time the records must be taken care of properly. Certain changes are contemplated by the Musical Echo Co., which will be made public at the proper time.

M. J. Roth, 1495 Third avenue, New York, has inaugurated a series of phonograph recitals which are proving an excellent means of stimulating trade in his territory.

BIG TRADE OPPORTUNITY

On account of outside enterprises, a talking machine concern, situated in the central states, will close out business. This is a splendid opportunity for an enterprising business man.

The only exclusive talking machine store within 150 miles of a large Western city.

No used machines on hand.
No shop-worn or old-style machines.
It will pay to investigate this announcement.
All particulars will be cheerfully furnished.

Care of TALKING MACHINE WORLD
1 Madison Ave., New York

JONES PATENT AGAIN SUSTAINED.

The Jones process patent for duplicating disc records was declared valid a second time by the United States Circuit Court of Appeals, New York, on April 14.

The Los Angeles, Cal., branch of the Columbia Co., of which Wm. F. Stidham is manager, reports an excellent volume of business for the past month. The travelers from the local store cover a large section of Southern California and Arizona and state that conditions in the interior are very satisfactory.

The Houston (Tex.) Phonograph Co. have been appointed Edison jobbers for that territory, the concern taking over the stock of the Texas Phonograph Co., bankrupt. The change was effected April 1.

In retail business it is well to remember the fate of the orator who called upon his friends to witness the defeat of his opponent and the next day found that his friends had gone over to the other side and he was friendless. Opposition is fair; competition is healthful; abuse is unfair and to defame is dishonest.

Overstocked Dealers—Attention!

Write me at once. I buy excess Records—both disc and cylinder—Machines and Accessories. Send list and prices. Music Store, 353 West 59th street, New York.

POSITION WANTED AS MANAGER.

Man of experience in the Victor and Edison lines wishes position as manager of department or store in a large city, where ability to handle and attract the Red Seal trade is desired; basis, salary and commission. Address "Producer," care The Talking Machine World, 1 Madison Ave., New York.

MR. DEALER

Have you a copy of "How to Repair Talking Machines and Phonographs"? Copyrighted. If not, order it *now*, get the use of it *at once*. Postpaid on receipt of price, $1.50. Frank E. Drake, 4245 Tracy Ave., Kansas City, Mo. Rerefence, Gate City Bank.

MANAGER DESIRES POSITION.

Position desired by a competent manager. Thoroughly acquainted with Victor and Edison. Experienced in buying and also selling wholesale and retail by correspondence, mail order, soliciting, canvassing, etc., etc. If you want a wide-awake manager, who has all business-getting propositions at his finger tips, to take charge of your talking machine department, answer this ad. and get next to a live wire—one who can "carry the message to Garcia." Address Box 537, care of The Talking Machine World, 1 Madison Ave., New York.

FOR DEALERS!

A well-selected stock of Victor machines and records. Invoice about $1,000; might divide. Address "Victor Stock," care of The Talking Machine World.

BUSINESS FOR SALE.

Good phonograph business already established in large city in California. Record trade will keep business going. Only business of that kind in that part of town. Will cut down stock of goods to suit purchaser, but must have at least $1,000 cash to put in business. Room in store to handle pianos. Rent low. Best climate in California.

Reason for selling: Owner cannot put personal attention to business. Right party can clear $3,000 to $7,000 per year. Answer quick. Address 735 M, care of Talking Machine World, 1 Madison Avenue, New York.

HARMONY OF WORKING FORCE

Is Most Essential to Success in the Talking Machine or Any Other Business—Some Candid, Straight from the Shoulder, Talk from an Employer Which Has the Right Ring About It—Pays to be Frank With Employes.

How to get the most out of employes is one of the great problems that confronts every merchant, whether he is selling talking machines, or dry goods, or money. As a matter of fact the employer and employe form one large family working for a common cause, the employer being the directing head. No business can succeed as it should unless the employes take an interest in the business, put their shoulder to the wheel and work together in perfect harmony for the advancement of the firm. Talking along these lines recently M. C. Hale, Tulsa, Oklahoma City, said:

"I have found many cases where this lack of harmony was fatal to the business. A jealousy among the clerks, a lack of respect for the employer, and an indifferent interest in the business are all serious handicaps for the success of the business. I believe the trouble with some of us is that we don't take our employes enough into confidence, that we are indifferent to their opinion pertaining to the business, are quick to correct them when they make a mistake, but slow to praise when praise is due. Nothing helps a clerk so much as to receive praise when he has made a good sale or brought a new customer to the store.

"We are all human and appreciate worthy praise. I always talk over with my clerks the advisability of adding new goods to stock and the general policy of the business. Some dealers may think they cannot learn anything from a clerk, but this is not so. I have in mind one of the largest wholesale houses of the country, one whose business system is as nearly perfect as brains can make it, who place boxes throughout the house and agree to reward any employe who drops a suggestion into the box which would prove of value to the firm. This firm has received some valuable suggestions in this way for the improvement of their business methods. One especially was received from the elevator boy, which proved a most valuable suggestion and was put in practice. Our employes must be made to believe that they are a spoke in the wheel of progress; that they are, in a sense, a part of the firm and that the advancement of the firm will mean their advancement. Poor clerks are dear at any price. Even one poor one, when the balance are good, has an evil effect upon the whole force. I claim that a clerk who can't keep busy all the time is not looking for work, and a good clerk can nearly earn his salary by selling goods the customer does not call for.

"It is a good plan to encourage clerks to read trade papers. They can be benefited as much as the dealer by this class of reading.

"We should be frank with our employes if they do something wrong. Correct them on the spot and praise them for the good things they do. Some merchants make the mistake of not teaching the clerks what they themselves know about the business, but let them drift along and kick because they can't handle the business as they should.

We all spend more or less money each year advertising our business, but our greatest advertisement is a complete stock of goods and bunch of congenial clerks who are working in perfect harmony with their employer.

INVADERS HOLD REVEL

In the Summer Home of A. C. Middleton, of the Victor Talking Machine Co., in Sea Side Park, N. J.

The summer home at Sea Side Park, N. J., of A. C. Middleton, of the Victor Talking Machine Co. of Camden, was found to have been broken into and the furniture wantonly broken and destroyed recently, although no articles of value were taken, so far as known. The "burglars" had made a night of it, starting up the heater and warming the house well. Then they invaded the wine cellar, getting some choice wines and canned eatables. It is assumed that the furniture was broken after the wine began to get in its work and the burglars fell to quarreling. The cottage is one of the finest in Sea Side Park.

TAFT FAVORS TARIFF BUREAU.

Says It Will Prove of Great Aid in the Application of the Maximum and Minimum Rates of the Payne Bill and Hopes Congress Will Act in the Matter.

(Special to The Talking Machine World.)

Washington, D. C., March 31, 1909.

President Taft to-day declared himself in favor of a tariff bureau to be created at this session of Congress. He believes that such a bureau would be of great assistance to him in the application of the maximum and minimum principle of the Payne bill in the negotiation of foreign trade agreements, as well as in furnishing detailed information to Congress and to the White House on various tariff questions as they arise.

The President's announcement was made to the executive committee or the committee of one hundred created by the National Tariff convention recently held in Indianapolis. This committee, consisting of H. E. Miles, chairman; Henry R. Towne, of New York, and D. A. Tompkins, of Charlotte, N. C., called at the White House to-day to lay before the President the views of the tariff convention and to recommend a permanent tariff commission.

The members of the executive committee agree with the President that it is necessary for Congress to provide a commission or bureau for the aid of the executive and legislative departments of the government, and they will use their influence as far as possible to secure legislation on the subject at this session of Congress.

LANDAY BUYS MUSICAL ECHO CO.

The Well Known New York Jobbers Buy Out This Concern Which Will be Closed Out on May 1st.

Landay Bros., Victor distributers, New York, bought out the Musical Echo Co., Philadelphia, Pa., last week, Max Landay being over there for several days closing the deal and getting back home Monday. The business of the Musical Echo Co. will be continued until May 1, in the meantime the Edison, Columbia and Zonophone goods being disposed of, and the Victor stock being removed to New York, and placed on sale in the regular way with Landay Bros. After concluding his negotiations in the Quaker City Max spent Sunday in Atlantic City, N. J.

MURPHY TO BECOME COLUMBIA JOBBER.

On the first of the month, H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., General, New York, went to Buffalo, N. Y., where a change was made in the local establishment. S. O. A. Murphy, the Columbia Co. manager, who was in New York the previous week, has taken over the business as an independent Columbia territorial jobber under his own name, which was recently incorporated. Mr. Yerkes closed up the details of the deal while in Buffalo. He also visited Detroit, Mich., and Cleveland, O., before returning.

The Guernsey Music Store, North Yakima, Wash., under the able management of C. W. Harris, is going after the talking machine business strong. They are carrying a complete stock of Victor and Edison goods, have sound-proof rooms in which to demonstrate the merits of the goods, are wide-awake, and will get a goodly share of the business in that vicinity.

EDISON BUSINESS PHONOGRAPH

Has Become a Necessity With Every Progressive Business Office—Is the Greatest Economizer of Time—Graphically Portrayed.

As an economizer of time in the despatch of correspondence the Edison business phonograph stands high in the esteem of busy men. As the company truly say, it "saves the time of high salaried men, increases their letter writing capacity, improves their diction, gives them more time for other duties, equalizes the work in the typewriting department, insures perfectly written letters and decreases the cost of correspondence."

The accompanying illustrations graphically depict, in a very practical way, just what the Edison business phonograph does.

"Usually one stenographer takes the notes of four persons.

Do three of your men stand around while one tries to think of what he wants to say

or do all think and dictate at the same time

and let this same one stenographer write the letters of all and have them ready to sign at quitting time?"

MARCH RECEIPTS SHOW GAIN.

(Special to The Talking Machine World.)

Washington, D. C., April 5, 1909.

The statement of Government receipts and expenditures for March shows a gratifying increase in the receipts, both as to customs and internal revenue. While, as a whole, they do not equal those of the period just before the panic of 1907, the receipts from customs are within $1,000,000 of the figures for March of that year. The internal revenue receipts, however, are over $2,000,000 short of March, 1907. The expenditures continue to increase, although they are considerably less than was anticipated one month ago, when the Sixtieth Congress adjourned.

NEW EDISON DEALERS.

The Maine Jewelry & Optical Co., are new Edison dealers in the city of Everett, Wash., having removed from the state of Maine. They believe the outlook for business in the Golden West is much ahead of the outlook way back East, where they came from. They have a full catalog of Edison records and are doing a very nice business.

The John C. Walling Co., Seattle, Wash., have refitted their store on Union street and equipped it with a balcony of four sound-proof rooms, in which to demonstrate talking machines and records.

Millions of Readers Se

And We Are Sending T

No advertising campaign ever had a more plain and def purpose than this one of ours.

We had an extraordinarily interesting story about Colur Double-Discs, to tell to owners of disc machines. We had a no interesting story about Columbia Indestructible Records to tel owners of cylinder machines. We had a somewhat more educati but no less important story to tell concerning Columbia Disc Cylinder Graphophones to those who have not yet come to an ap ciation of these peerless musical instruments and all-round er tainers.

We are illustrating on these pages some of the magazine general circulation which have carried our story repeatedly during last few months, and in which that story is still being told to somet like ten million readers.

RECLASSIFYING FREIGHTS.

Small Goods Trade Will be Interested in Move to Classify Commodities for Shipment According to Their Value Instead of Weight.

(Special to The Talking Machine World.)

Washington, D. C., March 29, 1909.

A move on the part of experts to revise freight classification along railroad lines will concern the shippers of small goods as well as piano manufacturers. It is understood that at a meeting to be held in New York Wednesday of next week, the official classification committee will consider the advisability of classifying commodities for shipment according to their value, instead of weight and bulk. The subject is also before the uniform classification committee in Chicago. It would be a drastic departure from time-honored practice and its object is to simplify the working out of a uniform classification which was actively begun about a year ago.

The proposition had its inception in a suggestion made last December by Commissioner Prouty of the Interstate Commerce Commission, when he said: "While we decline to establish a rating upon the basis of value, it must not be understood that we have reached a final conclusion that such a principle might not with propriety be introduced into the classification. There is much to commend the idea. If the carriers could suggest a workable plan, it would meet with the approval of the commission."

Should the idea be carried into effect rate-making methods of American railroads would undergo a revolution, and as it is now broached for the first time in a manner to demand serious attention its reception by the shippers of the country, especially those connected with organized bodies, will be awaited with much interest. Under present methods articles of widely varying values are so classified as to be given the same rating. For instance, it costs no more to ship cheap tables than the most expensive mahogany furniture. Pianos properly boxed are in the same class as bamboo settees. The same is true of books, whether they are editions de luxe or cheap novels and probably the rule applies to certain grades of small goods.

HENRY BABSON A VISITOR.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 24, 1909.

Henry Babson, of Babson Bros., Edison jobbers, Chicago, Ill., was a visitor at the plant of the Victor Talking Machine Co., Camden, N. J., recently. Later in the week he went to New York City, calling on some of his old-time friends in the trade there, then going West. Mr. Babson, while here, in speaking of affairs, said business was brightening appreciably and stocks were moving into the hands of the aggressive and enterprising dealers very satisfactorily. As an illustration of how sales were with their firm particularly, Mr. Babson stated that in February they had paid the National Phonograph Co., Orange, N. J., $40,000 for goods.

VICTOR RECORDS DESTROYED BY FIRE.

(Special to The Talking Machine World.)

Boston, Mass., March 29, 1909.

About 2,000 talking machine records were destroyed by a lively fire which was discovered in the five-story brick building at 35 and 37 Arch street, occupied by the M. Steinert & Sons Co., shortly after 10:30 last night.

The blaze, which was one of the smokiest small fires seen in the city proper in a long time, is believed to have been burning for several hours before its discovery.

Early in June a successful jobber and dealer, who is going abroad for a vacation of a couple of months, and will visit the chief capitals of Europe, invites inventors and patentees to communicate with him regarding any devices, improvements, appliances, attachments, etc., connected with either disc or cylinder machines, with a view of introducing them in the foreign trade. The particulars of this offer are presented on page 49. Correspondence will be strictly confidential.

TRADE SLIGHTLY IMPROVING.

Business Getting Better With Both Dealers and Jobbers as Spring Advances—Foreign Trade a Strong Factor and Expanding Rapidly.

Trade is showing some slight improvement during the past ten days. As a matter of fact, as the spring advances business is getting better, both with jobbers and dealers. The eastern section of the country is making a better showing, with the West still holding its own, with the possible exception in a couple of the cities, notably Chicago and St. Louis. The factories are fairly busy, especially on foreign trade. This branch of the business is expanding very rapidly, especially in the Spanish-American countries.

The disappointment in not hearing from the United States Supreme Court in the Berliner case is expressed by everybody, including the contestants.

NO DECISION YET IN BERLINER CASE.

Again The World goes to press and the Supreme Court of the United States is still mute on the Berliner case (Victor Talking Machine Co. against Leeds & Catlin Co.) this has been before them since January 14. Possibly the learned justices may conclude their ponderings in time to give an opinion before the summer recess.

In the cases of the Columbia Phonograph Co., general, New York, and the Victor Talking Machine Co., Camden, N. J., against W. V. R. Bradley, Brooklyn, N. Y., and others, for "dubbing," Judge Chatfield, United States Circuit Court, eastern district of New York, has not filed an opinion also. It was stipulated between counsel, however, that the defendants should stop "dubbing," pending the court's action in the matter.

COLUMBIA QUARTERS IN ATLANTA, GA.

The store of the Columbia Phonograph Co., Atlanta, Ga., on May 1 will be removed from 26 Whitehall street to the new building of the Cable Co., the prominent piano manufacturers of Chicago. This is one of the finest business buildings in the South, and the Columbia Co. will fit up their space with demonstrating booths, carrying stock under their own supervision, the department being managed solely by them. Manager Terhune has made a sales record for his establishment.

CAN'T SELL BELOW SPECIFIED PRICES.

(Special to The Talking Machine World.)

Minneapolis, Minn., April 3, 1909.

A preliminary injunction has been sought in the Federal Court by the New Jersey Patent Co. and the National Phonograph Co. to have Thomas C. Hough and James A. Latta, trustees in bankruptcy, desist from selling any of the Edison phonographs belonging to the estate of T. C. Hough at public auction at prices less than specified in an agreement with the National Phonograph Co.

The Turner Music Co., Wallace, Idaho, have secured larger quarters and now have soundproof rooms in which to demonstrate their talking machine business. They have one of the nicest stores for a town of that size in the country.

McDonald's Talking Machine Store in the city of Bellingham, Wash., is hard after business and is doing a better business this year by far than last. A much larger increase in the near future is looked for.

Shaw & Hodgins, Everett, Wash., say their Edison business has increased at least 25 per cent. in the last four months.

PERTINENT APHORISMS

Of Interest to the Talking Machine Man as to Everyone Else Contributed by J. C. Rahming to The Traveling Salesman.

A salesman should look upon himself as a storehouse and should take an inventory of the stock he works with every day.

Call the stock the faculties of the mind—which are intelligence, memory, imagination and will.

Look into yourself and learn whether you are improving this stock of faculties by true education.

True education means the cultivation of the faculties, developing thereby the positive qualities of the mind.

Keep a full supply of the positive quality of judgment and concentration.

Get rid of the negative quality of prejudice and heedlessness.

Always take in a large stock of initiative and self-control.

Let go that old stock of laziness and indecision.

Place your supply of "I wills" to the front and take your stock of "I can'ts" and bury them.

The salesman who will take the mental stock of himself and act on the good suggestions every day, practising them constantly until they become a fixed habit, will find himself climbing out of the rut of the ordinary salesman by increasing his business with the old and making new customers.

It is the positive qualities that win.

It is the negative qualities that lose.

Do you want to be a winner? Then get busy now cultivating the qualities that win.

As Hubbard says: "The greatest reward goes to the man who takes the initiative, the next best to the one who is told once."

Cultivate the following habits until they become as natural to you as breathing.

The habit of gripping good suggestions and making use of them.

The habit of doing it now.

The habit of making notes of specials you have to offer on certain days.

The habit of keeping posted on everything concerning your business.

The habit of being thorough in all you undertake, realizing that which is worth doing at all is worth your best efforts.

The habit of being prompt.

The habit of cheerfulness.

The habit of making new customers.

The habit of perseverance.

The habit of writing your orders plainly and correctly.

The habit of stimulating old customers.

The habit of telling your troubles only to the right man—the one concerned, and who can adjust the difference or misunderstanding.

The habit of always talking the profitable lines—talking quality, not prices.

NOT GOOD DAYS FOR BUSINESS.

Rainy days are not good days for business, but they are good days to plan for business and to get ready for the days of sunshine that are sure to follow. No store can be conducted successfully without some good, hard thought. The merchant who stands about his place of business on rainy days with a long face and his hands in his pockets, complaining about the weather, is losing valuable time that should be put to use in the rearrangement of stocks, writing advertising copy and attending to the numerous details of the business which slip past him on busy days.

The various branches of the lithographic industry who have failed to change the schedules affecting the duty on imported post cards in the Payne bill are now turning their batteries on the Senate, where the bill is now up for consideration.

FAMOUS EDISON SUIT SETTLED.

The End of Years of Litigation—An Adjustment Reached That Closes the Legal Strife Which Has Been Waged With Much Energy—The Amount Paid Not Given Out, Although Reports Vary—They All Agree That the Figures Were Large—All of the Various Companies Included in the Settlement.

When the March issue of The World went to press the case of the New York Phonograph Co., New York, against the National Phonograph Co., Thomas A. Edison, and others, Orange, N. J., an appeal to the United States Circuit Court of Appeals, second circuit, had been argued. The following day, namely, March 16, the court handed down their opinion, affirming the decision of Judge Hazel, in the Circuit Court, and a little more. At any rate the findings of the Court of Appeals was not altogether agreeable to the defendants, and subsequently a motion was duly made and argued, with a filing of supplemental briefs, for a stay of mandate, the matter coming again before the judges in this regard April 2, with decision being reserved. The ultimate purpose of the defense was to take the case to the Supreme Court of the United States on a writ of certiorari.

This was the state of affairs until the 9th succeeding, when official announcement was made by the National Phonograph Co. that a settlement had been effected with the New York Phonograph Co. the night before, and the suits in the Federal and New York State courts and all other actions, were discontinued. Just what the nature of the arrangement was, is a matter of conjecture, the money consideration being variously estimated from half a million to two million dollars; though a party in a position to know, and who acted in a confidential capacity throughout the entire negotiations, stated to The World that the amount of cash passed was comparatively modest, whatever that may mean. At any rate, it has been agreed between the parties in interest that the precise terms of settlement will not be revealed for publication.

An all-night conference was held in the Union National Bank, Newark, N. J., on the date above mentioned, at which the following were present: William H. Fahnestock, president of the New York Phonograph Co.; James L. Andem, secretary, and John C. Tomlinson, counsel; Frank L. Dyer, president of the National Phonograph Co., representing also Mr. Edison in person and all the other Edison companies; William Pelzer, vice-president; Carl H. Wilson, general manager; Alfonse Westee, secretary and treasurer; and Judge Edward W. Hatch, of Sheehan, Parker & Hatch, representing the Edison interests and those of the other defendant companies.

Suits that have been brought in the various States by practically the same complainants against the National Phonograph Co. and others, are included in this friendly settlement. It is learned the New York Phonograph Co. will not be "wiped off the map" in a legal sense, as several National Phonograph Co. people will go on the board of directors and control its future, the same as is now done with the New England Phonograph Co. The National Co.'s policy will not be changed in any sense so far as the trade is concerned.

ENGELHARDT ISSUES NOTICE

To the Trade Regarding the Hobart Patent—Infringers Warned on April 1.

The Peerless Piano Player Co. (F. Engelhardt & Sons, proprietors) have sent out under date of April 1, the following notice to the trade, bearing on the Hobart patent decision, and which was fully covered in these columns several weeks ago:

"Gentlemen: We hereby give notice to the trade that the Hobart patent No. 765,240, which covers a removable drawer containing an endless tune sheet and tune sheet rollers in a pneumatic piano, has been fully sustained by the Circuit Court of the United States and by the Circuit Court of Appeals in our suit against Louis H. Harris, doing business as the Automatic Musical Co.

"We warn all jobbers and dealers against handling instruments that have such infringing drawers and that otherwise infringe our patents. We shall sue every infringer and collect full damages from those who may be found to violate our rights. Very truly yours,

"PEERLESS PIANO PLAYER CO.,
"Per A. D. Engelhardt."

"N. B.—Copy of decision will be sent by us to anyone who desires it."

PHONOGRAPH A WITNESS.

Records Used at Sunday Ball Game for Sunday Law Test in Jersey City.

The war on Sunday baseball in Jersey City took a new turn last Sunday, when large phonographs were taken to the West Side Ball Park by the management to obtain a record of the volume of sound made by the crowd which assembled to see the Giants play the Jersey City team.

The object was to prove to the Court of Chancery at the court hearing next week that Sunday baseball games at the park are not a nuisance. The records taken will be turned on in court for the benefit of the Chancellor, who will determine from the sounds he hears whether the noise constitutes a nuisance. Vice Chancellor Stevenson will hear the case. Affidavits of citizens in favor of Sunday baseball will also be submitted.

Several phonographs of unusual size were used in to-day's experiments. They were placed at various points of vantage about the grounds.

TO BUILD A CHAIN OF THEATRES.

It is the purpose of the Powers Amusement Co. (Powers, Kaiser & Henkel) to build a chain of theatres of their own. Of these two will be erected in the Bronx, New York city; two in Brooklyn and two in Jersey City, N. J. New Dorp, S. I., may also have another. Moving pictures will be the feature of these places, with special vaudeville numbers on the program. These theatres will be models of their kind, and embody all the latest improvements and safeguards.

A "VICTOR, JR."

A. M. Buchner, proprietor of the Newark Talking Machine Co., sends us the above photograph with the statement that they have named the dog Victor, Jr., and that his photograph was taken while he was listening to His Master's Voice.

The Newark Talking Machine Co., since moving to their present quarters, have been very much pleased with the increasing demand for their machines.

They have parlors attractively fitted up and command a very exclusive trade.

The World hears with regret of the death on April 9, in her home at Highwood, N. J., of Mrs. Louis Hicks, wife of Louis Hicks, the eminent New York patent attorney, well known in connection with all the leading talking machine cases that have been before the courts during the past ten years. The funeral took place Monday. Mr. Hicks is on the legal staff of the National Phonograph Co., Orange, N. J.

One of the latest bits of news set afloat is that an Edison machine of the famous Victor Victrola type is a possibility of the near future. This is interesting, if true, but neither official confirmation or denial is forthcoming.

An Opportunity for European Business

A WELL-KNOWN talking machine dealer and jobber who is going abroad in June would be pleased to take along and introduce any American invention of merit, such as attachments, horns, needles, sound-boxes and anything whatsoever in the way of patented novelties in the line.

Correspondence invited in confidence and prompt attention given all communications. Address

"EUROPE"
Care of THE TALKING MACHINE WORLD
1 Madison Avenue, New York City

VICTOR FOR REV. THOS. DIXON.

Sale Made by Excelsior Phonograph Co., Which Is Rapidly Closing Out Stock—Premises to be Occupied by Columbia Phonograph Co.

The Excelsior Phonograph Co., (formerly the Douglas Co.), 89 Chambers street, New York, are rapidly closing out their stock, preparatory to the Columbia Phonograph Co. taking possession of the premises. It is thought that the place will be vacated before the middle of April. Great regret is heard in "talking machine row" over the closing of this business, at one time the largest and most important on the street. Last month John Kaiser, manager of the Excelsior Co., sold a Victor outfit to the Rev. Thomas Dixon, Jr., the celebrated divine and author of those well known and widely read books, "The Only Woman," "Leopard Spots," etc. The equipment consisted of a Victor 4 machine, a mission record cabinet and a quantity of standard and Red Seal records, which were shipped to Baltimore, Md., to go aboard the reverend gentleman's yacht, "Conrades," since lying in New York harbor. A duplicate of the same goods was also purchased subsequently by Mr. Dixon for presentation to a friend. So pleased was the popular writer with the Victor that later, on request, he agreed to deliver an address to-morrow (Sunday) at 4 p. m. before the mission class of Calvary P. E. Church, New York, which is presided over by Mr. Kaiser.

NOTHING WASTED NOW.

The late P. D. Armour once said that the only thing that went to waste at the stock yards was the pig's squeal, but now inventive genius has found a way to make even the squeal pay. Recently a man visited the Chicago Stock Yards, set up a phonograph to receive the squeals of

the hogs to be used in a five-cent theater, illustrating a pictorial story, entitled "A Day at the Stock Yards." Now that their real value has been discovered the public will have to pay for the squeals just the same as it pays for the hams, the loins and other parts of the American porker.

* * * *

We take the above clipping from one of our daily paper contemporaries, and it will be observed that the artist is not acquainted with the talking machine, for he uses a disc to make records in the stock yards, and on the floor will be found a lot of cylinder records cartooned. The artist cannot be blamed for this, however, for the writers in the daily papers, even some of the "specialists," cannot seem to understand the difference between the disc and cylinder talking machine.

In their new store at 27 West 34th street, New York, Landay Bros. are about to overhaul the place, put in entirely new and more handsome fixtures and fittings, and otherwise greatly improve and embellish the premises, which are centrally located.

George Rammelsberg and Harry J. Enders, at one time both well known in the talking machine trade of New York City and elsewhere, are in partnership in another line of business.

BIG CALL FOR VICTOR-VICTROLAS.

The Victor Co. Find It Difficult to Supply Demands for These Creations.

The demand on the Victor Talking Machine Co. for Victor Victrolas is a striking feature of an otherwise quiet season. The distributers in all parts of the country are writing and wiring in for the biggest hit ever made in the history of the American talking machine trade. Complaints are general at the delay in filling orders for Victrolas, but the company claim that they are doing their level best to supply the demand. When the resources of the Victor Co.'s plant are considered, this gives an idea of the immense demand for these instruments.

POWERS CO. LEASE OFFICES.

The Powers Co., who will manage a motion picture business, leased a suite of offices on the eighth floor of the New York World Building, New York City, Monday. This is the company composed of P. A. Powers, of Buffalo and Rochester, N. Y., and C. V. Henkel, also former manager of the Douglas Phonograph Co., dissolved, and John Kaiser, of the same company, and manager of the Excelsior Phonograph Co., New York City, who closed out their business this week.

BUTTON TO SUCCEED GAINES.

On May 1, H. S. Gaines, in charge of the promotion bureau of the wholesale department of the Columbia Co., will sever his connection, to enter another line of business. He will be succeeded by John C. Button.

THE NATIONAL CO.'S POLICY.

Conserving Trade and Eliminating Weak Dealers and Jobbers to the End of Helping Business.

The policy of the National Phonograph Co., Orange, N. J., is to eliminate as many Edison dealers and jobbers as possible consistent with the proper representation of their line. They will create no new dealers in territory more than amply covered, and where one, two or several in a large city or good sized town desire to withdraw from the field the company arrange to sell the stock on hand to a competing firm who are regarded as a stronger and better representative, and one who will push and market the goods by up-to-date methods and progressive merchandising. Quite a number of dealers who have become faint-hearted and are possessed of that "tired feeling" have sold out under such conditions, leaving the really right kind of people to reap the benefit of lesser competition. In this way the "survival of the fittest" are better protected, do a larger and more satisfactory business, and everybody concerned is naturally pleased.

IMPORTANT COPYRIGHT DECISION.

Court Holds That Printed Play Is Not a Book and Can be Copyrighted Here Although Put in Type Abroad.

Paul Hervieu, the French dramatist, has won his long standing suit against the J. S. Ogilvie Publishing Co., which was brought to test the validity of the copyright of a five-act play called "Le Dedale." M. Hervieu wrote the play and had it printed in Paris on the press of L'Illustration. He then had the printed play entered in the copyright office at Washington in December, 1903. Two years later the Ogilvie company copyrighted a play in English based on the Hervieu drama and entitled "The Labyrinth; or a Case for Divorce," by George Morehead.

M. Hervieu promptly brought suit for infringement of copyright. Counsel for the company declared that there could be no infringement because the copyright secured by Hervieu was invalid, for the reason that a book set in type outside the United States could not be copyrighted here. The plaintiff contended that the play was not a "book." The copyright law clearly distinguishes between books and musical and dramatic compositions and provides different penalties for infringement of the several copyrights. Judge Martin in his opinion filed Tuesday holds that M. Hervieu's play is a dramatic composition and as such has a valid copyright.

THE "DUBBING" CASE.

Decision of Judge Chatfield Eagerly Awaited—Victor Co. Also Complainants.

When the "dubbing" case against W. V. R. Bradley, Brooklyn, N. Y., sales agent of the Continental Record Co., was argued in the United States Circuit Court, eastern district of New York, Judge Chatfield sitting, with the Columbia Phonograph Co., General, and the Fonotipia Co., Milan, Italy, as joint complainants, on March 4, the Victor Talking Machine Co., Camden, N. J., also were heard against the same defendants. The Victor Co. proceeded against Mr. Bradley and others for "dubbing" their "Red Seal" records, and the opinion of the court will dispose of the entire matter in controversy. As the Victor Co. record their own "talent," manufacture the master dies or plates, and do their own pressing, their bill of complaint differs materially from that of the Columbia Co., as the masters they use in duplicating the Fonotipia records, Columbia series are supplied from abroad. These interesting cases are awaited with more than ordinary curiosity by the entire trade. As yet Judge Chatfield remains silent.

A BIG INITIAL ORDER.

In our San Francisco letter, elsewhere, reference is made to the appointment of the Southern California Music Co., of Los Angeles, as Columbia jobbers. Their initial order was for $25,000 worth of Columbia double disc records alone, and a full line of grand opera double discs, including both the Symphony and Fonotipia series. In a chat this week the Columbia Co. stated that their proposition is appealing more and more to music dealers, and added "Forty per cent. of the new dealers we are signing up right along are music dealers already established, and we have been holding that proportion for three months."

The Spokane Phonograph Co., Edison jobbers, have purchased the Inland Phonograph Co., which they formerly owned as a retail establishment, so they now have their old stand back again.

Eilers Piano House, Spokane, Wash., are refitting their talking machine rooms and propose to push the Edison retail as hard as they now do the Victor.

Sherman, Clay & Co., Spokane, Wash., are remodeling and enlarging their Victor, talking machine rooms to take care of their increasing business.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., General, left New York, Monday, for a trip of inspection of the company's stores between here and Chicago. He will be on the road a couple of weeks.

E. N. Burns, manager of the Columbia export department, states business is very much improved in Havana, Cuba. He is now in the City of Mexico, and expects to be at headquarters again May 1.

The Novelty Parlors, Seattle, Wash., owned by Mead & McGuire, are pushing the Edison line hard and are very much pleased with the results as business is daily improving.

W. R. Barry, of Rochester, Vt., has purchased the talking machine business of J. E. Jerd, Randolph, Vt., and will continue same.

SOUTHERN CALIFORNIA NEWS.

Fine Weather Welcomed—Two New Stores Opened and One Closed During Month—Holmes Music Co. and Fitzgerald Music Co. Handling Talkers—Victor Styles in Great Demand—Edison Amberols Increase in Favor—Dealers Would Like Records of Pacific Coast "Hits"—Dusy & Sawrie Open in Selma—Columbia's Good Trade.

(Special to The Talking Machine World.)

Los Angeles, Cal., April 4, 1909.

Rain and unsettled weather has not affected the trade as much as it does as a general rule. All southern California has shared in the uncertain condition of the weather, which seems now to have ended. Municipal affairs have commanded a great deal of interest among the prominent dealers, involving as they do the leading citizens who are interested in the future of the city. If present plans are successful Los Angeles will be a seaport city; that is, if San Pedro and Wilmington are consolidated with Los Angeles. Many important changes have taken place since the middle of the month—namely, the closing of one store and the opening of two new ones.

The store of the Exton Music Co. was closed for all time about the last of the month after a special sale, which was under the direction of F. A. Ingersoll, who was appointed superintendent by the owner.

Of the two new stores recently opened the Holmes Music Co. was first in the field, although they have not entirely completed alterations. They are located in the old Fitzgerald store at 113 South Spring street, which has undergone considerable remodeling. The interior is fitted up in a splendid style, allowing four large rooms for their talking machine department. Sibly Pease has been appointed manager and prides himself in the new store. They have started business in a very promising manner.

The other new store is that of the Fitzgerald Music Co. at 523 South Broadway. The entire fourth floor of their new building has been given to make a first-class department which will consist of five large demonstrating rooms, which will have glass partitions, with woodwork of Mission finished pine. They have been doing a nice business, although not fully prepared to handle the trade. John Fuente, who is in charge, has been busy arranging stock and preparing the department for the formal opening.

The Wiley B. Allen Co. have made several very original window displays which have attracted much attention. They have received a large shipment of Victor goods, including the new style machines.

The Geo. J. Birkel Music Co. are having splendid success with the new automatic brake for Victor machines which they have recently announced to their customers.

Fred Sherman, of Sherman, Clay & Co., has been a visitor in this city. As this is his first trip in this direction for several years he expressed a great surprise in the rapid growth of this city.

Sherman, Clay & Co. have received their first shipment of the new style Victors II and III, which they are sending to the trade. These new styles are meeting with great favor. The second list of double-faced Victor records are also liked. Manager Chas. Ruggles has been a busy man, as the demand for Victor goods has been very large with the opening of several new stores.

The Columbia Phonograph Co. are enjoying a good share of trade and the wholesale department is filling orders for several new dealers. The new list of Fonitipia records has been the source of much interest, especially the new Bonci records. During the recent visit to this city of David Bispham his records listed by them were in great demand.

The W. H. Clune Film Co., 727 South Main street, are among the oldest talking machine dealers of the city, and have lately decided to push that line more vigorously than ever.

Geo. Snider, of Kern, Cal., is greatly pleased with the increased volume of busines he is doing with the Amberol goods.

Dusy & Sawrie, well-established Edison dealers of Selma, Cal., have fitted up one of the finest stores on the coast. Their department is exceptional for a city the size of Selma, having as it has a population of 1,500. The volume of business recently done with the Edison Amberol goods has led to the enlarging of their facilities.

A good mail-order business has been received from Lower California by the dealers of southern California since the better steamship service has been established. Occasionally a visitor arrives from the south with orders for talking machine goods as well as small goods and sheet music.

W. W. Jones, manager of the Record Exchange and Music Co., 213 Mercantile place, in this city, is greatly pleased with present conditions.

The great success of the Edison Amberol record has been the main business attraction for the Southern California Music Co. The volume of business done in this line already surpasses that of the two-minute by a very large margin, especially on the new monthly issues. A shipment of record cabinets in various styles and finishes has lately been received by this firm. Foreign records have been in great demand and much attention is paid to this department by the dealers.

It is the opinion of the dealers of the Pacific coast in general that much money is lost in not being able to furnish their customers with talking machine records of hits which are popular on the Pacific coast only. It would be well for the manufacturers to take into consideration these facts when making up their monthly lists.

Carl J. Schultz, representing the Rudolph Wurlitzer Co., of Chicago, has just left for the East, after spending several days in and about Los Angeles. While here he entertained members of the Chicago White Sox in the talking machine department of the Southern California Music Co. Edward Borgum has returned from a tour of the most southern points of the State, reporting very favorable conditions.

There are rumors to the effect that a new fiber needle, which is to be manufactured in Watts, Cal., will be placed on the market in a short time.

The T. T. Jones Co., manufacturers of disc record files and indexes, have received many orders for their new style product which is carried in stock by most all dealers in this city.

The handsome display windows gotten up by Manager Raynard for the Southern California Music Co., of Santa Barbara, have come in for general commendation.

The Beard Music Co. is a new concern in Beatrice, Neb. They handle pianos and Victor and Edison talking machines and records.

REGINA SALES FORCE IN WEST.

Group Assembled Seeing Mr. Sachs Off to Pacific Coast.

(Special to The Talking Machine World.)

Chicago, Ill., April 8, 1909.

The accompanying cut shows the western sales force of the Regina Co. in the act of seeing I. S. Sachs, who has long represented the company of the middle western states, off for his initial trip to the Pacific Coast. The gathering of the clans in Chicago was due to the recent

visit of General Manager J. Blumberg, who spent a week at their western office, coaching the boys on some of the Regina Co.'s new productions and laying plans for the spring and summer campaign.

The names of the gentlemen ornamenting the rear platform of the coach, reading from left to right, are as follows: C. Huebsch, city salesman; A. M. Jansen, Illinois; I. S. Sachs; T. H. Walker, Michigan, Iowa, Southern Indiana, Missouri and Kentucky; M. J. Faber, manager of the Chicago office.

W. P. Ainsworth, a partner in the late firm of Leonard & Ainsworth, recently dissolved in Rantoul, Ill., has decided to enter the field again under the name of the Ainsworth Piano Co. In addition to pianos and organs a full line of talking machines and records will be carried.

Needles Free To Prove Quality

"THE BEST THAT MONEY CAN BUY"

Playrite TRADE MARK

NEEDLES

"THE NAME TELLS WHAT THEY DO"

BLACKMAN TALKING MACHINE CO.

J. NEWCOMB BLACKMAN, President

97 CHAMBERS STREET NEW YORK CITY

BALTIMORE TRADE GLEANINGS.

Decided Betterment in Trade—Big Call for Victor Victrolas at the Leading Stores—Cohen & Hughes' New Department—Columbia Activity—Cooper Establishing Agencies.

(Special to The Talking Machine World.)

Baltimore, Md., April 5, 1909.

From reports given out by those engaged in the talking machine business in Baltimore there seems to be nothing the matter with the trade here. All the dealers talk prosperity, and in this they appear to be much better off than most of those who are wrestling with the piano-selling proposition in this city. The reports given out do not merely pertain to the sale of records, but to the machines as well—and the most expensive ones at that. The Victor Victrolas, particularly, seem to have a big run. Sanders & Stayman, Cohen & Hughes, H. R. Eisenbrandt Sons, E. F. Droop & Sons Co. and others report that the demands for these machines are quite lively. The high-priced Victors, Columbias, Starrs and Edisons have all come in for a brisk demand.

Manager M. E. Lyle, of the local branch of the Columbia Phonograph Co., states that his store had the best month during March of any since December. He reports that the instalment business has shown wonderful improvement, while the collections have been excellent right through the month. One of the machines which the Columbia are having great success with is the new popular-priced one with the wooden horn. As for the records, the greatest call has been for "I Wish I Had a Girl." In this connection Mr. Lyle says the record has proven so popular that he has had the hardest time to keep enough of them in stock to supply the rush of demands.

W. O. Cooper, traveling representative for the local branch, is busy in West Virginia establishing new agencies and taking orders for new goods in the stores where the stock has been reduced by the demands for Columbia records.

The Baltimore branch has notified the Philadelphia branch of its readiness to assist in filling any rush orders which the Quaker City store may be unable to handle in consequence of the fire which wiped out the place.

Manager Arthur Ansell, who has charge of the talking machine section of Cohen & Hughes, representatives here for the Victor machines, is busy these days in superintending the work of completing his section of the new store, 315 North Howard street, which will be occupied by both the talking machine and piano branches of the firm within the next week. Manager Ansell will have two floors exclusively for the handling of the Victor in the new store.

EMPLOYES FORM ASSOCIATION.

Employes of Eastern Talking Machine Co. Organize to Promote Social Feeling Among Themselves.

(Special to The Talking Machine World.)

Boston, Mass., April 8, 1909.

The employes of the Eastern Talking Machine Co. met last week in one of the parlors of the store and formed an association for the purpose of promoting closer social relations among themselves. E. F. Taft, secretary and general manager of the company, presided at the meeting and expressed the appreciation of the company for the earnest efforts of the employes. The meetings of the association will be held monthly and it is expected that ideas will be exchanged which will prove helpful to all members.

NEW LINE OF UDELL CABINETS

Specially Made for Cylinder Records—Clamps Substituted for the Usual Pegs.

The Udell Works, Indianapolis, Ind., have recently brought out a line of cabinets for cylinder records, in which the records may be placed in their original flannel-lined cartons, a set of clamps being substituted for the usual pegs in the cabinet.

The advantages of the new arrangement is that the record is protected from dust and the danger of being broken. The new cabinets in general design are fully up to the Udell standard and have proven decidedly popular wherever introduced.

NEW RECORD HOLDING DEVICE.

(Special to The Talking Machine World.)

Chicago, Ill., April 8, 1909.

A new and inexpensive record holding device for home use is illustrated in the advertisement elsewhere in this issue of A. E. Croft & Co., 40 Dearborn street. It holds fifty disc records securely and in a manner that prevents them from coming in contact with each other and is thus particularly adapted for the new double-faced records. The white spaces are provided for the inscription of the names of the selections, thus doing away with the numbered index. The "Crescent" is made in either mahogany or golden oak or mission finish and should prove a good seller. The manufacturers have a special plan for aiding the dealer in pushing sales, which they will explain to enquirers.

BLACKMAN TALKS ECONOMY.

Competition among dealers in the talking machine business is so keen that it is extremely important that dealers practice every economy possible. J. Newcomb Blackman, president of the Blackman Talking Machine Co., New York City, says dealers are realizing this fact more and more every day.

Most dealers are handling both Edison and Victor goods, and where, in many cases, they were in the habit of buying each line from a different jobber they are now beginning to realize the importance of dealing with a jobber who handles both Edison and Victor.

The Blackman Co. explain the economy of ordering both Edison and Victor goods from one jobber in their advertisement on page 29 of this issue, and it might be well for dealers to look into the matter.

TALKING MACHINE JOBBERS HOLD EXECUTIVE SESSION

Executive Committee of the National Association of Talking Machine Jobbers Meet at the Warerooms of Perry B. Whitsit, in Columbus—Many Matters of Interest Discussed—Annual Convention at Atlantic City in July—Dolbeer Addresses Jobbers—Banquet Enjoyed—New Members Enrolled.

(Special to The Talking Machine World.)

Columbus, Ohio, April 3, 1909.

The called meeting of the executive committee of the National Association of Talking Machine Jobbers, held in the salesrooms of the Perry B. Whitsit Co., of this city, Sunday, was most interesting from several points of view. The sessions, which lasted the entire day, were of the most practical character from a trade standpoint, and the work accomplished demonstrates that the committee are "on their job" and attend strictly to business when they come together in conference.

Standing (left to right)—T. H. Towle, Geo. E. Mickel, Max Strausburg, J. C. Roush, J. F. Fintze, W. F. Davison. Those sitting are: Lawrence McGreal, Perry B. Whitsit, W. D. Andrews, J. F. Bowers, Louis Buehn, J. N. Blackman, and W. E Henry.

President Bowers presided. Secretary Whitsit reported the results of the last meeting, the most important of which was that regarding the concessions by the Victor Talking Machine Co., Camden, N. J., of the committee's request to give distributers the usual margin of profit on their ten inch double-face records. When the matter was made plain to the Victor Co. they acted promptly and favorably on the suggestions.

G. E. Mickel, of the Nebraska Cycle Co., a member of the association, addressed the meeting in behalf of the Missouri Valley Jobbers' Association. In the course of his remarks, Mr. Mickel assured the committee that the Missouri Association were and would be in hearty sympathy with every move and purpose of the National Association of Talking Machine Jobbers, and would give it unequivocal support. They would also endeavor to increase the membership of the national organization in their territory.

When the selection of a place for holding the next annual convention of the National Association came up it was evident everybody, East and West, not only favored but voted for an eastern place. As J. Newcomb Blackman, chairman of the press committee, explained: "The main reason is that the plants of the National Phonograph Co. and the Victor Talking Machine Co. are located in that section, and it is a good time and season to get a line on what will be ready for the market in the fall. This information can be gained by making factory calls. New York City is so large and has so many diversified attractions that there would be danger of our people getting scattered. On the other hand, Atlantic City is a seaside resort and a place where one would naturally go for a vacation."

At any rate New York and Atlantic City, N. J., received the majority of votes. Atlantic City, however, was chosen and President Bowers appointed J. Newcomb Blackman, of New York, and Louis Buehn, of Philadelphia, a committee of arrangements. While it is intended to make the Hotel Chalfonte headquarters it has not been definitely settled as yet, as there is plenty of time for the selection to be made. The date of the convention will be July 13-14. The committee, however, will use every effort to duplicate or even exceed the attendance of last year. It is also about fixed that the banquet will be given at the Marlborough-Blenheim, and that no "switching" will occur this year under any circumstances. While Messrs. Blackman and Buehn will look after the details of all the arrangements, an additional special or sub-committee, to be known as a reception committee, will be named by them, to be composed of members in their respective territories to secure pledges for a record attendance at Atlantic City. This committee will consist of half to a dozen members.

Ten new members were enrolled in the association, as follows: Southern California Music Co., Los Angeles, Cal.; O. K. Houck Piano Co., Memphis, Tenn.; Knoxville Typewriter and Phonograph Co., Knoxville, Tenn.; Julius A. J. Friedrich, Grand Rapids, Mich.; Bruce & Brown Co., Seattle, Wash.; Jones Piano Co., Des Moines, Ia.; A. T. Pommer Co., Sacramento, Cal.; Talking Machine Co., Birmingham, Ala.; W. H. & L. C. Wolfe, Altoona, Pa.; H. R. Eisenbrandt & Sons, Baltimore, Md.

The following members were present: J. F. Bowers, Chicago; W. D. Andrews, Syracuse, N. Y.; Louis Buehn, Philadelphia, Pa.; Perry Whitsit, Columbus, O.; Lawrence McGreal, Milwaukee, Wis.; W. E. Henry, Pittsburg, Pa.; and J. Newcomb Blackman, of New York City. This represented the entire committee with the exception of Carl A. Droop, of Washington, D. C.; and E. H. Uhl, of Chicago, Ill., who were unable to attend. In addition the following jobbers and members of the association were on hand: T. H. Towle, of the Eclipse Musical Co., Cleveland, O.; J. F. Fintze, of the Ball-Fintze Co., Newark, O.; Max Strausburg, of Grinnell Bros., Detroit, Mich.; Geo. E. Mickel, of the Nebraska Cycle Co., Omaha, Neb., and J. C. Roush, of the Standard Talking Machine Co., Pittsburg, Pa.

Frank K. Dolbeer, sales manager of the National Phonograph Co., Orange, N. J., addressed the meeting on a matter of importance. In his informal address Mr. Dolbeer said the company contemplated introducing something that would, they considered, be of great benefit to their trade. At the close of his remarks the committee expressed themselves in hearty sympathy with the matter presented. Other questions regarding the policy of the National Phonograph Co. were introduced, the purport of which are deemed inadvisable to reveal just now. Afterward Mr. Dolbeer invited the jobbers to be his guests at dinner. The invitation was accepted, the committee adjourning especially to accept the invitation. The dinner, which was elaborate enough to be properly styled a banquet, was served in the Southern Hotel, and was greatly enjoyed both by the host and his guests.

Matters of great interest to the trade came up for discussion and will be presented later to the manufacturers. The meeting adjourned at 6.30 p. m., and was pronounced one of the most successful ever held.

Subsequently Mr. Blackman, who is also chairman of the membership committee, stated to The World that they had been sending out letters to jobbers and distributers in all parts of the country, directing their attention to the work accomplished by the association, and they will continue the propaganda and that of membership solicitation until every representative man was enrolled.

On his way home from the meeting Mr. Blackman, accompanied part of the way by Messrs. Andrews and Buehn, reported to Secretary Whitsit that he had secured three new members, through a personal appeal, which was found most effective and seldom fails, he said, when rightfully exerted. These include Collister & Sayle, Cleveland, O., who filed their applications; A. F. Ferris and Wm. Harrison, both Edison jobbers, Utica, N. Y., also followed suit, this making a solid delegation from that city; and in Schenectady, N. Y., J. A. Rickard, an Edison and sporting goods concern, will likewise sign the roll.

A curious similarity of voices among the record "talent" is that of Pete Murray, who is on the artist staff of the Universal Talking Machine Mfg. Co., Newark, N. J., and of the widely known Billy Murray, whose services are exclusive with the Victor Talking Machine Co., Camden, N. J. Both are baritones of about the same pitch and quality, and each has a slight lisp. It takes an expert to differentiate the two voices on the records.

Trade Well Pleased With Conditions and Look for Good Year's Business Total—Lyon & Healy Changes—New Columbia Quarters Well Arranged—Some News of the Travelers—Bowers Enthusiastic Over Progress Made by Talking Machine Jobbers Association—Suggest New Moving Picture Film—Some Recent Trade Visitors—"Tiz It" Horn Connections Popular—Special Columbia Records in Great Demand—E. D. Easton in Chicago on Tour of Inspection—Other News.

(Special to The Talking Machine World.)

Chicago, Ill., April 8, 1909.

Jobbers are all well pleased with the showing made by March, and in every instance reports reveal a marked increase over the same month a year ago. This is the first time that an increase of material proportion, as compared with the preceding year, has been reported universally by the jobbers since the depression set in the latter part of 1907, and therefore indicates a progress towards a restoration of fully normal conditions, which is very gratifying. Furthermore, the volume of business since the first of the year has been steadily increased, while during the first three months of last year the tendency was in the opposite direction. The general belief in the trade here is that each month the balance of the year will show a strong improvement over last year and that with the fall trade the percentage of this increase will be notably larger, with perhaps a return to something like the figures of 1906.

Local retail trade has made a very good showing, indeed, last month with the large establishments within the loop, and while it has been a little spotty the last two weeks, owing, no doubt, to the approach of Easter, with the accompanying expenditure for fine array, there have been some excellent days. The proportion of the sales of higher grade machines to the total business done seems to be steadily increasing rather than diminishing. This is noticeable in all of the several makes as far as the local trade at least is concerned and is reflected to a certain degree in country business of the regular established jobbers selling the dealers' trade.

C. E. Goodwin Succeeded by Wiswell.

The resignation of C. E. Goodwin as manager of the talking machine department of Lyon & Healy, which took effect on the 16th of last month, came in the form of a general surprise to the trade. Mr. Goodwin has made no announcement as to his intentions regarding the future and in all probability will not re-embark in business until fall. After his long years of efficient and energetic service in the trade he naturally feels that he is entitled to a good vacation and in all likelihood will leave shortly on a European trip. L. C. Wiswell, who has been connected with the department with Mr. Goodwin almost since its inception a decade ago, first as salesman and for the last four years as assistant manager, has been promoted to the position of manager.

Columbia Co.'s New Quarters.

On May 1 the Columbia Phonograph Co. will desert the location that they have occupied for many years at 88 Wabash avenue, and go south three blocks on the same thoroughfare to number 210, where they will be in the very heart of the music trade district. The new location possesses advantages over the old one, both from retail and wholesale viewpoints. The store is a few doors south of Adams street on the east side of Wabash avenue and is now occupied by the Thurber art galleries. The new quarters comprise not only the ground floor store at 210, but the rear half of the adjoining store at 212, which will be utilized for stock room for machines and accessories and a balcony constructed for the repair department, etc. A second-story addition on the rear of and the main store, which was formerly used as a photograph gallery, is also included in the lease and will be given up to the bookkeeping department. Although the store is 170 feet deep it does not run back to the alley line and a brick addition, 20 x 10 feet, with cement floors, will be constructed in the rear for the shipping department. The front of the store will be fitted up for a handsome reception room. Back of this along the south side of the room seven demonstration booths will be erected. They will have glass fronts and with solid walls between them making them as soundproof as possible. The retail record stock will occupy shelving along the walls behind the booths and on the back of the booths themselves. In the rear of the booths will be located the private offices for District Manager Fuhri, Local Manager Baer, Assistant Manager Cass, Western Wholesale Manager Plume, City Salesman Blimke and also the order department. The store is excellently lighted as the second story of the building is built up only in the front and the back, the main portion of the building being only one story and provided with skylights every few feet. The store is equipped with a ventilating system which changes the air every fifteen minutes and this will of course be especially appreciated by the customers while in the record booths. Taken all in all, the Columbia Co. will benefit greatly by the move, both in location and in store arrangement, and when the improvements and alterations are completed will have one of the most up-to-date talking machine establishments in the country.

Arthur D. Geissler in the East.

Arthur D. Geissler, general manager of the Talking Machine Co., left on Tuesday of this week for the East, to be gone for about ten days, dividing his time between the factory at Camden and New York city. Mr. Geissler is enthusiastic regarding the improvement in trade last month, which proved one of the largest Marches in the history of the business. The company has recently augmented its traveling force by the addition of two new salesmen, W. E. Clark and F. C. Phillips. Mr. Clark is a man of long experience in the retail talking machine business, both in Chicago and elsewhere. He is showing the advantage of this training on his present trip in Wisconsin, as he has sent in an order from one dealer for three Victrolas, which he aided the merchant in selling. Mr. Phillips, who has Michigan and Indiana, is proving himself another live wire and is sending in some nice business.

May Establish Jobbing Department.

Mr. O'Neill, of the O'Neill-James Co., the large talking machine premium house, returned this week from an eastern trip. While away he started negotiations which may result in their establishing a general jobbing department, which will enable them to offer the trade a special proposition which he claims will prove interesting to dealers.

E. H. Uhl's Pacific Coast Trip.

E. H. Uhl, manager of the Chicago house of the Rudolph Wurlitzer Co., who is now on the Coast, is expected back in Chicago the latter part of next week. Assistant Manager Fred Siemon says that last month not only showed a large improvement over the same month of last year, but rolled up a total which threw either January or February of this year very much in the shade. The Wurlitzer Co. have six salesmen on the road, including Hans Schloessing, their local man, and they are all working aggressively and effectively as shown by the orders they are sending in, both for talking machines as well as small goods and other lines. Rudolph Wurlitzer spent several days in Chicago last week and Farney Wurlitzer the head of the automatic department, was here in the course of a general western trip.

Recent Visitors.

Con Hogan, the Victor and Edison dealer of Ashland, Wis., was in the city this month buying goods. He is rated as one of the most successful dealers in his state, and yet has worked under a handicap which would have totally discouraged many men, as he is totally blind. He comes to Chicago quite frequently and always travels alone, but employs a messenger boy to conduct him around the business district. He is a model of optimism and cheerfulness and is always a welcome visitor in the trade.

Oliver Jones, credit manager of the Victor Co., called on the Chicago jobbers last week on his return East after a brief trip among the western trade.

President James F. Bowers.

President James F. Bowers, of the National Association of Talking Machine Jobbers, returned from an executive committee meeting at Columbus, Ohio, enthusiastic as ever regarding the progress being made by the organization, the work

The Economy Racks

A NOTABLE INNOVATION

The Economy Disc Record Rack—Convenient, Portable. One record to a compartment. No handling of several to find the one you wish. Made in highly polished Mahogany or oak or oak mission. COMING—*The most unique talking machine cabinet ever introduced to the trade. It will embrace the "Economy" principle and will create a sensation.*

R. H. JONES, Patentee and Sole Manufacturer **1-17 Bryan Place, Chicago, Ill.**

Let Us Increase Your Sales

You, Mr. Talking Machine Dealer, can only increase your sales—and thus your profits—by giving prompt service and furnishing reliable goods.

A satisfied customer is always the best advertisement and the basis of a larger and more profitable business.

It is not necessary for you to carry a large stock, but when a customer says: "I want a Victor or an Edison Outfit," he usually wants it quick.

And you simply can't afford to take any chances of losing a profitable sale by allowing your customer's ardor to cool while he waits a fortnight or so for you to fill his order.

You may not be to blame for the delay in filling the order, but the firm from whom you order may be at fault by reason of faulty methods or faulty employees.

It behooves you, therefore, to deal with an established house, where improved methods and a large and capable sales force can fill your orders promptly and accurately.

It is just such dependable service, supported by forty-five years in the music business that we offer you.

If you are not already on our list of

Victor and Edison Dealers

write us at once. We want to keep you posted on all kinds of money-making merchandise. Victor and Edison goods of all kinds, in vast quantities, are constantly on hand.

We sell "Everything known in Music."

Lyon & Healy

CHICAGO

it is doing for the trade, its growing membership, and the character of his associates. George E. Mickel, of the Nebraska Cycle Co., of Omaha, and who attended the meeting as a representative of the Missouri Valley Jobbers' Association, spent several days in Chicago on his return. Lawrence McGreal, of Milwaukee, dropped in on a few of his Chicago friends en route.

Wiswell Pleased With Activity.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy expressed himself along the lines of the other men of the local trade and is well pleased with the increased activity, as evidenced in March as compared with last year. April so far has opened up in a gratifying manner, dealers showing an increased liberality in orders for machines as well as records. The department now has two exclusive talking machine men on the road, besides reaping the benefit of a large force of the firm's general travelers. These are W. A. Voltz, who returned to the house a couple of months ago after a year's absence, and J. Pelatier, formerly in the retail talking machine business at Martinton, Ill., and who is now on his initial trip.

Fern in the Retail Business.

E. A. Fern, who has been with James I. Lyons for a number of years, and for the past two and one half years manager of his retail store at 1041 Lincoln avenue, will engage in the retail business for himself at the same location, having bought the fixtures from Mr. Lyons and installed a complete stock of Victor and Edison goods.

George Hardin, western representative of the Edison Co., is reported to have furnished a suggestion for a new moving picture film to be entitled "The Man from Mexico," and in which the hero appears in many a touching scene.

Malcolm B. Henry, the energetic representative of the Hawthorne & Sheble Mfg. Co., is a very busy man these days and from reports that float in from various quarters is evidently getting in some good work on Star machines and records.

B. Feinberg, representing the Universal Talking Machine Co., is again in the city this week headed westward on a special trip which will probably eventuate the establishment of a very large jobbing representation on Zonophone goods.

Kreiling & Co., manufacturers of "Tiz-It" the all-metal, ball-joint horn connection for cylinder machines, reports a steady expansion of the demand for their specialty. He recently received an order for 2,000 "Tiz-Its" from one firm for immediate shipment. J. W. Kreiling has been working his inventive faculties overtime of late and as a result, a new contrivance which will add greatly to the convenience of phonograph users will soon be placed on the market.

Patent Allowed on Record Sweeper.

The Record Sweeper Co., of Highland Park, Ill., have just received a notification from Washington that the patent on their automatic record sweeper and attachment for Victor machines has been allowed. The device does its work of cleaning the grooves of the record simultaneously with the playing thereof and is evidently proving a distinct success judging from the constantly increasing demand.

Col. F. B. T. Hollenberg, of Little Rock, Ark., the well known Columbia jobber, was a Chicago visitor last week.

Friends of George M. Nisbett, now manager of the Mexican National Phonograph Co., which controls the Edison interests in the sister republic, gather from letters received from the popular ex-Chicagoean that he is happy, likes the climate, and is getting "biz."

Talker Represents Absent Alumni.

At a banquet of the Chicago Alumni of Amherst College, held at the Grand Pacific on March 25, a number of talks made by prominent graduates and members of the faculty for the occasion by absentees were listened to through the medium of a Columbia graphophone. Several records by prominent Chicagoeans who were present, but who made the records at the Chicago Columbia headquarters for the benefit of the Alumni celebration in New York last month were also listened to. The records are in great demand and will be shipped to various cities within the next few months for gathering of Augustus Thomas, the famous playwright through phone took place at the gathering of the "Lambs," a famous organization of actors in Chicago the other day when the guests were addressed by Augustus Thomas, the famous playwright through the medium of the graphophone. The toastmaster was Mr. Sain Polis, now appearing here with the "Via Wireless Company," and he introduced the absent speaker to the audience with great eclat. The graphophone also favored the guests with a number of musical selections during the evening.

The B. & H. Fibre Manufacturing Co. report that March was the biggest month in the point of sales of the fiber needles that they have ever had. Considerable new special machinery which will greatly increase the output of the factory is being added in order to meet the heavily increasing demand without delay.

The Schubert Extensible Racks for cylinder machines are steadily gaining ground according to G. H. Schubert, of 199 West Madison street, Chicago. Each shelf holds twelve records which cannot fall out and the dealer can furnish his customers with additional racks as the machine owners' stock increases, thus creating a continual source of revenue from his established trade. Mr. Schubert expects shortly to establish a downtown office.

A. V. Chandler, Illinois representative for the National Phonograph Co., has returned from a month's trip through the state of a kind that maketh the heart of the jobber glad.

Death of Henry W. Chester.

Henry W. Chester, a director of the Hibbard Spencer Bartlett & Co., and a prominent factor in the business of the great wholesale hardware house for over a quarter of a century, died on March 25 after a week's illness of pneumonia. He was prominent in public affairs, was secretary of the Citizen's League, and chairman of one of the committees of the Chicago Association of Commerce. Mr. Chester had general supervision of the sporting goods department, including talking machines, which branch of the business is in immediate charge of J. F. Jones.

President Edward D. Easton, of the Columbia Phonograph Co., General, spent a couple of days in Chicago the latter part of last month on his return from a tour of inspection of the company's agencies in the Far West. W. C. Fuhri, district manager of the company met Mr. Easton at Kansas City and together they visited the St. Louis branch before coming to Chicago.

Lyon & Healy are preparing to take advantage as usual of the Metropolitan Grand Opera Season, which commences next Monday by special opera recitals in Victor Hall. Each day the Red Seal records from the opera to be produced that night will be played and the fact advertised vigorously in the dailies and via the window route.

The big talking machine cabinet factory of the Salter Manufacturing Co., of this city, is kept very busy on their extensive line of disc and cylinder record cabinets. Their new flat felt-lined shelf cabinet is proving very popular.

The Columbia branch at Salt Lake City is now moving to a much better location at 23 West Third South street. George F. Standke is the manager.

The splendid facilities for handling stock enjoyed by the Talking Machine Co., as shown by the illustrations in their advertisement in this issue.

The Economy and Perfection Disc Record Racks made by R. H. Jones, are being heard from with great persistence and in a favorable way.

The Davidson Bros. are having a fine Victor trade at their store, the talking machine shop on Michigan avenue. They do quite a little effective advertising in the dailies. During the opera weeks they will have on exhibition in the store's crystal front, a fine collection of autograph photos of the artists appearing with the opera and who are represented in the Red Seal list.

TAKE OVER DENHAM CO. LINES.

The importing, phonograph and novelty end of the business of the Edwin A. Denham Co., 500 Broadway, has been taken over by the Manufacturers' Outlet Co., 89 Chambers street, New York, who will in future handle many of the articles formerly carried by the Denham Co.

AMERICAN PHONOGRAPH CO. TO REMOVE.

The American Phonograph Co., Detroit, Mich., Edison jobbers, announce that on May 1 they will remove from their present store at 106 Woodward avenue to new quarters at 252 Woodward avenue.

Kreiling & Company

Inventors and Sole Manufacturers

North 40th Ave. and Le Moyne St.

CHICAGO, U. S. A.

TRADE NOTES FROM CINCINNATI.

Conditions in Both Wholesale and Retail Fields Steadily Improving—Demand Principally for the Higher Priced Goods in Both Records and Machines—Edison Business Phonograph Grows in Favor in the Commercial World—Expensive Victrola for Standard Oil Magnate—The Wurlitzer Record Album—Other Items Worth Recording.

(Special to The Talking Machine World.)

Cincinnati, Ohio, April 7, 1909.

The past month was not a bad one for the dealers in talking machine goods. This is perhaps the best way of saying that conditions generally are improving and that the dealers are hopeful of better things this spring. The wholesale situation is also improving from month to month and jobbers figure out that the smaller dealer would not place orders unless he saw a fine chance of disposing of the goods. Moreover, these dealers are placing canvassers out who are stirring up trade.

Locally the sale of machines shows improvement in the high grade class. The cheaper machines are still on the stand-still, waiting for the workingman to get on his feet, where he can again indulge himself. The sale of records here in the city also indicates improvement. The dealers have been featuring the music of the shows that appear in town each week. This catches the popular ear and results in quite a large number of sales. April is looked upon with favor by dealers, who say that the increase of trade will be more in evidence than any month so far of this year.

The Columbia Phonograph Co. have the same good report to make for March that was made for February. The month held up in fine shape and showed the healthy increase over February, which leads Manager Nichols to be assured of a fine spring trade. Both the retail and wholesale departments show this increase. The trend of trade is to the high class instruments. The double disc and Edison indestructible records continue to pull orders from all sections. Several exclusive agencies were placed during the month. Manager Nichols stated last week just before he left for a swing around his territory for a call upon the dealers that he is confident that trade will hold strong all the way up to next October, and that he is more confident of the next few months than ever.

The Rudolph Wurlitzer Co. found the past month a good one in the way of results. The talking machine trade showed strong improvement, both locally and from the outside dealers. The small dealers are replacing orders more freely, which the local company takes to mean that the dealers are now waking up to spring possibilities, and to that end are placing men out to dig it up. The statement is made that fully ninety per cent. of the dealers had neglected the line on account of a lack of business. The expressions of confidence from these and the placing of orders lends encouragement to the wholesaler. Local business shows the largest increase had in the past twelve months.

The record trade has been marked by a tendency to the popular hits of the hour, which the Wurlitzer Co. call attention to by some splendid avertisements. The coming and going of the Merry Widow Co. caused a large sale of these records. De Wolf Hopper and his famous "Casey at the Bat" stunt created a demand for these records, resulting in a good sale. Week before last Mischa Elman, the violinist, was here in a recital, and his records show a large sale. The coming of the original Merry Widow Co. from New York this week has added interest again in the beautiful music of the opera and Wurlitzer is calling attention to the Victrola and its records. The company expects to entertain the Merry Widow cast while here at their warerooms. The coming of each celebrity to this city is marked by a visit to the Wurlitzer warerooms, where pictures are taken of the renowned one listening to the Victrola. That of Admiral Evans was the last to be added to the collection.
